Wenner, Wesley E., Allentown, Pa. Railroad base plate and fastener. 2,003,498; June 4.
Wente, Edward C., New York, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Position controlling device. 2,003,913; June 4.
Wente, Edward C. (See Hickman, C. N., and Wente.)
Wensell, Joseph W., El Monte, Calif. Mothproof bag. 2,003,704; June 4.
West Bend Aluminum Co. (See Finch, Arnold R., assignor.)
West, Franklin G., et al. (See Esterling, William M., assignor.)
West & West et al. (See Esterling, William M., assignor.)
West, Z. B., et al. (See Esterling, William M., assignor.)
Western Electric Company. (See Corbeels, Theophile, assignor.)
Western Electric Company, Incorporated. (See Husson, Harry L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hathaway, Clarence B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Jordan, E. H., and Hochstetter, assignors.)
Westinghouse Lamp Company. (See Ehrke, Louis F., assignor.)
Westinghouse Lamp Company. (See Hankins, Thomas J., Jr., assignor.)
Westinghouse Lamp Company. (See Rentschler, H. C., and Henry, assignors.)
Westinghouse Lamp Company. (See Shipp, Robert C., assignor.)
Westkott, Hans, West Reading, assignor to Berkshire Knitting Mills, Wyomissing, Pa. Machine for reclaiming yarn from knitted fabric. 2,003,777; June 4.
Westland, J. A. (See Jawort, Frank A.)
Whitcomb, William H., Newtonville, Mass. Adjustable frame for jig-saw puzzles. 2,003,845; June 4.
White, Edwin H., Newark, N. J., assignor to American Reenforced Paper Company, Attleboro, Mass. Waterproofing buildings. 2,003,618; June 4.
White Motor Company, The. (See Church, Harold D., assignor.)
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Sizing and dyeing of textiles. 2,003,409; June 4.
Whiteley, James, Detroit, Mich. Heat exchanger section. 2,003,705; June 4.
Whitin Machine Works. (See Hendrickson, Fred K.)
Whitman, Stewart C., Jackson Heights, N. Y. High frequency gaseous conduction lamp. 2,003,410; June 4.
Whitmore, Frank C., State College, Pa., and A. H. Homeyer, St. Louis, Mo., and W. R. Trent, State College, Pa., assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Tertiary butyl acetic acid. 2,004,066; June 4.
Whitworth, Edward, Saltcoats, Scotland, assignor to Imperial Chemical Industries Limited. Propellant explosive. 2,003,914; June 4.
Widen, Henry R., assignor of one-half to C. E. Rotenstein, Chicago, Ill. Sound actuated device. 2,003,765; June 4.
Willard, George B. (See Campbell, A., and Willard.)
Williams, Alfred O. (See Burrows, R. J., and Williams.)
Williams & Marcus Company. (See Cox, George D., assignor.)
Williamson, Ralph J., Milton, assignor to Trimont Manufacturing Co., Inc., Roxbury, Mass. Pipe cutting device. 2,003,619; June 4.
Willis, Charles C., Bound Brook, assignor to John Waldron Corporation, New Brunswick, N. J. Spray coating machine. 2,003,778; June 4.
Wilsing, Paul, assignor to Demag Aktiengesellschaft Duisberg, Germany. Clutch and brake mechanism for winches. 2,003,795; June 4.
Willsie, Henry E., New York, N. Y. Refrigeration apparatus and method. 2,003,411; June 4.
Wilson, James S. (See Tomkin, R., and Wilson.)
Willoughby, Victor, Ridgewood, N. J., and W. L. Lapworth, Wantagh, assignors to American Car and Foundry Company, New York, N. Y. Adapter valve for tank outlets. 2,003,915; June 4.
Willoughby, Victor, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y. Railway car. 2,003,916; June 4.
Wilson, Albert L. (See Smith, C., Prohaska, and Wilson.)
Winthrop Chemical Company. (See Bockmühl, M., Krohs, and Ehrhart, assignors.)
Wirt, Zebulon. (See McGinnis, W., and Wirt.)
Witthuhn, Frank, Cleveland, Ohio. Adjustable plant stand. 2,003,986; June 4.
Wolfe, Henry J. (See Jeffrey, D. C., and Wolfe.)
Wolff, Arthur J., Hartford, Conn. Forming spectacle frames. 2,003,846; June 4.
Wolff, George. (See McCarthy, W., and Wolff.)
Woock, Herbert J., assignor to Super Mold Corporation, Lodi, Calif. Circulating system for retreading mold pressure bags. 2,003,566; June 4.
Woock, Herbert J., assignor to Super Mold Corporation, Lodi, Calif. Circulating hot water through the pressure bags of tire retreading molds. 2,003,567; June 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Folder. 2,003,568; June 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Tension controlling means. 2,003,569; June 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Printing press. 2,003,639; June 4.
Wood Newspaper Machinery Corporation. (See Jordhoy, Hans C., assignor.)
Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)
Woodall Industries Incorporated. (See Smith, Alfred J., assignor.)
Woodberry, John H., United States Army, Fort Bliss, Tex. Support. 2,003,327; June 4.
Woodhouse, John C., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Effecting organic vapor phase reactions. 2,003,477; June 4.
Woodling, George V., Cleveland, Ohio. Stabilizer for vehicles. 2,004,068; June 4.
Woods, Charles S., Shaker Heights, Ohio. Washing device and method. 2,003,847; June 4.
Wooten, George R., Fredonia, Kans. Guard. 2,004,026; June 4.
Worn, George A., Montclair, N. J., assignor to The Lummus Company, New York, N. Y. Combined separator and heat exchanger. 2,003,815; June 4.
Worrall, Robert H., Washington, D. C. Apparatus for traffic control. 2,003,328; June 4.
Wunsch, Julius A., New York, N. Y. Recovery of naphthenic acids. 2,003,640; June 4.
Wussow, Ruben F., et al. (See Esterling, William M., assignor.)
Y Garcia, Joaquin Crespo. (See Clifford, P. C., and y Garcia.)
Yale & Towne Mfg. Co. (See Potter, Robert S., assignor.)
Yamaguchi, Yohei, Toshima-Ku, Tokyo, and H. Nakazawa, Kawanaka-Mura, Nishi-Kasugai Gun, assignors to Zaiden Hojin Rikagaku Kenkyujo, Tokyo, Japan. Sheet flasher for taking photographs. 2,003,660; June 4.
Yedd, Guy A., assignor of one-half to John R. Pusey, Oakland, Calif. Mining system and apparatus. 2,003,779; June 4.
Young, Lloyd L., Patchogue, N. Y., assignor to Radio Corporation of America. High speed keying. 2,003,329; June 4.
Youngstown Pressed Steel Company, The. (See Stanitz, J., and Boyer, assignors.)
Zahner, Robert, Bern, Switzerland. Melting pot, particularly for stereotype casting machines. 2,003,796; June 4.
Zaiden Hojin Rikagaku Kenkyujo. (See Yamaguchi, Y., and Nakazawa, assignors.)
Zapf, Georg, Cologne, assignor to Felten & Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany. Machine for manufacturing moistureproof cable coverings. 2,003,673; June 4.
Ziegler, Crawford. (See Trainer, J. E., and Ziegler.)
Zimic, Michael. (See Gruna, A., and Radhuber, assignors.)
Zimic, Michael, Forest Hills West, N. Y. Knitting machine. 2,003,674; June 4.
Zola, John C., Tarentum, Pa., assignor to Duplate Corporation. Laminated glass. 2,003,330; June 4.
Zschiesche, Johannes A. (See Nygren, K. A., and Zschiesche.)
Zwicky, Melchior, Berkshire Heights, assignor to Textile Machine Works, Wyomissing, Pa. Safety device for straight knitting machines. 2,003,766; June 4.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Disk harrow. S. S. Furrer. 19,598; June 4.
Magnetic tests and measurements. Apparatus for making. P. C. Hermann. 19,600–1; June 4.
Marker and flower vase, Combination grave. J. M. Powell. 19,602; June 4.
Starter, Engine. R. Chilton. 19,597; June 4.
Table leg construction. J. E. Bales and C. T. Christensen. 19,596; June 4.
Train control system, Continuous. W. D. Hailes. 19,599; June 4.

LIST OF PLANT INVENTIONS

Carnation variety. R. Witterstaetter. 127; June 4.

LIST OF DESIGN INVENTIONS

Air compressor unit. A. Hallett. 95,822; June 4.
Ash receiver. R. F. De Boer. 95,808; June 4.
Blouse. H. M. Raphael. 95,865; June 4.
Book end. F. D. Farr. 95,811; June 4.
Bottle. C. W. Ahrens. 95,787; June 4.
Bottle. W. Guyer. 95,821; June 4.
Bottle. W. R. Leach. 95,849; June 4.
Bottle. F. McLaughlin. 95,854; June 4.
Bottle or similar article. J. S. Stein. 95,873; June 4.
Box. N. B. Geddes. 95,816; June 4.
Braid, Elastic lace. O. E. Huber. 95,828–32; June 4.
Broiler. H. H. Minard. 95,859; June 4.
Brush or similar article. A. Wewetzer. 95,883; June 4.
Cabinet, Stocking display. H. Janssen. 95,834; June 4.
Closure for containers or similar article. H. L. Van Doran and C. K. Ellsworth. 95,877; June 4.
Coat garment. S. A. Jamieson. 95,833; June 4.
Coffeepot. A. Brenneman. 95,800; June 4.
Coffeepot, Drip. A. Brenneman. 95,799; June 4.
Coffeepot or like article. H. F. Wood. 95,885; June 4.
Container for nail polish manicure set. M. Schnefel. 95,866; June 4.
Decanter or similar article. E. Stahl. 95,872; June 4.
Dishwashing machine. O. K. Cox. 95,806; June 4.
Dress. J. Kirschner. 95,838; June 4.
Dress, Ensemble. J. Kirschner. 95,836–7; June 4.
Dress, Ensemble. J. Kirschner. 95,839–42; June 4.
Eyeglass bridge. F. H. Soden. 95,869; June 4.
Game apparatus. H. P. Compton and L. Solomon. 95,804; June 4.
Game board, Amusement. F. K. Maitland. 95,852; June 4.
Golf club head. J. Gourley. 95,819; June 4.
Guide, Fender. J. H. Cohen. 95,803; June 4.
Inhaler, Nasal. F. Lobl. 95,850; June 4.
Jar, Marmalade. C. Kaiser. 95,835; June 4.
Lace. H. B. Barnum. 95794–6; June 4.
Lace. H. Stenson. 95,874; June 4.
Lamp globe or similar article, Vehicle. H. B. Donley. 95,810; June 4.
Lamp-post or similar article. R. Waggoner. 95,881; June 4.
Lavatory. H. N. Davock. 95,807; June 4.
Lever. H. Wolff. 95,884; June 4.
Lighter, Pocket. M. Grünstein. 95,820; June 4.
Lip stick container. P. H. Ganz. 95,813; June 4.
Liquid dispensing rack. J. Garvey. 95,814–15; June 4.
Marker, Memorial. I. W. Cox. 95,805; June 4.
Pen nib, Fountain. N. E. Welgel. 95,882; June 4.
Pen point. M. M. Neuhoff. 95,860; June 4.
Plate or similar article. C. L. Sebring. 95,867; June 4.
Powder puff. E. Burkhart. 95,801; June 4.
Pocket for pot holders, memorandum pads, and pencils, Wall. M. Caplan. 95,802; June 4.
Refrigerator cabinet. N. B. Geddes and W. I. Hamby. 95,817; June 4.
Sanding machine. T. L. Hedgpeth. 95,825; June 4.
Shoe. V. De Liso. 95,809; June 4.
Shoe. J. A. Goldberg. 95,818; June 4.
Shoe. S. Meyer. 95,855; June 4.
Shoe. A. Perugia. 95,861; June 4.
Shoe. F. B. Polley. 95,862–3; June 4.
Shoe. R. Sederqust. 95,868; June 4.
Shoe or similar article. L. Audino. 95,788–9; June 4.
Shoe or similar article. C. Miller. 95,856–8; June 4.
Shoe or similar article. J. Sofransky. 95,870–1; June 4.
Shoe or similar article. S. A. Wood. 95,886–7; June 4.
Shower head. C. W. Hathaway and E. Krumsiek. 95,823; June 4.
Ski boot. J. Lanz. 95,848; June 4.
Slip, Two-piece. M. E. Awamy. 95,790; June 4.
Spoon or other article of flatware. G. A. Feinauer. 95,812; June 4.
Spoon or other article of flatware. J. R. Price. 95,864; June 4.
Stand for hosiery or the like, Display. E. J. Berger. 95,797; June 4.
Steering wheel. J. D. Villas. 95,879; June 4.
Suit, Lady's. S. Vlock. 95,880; June 4.
Switch casing. F. Lobl. 95,851; June 4.
Tank vehicle body. A. A. Kramer. 95,843–4; June 4.
Tank vehicle body. J. M. Kramer. 95,846–7; June 4.
Tank vehicle body. A. A. and J. M. Kramer. 95,845; June 4.
Tennis racket or similar article. M. Van Schelle and J. Allen. 95,878; June 4.
Textile fabric. W. R. Haywood. 95,824; June 4.
Textile fabric. J. Todd. 95,875; June 4.
Textile fabric or similar article. W. H. Mayer, Jr. 95,853; June 4.
Toy vehicle or the like. W. Baetz. 95,791–3; June 4.
Type font, Printing. H. A. Trafton. 95,876; June 4.
Vanity case. H. L. Berinstein. 95,798; June 4.
Velocipede. K. W. Hedstrom. 95,826; June 4.
Wrap. C. Hoffman. 95,827; June 4.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorption refrigerating apparatus. E. Gruber 2,003,437; June 4.
Accounting machine. F. L. Fuller. 2,003,783; June 4.
Acid: *See*—
Tertiary butyl acetic acid
Acid compositions, Manufacture of. J. V. Shinn. 2,003,907; June 4.
Acid from hydrogen sulphide gas, Manufacture of sulphuric. I. Hechenbleikner. 2,003,442; June 4.
Acids, Recovery of naphthenic. J. A. Wunsch. 2,003,640; June 4.
Acoustic apparatus. I. C. Clement. 2,003,284; June 4.
Acoustic device. L. T. Smith and A. L. Thuras. 2,003,908; June 4.
Adjustable plant stand. F. Witthuhn. 2,003,986; June 4.
Aeroplane. Amphibian. R. R. Rand, Jr. 2,003,975; June 4.
Agricultural implement. E. T. Johnson. 2,003,365; June 4.
Air cooling system for motors. J. G. Dintilhac. 2,004,040; June 4.
Aircraft body. J. B. Ford. 2,003,433; June 4.
Aircraft having sustaining rotors. H. Alfaro. 2,003,331; June 4.
Aircraft having sustaining rotors. H. Alfaro. 2,003,620; June 4.
Alloy. T. H. Warner. 2,003,524; June 4.
Aluminum alloy. F. Keller and R. S. Merritt. 2,003,297; June 4.
Aluminum brass alloy. J. R. Freeman, Jr. 2,003,685; June 4.
Amino-aryl-thiazole-compounds. Producing. R. Herz. 2,003,443; June 4.
Amino compounds, Production of hydroxy-alkylated. H. C. Olpin and S. H. Bannister. 2,003,386; June 4.
Anchor, Rail. C. B. Shepherd. 2,003,395; June 4.
Animal trap. L. D. Myers. 2,003,513; June 4.
Articles, Apparatus for arranging. M. Schnaier. 2,003,517; June 4.
Articles, Manufacturing and packaging. M. Schnaier. 2,003,518; June 4.
Atomizer. J. L. Taylor. 2,003,813; June 4.
Atomizer, Oil engine. J. L. Taylor. 2,003,814; June 4.
Autographic register. L. F. Hagemann. 2,003,999; June 4.
Automatic arc lamp, High intensity multiple. F. A. Berg. 2,003,675;
Automatic clutch. H. H. Vail. 2,003,322–3; June 4.
Axle bearing. T. V. Buckwalter. 2,003,339; June 4.
Axle, Oscillatable pivotally mounted. J. Ganz. 2,004,063; June 4.
Azanthracene derivatives, Producing. K. Koeberle and
Bag: *See*—
Golf bag.
Mothproof bag.
E. Ploetz. 2,003,596; June 44.
Bag closing machine. C. V. Brady and F. R. Linda. 2,003,337; June 4.
Bag construction, Paper. G. W. Poppe. 2,003,697; June 4.
Bait device, Fishing. L. L. Raymond. 2,003,976; June 4.
Bait, Fish. P. Muller. 2,003,550; June 4.
Ball, Jingle. M. B. Salisbury. 2,003,957; June 4.
Ballast excavating and cleaning apparatus. H. W. Protzeller. 2,003,606; June 4.
Band and removable lining, Combined sweat. L. Hoffeld. 2,003,886; June 4.
Barn. J. G. Shodron. 2,003,868; June 4.
Base plate and fastener, Railroad. W. E. Wenner. 2,003,498; June 4.
Beam hanger. C. M. Markham. 2,003,635; June 4.
Bearing: *See*—
Axle bearing.
High speed bearing
Bearing and forming same. R. R. Searles. 2,003,906; June 4.
Bearing assembly for drills, Antifriction. C. E. Reed. 2,004,013; June 4.
Bearing assembly, Roller. A. H. Oelkers. 2,003,605; June 4.
Bell retort furnace. A. W. Machlet. 2,003,970; June 4.
Bell ringer. R. J. Burrows and A. O. Williams. 2,003,340; June 4.
Belt fastener. S. Amantea. 2,003,987; June 4.
Benzyl piperidine-1-carbothionolate and preparing the same. D. F. Twiss and F. A. Jones. 2,003,703; June 4.
Beverage cooling and dispensing device. G. A. Ghoor. 2,003,532; June 4.
Beverage maker. A. D. Olds. 2,003,490; June 4.
Binding strips, Apparatus for making metal. H. H. J. Kruse. 2,003,448; June 4.
Biophysical process for preserving and conserving fermentable liquids. P. C. Clifford and J. Crespo y Garcia. 2,003,644; June 4.
Bit: *See*—
Rock disk bit.
Rotary disk bit.
Blade, Safety. N. Testi. 2,003,761; June 4.
Block for draft gears, Follower. H. E. Bartsch. 2,003,989; June 4.
Board: *See*—
Drawing board.
Ironing board.
Boats, Propulsion of. W. Riseam. 2,003,904; June 4.
Body trim structure. A. J. Smith. 2,003,396; June 4.
Boiler: *See*—
Superheater boiler.
Boiler. N. Artsay. 2,003,419; June 4.
Boiler. T. B. Stillman. 2,004,058; June 4.
Boiler and water-heater, Steam. E. F. Spanner 2,003,980; June 4.
Boiler construction. S. E. Parker. 2,003,491; June 4.
Bonding composition, Colloidal inorganic. W. A. Boughton. 2,004,030; June 4.
Bone and the like, Imitation. M. B. Salisbury. 2,003,958; June 4.
Book chart, and reference holder. F. E. Headington. 2,003,746; June 4.
Book stack. R. C. Walker. 2,003,670; June 4.
Book stack construction. R. C. Walker. 2,003,671; June 4.
Boring tool. A. Thomas. 2,003,402; June 4.
Bottle and apparatus therefor, Capping. A. G. Enock. 2,003,682; June 4.
Bottle attachment. G. R. Johnson. 2,003,594; June 4.
Bottle closure. R. Weisbach. 2,003,873; June 4.
Bottle making process, High speed. H. W. Ingle. 2,003,940; June 4.
Bottles, Apparatus for cleaning. P. S. Pittenger. 2,003,668; June 4.
Box: *See*—
Outlet box.
Vanity box.
Shoeshine box.
Box construction. D. R. Palmer. 2,003,388; June 4.
Brake: *See*—
Hydraulic brake.
Brake. T. P. Chase. 2,004,062; June 4.
Brake beam safety device. E. G. Busse. 2,003,499; June 4.
Brake beam support. H. W. Ekholm and E. G. Busse. 2,003,530; June 4.
Brake drum, Composite. D. J. Campbell. 2,004,061; June 4.
Brake mechanism, Hand. M. A. Frud'homme. 2,003,607; June 4.
Brake mechanism, Hydraulic. G. F. McDougall. 2,004,078; June 4.
Braking system. W. F. Oliver. 2,003,972; June 4.
Braun tube. K. Schlesinger. 2,003,775; June 4.
Brush and comb combination for packets. S. M. Flegel. 2,004,044; June 4.
Building block machine. L. Gelbman. 2,003,632; June 4.
Buildings, Waterproofing. E. H. White. 2,003,618; June 4.
Bumper, Mine car. W. T. Dalton. 2,003,645; June 4.
Burner: *See*
Oil burner.
Burner manipulating mechanism, Oil. E. E. Allyne. 2,003,413; June 4.
Butter package and making same. A. Lowenfels. 2,003,600; June 4.
Cable connecter. W. A. Bonnell. 2,003,676; June 4.
Cable, Electric. G. Carlson and H. G. Knoderer. 2,003,940; June 4.
Cable terminal. Le R. W. Kelsay. 2,003,447; June 4.
Cable, Weatherproof armored. G. Carlson. 2,003,991; June 4.
Cable, Weatherproof armored. H. G. Knoderer. 2,004,004; June 4.
Cables, System and apparatus for reeving counterweight. R. W. Kaltenbach. 2,003,715; June 4.
Cables to batteries, Connecting. C. E. Hoover. 2,004,049; June 4.
Cake and method and mold for making the same, Pastry. V. A. Clement. 2,003,578; June 4.
Calcium acetylsalicylate, Preparation of. W. H. Lawrence, Jr. 2,003,374; June 4.
Camera, Motion-picture. K. Morsbach. 2,003,971; June 4.
Cap, Bathing. W. Carter. 2,003,920; June 4.
Cap, Beverage bottle. L. J. Strauss. 2,004,018; June 4.
Cap, Collapsible tube. A. Goss. 2,003,506; June 4.
Cap for cans or the like, Removable. S. O. Paull. 2,003,460; June 4.

Cap for drinking glasses. R. I. Stubblefield. 2,003,657; June 4.
Cap former, Bottle. G. A. Buttress. 2,003,643; June 4.
Car, Mine. C. P. Daniel. 2,003,878; June 4.
Car, Railway. V. Willoughby. 2,003,916; June 4.
Carbon-dioxide from flue gases, Production of. R. J. Claret. 2,003,922; June 4.
Carburetor. G. F. Hodges and F. B. Cota. 2,003,363; June 4.
Carburetor. G. L. Kennedy. 2,004,003; June 4.
Carburetor. C. A. Rosier. 2,003,313; June 4.
Carburetor. H. H. Timian. 2003,403; June 4.
Card, Memorandum. L. B. Kuhn. 2,003,449; June 4.
Carrier: *See*—
Spare wheel carrier.
Casings, Repairing tire. W. H. Criswell. 2,004,037; June 4.
Cavities in the ground or in structures, Water-proofing or filling. L. Cheverillon. 2,003,921; June 4.
Cellulose derivative composition. E. F. Izard. 2,003,295; June 4.
Cellulose esters of the partly esterified polybasic acids. A. Welhe. 2,003,408; June 4.
Cellulose or cellulosic materials, Manufacture of. H. Dreyfus. 2,003,347; June 4.
Cement product and making the same. H. R. Starke. 2,003,656; June 4.
Centrifugal fractionating method and apparatus. W. J. Podbielniak. 2,003,308; June 4.
Centrifugal separator. G. H. Andersson. 2,003,621; June 4.
Centrifugally controlled valve. J. W. Hale. 2,003,857; June 4.
Ceramic article and making the same, Lightweight. B. Townshend. 2,003,319; June 4.
Chlorination process and product thereof. H. B. Hass and E. T. McBee. 2,004,072; June 4.
Chuck. L. B. Hester. 2,003,747; June 4.
Chocolate or the like, Method of and apparatus for conditioning. W. A. Mohr. 2,004,009; June 4.
Cigarette vending machine. W. Jay and L. Pengilly. 2,003,489; June 4.
Circuit breaker. C. V. Glaimo. 2,003,686; June 4.
Circuit controlling apparatus, Time delay. W. D. Cockrell 2,003,992; June 4.
Circuit, Regulator. E. R. Morton. 2,003,457; June 4.
Circulating system for retreading mold pressure bags. H. J. Woock. 2,003,566; June 4.
Clarification, Apparatus for. W. A. Gilchrist. 2,003,357; June 4.
Cleaner floor tool, Suction. F. Riebel, Jr. 2,003,312; June 4.
Clip: *See*—
Cover attaching clip.
Clock and radioreceiver, Combination. H. R. Vanbeverter. 2,003,405; June 4.
Clock, Modulated alarm. D. S. Ingraham. 2,003,785; June 4.
Closure for containers. D. E. Baxter. 2,004,027; June 4.
Closure for vacuum cleaner bags. J. W. Meek. 2,003,720; June 4.
Clothes spinner. R. H. Jordan and P. E. Hochstetter. 2,004,004; June 4.
Clutch: *See*—
Automatic clutch.
Free wheeling clutch.
Clutch and brake mechanism for winches. P. Wilsing. 2,003,795; June 4.
Clutch device, Automatic. H. H. Vail. 2,003,321; June 4.
Clutch for punch presses. E. J. Dreis. 2,003,529; June 4.
Coal, Cleaning and sizing of. A. P. Nesbit. 2,003,899; June 4.
Coil antenna, Direction finding. A. Leib. 2,003,375; June 4.
Coin testing device. E. Graf. 2,003,771; June 4.
Compass, Fluid. E. Fischel and G. Rieper. 2,003,929; June 4.
Compensating device acting between the different pneumatic mountings of a vehicle. J. Mercier. 2,003,511; June 4.
Composition and preparing same. R. L. Falls. 2,003,789; June 4.
Composition for use in soldering chain links. J. E. Pilling. 2,003,805; June 4.
Composition of matter. E. W. Reid. 2,003,655; June 4.
Compressor. E. W. Swartwout. 2,003,476; June 4.
Concentrator, Centrifugal. C. C. Baldwin and V. S. Miller. 2,003,747; June 4.
Concrete block making apparatus. F. J. Straub. 2,003,702; June 4.
Concrete, Waterproofing. E. W. Scripture, Jr. 2,003,613; June 4.
Condenser to a main condenser, Applying a trimming. E. D. Koepping. 2,003,545; June 4.
Conductor, Insulated. A. S. Gray. 2,003,772; June 4.
Conduit construction, Underground. M. Craighead. 2,003,580; June 4.
Conduits exposed to high temperatures, Protection of metallic. L. B. Skinner. 2,003,725; June 4.
Confection coating machine. A. L. Bausman. 2,003,851; June 4.
Confection, Frozen. M. Schnaier. 2,003,612; June 4.
Confections, Apparatus for and method of processing frozen. M. Schnaier. 2,003,518; June 4.
Connecter: *See*—
Cable connecter.
Connection for frame members, Metal. E. Galante. 2,003,531; June 4.
Contact devices for radio sockets and the like, Making. C. L. Knutsch. 2,004,076; June 4.
Contactor indicator. T. C. Henneberger. 2,003,443; June 4.
Container: *See*—
Metal container.
Container. A. O. Daller. 2,003,925; June 4.
Container. C. P. Wellman. 2,003,326; June 4.
Container cover. A. F. Pityo and J. F. Mitchell. 2,003,307; June 4.
Containers, Forming sealed. C. E. McManus. 2,004,079; June 4.
Control system for burners producing high temperature flames. G. D. Bower. 2,003,624; June 4.
Control system for radio broadcast receivers, Remote. A. S. Blatterman. 2,003,877; June 4.
Conveyer for kilns. L. L. Ladd. 2,003,450; June 4.
Cooking apparatus. G. Van Voorst, Jr. 2,004,024; June 4.
Cooler: *See*
Oil cooler.
Cop winding machine. W. Reiners and G. Kahlsch. 2,003,903; June 4.
Copper and copper alloys, Making deoxidized. H. C. Jennison and R. B. Montgomery. 2,003,889; June 4.
Copper, Making deoxidized. H. C. Jennison and R. B. Montgomery. 2,003,296; June 4.
Corn shock holding and binding device. E. L. Bailey. 2,003,874; June 4.
Cotton plant cellulose, Utilization of. G. H. Palmer. 2,003,696; June 4.
Coupler. A. H. Oelkers. 2,003,582; June 4.
Coupling: *See*—
Flexible coupling.
Hose coupling.
Coupling. W. J. McCarthey and S. T. Bachus. 2,004,077; June 4.
Coupling for canvas tubing. F. M. Bins. 2,003,732; June 4.
Cover: *See*—
Container cover.
Cover attaching clip. Box. C. Gimbel. 2,003,856; June 4.
Cover trimming machine. C. G. Brostrom. 2,003,338; June 4.
Crate. G. M. Leghorn. 2,003,717; June 4.
Cream, Treatment of. F. G. Cornell, Jr. 2,003,427; June 4.
Crossfooter register. H. A. Foothorap. 2,003,997; June 4.
Crystalline alumina and a composition of matter containing the same, Making. R. R. Ridgway. 2,003,867; June 4.
Cup for lenses and the like, Retaining. R. Malcom. 2,003,379; June 4.
Current contact apparatus, Centrifugal counter. W. J. Podbielniak. 2,004,011; June 4.
Cut-out, Fusible. D. L. Römberg. 2,003,977; June 4.
Cutter: *See*
Pipe cutter.
Cutter blade holder. B. and S. Tewelow. 2,003,497; June 4.
Cutting machines, Feeding mechanism for. R. M. Tucker. 2,004,021; June 4.
Cylinder head for internal combustion engines. D. E. Anderson. 2,003,571; June 4.
Data sheet holder. G. D. Cox. 2,003,854; June 4.
Dental appliance. J. E. Meadows. 2,003,692; June 4.
Dental plate. E. Kaczmarek. 2,003,891; June 4.
Derrick, Tractor. R. G. Le Tourneau. 2,003,599; June 4.
Die: *See*
Wire drawing die.
Die sinking machine, Hydraulically controlled automatic. B. Sassen. 2,003,557; June 4.
Direction indicator. R. S. Miller. 2,004,007; June 4.
Directional receiver. W. Kiblewind. 2,003,372; June 4.
Discharge tube, Electric gas filled. H. Rinia and H. J. M. van Embden. 2,003,468; June 4.
Disk jointer, Self-aligning. A. H. Glaves. 2,003,831; June 4.
Dispenser: *See*—
Tube paste dispenser.
Dispensing and game playing machine. C. R. Dumble. 2,003,349; June 4.
Dispensing device. W. H. Scott. 2,004,015; June 4.
Distillation, Method and apparatus for. J. Perl. 2,003,306; June 4.
Door, Car. A. Campbell and G. B. Willard. 2,003,577; June 4.
Door closer. R. S. Potter. 2,003,669; June 4.
Door control, Motor operated. M. V. Green. 2,003,534; June 4.
Door fastener, Chain type. A. J. Schulz and H. H. Schulz. 2,003,473; June 4.
Doorlatch. R. C. Reito. 2,003,731; June 4.
Door opening device, Electric. M. V. Green. 2,003,533; June 4.
Door operating apparatus. E. Gauthier. 2,003,484; June 4.
Door operator. A. J. and J. Kinsler. 2,003,652; June 4.
Door operator. J. C. Tamsitt. 2,003,399; June 4.

Door, Revolving. E. Peremi and C. Kish. 2,003,305; June 4.
Dough divider for doughnut machines and the like. P. J. Toews. 2,003,617; June 4.
Draft gear. A. H. Oelkers. 2,003,583; June 4.
Drain, Floor. L. Goodhart. 2,003,770; June 4.
Drawer, Filing. F. A. Schmitz. 2,004,057; June 4.
Drawing board. R. L. Sorensen. 2,003,841; June 4.
Drier: *See*—
Hair drier.
Drill steel retainer. J. C. Curtis. 2,003,924; June 4.
Driving mechanism for producing gyratory movement. G. H. Hobebrand. 2,003,441; June 4.
Duplicating apparatus. W. Ritzerfeld. 2,003,469; June 4.
Dyestuffs of the series triarylmethane. O. Wahl, W. and R. Fingado. 2,003,407; June 4.
Elevator: *See*—
Residence elevator.
Earth-nut kernels, Treating. P. Ammann. 2,003,415; June 4.
Earth working implement. J. Svatos. 2,003,871; June 4.
Easel construction. H. M. Fancher. 2,003,482; June 4.
Egg grading machine. O. A. Studley and K. R. Gilbert. 2,003,561; June 4.
Electric controlling apparatus. F. G. Logan. 2,003,945; June 4.
Electric heater. G. Fredrickson. 2,003,855; June 4.
Electric heater, Portable. G. A. Johnson. 2,003,714; June 4.
Electric motor. T. V. Dillström, P. A. Åstradsson, and F. Dahlgren. 2,003,647; June 4.
Electric signal and control device. C. B. Bartley. 2,003,706; June 4.
Electrical connecter and fixture support. H. D'Olier, Jr. 2,003,966; June 4.
Electrical connection. W. McGinnis and Z. Wirt. 2,003,788; June 4.
Electrical outlet receptacle. J. F. Stark. 2,003,909; June 4.
Electrical protective apparatus. G. N. Lemmon. 2,003,298; June 4.
Electricity meter. J. Indergrand. 2,003,939; June 4.
Electrode, Spark plug. D. W. Randolph and J. T. Ford. 2,003,467; June 4.
Electron tube. F. Michelssen and J. Richter. 2,003,301; June 4.
Emulsion, Bituminous. K. E. McConnaughay. 2,003,860; June 4.
Engine: *See*—

Contactor indicator. Liquid level indicator.
Direction indicator. Weight indicator.
Indicator for zeolite softeners. O. R. Sweeney and T. B. Clark. 2,003,760; June 4.
Indol compound. F. Ballauf and A. Schmelzer. 2,003,421; June 4.
Ink fountain regulator. H. C. Jordihoy. 2,003,544; June 4.
Inspection device. R. V. Terry. 2,003,401; June 4.
Instrument for enciphering and deciphering. N. A. Smith. 2,003,812; June 4.
Internal combustion engine. H. D. Church. 2,003,677; June 4.
Internal combustion engine. O. E. Szekely. 2,003,563; June 4.
Ironing board. A. K. McLeod. 2,003,604; June 4.
Ironing board. J. W. Richardson. 2,003,806; June 4.
Ironer, Double side. F. J. Couch. 2,003,993; June 4.
Ironing machines, Feed board attachment for flat work. A. J. Randlett 2,003,902; June 4.
Jack and wheel and gear puller, Combined. F. L. and J. K. Fryer. 2,003,648; June 4.
Jacking attachment. M. Dwork. 2,003,502; June 4.
Joint: *See*—
Universal joint.
Joints, Assembling resilient. H. W. Alden and L. R. Buckendale. 2,003,412; June 4.
Ketones and product, Preparing alkylated aromatic. H. A. Bruson and O. Stein. 2,004,069; June 4.
Keyboard. H. Luedtke. 2,003,894; June 4.
Key holder. R. C. Root. 2,003,553; June 4.
Keying, High speed. L. L. Young. 2,003,329; June 4.
Kiln. L. L. Ladd. 2,003,451; June 4.
Knitting machine. M. Zimic. 2,003,674; June 4.
Laminated material. R. S. Reynolds. 2,003,494; June 4.
Laminated product, Bendable. G. E. Landt. 2,003,752; June 4.
Lamp: *See*—
Automatic arc lamp. Gaseous conduction lamp.
Lamp and socket, Quick detachable. N. L. Guljas, Jr. 2,003,507; June 4.
Lantern. R. D. Evans. 2,003,352; June 4.
Lead sulphite mineral, Treating. F. E. Gregory and R. L. Hallows. 2,003,711; June 4.
Leg construction and locking means therefor, Folding. J. K. Mitchell. 2,003,836; June 4.
Leg construction, Folding. J. K. Mitchell. 2,003,835; June 4.
Lens. R. N. Falge. 2,003,804; June 4.
License plate holder, Automobile. C. R. Davis. 2,003,343; June 4.
Lid, Container. E. S. Irelan. 2,003,540; June 4.
Lidding machine. H. Paxton. 2,003,304; June 4.
Lifting and propelling mechanism for vehicles. T. E. Burkhardt. 2,003,627; June 4.
Light: *See*—
Pilot light.
Lighting apparatus. H. M. Cavanaugh. 2,003,342; June 4.
Lightweight article and manufacturing the same. E. R. Powell. 2,003,309; June 4.
Line system, Repeatered. H. S. Black. 2,003,964; June 4.
Liquid composition. H. L. Cox. 2,003,429; June 4.
Liquid level indicator. W. A. Reichel. 2,003,759; June 4.
Liquid medium for heat and pressure transfer. H. L. Cox and L. J. Clapsadle. 2,003,662; June 4.
Liquid tank. J. J. Masench. 2,003,808; June 4.
Liquids, Apparatus for treating. J. C. Gordon. 2,003,589; June 4.
Liquids, Electrolytic treatment of. K. Kaisser. 2,004,065; June 4.
Lock and release for switchboards, Automatic signal. H. Koch. 2,003,689; June 4.
Lock for vehicle bodies, Automatic rear door. J. C. Sell. 2,003,394; June 4.
Lock with electrical switch control, Combination. G. T. Hosking. 2,003,650; June 4.
Locomotive and tender. J. W. Myers. 2,003,455; June 4.
Loom. E. W. Bullard. 2,004,031; June 4.
Lubricant. A. H. Kelling. 2,003,368; June 4.
Lubricant sealed seat. A. K. Sorensen. 2,003,840; June 4.
Lubricating system and installing the same. R. E. Petrie. 2,003,389; June 4.
Lubricating system and the constituent parts thereof. J. Bijur. 2,003,281; June 4.
Machine for applying a web to a strand. C. B. Fantone and E. G. Parvin. 2,003,354; June 4.
Machine for assembling spark plugs. H. Rabezzana. 2,003,465; June 4.
Machine for attaching keys to containers. A. A. Trombly. 2,003,321; June 4.
Machine for automatically sorting plates or other articles according to weight. J. O. Powell. 2,003,722; June 4.
Machine for cutting and resharpening the reeds of wind instruments. P. Dulac. 2,003,348; June 4.
Machine for manufacturing moistureproof cable coverings. G. Zapf. 2,003,673; June 4.
Machine for reclaiming yarn from knitted fabric. H. Westkott. 2,003,777; June 4.
Machine for use in the manufacture of shoes. A. R. Morrill. 2,003,512; June 4.
Magnesium, Producing substantially pure. F. Hansgirg. 2,003,487; June 4.
Magnetic from non-magnetic material, Apparatus for removing. R. E. Crockett. 2,003,430; June 4.
Manifold and connection, Exhaust. H. A. Gehres. 2,003,485; June 4.
Manifold writing device. H. D. Black and C. F. Webb. 2,004,028; June 4.
Match book. J. F. St. John. 2,003,870; June 4.
Materials, Method of and apparatus for working. T. Corbeels. 2,003,426; June 4.
Measuring apparatus. E. D. Doyle. 2,003,681; June 4.
Measuring instrument, Universal. G. Bozzer and J. Haversin. 2,003,626; June 4.
Meat package. H. H. McKee. 2,003,862; June 4.
Mercury boiler headers with casings. H. J. Kerr. 2,003,786; June 4.
Metal body resistant to fluctuating stresses. H. W. Graham and S. L. Case. 2,003,710; June 4.
Metal container. C. Hammer. 2,003,784; June 4.
Metals and producing the same, Clad. L. F. Ehrke. 2,003,481; June 4.
Meter: *See*—
Electricity meter. Piston meter.
Fluid flow meter.
Meter. E. L. Canfield. 2,003,919; June 4.
Metering through the medium of the versed sine, Apparatus for. E. S. Smith, Jr. 2,003,839; June 4.
Microscope. H. N. Ott. 2,003,387; June 4.
Milking machine check valve chamber. C. H. Hapgood. 2,003,590; June 4.

Milking machine connecter and pneumatic and electric conductor therefor. S. J. Erling. 2,003,586; June 4.
Mill: *See*—
Tube rolling mill.
Milling machine. W. D. Archea and M. Romaine. 2,003,572; June 4.
Milling machine. W. Hucal. 2,003,936; June 4.
Mining system and apparatus. G. A. Yeld. 2,003,779; June 4.
Mirror, Illuminated. E. W. North. 2,004,054; June 4.
Mixing apparatus. A. C. Gilbert. 2,003,931; June 4.
Mixing apparatus. A. C. Gilbert and A. A. Arnold. 2,003,829; June 4.
Moistener. T. I. Brown. 2,003,736; June 4.
Moisture extraction. H. L. Smith, Jr. 2,003,397; June 4.
Mold. A. R. Finch. 2,003,432; June 4.
Mold manufacture, Permanent. L. F. Nock. 2,003,864; June 4.
Mop. W. Evans. 2,003,286; June 4.
Mothproof bag. J. W. Wenzell. 2,003,704; June 4.
Motor: *See*—
Electric motor.
Motor and power transmitter, Unitary electric. W. J. Peets and I. F. Webb. 2,004,055; June 4.
Mount, Horn. E. W. Menger. 2,003,896; June 4.
Mounting for rimless spectacles and eyeglasses. M. R. McDaniel. 2,004,005; June 4.
Mounting frame for dental articulators. B. F. Tommire. 2,003,727; June 4.
Muffler. T. K. Corless. 2,003,500; June 4.
Napkin embossing, printing, and folding machine, Paper. J. S. Burt. 2,004,032; June 4.
Necktie, Adjustable. M. Halpern and W. Mayer. 2,003,359; June 4.
Necktie holder. H. Cohn. 2,003,740; June 4.
Needle package, Hypodermic. P. C. Kerk. 2,004,050; June 4.
Nozzle holder. J. A. Skoglund. 2,003,837; June 4.
Nut, Self locking. H. A. Hayden. 2,003,591; June 4.
Oar. V. Ankarlo. 2,003,418; June 4.
Oboe mouthpiece. A. O. Buhren. 2,003,576; June 4.
Offset printing press. H. M. Barber. 2,003,798–800; June 4.
Oil burner. W. M. Esterling. 2,003,827; June 4.
Oil burner. J. J. Sloyan. 2,003,700; June 4.
Oil cooler. J. Flockhart. 2,003,744; June 4.
Oil, Cracking hydrocarbon. J. B. Heid. 2,003,537; June 4.
Oil, Dehydrating pine. S. G. Norton. 2,003,458; June 4.
Oil, Dewaxing hydrocarbon. E. F. Pevere. 2,003,667; June 4.
Oil from the peels of citrus fruit, Method and machine for extracting. W. A. Pipkin. 2,004,056; June 4.
Oil well drilling mud. T. K. Stinson. 2,003,701; June 4.
Oils, Apparatus for the treatment of hydrocarbon. W. F. Sims and V. U. Cloer. 2,003,724; June 4.
Oils, Cracking hydrocarbon. J. B. Heid. 2,003,536; June 4.
Oils, Treatment of hydrocarbon. W. M. Stradford. 2,003,776; June 4.
Olefine derivatives, Making. W. B. Scott, L. S. Bovler, and E. D. Matthews. 2,004,084; June 4.
Operating in a spinning or other room, Method and apparatus for. W. B. Walker. 2,003,911; June 4.
Optical appliance. O. W. Lee. 2,003,806; June 4.
Orange reamer and beater, Combined. R. R. Smith. 2,003,521; June 4.
Orchard or field heating and irrigating apparatus. M. E. Seeber. 2,003,520; June 4.
Oscillator, Constant frequency. E. L. Koch. 2,003,371; June 4.
Outlet box. M. Marians. 2,003,602; June 4.
Oven, Coking retort. J. Becker. 2,003,574; June 4.
Oven, Coking retort. J. van Ackeren. 2,003,565; June 4.
Oven protector. E. A. Rowe. 2,003,555; June 4.
Overspeed device. C. M. Bovard. 2,003,478; June 4.
Over-voltage protective device. R. R. Pittman. 2,003,954; June 4.
Packing for pistons. G. Christenson. 2,003,769; June 4.
Packing material, Thermo-nonconducting water repellent. C. A. Black. 2,003,335; June 4.
Pad: *See*—
Heating pad.
Padding, Manufacture of upholstery. J. A. Howard. 2,003,935; June 4.
Pads, Production of laundry. J. H. Daughdrill. 2,003,741; June 4.
Paper fastener. O. A. Ross. 2,003,554; June 4.
Parking device for automobiles. W. H. Harless. 2,003,361; June 4.
Pattern on dark colored skins or leathers, Producing. H. Ennis. 2,004,043; June 4.
Pavement with natural aggregates, Constructing asphalt. C. C. Jamieson. 2,003,888; June 4.
Paving material and preparing it. K. E. McConnaughay. 2,003,861; June 4.
Peat or peat forming materials more especially in connection with the production of peat powder, Harvesting of. T. Grim. 2,004,047; June 4.
Pedal, Foot accelerator. W. L. Kramer. 2,003,751; June 4.
Peel, Baker's. F. A. Jawort. 2,003,541; June 4.
Pen, Fountain. H. L. Carman. 2,003,479; June 4.
Pendent for watches and the like. L. L. Burghoff. 2,003,781; June 4.
Pentaerythrite, Producing. E. Naujoks. 2,004,010; June 4.
Perhydrocarbazoles, Heterocyclically substituted. M. Bockmühl, W. Krohs, and G. Ehrhart. 2,003,623; June 4.
Phenol, Production of. L. Kuhl. 2,003,941; June 4.
Phonograph. L. Goldhammer. 2,003,434; June 4.
Phonograph, Automatic. F. A. Brandstrom. 2,003,424; June 4.
Phonographic playing machine, Selective. P. H. Smyth, Jr. 2,004,016; June 4.
Photoelectric tube. J. H. de Boer and M. C. Teves. 2,003,344; June 4.
Photographic apparatus. C. Miller. 2,003,754; June 4.
Photographic copying. C. E. Lundberg. 2,003,691; June 4.
Photography, Auto-collimated objective for color. G. Grosset. 2,003,881; June 4.
Piano accordion. F. Piatanesi. 2,003,953; June 4.
Piano chord player. D. M. Moore. 2,003,384; June 4.
Picture apparatus, Portable talking motion. R. P. May. 2,003,381; June 4.
Picture set, Sound. F. L. Hunt. 2,003,937; June 4.
Piles, Forming. H. E. Satre. 2,003,393; June 4.
Pilot light. V. R. Despard. 2,004,039; June 4.
Pin: *See*—
Headed pin.
Pipe: *See*—
Tobacco pipe.
Pipe connection and making same, Threadless. I. T. Hook. 2,003,488; June 4.
Pipe cutter. W. F. Erriz and G. M. Pfundt. 2,003,630; June 4.
Pipe cutting device. R. J. Williamson. 2,003,619; June 4.
Pipe elbow. D. W. Hickey. 2,003,538; June 4.
Pipe tamper. J. C. Anderson. 2,003,416; June 4.
Piston. F. N. Nutt. 2,003,459; June 4.
Piston and ring. C. B. Welch. 2,003,764; June 4.
Piston meter. W. H. Parker and N. J. Seibert. 2,003,901; June 4.
Planting machine. L. and B. Poll. 2,003,390; June 4.
Plaque. J. V. Cavalero. 2,003,824; June 4.
Plug and receptacle, Attachment W K. Mess. 2,003,948; June 4.
Plug fuse with a replaceable fuse link. J. Rosenbaum. 2,003,792; June 4.
Plugs, Making spark. H. Rabozzana. 2,003,464; June 4.
Poise device. C. Cadiet. 2,004,054; June 4.
Position controlling device. E. C. Wente. 2,003,913; June 4.
Pot particularly for stereotype casting machines, Melting. R. Zanner. 2,003,796; June 4.
Poultry feeding and watering device. C. L. Thomsen. 2,003,318; June 4.
Power control. P. W. Eells. 2,003,351; June 4.
Power press. R. Temple, Jr. 2,003,843; June 4.
Power supply system for electric shovels and the like. C. R. Hathaway. 2,003,688; June 4.
Power transmission. C. B. Strandgren. 2,003,317; June 4.
Power transmission. C. C. Swetenham. 2,004,019; June 4.
Preparation of composite substances. A. S. Riggs. 2,003,603; June 4.
Preparation of quinazarine. H. R. Lee. 2,003,859; June 4.
Press: *See*—
Offset printing press. Printing press.
Power press.
Pressing machine, Table model E. Davis and A. Kagi. 2,003,501; June 4.
Pressure regulating and filtering device for fluids. V. Ey. 2,003,828; June 4.
Printing. R. Tomkin and J. S. Wilson. 2,003,960; June 4.
Printing and punching record controlled machine. M. Maul. 2,003,636; June 4.
Printing plate base. H. W. Hacker. 2,003,712; June 4.
Printing press. H. A. W. Wood. 2,003,639; June 4.
Printing presses, Feeding mechanism for. H. Irmscher. 2,003,364; June 4.
Process and apparatus for manufacture of nitric. I. Hechenbleikner. 2,004,000; June 4.
Projection unit. F. N. Jones. 2,003,890; June 4.
Propane and its partially chlorinated derivatives, Chlorinating. H. B. Hass and E. T. McBee. 2,004,073; June 4.
Propeller shaft. S. Jencick. 2,003,508; June 4.
Protecting device for automobile upholstery. W. C. Groff and W. C. Siebens. 2,003,435; June 4.
Protective device for elevators and elevator shaftways. L. A. Gaudry. 2,003,588; June 4.
Protector: *See*—
Oven protector.
Pulverulent material, Apparatus for conveying and conditioning. E. J. Lauterbur and F. N. Lauterbur 2,003,716; June 4.
Puller: *See*—
Hydraulic puller.
Pump: *See*—
Fuel pump. Rotary pump.
Pump. A. C. Durdin, 3d. 2,003,350; June 4.

Shield, Guy. E. St. John. 2,003,959; June 4.
Shock absorber. H. E. Buckles and J. N. Mahoney. 2,003,823; June 4.
Shoes, Method and material for repairing. R. R. Bollman and C. L. Ornes. 2,004,059; June 4.
Shoeshine box. B. Azoubar. 2,003,279; June 4.
Sign: *See*—
Gas price sign.
Signal: *See*—
Warning signal.
Signalling. W. T. Ditcham. 2,003,285; June 4.
Signalling and power supply system. C. W. Green and H. S. Black. 2,003,967; June 4.
Silver roll forming machine. G. N. and J. Fraser. 2,004,045; June 4.
Skiving machine. A. Klick. 2,003,369; June 4.
Sleeve-valve mechanism for internal combustion engines. A. H. R. Fedden. 2,003,743; June 4.
Slitting mechanism for paper making machines. C. W. Valentine. 2,003,404; June 4.
Socket, Weatherproof. C. Batcholts. 2,003,622; June 4.
Soda solutions, Treating caustic. H. M. Broadhurst. 2,003,734; June 4.
Sodium carbamate and ammonium chloride, Production and recovery of. R. B. MacMullin. 2,003,378; June 4.
Sole and like product, Inner. M. J. Vittengl. 2,003,961; June 4.
Solution components and effecting separation thereof, Separating. J. D. Jordan. 2,003,543; June 4.
Sorting machine. P. Rieger. 2,003,790; June 4.
Sound actuated device. H. R. Widen. 2,003,765; June 4.
Sound amplification, Adjusted. C. M. R. Balbi. 2,003,875; June 4.
Sound reproducer and projector, Pneumatic. W. C. Eaves and C. F. Dilks. 2,003,880; June 4.
Spare wheel carrier. F. C. Burnett and G. S. Adams. 2,003,853; June 4.
Spark generating system. D. W. Randolph and H. Rabozzana. 2,003,466; June 4.
Spectacle frames, Forming. A. J. Wolff. 2,003,846; June 4.
Speed regulator, Air controlled. R. H. Ranger, V. T. Braman and C. E. Nelson. 2,003,552; June 4.
Spool. E. G. Ellstrom and W. P. Hicks. 2,003,663; June 4.
Spray coating machine. C. C. Willis. 2,003,778; June 4.
Spray head. G. H. Buzzard and R. W. Tracy. 2,004,033; June 4.
Spray wheel. W. S. Bowen. 2,003,575; June 4.
Spring: *See*—
Wire spiral spring.
Stabilizer for vehicles. G. V. Woodling. 2,004,068; June 4.
Stage, Double set. W. C. Barnard. 2,003,573; June 4.
Stairway. J. Birtcher. 2,003,876; June 4.
Stamp, Time. C. D. Lake. 2,003,787; June 4.
Stand: *See*—
Adjustable plant stand.
Starter, Engine. R. P. Lansing. 2,003,452; June 4.
Starting mechanism Automatic. L. K. Loehr and W. E. Burdick. 2,004,053; June 4.
Steam power installation for momentary reserve. J. Ruths. 2,003,315; June 4.
Stereoscope. H. A. de Vry. 2,003,480; June 4.
Sterilizing apparatus. K. W. Karnopp. 2,003,651; June 4.
Stick handling mechanism. M. Schmaler. 2,003,517; June 4.
Stoker. M. W. Pool and E. A. Turner. 2,003,462; June 4.
Stoker, Automatic. J. P. Norton. 2,003,385; June 4.
Stoker fuel deflector. A. Bayreuther. 2,003,422; June 4.
Stoking mechanism. E. Ryan and E. R. Funk. 2,003,472; June 4.
Stop device, Automatic. C. B. Fantone and R. M. Jameson. 2,003,353; June 4.
Stop motion for braiding machines. J. F. Schenck, Sr., and P. S. Monty. 2,003,978; June 4.
Stop motion for knitting machines. A. Gruna and F. Radhuber. 2,003,774; June 4.
Stove and the like, Camp. C. L. Pearson. 2,003,974; June 4.
Strainer. O. Hannesschlager. 2,004,071; June 4.
Strainer. L. J. Thomas. 2,003,658; June 4.
Strap: *See*—
Grip strap.
Stretcher, Foldable. F. Tintner. 2,003,844; June 4.
Sugar, Production of pure white. I. Bloch. 2,003,965; June 4.
Superheater boiler. W. H. Armacost. 2,003,818; June 4.
Superheater, Oil field. F. I. Epley. 2,003,826; June 4.
Superheater support. R. Smith. 2,003,838; June 4.
Support: *See*—
Brake beam support. Superheater support.
Screen plate support.
Support. J. H. Woodberry. 2,003,327; June 4.

Support for brake rods, Safety. S. A. Crone. 2,003,802 ; June 4.
Suspender and assemblage, Cord elastic. L. W. Joyce. 2,003,730 ; June 4.
Switch : *See*—
Fuse switch.
Switch operating apparatus, Railway. W. C. McWhirter. 2,003,382 ; June 4.
Switching mechanism, Electric. D. A. Christian. 2,003,782 ; June 4.
Table : *See*—
Game table.
Table for fourdrinier machines, Vertically adjustable. L. L. Laperrouse. 2,003,753 ; June 4.
Table or similar article of furniture. V. F. Blake. 2,003,821 ; June 4.
Table with foldable leaves. W. A. Duncan. 2,003,926 ; June 4.
Tack supplying device. W. T. Roberts. 2,003,391 ; June 4.
Tank : *See*—
Liquid tank.
Tappet. S. Jencick. 2,003,509 ; June 4.
Tarnishing of silverware, Method and material for preventing the. K. H. Barnard and H. F. Kane. 2,003,333 ; June 4.
Telegraph system. E. F. Watson. 2,003,325 ; June 4.
Telegraphone system, Magnetic. C. N. Hickman and E. C. Wente. 2,003,968 ; June 4.
Telephone toll apparatus. G. A. and W. W. Long. 2,003,948 ; June 4.
Telephone transmission system. O. B. Jacobs. 2,003,969 ; June 4.
Television receiving and projecting means and method. L. de Forest. 2,003,680 ; June 4.
Television system. J. W. Horton. 2,003,294 ; June 4.
Temperature controlling device. V. L. Ronci. 2,003,956 ; June 4.
Tension controlling means. H. A. W. Wood. 2,003,569 ; June 4.
Tension testing device for spring contacts. J. E. Stephenson. 2,003,910 ; June 4.
Terminal cleaning tool, In and out. I. E. Coffey. 2,003,629 ; June 4.
Terminal connection for electrical heating elements. J. A. Boyer. 2,003,625 ; June 4.
Terpene product and producing same, Sulphonated. A. L. Rummelsburg. 2,003,471 ; June 4.
Tertiary butyl acetic acid. F. C. Whitmore, A. H. Homeyer, and W. R. Trent. 2,004,066 ; June 4.
Test cores, Device for orienting. E. L. De Maris. 2,003,345 ; June 4.
Tester, Gas engine leakage. J. D. Morgan and P. B. Levitt. 2,003,949 ; June 4.
Textile fabrics with vat dyestuffs, Printing of. H. Berthold, C. Krauss, and A. Hagenböcker. 2,003,641 ; June 4.
Textile hemstitching machine. E. B. Roby. 2,004,080 ; June 4.
Textile materials by latex, Impregnation of. J. E. C. Bongrand and L. S. M. Lejeune. 2,004,029 ; June 4.
Textiles, Sizing and dyeing of. W. Whitehead. 2,003,409 ; June 4.
Textiles, Stripping and discharging dyed. J. G. Evans and L. G. Lawrie. 2,003,928 ; June 4.
Therapeutic device. J. W. Bacon and T. S. Warren. 2,003,527 ; June 4.
Thermostat, Cartridge. P. A. Nothstine. 2,003,638 ; June 4.
Thermostat, Snap action. E. W. McKinley. 2,003,947 ; June 4.
Threads, Manufacture of rubber. K. R. Shaw. 2,004,085 ; June 4.
Threads or strips of rubber or the like, Manufacture of. U. Pestalozza. 2,003,721 ; June 4.
Threshing. L. H. Thoen. 2,003,522–3 ; June 4.
Timing mechanism. M. S. Curtis. 2,004,838 ; June 4.
Tire, Antiskidding. E. Coenning. 2,004,836 ; June 4.
Tobacco pipe. D. P. Lavietes. 2,003,373 ; June 4.
Tobacco product. L. O. Lewton. 2,003,690 ; June 4.
Toilet seat hinge. J. Uffen. 2,004,023 ; June 4.
Tool : *See*—
Boring tool.
Cleaner floor tool.
Terminal cleaning tool.
Tool attachment. A. Scott. 2,004,083 ; June 4.
Tool for making cartridge shells. L. A. Guignet. 2,003,438 ; June 4.
Tool for reservicing springs equipped with spring covers. W. F. Eisenhauer. 2,003,708 ; June 4.
Tool for reservicing springs equipped with spring-covers. W. F. Eisenhauer and W. T. Ferguson. 2,003,709 ; June 4.
Tools, Making valve seat. F. O. Albertson. 2,003,570 ; June 4.
Torque transmission device. R. V. Derrah. 2,003,825 ; June 4.
Toughness or resistance to breakage of abrasive bodies by impact, Apparatus for determining. R. L. Melton and J. Fitzpatrick. 2,003,863 ; June 4.
Tower, Forced draft multiple fan cooling. L. T. Mart. 2,003,547 ; June 4.
Toy. W. E. Hopkins. 2,003,748 ; June 4.
Track forming, spacing, and retaining structure, Combined. G. Van Voorst, Jr. 2,004,025 ; June 4.
Traction unit, Independently mounted. A. F. Masury. 2,003,548 ; June 4.
Traffic control, Apparatus for. R. H. Worrall. 2,003,328 ; June 4.
Traffic controlling system, Centralized. R. M. Phinney. 2,003,952 ; June 4.
Trailer, Camp. R. S. Allen and B. Oakes. 2,003,816 ; June 4.
Trailer, Camping. O. J. Lehrer and J. B. Blankenship. 2,003,598 ; June 4.
Transmission. O. H. Banker. 2,003,963 ; June 4.
Transmission, Automatic. R. E. Keller. 2,003,634 ; June 4.
Trap : *See*—
Animal trap.
Truck. J. Twik. 2,004,022 ; June 4.
Truck body, Demountable. B. F. Fitch. 2,003,287 ; June 4.
Truck, Rail car. J. Ledwinka. 2,003,546 ; June 4.
Tube : *See*—
Braun tube.
Discharge tube.
Electron tube.
Photo-electric tube.
Tube paste dispenser. A. B. Chatelain. 2,003,283 ; June 4.
Tube rolling mill. K. A. Nygren and J. A. Zschiesche. 2,003,551 ; June 4.
Tuning control. G. Roethel, Jr. 2,003,608 ; June 4.
2'-nitro-2-carboxy-diphenylamine, Manufacture of. L. Spiegler. 2,003,842 ; June 4.
Typewriting machine. A. A. Johnson. 2,003,858 ; June 4.
Typographical slug. W. W. Morey. 2,003,693 ; June 4.
Underframe construction for railway cars. A. Campbell. 2,003,341 ; June 4.
Universal joint. G. H. Hufford. 2,003,539 ; June 4.
Upholstery machine. A. S. Mitchell. 2,003,897 ; June 4.
Utensil, Serving. W. S. Martin. 2,003,895 ; June 4.
Vacuum relief valve. J. F. Cilley. 2,003,678 ; June 4.
Valve : *See*—
Centrifugally controlled valve.
Float operated valve.
Vacuum relief valve.
Valve for automatic sprinkler systems, Control. M. E. Halford. 2,003,884 ; June 4.
Valve for tank outlets, Adapter. V. Willoughby and W. L. Lapworth. 2,003,915 ; June 4.
Vanity box. E. Farkas. 2,003,355 ; June 4.
Vapor phase reactions, Effecting organic. J. C. Woodhouse. 2,003,477 ; June 4.
Vapors vented from storage tanks, Apparatus for and method of recovering. LeR. D. Cilley. 2,004,074 ; June 4.
Vegetables and the like, Device for cutting and pressing. H. J. Marlowe. 2,003,299 ; June 4.
Vehicle control, Motor. W. B. Fageol. 2,003,431 ; June 4.
Vessels and the like in one continuous working process, Apparatus for the sterilization and sterile filling of. F. Stegemann. 2,003,869 ; June 4.
Vibrator, Power driven. M. Andis. 2,003,332 ; June 4.
Volume control for transmission circuits. F. A. Cowan. 2,003,428 ; June 4.
Wall construction, Veneer. C. S. and E. G. Finzer. 2,003,996 ; June 4.
Wall fixture, Knockdown. M. T. Johnston. 2,003,633 ; June 4.
Wardrobe and clothes drier, Convertible and portable. D. B. Cleveland. 2,004,035 ; June 4.
Warning signal. A. F. Gillet. 2,003,505 ; June 4.
Washer for bearings, Grease retaining. L. H. Hansel. 2,003,934 ; June 4.
Washing device and method. C. S. Woods. 2,003,847 ; June 4.
Washing machine. C. F. Brunn. 2,003,642 ; June 4.
Water purification. B. and C. B. Russell. 2,003,314 ; June 4.
Water softening apparatus. T. B. Clark. 2,003,739 ; June 4.
Water softening, Continuous automatic. E. Pick. 2,003,757 ; June 4.
Water through the pressure bags of tire retreading molds, Circulating hot. H. J. Woock. 2,003,567 ; June 4.
Water treating apparatus. E. T. Turner. 2,003,762 ; June 4.
Wave translation system. H. S. Black. 2,003,282 ; June 4.
Wax from oil, Filtration of. F. X. Govers. 2,003,664 ; June 4.
Wear compensating means. C. L. Best. 2,003,528 ; June 4.
Weighing and mixing mechanism. D. C. Jeffrey and H. J. Wolfe. 2,003,832 ; June 4.
Weight indicator, Cotton-lap. W. H. Trogdon. 2,004,020 ; June 4.
Welded articles, Making. T. F. Birmingham. 2,003,820 ; June 4.
Welding device. J. E. Trainer and C. Ziegler. 2,003,320 ; June 4.

Well tubing hanger. G. C. Imler and D. M. Hause. 2,003,446 ; June 4.
Wheel : *See*—
Spray wheel.
Wheel drive, Front. W. McCarthy and G. Wolff. 2,003,718 ; June 4.
Wheel testing apparatus. L. A. Weaver, A. R. Squyer, and E. K. Hall. 2,003,912 ; June 4.
Window. H. G. V. Rydahl. 2,003,723 ; June 4.
Window construction. E. C. Swanson. 2,003,982 ; June 4.
Window, Display. G. B. Brown and E. Pollard. 2,003,735 ; June 4.
Window operating means, Automobile. W. F. Sheltzline. 2,003,614 ; June 4.
Wire drawing die. R. C. Shipp. 2,003,475 ; June 4.
Wire, Marble-sawing. P. de V. d'Avocourt. 2,003,994 ; June 4.
Wire spiral spring. W. Vinar. 2,003,406 ; June 4.
Worm, Vibration absorbing. H. C. Harrison. 2,003,440 ; June 4.
Woven wire fabric. J. O'Neill. 2,003,695 ; June 4.
Wrench : *See*—
Ratchet wrench.
Wrench. A. F. Thener. 2,003,983 ; June 4.
Yarns, Manufacture of staple fiber. W. I. Taylor and L. B. Gibbins. 2,003,400 ; June 4.
Yoke and making the same, Lace. S. Goodman. 2,003,998 ; June 4.

CLASSIFICATION OF PATENTS

ISSUED JUNE 4, 1935

NOTE.—First number=class, second number=subclass, third number=patent number

1— 10: 2,003,304
39: 2,003,377
40.7: 2,003,391
2— 14: 2,003,379
68: 2,003,920
155: 2,003,359
184: 2,003,955
190: 2,003,886
197: 2,003,367
227: 2,003,683
278: 2,003,810
4— 240: 2,004,023
5— 256: 2,003,406
8— 2: 2,003,928
5: 2,003,409
2,004,043
6: 2,003,641
2,003,960
9— 25: 2,003,418
12— 42: 2,003,338
47.1: 2,004,070
151: 2,003,665
13— 34: 2,003,653
15— 20: 2,003,668
120: 2,003,286
155: 2,003,312
205: 2,003,279
269: 2,003,847
16— 51: 2,003,669
18— 1: 2,003,465
18: 2,003,566
53: 2,003,567
54: 2,003,721
59: 2,004,037
19— 158: 2,004,045
20—1,123: 2,003,573
10: 2,003,876
18: 2,003,305
35: 2,003,726
56.5: 2,003,982
94: 2,003,531
99: 2,003,738
2— 2: 2,003,796
190: 2,003,864
203: 2,004,061
23— 5: 2,003,907
100: 2,003,378
134: 2,003,711
142: 2,003,867
162: 2,004,000
175: 2,003,442

McCarty, Lewis C., Jr., Towson, and D. M. Helwig, Baltimore, Md., assignors to The Glenn L. Martin Company, Baltimore, Md. Aircraft chair. 95,919; June 11.

Moloney, Raymond T. (See Breitenstein, Herbert G., assignor.)

Moorman, Albert S., New York, N. Y. Pin board game device. 95,920; June 11.

Nyland, Houka K., Brewster, assignor to Larkin Company, Inc., Buffalo, N. Y. Rocking horse. 95,921; June 11.

O'Brien, William A., San Pedro, Calif. Card game scoring board. 95,922; June 11.

O'Brien, William A., San Pedro, Calif. Table top. 95,923; June 11.

Ogden, Arnold L., assignor to Mary Dunhill, Inc., New York, N. Y. Lip stick holder. 95,924; June 11.

Reichenbach, Howard F., assignor to The Chase Companies, Incorporated, Waterbury, Conn. Cocktail shaker or similar article. 95,925; June 11.

Rettich, Kurt, assignor to Keller Brass Company, Grand Rapids, Mich. Handle or similar article. 95,926; June 11.

Rheinauer, Daniel, New York, N. Y. Sweater. 95,927; June 11.

Richardson Company, The. (See Reiser, Oliver O., assignor.)

Reiser, Oliver O., Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio. Storage battery case. 95,928; June 11.

Roberts, Carl D., Kirbyville, Tex. Pall-bearer's badge. 95,929; June 11.

Rodriguez, Manuel G., Haiku, Hawaii. Nail. 95,930; June 11.

Russo, Alfred L. (See Larom, G. U., and Russo.)
Salvia, John A., assignor to Samson-United Corporation, Rochester, N. Y. Waffle iron. 95,931; June 11
Samson-United Corporation. (See Salvia, John A., assignor.)
Schumacher, Albert, assignor to Botany Worsted Mills, Passaic, N. J. Textile fabric or similar article of manufacture. 95,933; June 11.
Schwalbe, Max E., New York, N. Y. Emblem or similar article. 95,932; June 11.
Simon, Franklin & Co. (See Weinberg, Cecile, assignor.)
Smith, Margery M., Brooklyn, N. Y., assignor to Container Corporation of America, Chicago, Ill. Carton. 95,934; June 11.
Snyder, Eugene L., Canton, Ohio. Dish. 95,935; June 11.
Socony-Vacuum Oil Company. (See Geddes, N. B., and Landefeld, assignors.)
Stupell, Leo K., New York, N. Y. Alphabet for forming monograms or the like. 95,936; June 11.
Sutton, Lewis M., Jr., Minneapolis, Minn., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Bottle. 93,937; June 11.
Swindell Brothers, Incorporated. (See Dunnock, John L., assignor.)
Sypher, Milford G., Belleville, N. J., assignor to The Chilton Pen Company, Inc., Long Island City, N. Y. Fountain pen clip or similar article. 95,938; June 11.
Thomas, Cyril H., Chicago, Ill. Cable clamp. 95,939; June 11.
Turiansky, Abraham, New York, N. Y. Shoe. 95,940; June 11.
Weaver, Earl L., assignor to The Goshen Manufacturing Company, Goshen, Ind. Swing. 95,941; June 11.
Weinberg, Cecile, assignor to Franklin Simon & Co., Inc., New York, N. Y. Dress. 95,942; June 11.
Wiley, Lee M., Marion, Ind., assignor to Delta Electric Company. Electric lantern. 95,943; June 11.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 11TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott, Geoffrey J., London, England. Machine for cutting potatoes or other objects into chips or slices. 2,004,548; June 11.
Abele, Richard P. (See Vandever, James R., assignor.)
Ackermann, Franz. (See Graenacher, C., and Ackermann.)
Adams, Campbell V., Chicago, Ill. Power hammer. 2,004,180; June 11.
Adlake Company, The. (See Hamm, William S., assignor.)
Adlake Company, The. (See Keller, Walter E., assignor.)
Adlake Company, The. (See Larson, Carl H., assignor.)
Adler, Herbert P. (See Ingram, R. L., and Adler.)
Aeolian-Skinner Organ Company. (See Marks, Arthur H., assignor.)
Ahronheim, Albert A., assignor of one-half to W. Sparks, Jackson, Mich. Apparatus for telegraphically transmitting colored pictures. 2,004,359; June 11.
Ahronheim, Albert A., assignor of one-half to W. Sparks, Jackson, Mich. Method and apparatus for telegraphically transmitting colored moving pictures or scenes. 2,004,360; June 11.
Albers, Edwin W., Schenectady, N. Y. Locomotive construction. 2,004,742; June 11.
Alden, John L., LaGrange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical conductor cable. 2,004,592; June 11.
Allendorff, Friedrich. (See Kazenmaier, A., Allendorff, and Schmid.)
Allison, John J., and J. P. Ivy, Chandler, Ariz. Tractor drawn grader. 2,004,846; June 11
Alsop, Bertha S., Scarsdale, N. Y. Holder. 2,004,088; June 11.
Aluminum Company of America. (See Jardine, Frank, assignor.)
American Automatic Devices Co. (See Kovac, Rudolph, assignor.)
American Brake Shoe and Foundry Company, The. (See Folsom, E. C., assignor.)
American Can Company. (See Erb, George C., assignor.)
American Car and Foundry Motors Company. (See Chapman, J. F., and Hayes, assignors.)
American Cyanamid & Chemical Corporation. (See Jaeger, Alphons O., assignor.)
American Hair & Felt Company. (See Johnson, Reginald H., assignor.)
American Hair & Felt Company. (See Phillips, Robert S., assignor.)
American Hardware Corporation, The. (See Hurd, Norman B., assignor.)
American Machine and Metals, Inc. (See De Bothezat, George, assignor.)
American Meter Company. (See Benson, Arthur F., assignor.)
American Optical Company. (See Laabs, Max A., assignor.)
American Rayon Company. (See Furness, William H., assignor.)
American Telephone and Telegraph Company. (See Holden, William H. T., assignor.)
American Telephone and Telegraph Company. (See Miller, C. G., and Bonorden, assignors.)
Ames Baldwin Wyoming Co. (See Ready, William A., assignor.)
Anaconda Wire & Cable Company. (See Smedley, Anderson B., assignor.)
Anchor Cap & Closure Corporation. (See Von Till, Louis A., assignor.)
Anderson, Bert J., Hammond, Ind. Handle bar. 2,004,089; June 11.
Anderson Company, The. (See Smulski, Theodore J., assignor.)
Anderson, Harley E., assignor of one-half to J. H. Sharp, Chicago, Ill. Brake head. 2,004,743; June 11.
Anderson, Russell T. (See Rothchild, L., and Anderson.)
Andreas, Arno, Munster, Germany. Filling machine. 2,004,593; June 11.
Andrews, Norman F. (See Coultas, W. J., and Andrews.)
Andrews, Olive B., Chattanooga, Tenn. Device for packaging bakery products. 2,004,098; June 11.
Angstman, Roger W., Pontiac Mich., assignor, by mesne assignments, to E. A. Laboratories, Inc., Brooklyn, N. Y. Heater apparatus. 2,004,151; June 11.
Antelme, Jean B. S., St.-Cloud, assignor to Blériot-Aéronautique, Suresnes, France. Device for setting tubular rivets. 2,004,624; June 11.
Arbuckle, S. F., Corp. (See Arbuckle, S. F., and Coulter, assignors.)
Arbuckle, Samuel F., and G. H. Coulter, Highland Park, Mich., assignors to S. F. Arbuckle Corp. Sign. 2,004,181; June 11.
Arey, Fred C., Oak Park, Ill., assignor to Vulcan Soot Blower Corporation. Strap with attached washers and making the same. 2,004,182; June 11.
Armand Company, The. (See Weeks, Charles, assignor.)
Armitage, Joseph B., et al. (See Kearney, E. J., Parsons, and Armitage.)
Arms, Merton H., and J. B. Johnson, assignors to Bryant Chucking Grinder Company, Springfield, Vt. Calipering mechanism. 2,004,361; June 11.
Armstead, Edward C., Darrington, Wash. Self tying clip. 2,004,456; June 11.
Ashby, John T. (See Welch, S. A., Guyler, Ashby, and Bonler.)
Askland, Thomas C., Reeder, N. Dak. Corn binder. 2,004,090; June 11.
Asper, Halfdan, N. Dak. (See Schmohl, A. C., and Asper.)
Atlantic Carton Corporation. (See Whitehead, Earl B., assignor.)
Atlantic Service Company. (See Laemmel, Charles A., assignor.)
Automotive Maintenance Machinery Co. (See Zimmerman, Herman W., assignor.)
Avery, John S. (See Wilkes, G., and Avery.)
Babcock & Wilcox Company, The. (See Kerr, Howard J., assignor.)
Backsay Welt Company. (See Best, Frank A., assignor.)
Bacon, Thomas S. (See Thompson, C. L., Bacon, and Bludworth.)
Badenhausen Corporation. (See Badenhausen, Phillips, assignor.)
Badenhausen, Phillips, Philadelphia, assignor to Badenhausen Corporation, Cornwells Heights, Pa. Slag bottom for furnaces. 2,004,152; June 11.
Badgley, Roy J., Springfield, Ohio. Making mops. 2,004,804; June 11.
Bahnson Company, The. (See Simpson, Jerry H., assignor.)
Bain, William H., Portsmouth, Ohio. Shoe and making same. 2,004,425; June 11.
Bainbridge, Edmund F., Albany, N. Y. Treatment of alloys. 2,004,483; June 11.
Bajda, James J., South Orange, N. J. Treating cacao beans. 2,004,497; June 11.
Baker and Company et al. (See Tilley, J. N., and Whitehead, assignors.)
Baker, Randall B., Needham, assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass. Annunciator. 2,004,645; June 11.
Balcom, Charles H., Binghamton, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J. Nail-distributor. 2,004,233; June 11.
Ball, Donald A. (See Quick, C. G., Ball, and Bennett.)
Ballantyne, Horatio. (See Moore, C. W., and Ballantyne.)
Ballert, Otto, Berlin, Germany. Hydraulic rear tipper for fast delivery vans. 2,004,744; June 11.
Ballou, R. A., & Co. (See Morehouse Eugene, assignor.)
Band Box Corporation, The. (See Martin, John E., assignor.)
Bany, Herman, Lansdowne, Pa., assignor to General Electric Company. Automatic control equipment. 2,004,776; June 11.
Bapty, Samuel L. (See Collyear, J. R., and Bapty.)
Barz, Fritz, A. Landolt, W. Geigy, H. Kaegi, and C. Graenacher, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Dyeing of textiles. 2,004,476; June 11.
Basse, Charles. (See Bidwell, Edgar, Assignor.)
Bassler, Kurt, Berlin, Germany, assignor to General Electric Company. Elastic fluid turbine. 2,004,777; June 11.
Battle, Henry W., Jr., Louisville, Ky. Lacquer enamel. 2,004,514; June 11.
Baumann, Henry N., Jr. (See Benner, R. C., and Baumann, Jr.)
Bausch & Lomb Optical Company. (See Ellestad, Gerhard A., assignor.)
Bausch & Lomb Optical Company. (See Fassin, Gustave, assignor.)
Bausch & Lomb Optical Company. (See Gallasch, George B., assignor.)
Bausch & Lomb Optical Company. (See Poser, Max, assignor.)
Baxenden, George. (See Collyear, J. R., and Bapty, assignors.)
Bay State Optical Company. (See Nerney, George E., assignor.)
Beardsley & Piper Company, The. (See Piper, Walter F., assignor.)
Beatty, Wilfrid J., Castroville, Calif. Road planer. 2,004,154; June 11.

Becht, Louis D., St. Louis, Mo. Shirt board. 2,004,362; June 11.
Becker, Carl W., Allston, Mass. Cathode ray tube. 2,004,646; June 11.
Becker, Christopher A., Nutley, N. J., assignor to The Torsion Balance Company, New York, N. Y. Balance or weighing scale. 2,004,745; June 11.
Becker, Frederick W., and R. P. Kinsley, assignors to Watervliet Tool Company, Inc., Albany, N. Y. Expanding pintle for hinges. 2,004,561; June 11.
Becket, Frederick M., New York, N. Y., assignor to Electro Metallurgical Company. Producing columbium alloys. 2,004,498; June 11.
Bedford, Alda V., Collingswood, N. J., assignor to Radio Corporation of America, New York, N. Y. Cathode ray apparatus. 2,004,099; June 11.
Bedford, Burnice D., Schenectady, N. Y., assignor to General Electric Company. Electric valve converting apparatus. 2,004,778; June 11.
Beer, Karl, Stuttgart, and G. Pfrommer, Oberturkheim, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Electric condenser. 2,004,647; June 11.
Beers, Royce L., assignor to Detroit Stoker Company, Detroit, Mich. Stoker construction. 2,004,363; June 11.
Beghetti, Peter, San Francisco, Calif. Time release apparatus. 2,004,515; June 11.
Belmann, Wilhelm, Bochum, Germany. Liquid seal for collecting mains of distillation ovens or the like. 2,004,266; June 11.
Belden, James E., et al. (See Rogers, Thomas E., assignor.)
Bell Cap Company. (See Klein, Robert, assignor.)
Bell, Earl E., Brooklyn, N. Y. Swimming glove. 2,004,684; June 11.
Bell & Howell Company, The. (See Howell, Albert S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Bjornson, Bjorn G., assignor.)
Bell Telephone Laboratories, Incorporated. (See Carpenter, Warren W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hersey, Ralph E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Jones, Edward H., assignor.)
Bell Telephone Laboratories, Incorporated. (See Kleinfelder, Walter C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Meacham, Larned A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Mills, Percy E., assignor.)
Bendix Products Corporation. (See Heltzer, Frank H., assignor.)
Benham, Wilfrid E. (See Goodchild, F. D., and Benham.)
Benjamin, Reuben B., Chicago, assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill. Lighting fixture. 2,004,183; June 11.
Benjamin Electric Mfg. Company. (See Banjamin, Reuben B., assignor.)
Benjamin Electric Mfg. Company. (See Fall, Joseph W., assignor.)
Benner, Raymond C., and H. N. Baumann, Jr., assignors to The Carborundum Company, Niagara Falls, N. Y. Silicon carbide refractory. 2,004,594; June 11.
Benner, Raymond C., and H. N. Baumann, Jr., Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y. Making silicon carbide articles and raw batch therefor. 2,004,595; June 11.
Bennett, Thomas R. (See Quick, C. G., Ball, and Bennett.)
Bennett, Thomas S., North Attleboro, Mass. Fastening for jewelry. 2,004,779; June 11.
Benson, Arthur F., Erie, Pa., assignor to American Meter Company, New York, N. Y. Clock. 2,004,909; June 11.
Benzinger, Julius, Queens Village, N. Y., assignor to The Griscom-Russell Company, New York, N. Y. Heat exchanger. 2,004,390; June 11.
Berg, Ernest R. (See Keyeswetter, Irving A., assignor.)
Bergé, Julien, assignor to Raffinerie Tirlemontoise Société Anonyme, Tirlemont, Belgium. Diffusion. 2,004,184; June 11.
Berger Brothers Company. (See Feltman, Howard B., assignor.)
Berlinger, Eric, Waco, Tex. Casting apparatus. 2,004,457; June 11.
Berry, Otto C. (See Dean, E. E., and Berry.)
Berthold, Hermann, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Vat and sulphur dyestuff preparation for printing cotton. 2,004,458; June 11.
Best, Frank A., East Windsor, Ontario, Canada, assignor to Backstay Welt Company, Union City, Ind. Finishing strip. 2,004,364; June 11.
Best, George W., Reidsville, N. C. Ornamental link receptacle for wrist watch bands and chains. 2,004,685; June 11.
Best Weather Strip Company Limited. (See Main, Daniel T., assignor.)
Blas Buff & Wheel Company, The. (See Yohe, Albert S., assignor.)
Bidwell, Edgar, assignor of one-half to C. Basse, Wichita, Kans. Flash tester for high tension electric currents. 2,004,365; June 11.
Biggert, Florence C., Jr., Crafton, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Method and apparatus for manufacturing metal sheets and strips. 2,004,596; June 11.
Bincler, Fritz, Kansas City, Mo. Expanding hair waver rod. 2,004,366; June 11.
Binks Manufacturing Company. (See Wahlin, Fritz, assignor.)
Birch, Samuel McL. (See Oakey, Clarence S., assignor.)
Birchy, Charles, assignor of one-half to Samuel D. Hewlett, Atlanta, Ga. Producing sound absorbing material. 2,004,686; June 11.
Birnstock, William W., York, Pa. Crate. 2,004,847; June 11.
Birtch, Fred E., Detroit, Mich. Oven regulator. 2,004,597; June 11.
Bjornson, Bjorn G., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission control circuits. 2,004,598; June 11.
Blacher, Benjamin, assignor to Blacher Brothers, Providence, R. I. Frame for bags, purses, and the like. 2,004,185; June 11.
Blacher Brothers. (See Blacher, Benjamin, assignor.)
Blackburn, Daniel M., assignor to Hendrick Manufacturing Company, Carbondale, Pa. Adjustable shaft mounting. 2,004,562; June 11.
Blériot-Aéronautique. (See Antelme, Jean B. S., assignor.)
Blood, George E., assignor to The Foote Company, Inc., Nunda, N. Y. Automatic discharge and water control for concrete pavers. 2,004,234; June 11.
Bloomer Bros. Company. (See Inman, William H., assignor.)
Bludworth, Joseph E. (See Thompson, C. L., Bacon, and Bludworth.)
Blumberg, Julius E., Boston, Mass. Pattern maker's tool. 2,004,499; June 11.
Boaler, William H. (See Welch, S. A., Guyler, Ashby, and Boaler.)
Bodily, Leonard, assignor to King Seeley Corporation, Ann Arbor, Mich. Heat indicator. 2,004,091; June 11.
Bodor, Andrew, Newark, N. J., assignor to Reinforced Paper Bottle Corporation, New York, N. Y. Bottle bottom inserting and spinning mechanism for paper bottle making machines. 2,004,186; June 11.
Boehnke, Charles, Rosemead, Calif. Dinger. 2,004,459; June 11.
Bogoslowsky, Boris, Bridgeport, Conn., assignor, by mesne assignments, to A. C. Dickinson, Fitchburg, Mass. Compressor. 2,004,563; June 11.
Bol, Cornelis, Eindhoven, Netherlands, assignor to General Electric Company, Gascous electric discharge lamp device. 2,004,564; June 11.
Bol, Cornelis, and E. G. Dorgelo, Eindhoven, Netherlands, assignors to General Electric Company, Gascous electric discharge device. 2,004,565; June 11.
Bolster, Ernest L., assignor to Chair Town Manufacturing Co., Gardner, Mass. Securing device for convertible high chairs. 2,004,648; June 11.
Bommer, Emil, Brooklyn, N. Y. Adjustable door support and coupling. 2,004,187; June 11.
Bond, Lee, and L. C. Bond, Brookfield, Mo., assignors to The Davis Company, Omaha, Nebr. Garment stretcher. 2,004,848; June 11.
Bond, Le Roy C. (See Bond, Lee, and C.)
Bonniksen, Cyril W., Slough, assignor to Protectoglass Limited, London, England. Manufacture of safety glass. 2,004,518; June 11.
Bonorden, Allen R. (See Miller, C. G., and Bonorden.)
Booth, Clement, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Grinding machine. 2,004,427; June 11.
Booth, Clement, and F. S. Haas, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Grinding machine. 2,004,426; June 11.
Booth, Clement, and S. Einstein, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass. Grinding workpieces. 2,004,649; June 11.
Bopea, Angela, Peekskill, N. Y. Shoulder strap holder. 2,004,305; June 11.
Borberg, Adolf, Short Hills, N. J., assignor to Dortmund Hoerder Huettenverein Aktiengesellschaft, Dortmund, Germany. Reverse angle interlock piling. 2,004,188; June 11.
Bosch, Robert, Aktiengesellschaft. (See Beer, K., and Pfrommer, assignors.)
Bosch, Robert, Aktiengesellschaft. (See Kazenmaier, A., Allendorff, and Schmid, assignors.)
Bosling, Ernest A. (See Bretschger, M. E., and Bosling.)
Boston Wire Stitcher Company. (See Horton, Albert F., assignor.)
Bowles, Edward L., Wellesley Farms, Mass. Electrical system. 2,004,155; June 11.
Boyce, Erskine E., assignor to The Boysell Company, Gastonia, N. C. Turtling mechanism for sewing machines. 2,004,687; June 11.
Boyd, Randolph, Galva, Ill. Bed. 2,004,549; June 11.
Boyko, Peter, Bronx, N. Y. Lock. 2,004,746; June 11.
Boysell Company, The. (See Boyce, Erskine E., assignor.)
Brackett, Edward M., D. Dancke, and L. C. Williams, Topeka, Kans., assignor, by mesne assignments, to Dexter Folder Company, New York, N. Y. Trimming and cutting machine. 2,004,566; June 11.

Bradbury, Clifford C., trustee, et al. (See Stokes, Charles L., assignor.)
Bradley, Francois C., Union, Miss. Electrical connecter. 2,004,550; June 11.
Brainard, Seymour W., Kenmore, N. Y., assignor to Du Pont Rayon Company, New York, N. Y. Apparatus for winding thread on a bobbin. 2,004,153; June 11.
Brandt, Louis G., Portsmouth, assignor to The Multistamp Company, Inc., Norfolk, Va. Stencil sheet and making the same. 2,004,484; June 11.
Brause, Phillip R., West Union, Iowa. Fruit jar tool. 2,004,485; June 11.
Breddin, Paul, and O. Wittmers, Cologne-on-the Rhine, Germany. Mechanism for actuating the slay of weaving looms. 2,004,306; June 11.
Breeze Corporation, Inc. (See Steenson, James H., assignor.)
Breidenbaugh, Christian P. (See Turner, J. F., and Breidenbaugh.)
Breitenstein, Herbert G., assignor to R. T. Moloney, Chicago, Ill. Coin slide. 2,004,189; June 11.
Breitenstein, Herbert G., assignor to R. T. Moloney, Chicago, Ill. Pin ball amusement game. 2,004,190; June 11.
Breth, Walter J., and M. L. Engler, assignor to The General Tire & Rubber Company, Akron, Ohio. Tire building machine. 2,004,886; June 11.
Bretschger, Max E., Buffalo, N. Y., and E. A. Bosing, Long Beach, Calif., assignors to Buffalo Electro Chemical Company, Inc. Treating hydrocarbons. 2,004,849; June 11.
Briggs & Stratton Corporation. (See Fitz Gerald, John W., assignor.)
Briggs & Stratton Corporation. (See Jacobi, Edward N., assignor.)
Brixner, Frederick G., Kansas City, Mo. Chair. 2,004,718; June 11.
Brockstedt, Theophile E., San Francisco, Calif., assignor to Washington Institute of Technology, Inc. Radio steering control. 2,004,460; June 11.
Brockway, Carl P., Ridgewood, assignor to World Bestos Corporation, Paterson, N. J. Method and apparatus for impregnating brake linings. 2,004,267; June 11.
Brown, Walter L., Oakland, Calif. Rotary wood chipping machine. 2,004,367; June 11.
Brown, William, assignor to McAdoo & Allen Welting Company, Quakertown, Pa. Goodyear welting. 2,004,887; June 11.
Bruce, Hope, Washington, D. C. Correspondence sheet. 2,004,688; June 11.
Brumbaugh, Isaac V., St. Louis, Mo. Combinations of enamel and sprayed metal. 2,004,567. June 11.
Brün, Willi, Bridgeport, Conn., assignor to Remington Arms Company, Inc. Priming mixture. 2,004,719; June 11.
Bruncele, Eugene A., Somersworth, N. H. Cooking machine. 2,004,500; June 11.
Bryant Chucking Grinder Company. (See Arms, M. H., and Johnson, assignors.)
Buckeye Steel Castings Company. (See Johnson, George T., assignor.)
Buckeye Steel Casting Company, The. (See Schrock, Eugene R., assignor.)
Buckeye Steel Castings Company. (See Stertzbach, H. W., McPherson, and Ellander, assignors.)
Budd, Edward G., Manufacturing Company. (See Tarbox, John P., assignor.)
Budd Wheel Company. (See Ragsdale, Earl J. W., assignor.)
Buddeberg, Walter, Zurich, Switzerland, assignor to Albert T. Otto & Sons, New York, N. Y. Centrifugal machine. 2,004,268; June 11.
Buehner, William F. A., et al. (See Geary, Palmer H., assignor.)
Buffalo Electro-Chemical Company, Inc. (See Bretschger, M. E., and Rosling, assignors.)
Buffalo Steel Company. (See Kibler, William J., assignor.)
Bugatti, Ettore, Molsheim, France. Seat for use in road or rail vehicles. 2,004,850; June 11.
Builders Iron Foundry. (See Smith, Ed S., Jr., assignor.)
Bunker, Sidney W., assignor to Filter Tips Limited, London, England. Manufacture of cigarettes. 2,004,461; June 11.
Burkhard, Heinrich, assignor to Tipp & Co., Nuremberg, Germany. Toy airplane. 2,004,235; June 11.
Burkhardt, Evangeline, New York, N. Y. Powder puff and making the same. 2,004,307; June 11.
Burnell, Albert G. (See Drumm, J. J., and Burnell.)
Burroughs Adding Machine Company. (See Horton, Allen A., assignor.)
Bush, Samuel L., Manassas, Va. Adjustable form. 2,004,462; June 11.
Bussmann, Henry T., St. Louis, Mo. Electric fuse. 2,004,191; June 11.
Byers, A. M., Company. (See Story, E. B., and Gross, assignors.)
Cahill, George F., New York, N. Y. Sports arena and the accessories thereto. 2,004,888; June 11.
Cake, Wallace E., Boenet, Arahan, Sumatra, Dutch East Indies, assignor to General Rubber Company, New York, N. Y. Preservation of latex. 2,004,156; June 11.
Canstan Glass Company. (See McNamara, W. L., and Plazzoll, Jr., assignors.)
Carbo Plaster Limited. (See Case, Gerald O., assignor.)
Carborundum Company, The. (See Benner, R. C., and Baumann.)
Carborundum Company, The. (See McMullen, Charles, assignor.)
Carpenter, Warren W., Garden City, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,004,599; June 11.
Carpinello, Michael J., New York, N. Y. Liquid sampling device. 2,004,568; June 11.
Carter Brothers, Incorporated. (See Russell, Julian G., assignor.)
Carter, Loran E., Merrimac, Mass. Brush and stubble cutter. 2,004,100; June 11.
Case, Gerald O., Seven Oaks, assignor by mesne assignments to Carbo Plaster Limited Westminster, England. Production of hydraulic cement. 2,004,463; June 11.
Catarau, Jules, Seattle, Wash. Artificial bait. 2,004,308; June 11.
Cavanagh, James, Cohasset, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe and the manufacture thereof. 2,004,236; June 11.
Celander, Philip A., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill. Compression unit. 2,004,885; June 11.
Celanese Corporation of America. (See Seymour, G. W., and White, assignors.)
Celanese Corporation of America. (See Taylor, William I., assignor.)
Celanese Corporation of America. (See Welch, S. A., Guyler, Ashby, and Boaler, assignors.)
Centrifix Corporation. (See Hawley, Charles G., assignor.)
Chair Town Manufacturing Co. (See Bolster, Ernest L., assignor.)
Chamberlain Corporation. (See Etten, Nicholas L., assignor.)
Chandler & Price Corporation, The. (See Johnson, Lawrence R., assignor.)
Chandler and Price Company, The. (See Young, Edgar J., assignor.)
Chandler & Price Company, The. (See Honigman, Hans, assignor.)
Chaney, John L., Springfield, Ohio. Device for indicating the temperature of liquids. 2,004,092; June 11.
Chaney Manufacturing Company, The. (See Hoeflich, Julius G., assignor.)
Chapman, James F., Upper Darby, and F. E. Dayvs, Philadelphia, Pa., assignors to American Car and Foundry Motors Company, New York, N. Y. Manifold system for internal combustion engines. 2,004,192; June 11.
Chavoor, Ayedis Y., Worcester, Mass. Machine for pressing shoe soles. 2,004,309; June 11.
Cherry, Frank W., Kenilworth, Ill., assignor to Lug-Lox Flooring Company, Board of the tongue and groove type. 2,004,193; June 11.
Cherry, Harold A. (See Shewell, W., and Cherry.)
Chessin, Alexander. (See Trey, S., Howard, and Chessin.)
Chicago Flexible Shaft Company. (See Jeppseon, Ivar, assignor.)
Chilton, Ralph H., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Flexible metal ice tray. 2,004,519; June 11.
Chrysler Corporation. (See Diamant, Nicholas S., assignor.)
Churcher, Brian A. G., Bowdon, England, assignor to General Electric Company. Electrical measuring system. 2,004,780; June 11.
Cincinnati Butchers' Supply Company, The. (See Schmidt, Oscar C., assignor.)
Cincinnati Grinders Incorporated. (See Booth, Clement, assignor.)
Cincinnati Grinders Incorporated. (See Booth, C., and Haas, assignors.)
Cinder Chrome Company. (See Hede, Arvid, assignor.)
Citizens National Trust and Savings Bank of Riverside, administrators et al. (See Twomley, Herbert E., assignor.)
Clark, Frank M., and R. A. Ruscetta, Pittsfield, Mass., assignors to General Electric Company. Insulating composition for impregnating electrical tape. 2,004,781; June 11.
Clark, John J., Clinton, Iowa. Toy transportation system. 2,004,915; June 11.
Clarkson, Vincent J., Leeds, England. Machine or apparatus for threading buttons on to a wire or wires or the equivalent. 2,004,464; June 11.
Clary, Loraine M. (See Matthews, E. C., and Clary.)
Clausen, Thorvald T., Seattle, Wash. Helicopter. 2,004,310; June 11.
Cleevely, Harry, Rankin, Pa. Apparatus for diluting gas. 2,004,311; June 11.
Cleveland, Arch R., et al. (See Rogers, Thomas E., assignor.)
Cleveland Automatic Machine Company, The. (See Rupple, Harry W., assignor.)
Cohn, Irwin E. (See Zadek, A., and Cohn.)
Cohn, Ralph I., Oceanport, N. J.; now by judicial change of name Ralph Cole. Vacuum tube oscillator. 2,004,101; June 11.
Cole, Ralph (Judicial change of name from Cohn.) (See Cohn, Ralph I.)
Coleman, Walker B., and F. J. Ebel, New Orleans, La. Bank bandit trap. 2,004,551; June 11.
Collings, Lewis D. (See Stewart, Howard R., assignor.)

Collyear, John R., Bushey, and S. L. Bapty, Harlesden, London; said Bapty assignor to T. G. Baxenden, Hertfordshire, England. Free-wheel driving mechanism. 2,004,650; June 11.

Colvin, Fred S., Yakima, and J. V. Rogers, Wenatchee, Wash. assignors to Food Machinery Corporation, San Jose, Calif. Fruit drier. 2,004,289; June 11.

Comeau, Melburn A., Haverhill, Mass. Device for holding wires taut. 2,004,312; June 11.

Compagnie des Forges & Acieries de la Marine et d'Homecourt. (See Daum, Leon, assignor.)

Conklin, John M. Brooklyn, N. Y. Atomizer. 2,004,402; June 11.

Conti, Eugene, Mount Vernon, assignor, by mesne assignments, to Hera Cup Company, Incorporated, New York, N. Y. Dispenser. 2,004,520; June 11.

Continental Can Company. (See Coyle, John, assignor.)

Continental Can Company. (See Punte, William E., assignor.)

Continental Motors Corporation. (See Fink, James O., assignor.)

Continental Motors Corporation. (See Meyer, Andre J., assignor.)

Cook, Harry W., Malta, Ohio. Flushing strip for window frames. 2,004,651; June 11.

Cooney, John T., Los Angeles, Calif. Combination cardboard box opener and spout. 2,004,600; June 11.

Cooper, Simon, assignor to Cooper Tea Packet Company, Brooklyn, N. Y. Tea-bag package and carton. 2,004,486; June 11.

Cooper Tea Packet Company. (See Cooper, Simon, assignor.)

Cope, Frank T., assignor to The Electric Furnace Company, Salem, Ohio. Resistor grid for electric furnaces. 2,004,851; June 11.

Costello, Joseph A., deceased, Cleveland, Ohio, Thomas A. Costello, executor, assignor to Thomas A. Costello. Window seat. 2,004,237; June 11.

Costello, Thomas A., executor. (See Costello, Joseph A., assignor.)

Cotton-Wood Products, Inc. (See Gerard, George A., assignor.)

Coultas, Wilbur J., and N. F. Andrews, Moline, assignors to Deere & Company, Moline, Ill. Harvester. 2,004,720; June 11.

Coulter, Guy H. (See Arbuckle, S. F., and Coulter.)

Coyle, John, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Sheet metal container. 2,004,852; June 11.

Crane Co. (See Olson, C. A., and Patterson.)

Crary, Palmer H., Cocoanut Grove, assignor of one-third to W. F. A. Buehner, Miami, Fla., and ten per cent to R. A. Wright, Rye, N. Y. Air operated power unit. 2,004,853; June 11.

Crawford, Thomas J. (See Wallen, A. C., and Crawford.)

Crites, Willis L. (See Michels, Charles A., assignor.)

Crockett, William B., Notre Dame de Grace, Quebec, Canada. Pipe flanging machine. 2,004,313; June 11.

Crompton & Knowles Loom Works. (See Payne, Oscar V., assignor.)

Crompton & Knowles Loom Works. (See Turner, Richard G., assignor.)

Crompton & Knowles Loom Works. (See Vose, Lewis S., assignor.)

Crossley, Alfred, assignor to Johnson Laboratories, Inc., Chicago, Ill. Radio power supply system. 2,004,368; June 11.

Cunningham, Katherine E., assignor to I. Newman & Sons, Inc., New Haven, Conn. Foundation garment. 2,004,854; June 11.

Curtis, Edward W., Jr., Harrison, assignor to Underwood Elliott Fisher Company, New York, N. Y. Container. 2,004,501; June 11.

D'Agustino, Julius, Detroit, Mich. Toothpick dispenser. 2,004,805; June 11.

Daly, John A., New Rochelle, N. Y. Manufacture of gold inlays. 2,004,747; June 11.

Daneke, Dietrich. (See Brackett, E. M., Daneke, and Williams.)

Dante, Joseph J., Bantam, Conn., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass. Cartridge fuse extractor. 2,004,314; June 11.

Daum, Leon, assignor of one-half to Schneider & Cie., and one-half to Compagnie des Forges & Acieries de la Marine et d'Homecourt, Paris, France. Ammunition supplying device for pairs of guns mounted in turrets or the like. 2,004,855; June 11.

Daum, Leon, assignor to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Ammunition supplying device for pairs of guns mounted in turrets or the like. 2,004,856; June 11.

Davey, Peter, Mount Vernon, assignor to Vibroscope, Inc., New York, N. Y. Stroboscopic apparatus and method. 2,004,270; June 11.

David, William H., Tottenville, Staten Island, N. Y. Adjustable cap visor. 2,004,471; June 11.

Davies, John M., Denver, Colo. Massage apparatus. 2,004,428; June 11.

Davis, Archibald H., Jr., Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y. Electrometric determinations. 2,004,569; June 11.

Davis Company, The. (See Bond, Lee and LeR. C., assignors.)

Davis & Furber Machine Company. (See Owen, Henry A., assignor.)

Davisson, Delos W., F. G. Welke and A. C. Maynard, assignors to Shell Development Company, San Francisco, Calif. Gas fuel feed device. 2,004,403; June 11.

Dawson, George H., assignor to Wilson-Jones Company, Chicago, Ill. Loose leaf binder. 2,004,570; June 11.

Day, Leslie G., Taplow, assignor to Magnesium Castings and Products Limited, Slough, England. Melting and/or refining of magnesium and magnesium alloys prior to casting, and flux therefor. 2,004,689; June 11.

Dayes, Frederick E. (See Chapman, J. F., and Dayes.)

Dean, Edward E., and O. C. Berry, assignors to Marvel Carbureter Company, Flint, Mich. Thermostatically and suction controlled mixture temperature device. 2,004,093; June 11.

Dean, Elizabeth J., St. Louis, Mo. Kitchen implement. 2,004,782; June 11.

De Bothezat, George, assignor to American Machine and Metals, Inc., New York, N. Y. Fan. 2,004,571; June 11.

Deere & Company. (See Coultas, W. J., and Andrews, assignors.)

Deere & Company. (See Paul, Talbot W., assignor.)

Deere & Company. (See Thieman, William B., assignor.)

Deere & Company. (See Thomann, Frederick A., assignor.)

DeLacy-Mulhall, Patrick, Los Angeles, Calif. Valve controlling system. 2,004,194; June 11.

Delta Manufacturing Company. (See Tautz, Herbert E., assignor.)

Delta Star Electric Company, The. (See Rah, Joseph, assignor.)

Dempsey, Philip W., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Making cylinder packings. 2,004,652; June 11.

Dériaz, William, Geneva, Switzerland. Apparatus for the distribution of heat. 2,004,857; June 11.

Detroit Stoker Company. (See Beers, Royce L., assignor.)

Deulsel, Carl G., assignor to Progressive Service Company, St. Louis, Mo. Prewelt shaping machine. 2,004,195; June 11.

Dewald, Edward A., Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y. Manufacture of finned tubing. 2,004,387; June 11.

Dewald, Edward A., Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y. Manufacture of finned tubing. 2,004,388; June 11.

De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Shoe form. 2,004,157; June 11.

De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Shoe form. 2,004,158; June 11.

De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Shoe form. 2,004,159; June 11.

Dexter Folder Company. (See Brackett, E. M., Daneke, and Williams, assignors.)

Diamant, Nicholas S., Highland Park, assignor to Chrysler Corporation, Detroit, Mich. Radiator core. 2,004,890; June 11.

Dickey, Daniel A., Dayton, Ohio. Hollow steel propeller construction. 2,004,102; June 11.

Dickinson, Arnold C. (See Bogoslowsky, Boris, assignor.)

Dietrichs, Charles, assignor to Walker Cement Products, Inc., Little Ferry, N. J. Cement shingle. 2,004,465; June 11.

Dietz, Joseph R., Lansdowne, and H. L. Plummer, Philadelphia, Pa., assignors to T. I. du Pont de Nemours & Company, Wilmington, Del. Abrasive. 2,004,486; June 11.

Dillon, Hugh J., Detroit, Mich. Vehicle. 2,004,748; June 11.

Dillon, Hugh J., Highland Park, Mich. Vehicle. 2,004,749; June 11.

Doran, John H., Scotia, N. Y., assignor to General Electric Company. Shaft bearing. 2,004,783; June 11.

Dorgelo, Edward G. (See Rol, C., and Dorgelo.)

Dorsch, New York, N. Y. Pelvic attachment for artificial legs. 2,004,487; June 11.

Dortmund Hoerder Huettenverein Aktiengesellschaft. (See Borberg, Adolf, assignor.)

Douglas, James K., assignor to The Oilgear Company, Milwaukee, Wis. Speed controller for hydraulic motors. 2,004,522; June 11.

Downing, Frederick B., A. E. Parmelee, and C. J. Pedersen, Carneys Point, N. J., and J. L. Stecher, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Tetra alkyl lead. 2,004,160; June 11.

Doyle, Frank J. (See Rathbun, W. A., and Doyle.)

Dreyfus, Henry, London, England. Production of artificial filaments, threads, ribbons, films, and the like 2,004,271; June 11.

Dreyfus, Henry, London, England. Production of artificial products. 2,004,272; June 11.

Dreyfus, Henry, London, England. Production of cellulose derivative products. 2,004,273; June 11.

Dreyfus, Henry, London, England. Manufacture or treatment of artificial materials. 2,004,274; June 11.

Drumm, James J., and A. G. Burnell, Inchicore, Dublin, assignors to Drumm Battery Company Limited, Dublin, Ireland. Electric storage battery. 2,004,552; June 11.

Drumm Battery Company Limited. (See Drumm, J. J., and Burnell, assignors.)

Dubbs, Carbon P., Wilmette, assignor to Universal Oil Products Company, Chicago, Ill. Treating petroleum oil. 2,004,190; June 11.

Du Pont, E. I., de Nemours & Company. (See Dietz, J. R., and Plummer, assignors.)

Du Pont, E. I., de Nemours & Company. (See Downing, F. B., Parmelee, Pedersen and Stecher, assignors.)

Du Pont, E. I., de Nemours & Company. (See Gilbert, H. N., and Reichert, assignors.)

Du Pont, E. I., de Nemours & Company. (See Izard, E. F., and Salzberg, assignors.)

Du Pont, E. I., de Nemours & Company. (See Lazier, Wilbur A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lubs, Herbert A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lubs, H. A., and Strouse, assignors.)

Du Pont, E. I., de Nemours & Company. (See Magill, Paul La F., assignor.)

Du Pont, E. I., de Nemours & Company. (See Pranke, Edward J., assignor.)

Du Pont, E. I., de Nemours & Company. (See Reid, Ebenezer E., assignor.)

Du Pont, E. I., de Nemours & Company. (See Richardson, Roger W., assignor.)

Du Pont, E. I., de Nemours & Company. (See Rothrock, Henry S., assignor.)

Du Pont, E. I., de Nemours & Company. (See Scott, Norman D., assignor.)

Du Pont, E. I., de Nemours & Company, et al. (See Tilley, J. N., and Whitehead, assignors.)

Du Pont Rayon Company. (See Brainard, Seymour W., assignor.)

Du Pont Rayon Company. (See Gladding, E. K., and Evans, assignors.)

Duval, Edward A., Easthampton, Mass. Battery clamp device. 2,004,653; June 11.

Dye, Glen M. (See Rouch, J. W., and Dye.)

E. A. Laboratories, Inc. (See Angstman, Roger W., assignor.)

Eager, Wesley W., Los Angeles, and C. A. Tierney, San Marino, Calif. Door locking and operating device. 2,004,429; June 11.

Ebel, Frank J. (See Coleman, W. B., and Ebel.)

Eckhard, John, Cincinnati, Ohio. Clutch device for variable speed transmission mechanism. 2,004,750; June 11.

Eclipse Machine Company. (See Wertz, Daniel L., assignor.)

Eclipse Machine Company. (See Whitney, Maurice P., assignor.)

Een, Johannes B., Oslo, Norway. Armed wooden plate and armature bar for the same. 2,004,553; June 11.

Einstein, Sol. (See Booth, C., and Einstein.)

Eitzen, August D., Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y. Stock quotation projecting machine. 2,004,103; June 11.

Electric Furnace Company, The. (See Cope, Frank T., assignor.)

Electric Household Utilities Corporation. (See Hume, J. T., and Hart, assignors.)

Electro Metallurgical Company. (See Becket, Frederick M., assignor.)

Ellestad, Gerhard A., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope illuminator. 2,004,806; June 11.

Engler, Max L. (See Breth, W. J., and Engler.)

Erb, George C., Forest Hills, West, assignor to American Can Company, New York, N. Y. Container. 2,004,104; June 11.

Ethridge, Albert S., assignor to Hummel & Downing Co., Milwaukee, Wis. Box structure. 2,004,197; June 11.

Etheridge, Harry, Zelienople Borough, Pa. Railway track structure. 2,004,369; June 11.

Etten, Nicholas L., Waterloo, Iowa, assignor, by mesne assignments, to Chamberlain Corporation. Heater for laundry ironers. 2,004,430; June 11.

Evans, Bernard C., Fort Wayne, Ind., assignor to General Electric Company. Bushing. 2,004,784; June 11.

Evans, David F. (See Gladding, E. K., and Evans.)

Ewest, Hans. (See Pirani, M. Ewest, and Gaidies.)

Faccini, Enrique J., and J. Capra, Buenos Ayres, Argentina. Apparatus for burning heavy fuel oils. 2,004,275; June 11.

Fall, Joseph W., Evanston, assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill. Roof construction. 2,004,198; June 11.

Fanfarillo, Cesare, Glassboro, N. J. Pan for cement mixers. 2,004,276; June 11.

Farabough, George M., Rogers, Ark. Potato cutter. 2,004,858; June 11.

Farbenindustrie Aktiengesellschaft. (See Fick, Reinhold, assignor.)

Farese, Joseph. (See Simister, Louis W., assignor.)

Farish, Robert E., Jr., Columbus, Ga. Electrical connecter. 2,004,105; June 11.

Farley, Lyle T., Norwich, N. Y. Automobile surface sander. 2,004,859; June 11.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,004,654; June 11.

Farmer, Clyde C., Pittsburgh, and R. E. Miller, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Remote controlled brake. 2,004,655; June 11.

Fassin, Gustave, Iroudequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Photo-micrographic apparatus. 2,004,807; June 11.

Fausel, Charles A., Glenridge, N. J. Dispensing valve. 2,004,161; June 11.

Fenn, William, assignor to T. R. McDonald, Columbus, Ohio. Packing liner. 2,004,315; June 11.

Feltman, Howard B., Wyncote, assignor to Berger Brothers Company, Philadelphia, Pa. Gutter hanger. 2,004,861; June 11.

Ferrari, Abele, M. Scallone and C. Rafanelli, Healdsburg, Calif. Bung faucet. 2,004,860; June 11.

Fibreboard Products Inc. (See Ford, G. F., and Pittman, assignors.)

Fick, Reinhold, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Aminocarboxylic acids and salts thereof. 2,004,523; June 11.

Fieberling, Charles A., Oakland, Calif., assignor of one-half to J. H. Kimball, Berkeley, Calif. Overflow detector. 2,004,502; June 11.

Fieldman, Michael, Philadelphia, Pa., assignor to Houde Engineering Corporation, Buffalo, N. Y. Inertia controlled hydraulic shock absorber. 2,004,910; June 11.

Fieldman, Michael, Chicago, Ill., assignor to House Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,911; June 11.

Filander, Arthur H. (See Stertzbach, H. W., McPherson, and Filander.)

Fildes, Frederick K. (See Hankins, F. W., and Fildes.)

Filoon, V. & F. W., Company. (See Kent, Everett E., assignor.)

Filter Tips Limited. (See Bunker, Sidney W., assignor.)

Fink, James O., assignor to Continental Motors Corporation, Detroit, Mich. Ejector. 2,004,277; June 11.

First National Institute of Violin. (See Westman, William W., assignor.)

Fischer, H. G., & Company. (See Fischer, H. G., Musket and Richardson, assignors.)

Fischer, Herbert G. M., Westfield, N. J., and C. E. Gustafson, Elizabeth, N. J., assignors to Standard Oil Development Company. Hydrocarbon oil and making the same. 2,004,094; June 11.

Fischer, Herman G., P. P. Musket and D. E. Richardson, assignors to H. G. Fischer & Company, Chicago, Ill. Low voltage generator. 2,004,751; June 11.

Fish Net and Twine Co., The. (See Lichtenstein, Valentine, assignor.)

Fitch, William H., Plainfield, N. J. Recuperator for open hearth furnaces. 2,004,916; June 11.

Fithian, Lon, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Leveling and adjusting block. 2,004,238; June 11.

Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Clutch mechanism for engine starters. 2,004,431; June 11.

Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 2,004,432; June 11.

Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 2,004,433; June 11.

Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 2,004,434; June 11.

Fleetwood Craftsman, Inc. (See Waters, W. H., and Kern, assignors.)

Flynn & Emrich Company. (See Turner, J. F., and Breidenbaugh, assignors.)

Foeckler, John P., Sr., Milwaukee, Wis. Household tool. 2,004,524; June 11.

Folk, Joseph, assignor to U. S. Slicing Machine Company, La Porte, Ind. Slicing machine. 2,004,601; June 11.

Folk, Joseph, assignor to U. S. Slicing Machine Company, La Porte, Ind. Combined work holder and clamp. 2,004,602; June 11.

Folk, Joseph, assignor to U. S. Slicing Machine Company, La Porte, Ind. Gauge plate construction. 2,004,603; June 11.

Folsom, Edward C., Toledo, Ohio, assignor, by mesne assignments, to The American Brake Shoe and Foundry Company. Brake shoe. 2,004,278; June 11.

Fonville, John L., Burlington, N. C., assignor to King Cotton Mills Corporation, Richmond, Va. Stocking. 2,004,656; June 11.

Fonyo, Aladar, Chicago, Ill. Bottle closure. 2,004,690; June 11.

Food Machinery Corporation. (See Colin, F. S., and Rogers, assignors.)

Foote Company, The. (See Blood, George E., assignor.)

Foote, Wayland L., Griffin, Ga. Fishhook. 2,004,316; June 11.

Ford, George F., Los Angeles, and W. F. Pittman, Huntington Park, Calif., assignors to Fibreboard Products Inc., San Francisco, Calif. Box making machine. 2,004,604; June 11.

Förster, Arthur, assignor to Luftschiffbau Zeppelin Gesellschaft mit Beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Bracing the circumference of gas-inflated rigid airships. 2,004,785; June 11.

Forster, Thomas L., Berkeley, Calif. Gas burner. 2,004,317; June 11.

Frottinger, Hermann, Berlin-Wilmersdorf, Germany. Fluid driven and driving apparatus. 2,004,279; June 11.

Fox, Merritt L., Buffalo, N. Y., and F. E. Ullery, South Bend, Ind.; said Fox assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,752; June 11.

Franklin Needle Company. (See Roy, Edmond O., assignor.)

Franklin Process Company. (See Trayer, William A., assignor.)
Friedrich, George E., San Antonio, assignor to Edward Friedrich, San Antonio, Texas. Florist's refrigerator. 2,004,691; June 11.
Friedrich, Edward. (See Friedrich, George E., assignor.)
Friedrich, George E., assignor to Edward Friedrich, San Antonio, Texas. Refrigerator. 2,004,692; June 11.
Fuller, Emil E., assignor to Shambow Shuttle Company, Woonsocket, R. I. Shuttle. 2,004,721; June 11.
Furness, William H., Riverton, assignor to American Rayon Company, Inc., Riverton, N. J. Power transmission. 2,004,572; June 11.
Galdies, Georg. (See Pirani, M., Ewest, and Galdies.)
Gallagher, John P., Jersey City, N. J. Pressed steel car end. 2,004,199; June 11.
Gallasch, George B., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Diagnostic instrument. 2,004,808; June 11.
Galley, Ernest V. (See Galley, John A. and E. V.)
Galley, John A., Edgecliff, New South Wales, and E. V. Galley, Milsons Point, North Sydney, New South Wales, Australia. Pea sheller. 2,004,573; June 11.
Galvin Manufacturing Corporation. (See Mitchell, Donald B., assignor.)
Capra, José. (See Faccini, E. J., and Capra.)
Garey, Raymond M. (See Henwood, A., and Garey.)
Gasoline Antioxidant Company. (See Wilson, Robert E., assignor.)
Gaspar, Béla, Berlin, Germany. Producing photographic dyestuff images. 2,004,625; June 11.
Gasswint, Charles W., Mason City, Iowa. Awning fastening device. 2,004,862; June 11.
Gast, Richard. (See Schindhelm, H., and Gast.)
Gaston, George H., Houston, Tex. Seat or cushion. 2,004,106; June 11.
Gaus, George E., Washington, D. C., assignor to the free use of the Public. Staff holder. 2,004,786; June 11.
Geary, Francis E., et al. (See Quisenberry, Frank R., assignor.)
Gee, William Oliver, Jr., Chicago, Ill. Spray gun reservoir. 2,004,574; June 11.
Geigy, Wilhelm. (See Barz, F., Landolt, Geigy, Kaegi, and Graenacher.)
Gemmer Manufacturing Company. (See Marles, Henry, assignor.)

Gerard, George A., assignor to Cotton-Wood Products, Inc., Reading, Mass. Method and apparatus for making sealed pads. 2,004,657; June 11.
Gerard, George A., assignor to Cotton-Wood Products, Inc., Reading, Mass. Method and machine for making cushion pads. 2,004,658; June 11.
Geyer, Harvey D., and F. W. Sampson, Dayton, Ohio, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich. Freezing tray. 2,004,525; June 11.
Gibson, Harvey C., Columbia, Pa. Confection. 2,004,863; June 11.
Gifford-Wood Company. (See Towne, Willis H., assignor.)
Gilbert, Edward L., Fort Bayard, New Mex. Single sleeve valve engine. 2,004,693; June 11.
Gilbert, Harvey N., and J. S. Reichert, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del. Stabilizing hydrogen peroxide solutions with pyrophosphoric acid plus a tin compound. 2,004,809; June 11.
Gillet, James M., Evanston, Ill., assignor to Victor Chemical Works. Treating water. 2,004,694; June 11.
Gillette, Robert T., Scotia, N. Y., assignor to General Electric Company. Mandrel. 2,004,787; June 11.
Girdler Corporation, The. (See Luening, Eugene G., assignor.)
Gladding, Ernest K., and D. F. Evans, Buffalo, assignors to Du Pont Rayon Company, New York, N. Y. Bobbin traverse motion. 2,004,162; June 11.
Globe Automatic Sprinkler Company. (See Rowley, Arthur C., assignor.)
Goddu, George, deceased, Winchester, Mass., by Isabelle W. Goddu, executrix, Winchester, assignor to The Litttleway Process Company, Boston, Mass. Holding shoe uppers in lasted position. 2,004,239; June 11.
Goddu, Isabelle W., executrix. (See Goddu, George.)
Goldberg, Samuel D., assignor to Novocol Chemical Mfg. Co., Inc., Brooklyn, N. Y. Anaesthetic composition. 2,004,891; June 11.
Goldsmith, Alfred N., New York, N. Y., assignor to Radio Corporation of America. Radio receiving system. 2,004,107; June 11.
Goodchild, Frank D., and W. E. Benham, Aldwych, London, England, assignors to Western Electric Company, Incorporated, New York, N. Y. Electron discharge tube. 2,004,605; June 11.
Goodlin, Carl L., Wilkinsburg, and T. J. O'Meara, Pittsburgh, assignors to The Union Switch & Signal Company, Swissvale, Pa. Lamp socket adapter. 2,004,200; June 11.
Goodlin, Carl L., Wilkinsburg, and T. J. O'Meara, Pittsburgh, assignors to The Union Switch & Signal Company, Swissvale, Pa. Lamp socket adapter. 2,004,201; June 11.
Goodrich, B. F. Company, The. (See Homeier, Otto F., assignor.)
Goodrich, B. F., Company, The. (See Merrill, Allan B., assignor.)
Goodrich, B. F., Company, The. (See Moffitt, Lucian Q., assignor.)
Goodrich, J. D., et al. (See Silber, T. J., assignor.)
Government and the People of the United States, Dedicated to the free use of the. (See Green, Edmund L., assignor.)
Grady, Charles B., West Orange, N. J. Gas treating apparatus. 2,004,108; June 11.
Graeber, Jacob F., Norristown, Pa., assignor to The National Tag Manufacturing Corporation, New York, N. Y. Ticket-stringing apparatus. 2,004,163; June 11.
Graenacher, Charles. (See Barz, F., Landolt, Geigy, Kaegi, and Graenacher.)
Graenacher, Charles, Basel, and F. Ackermann, Bluingen, near Basel, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Imidazole derivatives, useful especially as textile assistants and making same. 2,004,864; June 11.
Grammes, L. F. & Sons, Inc. (See Price, Wilbur F., assignor.)
Grasehy, Robert C., New Malden, England. Prepayment meter mechanism. 2,004,526; June 11.
Gratzmüller, Louis R. E., Paris, France. Electric traction. 2,004,240; June 11.
Gredell, Otto N., Kansas City, assignor to Standard Steel Works, North Kansas City, Mo. Combination cutting and grinding mill. 2,004,753; June 11.
Green, Edmund L., Washington, D. C., dedicated to the free use of the Government and the People of the United States. Spray material. 2,004,788; June 11.
Green, Edmund L., Washington, D. C., dedicated to the free use of the Government and the People of the United States. Active or toxic spray material. 2,004,789; June 11.
Greve, Norman A. (See Greve, Robert L., assignor.)
Greve, Robert L., Pasadena, assignor of one-half to N. A. Greve, Wilmar, Calif. Rafter marking apparatus. 2,004,318; June 11.
Grieshaber, William A., Riverside, Calif. Pneumatic tire. 2,004,892; June 11.

Griscom-Russell Company, The. (See Benzinger, Julius, assignor.)
Griscom-Russell Company, The. (See Dewald, Edward A., assignor.)
Griscom-Russell Company, The. (See Jones, Russell C., assignor.)
Griscom-Russell Company, The. (See Price, J., and Jones, assignors.)
Grison, Joseph, Braintree, Mass. Exhaust gas purifier for vehicles. 2,004,865; June 11.
Groch, Robert D., Sacramento, Calif. Table fork 2,004,659; June 11.
Gross, Charles E. (See Story, E. B., and Gross.)
Gumpper, Harold D., Detroit, Mich. Speed governor for gas electric power units. 2,004,404; June 11.
Gumpper, Harold D., Detroit, Mich. Unit electric power generating plant. 2,004,405; June 11.
Gustafson, Clifford E. (See Fischer, H. G. M., and Gustafson.)
Guyler, Albert F. (See Welch, S. A., Guyler, Ashby, and Boaler.)
Haas, Frederick S. (See Booth, C., and Haas.)
Hadaway, John B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Abrading machine. 2,004,109; June 11.
Hagen, Harold F., Dedham, assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass. Centrifugal fluid moving apparatus. 2,004,516; June 11.
Hager, Fritz, Berlin, Germany. Hanger for cables of overhead lines. 2,004,695; June 11.
Haldeman, James F., Bloomfield, Ind. Submersible pump and electric motor unit. 2,004,866; June 11.
Hall, Ferguson, Shenandoah, Iowa. Controlling system for sound recording devices. 2,004,803; June 11.
Hall, Virgil. (See Trotter, J. L., and Hall.)
Halliburton, Erle P., Los Angeles, Calif. Cementing wells. 2,004,606; June 11.
Hamilton, Benjamin W., Great Falls, Mont., assignor to S. L. Kerr. Power control system. 2,004,478; June 11.
Hamilton, Eugene R., Boston, Mass. Educational map. 2,004,241; June 11.
Hamm, William S., Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill. Weather strip. 2,004,722; June 11.
Handley, William C., Chicago, Ill. Waterproof watch. 2,004,280; June 11.
Hankins, Frederick W., Philadelphia, and F. K. Fibles, Altoona, Pa. Container transfer apparatus. 2,004,095; June 11.
Hanlon-Buchanan, Inc. (See Thompson, C. L., Bacon, and Rhodworth, assignors.)
Hann, George L., Staten Island, N. Y., assignor to United States Gypsum Company, Chicago, Ill. Packaging sheet materials. 2,004,626; June 11.
Hansen, Conrad T., Rywood, Pa., assignor, by mesne assignments, to The E. F. Hauserman Company. Wall and post construction. 2,004,319; June 11.
Hanson, Gustaf S., Montclair, N. J. Paint brush protector. 2,004,320; June 11.
Hart, Harold L. (See Hume, J. T., and Hart.)
Hartford Products Corporation. (See Wolcott, Frank E., assignor.)
Harvel Corporation, The. (See Harvey, Mortimer T., assignor.)
Harvey, Douglas J., Nutley, N. J. Buckle. 2,004,406; June 11.
Harvey, Frank, Covington, Ky., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electrical conducting system. 2,004,527; June 11.
Harvey, Harold C., Trenton, N. J. Composite flooring material. 2,004,723; June 11.
Harvey, Mortimer T., East Orange, N. J., assignor to The Harvel Corporation. Adhesive. 2,004,370; June 11.
Harvey, Theodore C., Philadelphia, Pa. Dump wagon. 2,004,754; June 11.
Harvey, Theodore C., Philadelphia, Pa. Dump wagon. 2,004,755; June 11.
Hauserman, E. F., Company, The. (See Hansen, Conrad T., assignor.)
Hawkins, William F. (See Quinn, F. P., Horrobin, and Hawkins.)
Hawley, Charles G., Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio. Scrubber. 2,004,467; June 11.
Hawley, Charles G., Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio. Centrifugal separator. 2,004,468; June 11.
Hay, Walter, Sandusky, Ohio. Universal joint chain. 2,004,321; June 11.
Hazel-Atlas Glass Company. (See Fithian, Lon, assignor.)
Hazel-Atlas Glass Company. (See Schwab, John C. E., assignor.)
Head, Percy H., Attenborough, assignor to Netal Products Limited, Long Eaton, near Nottingham, England. Porous rubberized fabric and producing same. 2,004,110; June 11.
Heald Machine Company, The. (See Booth, C., and Einstein, assignors.)
Heath, Albert, assignor to R. F. Weisbrenner, Chicago, Ill. Table construction. 2,004,696; June 11.
Henulme, Henri, Paris, France. Apparatus for presenting advertisement-pictures and others. 2,004,111; June 11.
Hede, Arvid, assignor to Cinder Chrome Company, Detroit, Mich. Cinder chrome building unit. 2,004,323; June 11.
Hedlund, John E., St. Paul, assignor of one-half to E. S. Leighton, Minneapolis, Minn. Safety razor. 2,004,322; June 11.
Hedlund, Oscar, Battle Creek, assignor to Wilcox-Rich Corporation, Detroit, Mich. Making valves. 2,004,528; June 11.
Hedman, Erik G., Buffalo, N. Y. Weighing scale. 2,004,696; June 11.
Heeren, Reinhard L., Brooklyn, N. Y. Automatic tuning device. 2,004,324; June 11.
Hehlgans, Friedrich W., Berlin-Helmsdorf, Germany, assignor to General Electric Company. Electron discharge device. 2,004,790; June 11.
Heil Co., The. (See Thwaits, Frederick G., assignor.)
Heinel, Amy B. (See Heinel, Howard C., assignor.)
Heinel, Howard C., assignor to Amy B. Heinel, Philadelphia, Pa. Revoluble valve for internal combustion engines. 2,004,912; June 11.
Heitger, Frank H., deceased, Flint, Mich., M. G. Heitger, administratrix, assignor to Bendix Products Corporation, South Bend, Ind. Carburetor. 2,004,242; June 11.
Heitger, Mattie G., administratrix. (See Heitger, Frank H., assignor.)
Hemb, Harold B., Wilmette, Ill. Container closure. 2,004,407; June 11.
Hendrick Manufacturing Company. (See Blackburn, Daniel M., assignor.)
Hene, Emil, Berlin, assignor to Rudolph Koepp & Co., Chem. Fabrik A. G., Oestrich, Germany. Making potassium oxalate. 2,004,867; June 11.
Henkel, Erich, Calumet City, Ill., A. Williams, Hammond, Ind., and R. M. Ostermann, Kenilworth, Ill., assignors to The Superheater Company, New York, N. Y. Injector. 2,004,281; June 11.
Henwood, Abraham, Cynwyd, and R. M. Garey, Willow Grove, Pa. Apparatus for use in chemical digestions. 2,004,868; June 11.
Hersey, Ralph E., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Testing system. 2,004,607; June 11.
Herz Cup Company. (See Conti, Eugene, assignor.)
Herzog, Erwin P., St. Louis, Mo. Measuring instrument. 2,004,724; June 11.
Hess, Margaret, Morocco, Ind. Spoon. 2,004,756; June 11.
Hewlett, Samuel D. (See Birchy, Charles, assignor.)
Hiller, Stanley, Berkeley, assignor to Stanley Hiller, Incorporated, San Francisco, Calif. Apparatus for expressing liquids. 2,004,408; June 11.
Hiller, Stanley, Incorporated. (See Hiller, Stanley, assignor.)
Hillier, Harold, Cathcart, Glasgow, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Liquid level regulator. 2,004,529; June 11.
Hines, James F., assignor to R. J. Hines, Lakewood, Ohio. Making hinges. 2,004,810; June 11.
Hines, Russell J. (See Hines, James F., assignor.)
Hixon Electric Co. (See MacNaught, Malcolm S., assignor.)
Hloch, Albert, Lichterfelde, near Berlin, assignor, by mesne assignments, to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Operating breathing apparatus. 2,004,243; June 11.
Hoe, R., & Co. (See Quick, C. G., Ball, and Bennett, assignors.)
Hoeflich, Julius G., assignor to The Chancy Manufacturing Company, Springfield, Ohio. Self-supporting thermometer. 2,004,627; June 11.
Hofmann, Otto, Karlsbad, Czechoslovakia. Producing containers. 2,004,164; June 11.
Hogg, John W., Llanerch, Pa. Charge forming device. 2,004,869; June 11.
Holden, William H. T., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Selective signaling system. 2,004,244; June 11.
Hollingshead, Arthur G., and C. W. Ploen, assignors to The Okadee Company, Inc., Chicago, Ill. Automatic cylinder cock with relief valve. 2,004,097; June 11.
Holtzer-Cabot Electric Company, The. (See Baker, Randall B., assignor.)
Homeier, Otto F., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Tool for preparing laminated fabrics for splicing. 2,004,517; June 11.
Honigman, Hans, East Cleveland, assignor to The Chandler & Price Company, Cleveland, Ohio. Platen printing press. 2,004,149; June 11.
Hood Rubber Company. (See Lussier, Joseph A., assignor.)
Hoover Company, The. (See White, Harry R., assignor.)
Hopkins, Burward K., Peoria, Ill. Apparatus and method for forming screen from wire. 2,004,409; June 11.
Hopkins, Edwin, New York, N. Y. Teleticket system. 2,004,112; June 11.
Horak, Julius J. (See Quandt, H. L., and Horak.)
Horrobin, William. (See Quinn, F. P., Horrobin, and Hawkins.)
Horton, Albert F., Cranston, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine. Tag printing and stapling machine. 2,004,202; June 11.

Horton, Allen A., Plymouth, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich. Driving mechanism for calculating machines. 2,004,282; June 11.

Horton, George T., Chicago, Ill. Tank. 2,004,113; June 11.

Houch, John W., and G. M. Dye, assignors to Pako Corporation, Minneapolis, Minn. Apparatus for handling articles through treating liquids. 2,004,410; June 11.

Houde Engineering Corporation. (See Fieldman, Michael, assignor.)

Houde Engineering Corporation. (See Fox, M. L., assignor, and Ullery.)

Houde Engineering Corporation. (See Peo, Ralph F., assignor.)

Houde Engineering Corporation. (See Peo, R. F., and Lautz, assignors.)

Houde Engineering Corporation. (See Peo, R. F., and Sullivan, assignors.)

Hounsfield, Leslie H., London, England. Material strength testing machine. 2,004,660; June 11.

Howard, William. (See Trey, S., Howard, and Chessin.)

Howe, Charles W., Milwaukee, Wis., and J. A. Nevin, Wichita, Kans., said Howe assignor to said Nevin. Apparatus and method for forming edible receptacles. 2,004,530; June 11.

Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Reel. 2,004,608; June 11.

Howell, James W., Chickasha, Okla. Spout for hose nozzles. 2,004,203; June 11.

Hruza, Frank J., Cicero, Ill. Spring structure. 2,004,657; June 11.

Hubbell, Harvey, Jr., Bridgeport, Conn. Magnet controlled switch. 2,004,114; June 11.

Hubbell, Harvey, Incorporated. (See Von Holtz, Charles T., assignor.)

Hughes, Grover A., assignor to Truscon Steel Company, Youngstown, Ohio. Structural beam. 2,004,894; June 11.

Hulse, George E., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company. Control apparatus for refrigeration machines. 2,004,503; June 11.

Hume, John T., Chicago, and H. L. Hart, River Forest, assignors to Electric Household Utilities Corporation, Cicero, Ill. Ironing machine. 2,004,165; June 11.

Hummel & Downing Co. (See Ethridge, Albert S., assignor.)

Hummel & Downing Co. (See Ratcliff, Arthur, assignor.)

Hurd, Norman B., Newington, assignor to The American Hardware Corporation, New Britain, Conn. Panic bolt. 2,004,811; June 11.

Hurt, Arthur J., Denver, Colo. Fixture for turning or grinding ovals. 2,004,283; June 11.

I. G. Farbenindustrie Aktiengesellschaft. (See Hoch, Albert, assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Mueller Conradi, M., and Ober, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Müller, C., Schlecht, and Keunecke, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wolf, H., Leuchs, and Saenger, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wulff, C., and Boell, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wulff, C., Nicodemus, and Treppenhauer, assignors.)

Ibañes, Francisco R., Mexico City, Mexico. Elastic coupling to substitute an internal gear. 2,004,325; June 11.

Imperial Chemical Industries Limited. (See Palmer, Keith W., assignor.)

Industrial Patents Corporation. (See Ingram, R. L., and Adler, assignors.)

Ingram, Robert L., and H. P. Adler, assignors to Industrial Patents Corporation, Chicago, Ill. Meat holder. 2,004,757; June 11.

Inman, William H., assignor to Bloomer Bros. Company, Newark, N. Y. Article holder. 2,004,326; June 11.

Innes, Robert, Coldbrook, Nova Scotia, Canada. Blotting attachment for pens. 2,004,870; June 11.

Iris-Licht G. m. b. H. (See Lebedenko, N., Levy, and Zeitlin, assignors.)

Irving Trust Company, receiver. (See Quick, C. G., Ball, and Bennett, assignors.)

Iversen, Lorenz, Pittsburgh, assignor to Master Machine Company, Homestead, Pa. Feeding and shearing mechanism. 2,004,871; June 11.

Ivy, James P. (See Allison, J. J., and Ivy.)

Izard, Emmette F., Elsmere, and P. L. Salzberg, assignors to E. I. duPont de Nemours & Company, Wilmington, Del. Levulinic acid esters and their preparation. 2,004,115; June 11.

Jackson, Oscar W., Rockville Center, N. Y. Reenforcement for mats. 2,004,204; June 11.

Jacobs Bros. Co. Inc., The. (See Walker, Harold L., assignor.)

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 2,004,435; June 11.

Jaeger, Alphons O., Mt. Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, Matoh. 2,004,436; June 11.

Jaeger, Alphons O., Crafton, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, Catalytic apparatus. 2,004,758; June 11.

Janesick, Albert, Detroit, Mich. Steam pressure atomizer. 2,004,371; June 11.

Jardine, Frank, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa. Piston sand core. 2,004,661; June 11.

Jennings, George H., Elmwood, East Bridgewater, Mass. Welting and producing it. 2,004,116; June 11.

Jennings, George H., Elmwood, East Bridgewater, Mass. Welting and producing welting. 2,004,117; June 11.

Jeppsson, Ivar, assignor to Chicago Flexible Shaft Company, Chicago, Ill. Freezer power attachment. 2,004,245; June 11.

Jester, Alfred T., Houston, Tex. Ringing repeater. 2,004,759; June 11.

Johansson, Ernest G., Watertown, assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass. Switch and fuse mechanism. 2,004,327; June 11.

Johansson, Ernest G., Watertown, assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass. Fuse mechanism. 2,004,328; June 11.

Johansson, Ernest G., Watertown, assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass. Switch for electric meters. 2,004,329; June 11.

Johnson, Edward S., Seven Mile, Ohio. Gas tank alarm. 2,004,872; June 11.

Johnson, George T., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Car construction. 2,004,330; June 11.

Johnson, Gustave T. (See White, C. L., and Johnson.)

Johnson, Joseph B. (See Arms, M. H., and Johnson.)

Johnson Laboratories, Inc. (See Crossley, Alfred, assignor.)

Johnson, Lawrence R., assignor to The Chandler & Price Company, Cleveland, Ohio. Platen printing press. 2,004,812; June 11.

Johnson, Oscar L., assignor, by mesne assignments, of one-half to Lug-Lox Flooring Company, and one-half to Leon F. Urbain, Chicago, Ill. Attaching floor boards. 2,004,917; June 11.

Johnson, Reginald H., Maplewood, N. J., assignor to American Hair & Felt Company, Chicago, Ill. Felt punching loom. 2,004,725; June 11.

Johnston, Harry, Detroit, Mich. Tennis racket. 2,004,669; June 11.

Jones, Edward H., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Mounting for electrical apparatus. 2,004,610; June 11.

Jones, James E., Richmond, Ind. Fuel stoker. 2,004,813; June 11.

Jones, Russell C. (See Price, J., and Jones.)

Jones, Russell C., Bronxville, assignor to The Griscom Russell Company, New York, N. Y. Manufacture of finned tubing. 2,004,389; June 11.

Jonitz, Georgina F., Washington, D. C. Receptacle closure. 2,004,698; June 11.

Judd, Irving H., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Truck trailer combination. 2,004,437; June 11.

Judd, Irving H., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Transportation of automobiles. 2,004,438; June 11.

Judd, Irving H., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Automobile loading and carrying means. 2,004,439; June 11.

Junkers, Hugo, Dessau, and H. Wigge, Koethen, Germany. Measuring the distance of an aircraft from ground. 2,004,662; June 11.

Kaegi, Hans. (See Barz, F., Landolt, Geigy, Kaegi, and Graenacher.)

Kägi, Emil, assignor to firm Sulzer Frères Société Anonyme, Winterthur, Switzerland. Compressor. 2,004,726; June 11.

Kaiser, Wilhelm J. (See Kirstahler, A., and Kaiser.)

Kirstahler, Alfred, Duesseldorf, and W. J. Kaiser, Duesseldorf-Benrath, Germany. Thiosulphate esters and their production. 2,004,873; June 11.

Kartizky, John. (See Pleister, H. W., and Kartizky.)

Kaselitz, Oskar, Berlin, Germany. Utilizing the nitrogen in nitrosyl chloride. 2,004,663; June 11.

Kazenmaier, August, F. Allendorff, and A. Schmid, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Packing arrangement for electrical machines. 2,004,440; June 11.

Kearney, Edward J., Wauwatosa, and F. A. Parsons and J. B. Armitage, Milwaukee, assignors to Kearney & Trecker Corporation, West Allis, Wis. Milling machine organization. 2,004,441; June 11.

Kearney & Trecker Corporation. (See Kearney, E. J., Parsons, and Armitage, assignors.)

Keen, Charles R., and C. F. Moore, San Diego, Calif. Carbon removing composition. 2,004,628; June 11.

Keller, Walter E., Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill. Sash construction. 2,004,727; June 11.

Kellerth, Carl W., Rockford, Ill. Garment hanger. 2,004,284; June 11.

Kelley, John E., Larchmont, N. Y. Drier. 2,004,488; June 11.

Kendall Company, The. (See Meagher, Glenn B., assignor.)

Kennedy, Donald S., Longparish, Hampshire, England. Pulley drum for motor vehicles. 2,004,554; June 11.

Kent, Everett E., Newton, assignor to V. & E. W. Filoon Company, Brockton, Mass. Welting and producing welting. 2,004,118; June 11.

Kent, James W., Brooklyn, and E. P. Peters, Richmond Hill, N. Y. Paint can accessory. 2,004,285; June 11.

Kern, Jacob S., et al. (See Waters, W. H., and Kern.)

Kernin, Alfred G., assignor to Mosinee Paper Mills Company, Mosinee, Wis. Smelting furnace for black liquor. 2,004,205; June 11.

Kerr, Howard J., Westfield, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Boiler. 2,004,895; June 11.

Kerr, S. Logan. (See Hamilton, Benjamin W., assignor.)

Kershaw, Henry, assignor to Sovereign Machinery Company, Newark, N. J. Producing radio tube grids. 2,004,246; June 11.

Kestenman, Charles H., assignor to Kestenman Bros. Mfg. Co., Providence, R. I. Extendible clasp or connecting device for straps, bands, and bracelets. 2,004,206; June 11.

Kestenman Bros. Mfg. Co. (See Kestenman, Charles H., assignor.)

Ketner, William H., Broomfield, Colo. Hack saw frame and guide. 2,004,286; June 11.

Keunecke, Emil. (See Müller, C., Schlecht, and Keunecke.)

Keyeswetter, Irving A., Berwyn, assignor of one-half to Ernest R. Berg, Cicero, Ill. Roof and side covering for buildings. 2,004,575; June 11.

Kibler, William J., assignor to Buffalo Steel Company, Tonawanda, N. Y. Fence post. 2,004,629; June 11.

Kiesecker, Jules P., New York, N. Y. Furniture. 2,004,287; June 11.

Kimball, John H. (See Fiederling, Charles A., assignor.)

King Cotton Mills Corporation. (See Fonville, John L., assignor.)

King, Lindsey. (See Siebert, S. R., and King.)

King-Seeley Corporation. (See Boddy, Leonard, assignor.)

Kinsley, Reginald P. (See Becker, F. W., and Kinsley.)

Kirsch, John, Milwaukee, Wis. Applicator roll. 2,004,576; June 11.

Kleinfelder, Walter C., Rosebank, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Flow indicator. 2,004,611; June 11.

Klein, Harry H., New York, N. Y. Hair curler. 2,004,760; June 11.

Klein, Robert, Brooklyn, assignor to Bell Cap Company, New York, N. Y. Ventilated engineer's cap. 2,004,913; June 11.

Kleinmann, Ernst, and A. Mendel, Berlin-Lichtenberg, Germany. Method and apparatus for the manufacture of electrical contact plugs. 2,004,555; June 11.

Knobel, Max, Arlington, Mass. Clock movement. 2,004,814; June 11.

Knott, George A., Washington, D. C. Folding furniture. 2,004,896; June 11.

Koepp, Rudolph, & Co., Chem. Fabrik A. G. (See Heue, Emil, assignor.)

Koppel Industrial Car and Equipment Company. (See Schmuhl, A. C., and Asper, assignors.)

Koppel Industrial Car and Equipment Company. (See Schmuhl, Alfred C., assignor.)

Korte, Alfred C., assignor to Metalcraft Corporation, St. Louis, Mo. Headlight and spot light device for toy vehicles. 2,004,791; June 11.

Kosken, Wilbo, Inc. (See Kosken, Wilbo A., assignor.)

Kosken, Wilbo A., New York, N. Y., assignor to Wilbo A. Kosken, Inc. Additive fixed filter color system. 2,004,442; June 11.

Kovac, Rudolph, assignor to American Automatic Devices Co., Chicago, Ill. Lens. 2,004,443; June 11.

Krannak, Steven J., assignor to Min-A-Max Co., Minneapolis, Minn. Muzzle loading grease gun. 2,004,664; June 11.

Krautkopf, Simon, Stuttgart, Germany. Knitting tubular fabric. 2,004,699; June 11.

Krick, Harold T., Hazleton, Pa. Collar stay. 2,004,288; June 11.

Krieg, Carl, Frankfort-on-the-Main, Germany. Grinding disk. 2,004,630; June 11.

Kruse, Harold F., Grosse Pointe Park, Mich. Aircraft. 2,004,411; June 11.

Kuhn, Frederick A., Meriden, assignor to The Lyman Gun Sight Corp., Middlefield, Conn. Telescope sight mounting. 2,004,489; June 11.

Kühers Metallwerke G. m. b. H. (See Luschenowsky, Alexander, assignor.)

Laabs, Max A., assignor to American Optical Company, Southbridge, Mass. Ophthalmic lens and making the same. 2,004,815; June 11.

Laemmel, Charles A., Brooklyn, assignor to Atlantic Service Company, Inc., Brooklyn, N. Y. Forming eyelets on meat saws and the like. 2,004,700; June 11.

Laganas, George, et al. (See Thompson, John L., assignor.)

Lamac Process Company. (See McClenathan, Roy F., assignor.)

Landis, Forrest C. (See Shoe, E. L., and Landis.)

Landolt, Albert. (See Barz, F., Landolt, Geigy, Kaegi, and Graenacher, assignors.)

Lang, Franz, Munich, Germany, assignor to Lanova Aktiengesellschaft, Vaduz, Liechtenstein. Diesel engine. 2,004,631; June 11.

Lanova Aktiengesellschaft. (See Lang, Franz, assignor.)

Lapham, Albert T., London, England. Neckwear. 2,004,490; June 11.

Laplante, Ovide, Riviere Du Loup Centre, Quebec, Canada. Switch. 2,004,207; June 11.

Laput, Gregory, Brooklyn, N. Y. Locking device. 2,004,761; June 11.

Larson, Carl H., assignor to The Adlake Company, Elkhart, Ind. Sash ventilator. 2,004,762; June 11.

Larsson, Joel, Hofors, Sweden, and H. Styrl, Philadelphia, Pa., assignors by mesne assignments to SKF Industries, Inc., Philadelphia, Pa. Alloy Steels. 2,004,331; June 11.

Lasker, William W., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Punching machine. 2,004,208; June 11.

Lautz, Carl F. (See Peo, R. F., and Lautz.)

Lazier, Wilbur A., Marshallton, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Product and process for preparing same. 2,004,874; June 11.

Leach, Charles H., Roselle, N. J. Rent exchange apparatus. 2,004,469; June 11.

Leake, Arthur G., Bridgeport, Conn. Tightening loose rivets in structural members. 2,004,665; June 11.

Lebedenko, Nikolai, Berlin-Wilmersdorf, R. Levy, Berlin-Wilmersdorf, and W. Zeitlin, Berlin-Charlottenberg, Germany, assignors to Iris-Licht G. m. b. H., Berlin, Germany. Process and apparatus for the production of luminous signs in electric gas discharge tubes. 2,004,577; June 11.

Leighton, Emma S. (See Hedlund, John E., assignor.)

Lems, Hendrik, Eindhoven, Netherlands, assignor to General Electric Company, Gaseous electric discharge device. 2,004,578; June 11.

Leng, Leopold. (See Moser, W., and Leng.)

Leonard, Charles H., Detroit, Mich. Repeating toy gun. 2,004,531; June 11.

Letterman, William E., Seattle, Wash. Spark plug. 2,004,119; June 11.

Leuchs, Hermann. (See Wolf, H., Leuchs, and Saenger.)

Leventhal, Jacob F., New York, N. Y., assignor by mesne assignments to Leventhal Patents, Incorporated. Optical compensator. 2,004,120; June 11.

Leventhal Patents, Incorporated. (See Leventhal, Jacob F., assignor.)

Lever Brothers Company Limited. (See Moore, C. W., and Ballantyne, assignors.)

Levy, Rudolf. (See Lebedenko, N., Levy, and Zeitlin.)

Lichtenstein, Valentine, assignor to The Fish Net and Twine Co., Jersey City, N. J. Reenforced tennis net and making the same. 2,004,579; June 11.

Lilienfeld, Leon, Vienna, Austria. Manufacture of artificial materials. 2,004,875; June 11.

Lilienfeld, Leon, Vienna, Austria. Manufacture of artificial threads and other products from cellulose compounds. 2,004,876; June 11.

Lilienfeld, Leon, Vienna, Austria. Manufacture of artificial threads and other products from cellulose compounds. 2,004,877; June 11.

Lindgren, Bror J., assignor to Niagara Machine and Tool Works, Buffalo, N. Y. Metal barrel drum beading machine. 2,004,816; June 11.

Linney, Albert T., Lexington, Ky. Sounding toy. 2,004,817; June 11.

Liptrott, Richard G., Brooklyn, N. Y. Window ventilator. 2,004,444; June 11.

Littleway Process Company, The. (See Goddu, George, assignor.)

Livengood, Orville A., Wyoming, Pa. Goggle supports. 2,004,701; June 11.

Loibl, Robert B., Jr., Los Angeles, Calif. Pest exterminator. 2,004,121; June 11.

Loibl, Robert B. Jr., Los Angeles, Calif. Pest exterminator. 2,004,122; June 11.

Loibl, Robert B., Jr., Los Angeles, Calif. Pest exterminator. 2,004,123; June 11.

Long, Thomas J., South Bend, Ind. Furnace regulator. 2,004,666; June 11.

Low, Stanley J., Niles Center, Ill. Coaster. 2,004,166; June 11.

Lubs, Herbert A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. N(p-amino-phenyl) morpholine and preparing the same. 2,004,763; June 11.

Lubs, Herbert A., and G. C. Strouse, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of N(p-amino-phenyl) morpholine. 2,004,764; June 11.

Luckett, William S., New York, N. Y. Paper receptacle. 2,004,818; June 11.

Luftschiffbau Zeppelin Gesellschaft mit Beschränkter Haftung. (See Förster, Arthur, assignor.)

Luening, Eugene G., assignor to The Girdler Corporation, Louisville, Ky. Pipe bend. 2,004,491; June 11.

Luftig, Morris, Chicago, Ill. Belt for personal wear. 2,004,412; June 11.

Lug-Lox Flooring Company. (See Cherry, Frank W., assignor.)

Lug-Lox Flooring Company. (See Johnson, Oscar L., assignor.)

Luschenowsky, Alexander, Berlin, assignor to Kühers Metallwerke G. m. b. H., Bonn-on-the-Rhine, Germany. Solder for aluminum and its alloys. 2,004,372; June 11.

Lusfield, Joseph. (See Martin, William P., assignor.)

Lussier, Joseph A., assignor to Hood Rubber Company, Inc., Watertown, Mass. Shoe. 2,004,897; June 11.

Lutes, Arthur M., Red Creek, N. Y. Drink mixer. 2,004,373; June 11.

Luttmann, Fred, Jr., Chicago, Ill. Elastic lace. 2,004,702; June 11.

Lyman Gun Sight Corp., The. (See Kuhn, Frederick A., assignor.)

Lyons, Thomas A., Pittsburgh, Pa. Flushing tank. 2,004,504; June 11.
MacLean, John, Pueblo, Colo. Printing plate and making the same. 2,004,824; June 11.
MacNaught, Malcolm S., Yonkers, N. Y., assignor to Hixon Electric Co., Boston, Mass. Container. 2,004,878; June 11.
Madge, Norman G., Montclair, N. J., assignor by mesne assignments to United States Rubber Company, New York, N. Y. Golf ball. 2,004,167; June 11.
Magill, Paul La F., Niagara Falls, N. Y., assignor to E. I. Du Pont de Nemours & Company, Inc., Wilmington, De. Treating solids with liquid. 2,004,332; June 11.
Magnani, Alessandro, Casale Monferrato, Italy. Direct manufacture of fibrous cement tubes between couples of rotating cylinders. 2,004,703; June 11.
Magnesium Castings and Products Limited. (See Day, Leslie G., assignor.)
Main, Daniel T., Westmount, Quebec, Canada, assignors to Best Weather Strip Company Limited, Hamilton, Ontario, Canada. Weatherstrip. 2,004,413; June 11.
Mallory, P. R., & Co. (See Weiger, Joseph A., assignor.)
Mansfield, George W., et al. (See Quisenberry, Frank R., assignor.)
Mapes, Clyde W., Dayton, Ohio, assignor by mesne assignments to General Motors Corporation, Detroit, Mich. Resilient mounting. 2,004,532; June 11.
Marks, Arthur H., New York, N. Y., assignor to Aeolian-Skinner Organ Company, Inc., Dorchester, Mass. Pipe organ. 2,004,168; June 11.
Marles, Henry, assignor to Gemmer Manufacturing Company, Detroit, Mich. Steering gear. 2,004,374; June 11.
Marshall, D. B., et al. (See Silber, TJ., assignor.)
Martin, Beatrice. (See Martin, William H., assignor.)
Martin, John E., assignor, by mesne assignments, to The Band Box Corporation, St. Louis, Mo. Cleaning method and apparatus. 2,004,375; June 11.
Martin, John E., assignor, by mesne assignments, to The Band Box Corporation, St. Louis, Mo. Dry cleaning apparatus and method. 2,004,376; June 11.
Martin, Wayne P., Anoka, Minn. Grinding mill. 2,004,704; June 11.
Martin, Wesley G., assignor to A. O. Smith Corporation, Milwaukee, Wis. Enameling. 2,004,632; June 11.
Martin, William H., assignor to Beatrice Martin, Ottawa, Kans. Swinging sign support. 2,004,819; June 11.
Martin, William P., Stickney, assignor of one-quarter to Joseph Lustfield, Cicero, Ill. Package opener. 2,004,377; June 11.
Martinez, Arcadio A., San Diego, Calif. Vehicle direction signal. 2,004,289; June 11.
Marvel Carbureter Company. (See Dean, E. E., and Berry, assignors.)
Massingham, Henry R., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Cable and making same. 2,004,612; June 11.
Mather, Irwin E., Chicago, Ill. Apparel belt. 2,004,477; June 11.
Matthews, Ernest C., and L. M. Clary, Eureka, Calif., assignors to The Paraffine Companies, Inc., San Francisco, Calif. Shingle. 2,004,879; June 11.
Maurer, Harry A., Novelty, Ohio, assignor to The Oster Manufacturing Company, Chaser holder. 2,005,333; June 11.
Mautsch, Robert H., Brussels, Belgium, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Thermostat. 2,004,667; June 11.
Maynard, Almy C. (See Davisson, D. W., Welke, and Maynard.)
Maynard, Walter A., Cleveland Heights, Ohio. Automatic stoker and control therefor. 2,004,533; June 11.
McAdoo & Allen Welting Company. (See Brown, William, assignor.)
McAuliffe, Michael J., Vicksburg, Miss. Tent. 2,004,668; June 11.
McCarthy, Henry J. (See Roberts, Joseph L., assignor.)
McCarty, Orin P., Pittsfield, Mass., assignor to General Electric Company. Electric switching. 2,004,792; June 11.
McCaul, Benjamin V., Fargo, N. Dak. Fish stringer. 2,004,247; June 11.
McClenathan, Roy F., assignor to Lamac Process Company, Erie, Pa. Shoe pressing machine. 2,004,820; June 11.
McCullough, Paul J., and A. H. Sullivan, St. Louis County, Mo. Amusement device. 2,004,290; June 11.
McDonald, Edward F. (See Parkinson, Roy W., assignor.)
McDonald, Thomas R. (See Fean, William, assignor.)
McGregor, Alexander Grant, London, England. Rotary furnace. 2,004,334; June 11.
McMullen, Charles, assignor to The Carborundum Company, Niagara Falls, N. Y. Making refractory products and the like. 2,004,378; June 11.
McNamara, William L., and L. P. Piazzoli, Jr., assignors to Capetan Glass Company, Connellsville, Pa. Vessel handling and finishing devices. 2,004,492; June 11.
McNutt, Joseph D., New Haven, assignor to Winchester Repeating Arms Company, New Haven, Conn. Priming mixture. 2,004,505; June 11.
McPherson, John S. (See Stertsbach, H. W., McPherson, and Filander.)
McSwain, Melvin E., Memphis, Tenn. Minnow trap. 2,004,899; June 11.
Marchant, Lawrence E., assignor to National Steel Car Corporation, Limited, Hamilton, Ontario, Canada. Sleeping car ceiling. 2,004,898; June 11.
Master Machine Company. (See Iversen, Lorenz, assignor.)
Mead, Frederic S., Cranston, R. I., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Apparatus and method for conveying threads. 2,004,169; June 11.
Meagher, Glenn B., Chicago, Ill., assignor to The Kendall Company, Boston, Mass. Container for absorbent cotton. 2,004,614; June 11.
Mears, Stowell W., New York, N. Y. Humidifier. 2,004,821; June 11.
Mecham, Larned A., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Phase shifting apparatus. 2,004,613; June 11.
Mendel, Alfred. (See Kleinmann, E., and Mendel.)
Menefee, James W., Fort Wayne, Ind. Bobber. 2,004,414; June 11.
Mercier, Louis M., Neuilly-sur-Seine, France. Pressure control for pneumatic tires. 2,004,822; June 11.
Merrill, Allan B., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Transmission belt. 2,004,479; June 11.
Merriman, Michael W., Cleveland, Ohio. Manhole frame and cover. 2,004,335; June 11.
Metalcraft Corporation. (See Korte, Alfred C., assignor.)
Metropolitan Device Corporation. (See Murray, Thomas E., Jr., assignor.)
Mewborne, Robert G., Albuquerque, New Mex., assignor to Niagara Sprayer and Chemical Co., Inc., Middleport, N. Y. Treatment of tobacco for insecticidal purposes. 2,004,124; June 11.
Meyer, Andre J., assignor to Continental Motors Corporation, Detroit, Mich. Clutch. 2,004,291; June 11.
Meyer, Edwin L., Bridgeport, Conn. Electric scroll saw. 2,004,580; June 11.
Meyer, Lina R., executor. (See Meyer, William.)
Meyer, Peter H., Buffalo, N. Y. Eyeglasses and the like. 2,004,445; June 11.
Meyer, Raymond B., Washington, D. C. Temperature controlled cabinet for electromechanical oscillators. 2,004,125; June 11.
Meyer, Samuel J., Brooklyn, N. Y. Shoe. 2,004,823; June 11.
Meyer, William, deceased, Chicago, Ill., Lina R. Meyer, executrix. Shaping or arching eyebrows. 2,004,581; June 11.
Michal, James, assignor to Storkline Furniture Corporation, Chicago, Ill. Foot control for baby carriages. 2,004,470; June 11.
Michels, Charles A., assignor of one-half to W. L. Crites, Moscow, Idaho. Pea husker. 2,004,370; June 11.
Middelboe, Kristian, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Manufacture of hydraulic cement and the like. 2,004,381; June 11.
Miehle Printing Press and Manufacturing Company, The. (See Wilkinson, William J., assignor.)
Miller, Alfred R., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote control system. 2,004,209; June 11.
Miller, Charles G., Montclair, and A. R. Bororden, Fanwood, N. J., assignors to American Telephone and Telegraph Company, Time announcing system. 2,004,248; June 11.
Miller, Raymond E. (See Farmer, C. C., and Miller.)
Miller, Raymond E., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Packing cup. 2,004,669; June 11.
Miller, Samuel C., assignor of one-half to J. A. Weis, New York, N. Y. Massage brush. 2,004,633; June 11.
Mills, Herbert S., River Forest, assignor to Mills Novelty Company, Chicago, Ill. Combined whipper and scraper for ice cream freezers. 2,004,446; June 11.
Mills Novelty Company. (See Mills, Herbert S., assignor.)
Mills Novelty Company. (See Radtke, Bruno, assignor.)
Mills, Percy E., Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coin collecting apparatus. 2,004,615; June 11.
Min-A-Max Co. (See Krannak, Steven J., assignor.)
Minneapolis-Moline Power Implement Company. (See Orelind, John R., assignor.)
Mitchell, Allister S., Detroit, Mich., assignor to National Automotive Fibres, Inc., Oakland, Calif. Upholstery method. 2,004,705; June 11.
Mitchell, Donald H., assignor to Galvin Manufacturing Corporation, Chicago, Ill. Control device. 2,004,918; June 11.
Moffitt, Lucian Q., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Resilient shaft journal and bearing therefor. 2,004,506; June 11.
Moloney, Raymond T. (See Breitenstein, Herbert G., assignor.)
Molter, Frederick G., Hempstead, N. Y. Waterproof suit for firemen and others. 2,004,765; June 11.
Monroe Auto Equipment Company. (See Nickelsen, John M., assignor.)

Montgomery, Donald H., Berlin, assignor to The New Britain Gridley Machine Company, New Britain, Conn. Hydraulic apparatus. 2,004,793; June 11.
Moore, Charles W., Warrington, Lancaster, and H. Ballantyne, Tadworth, Surrey, assignors to Lever Brothers Limited, Port Sunlight, England. Manufacture of soap powders. 2,004,670; June 11.
Moore, Clyde E. (See Keen, C. R., and Moore.)
Moore, John B., Riverhead, N. Y., assignor to Radio Corporation of America. Antenna selector. 2,004,126; June 11.
Moravec, Joseph J., Washougal, Wash. Flat screen frame. 2,004,507; June 11.
Morgans, Godfrey E., London, England. Swimming bath. 2,004,825; June 11.
Morehouse, Eugene, Providence, R. I., assignor to B. A. Ballou & Co., Inc. Clasp. 2,004,336; June 11.
Morland & Impey Limited. (See Shewell, W., and Cherry, assignors.)
Morrell, Jacque C., assignor to Universal Oil Products Company, Chicago, Ill. Producing asphalt. 2,004,210; June 11.
Moser, Wilhelm, and L. Leng, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Crystal holder. 2,004,170; June 11.
Moslnee Paper Mills Company. (See Kernin, Alfred G., assignor.)
Mueller-Conradi, Martin, Ludwigshafen-on-the-Rhine, and E. Ober, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Catalytic dehydration. 2,004,521; June 11.
Muffly, Glenn, Richmond, Mich. Mechanism for disintegrating frozen liquid. 2,004,582; June 11.
Müller Carl, Mannheim, L. Schlecht, Ludwigshafen-on-the-Rhine, and E. Kennecke, Oppau, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Separation of metals. 2,004,534; June 11.
Multistamp Company, The. (See Brandt, Louis G., assignor.)
Munschauer, Frederick E., assignor to Niagara Machine & Tool Works, Buffalo, N. Y. Clutch. 2,004,794; June 11.
Munzinger, Albert M., Janesville, Wis. Bung withdrawal machinery. 2,004,211; June 11.
Murphey, Joseph W., Monroe, La. Fluid pump. 2,004,337; June 11.
Murray, Thomas E., Jr., Brooklyn, N. Y., assignor to Metropolitan Device Corporation. High tension fuse switch. 2,004,212; June 11.
Musket, Peter P. (See Fischer, H. G., Musket, and Richardson.)
Muth, Herbert, and W. Runge, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Oscillation generator. 2,004,171; June 11.
National Aniline & Chemical Co. (See Davis, Archibald H., assignor.)
National Aniline & Chemical Company. (See Riegler, Riewen, assignor.)
National Automotive Fibres, Inc. (See Mitchell, Allister S., assignor.)
National Metal Edge Box Company. (See Wolf, Elias.)
National Rubber Machinery Company. (See Pfeiffer, Fred R., assignor.)
National Steel Car Corporation. (See Marchant, Lawrence E., assignor.)
National Tag Manufacturing Corporation, The. (See Graeber, Jacob F., assignor.)
Nelson, William J., New York, N. Y. Health promoting machine. 2,004,671; June 11.
Nerney, George E., assignor to Bay State Optical Company, Attleboro, Mass. Container for spectacle temples. 2,004,415; June 11.
Neubert, Curt, Glersdorf, near Hirschberg, Germany. Manufacture of printing rollers. 2,004,508; June 11.
Nevin, John A. (See Howe, C. W., and Nevin.)
New Britain-Gridley Machine Company, The. (See Montgomery, Donald H., assignor.)
Newhall, Henry B., Corporation. (See Pleister, H. W., and Karitzky, assignors.)
Newman, David F., Freeport, assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y. Sound reproducing system. 2,004,583; June 11.
Newman, L. & Sons, Inc. (See Cunningham, Katherine E., assignor.)
News Projection Corporation. (See Eitzen, August D., assignor.)
Niagara Machine and Tool Works. (See Lindgren, Bror J., assignor.)
Niagara Machine & Tool Works. (See Munschauer, Frederick E., assignor.)
Niagara Sprayer and Chemical Co. (See Mewborne, Robert G., assignor.)
Nickelsen, John M., Ann Arbor, assignor to Monroe Auto Equipment Company, Monroe, Mich. Direct acting shock absorber. 2,004,380; June 11.
Nicodemus, Otto. (See Wulff, C., Nicodemus, and Treppenhauer.)
Nilday, Everett F., Altadena, Calif. Starting block. 2,004,172; June 11.
Niederer, Otto, Titusville, N. J. Egg candler and grader combined. 2,004,338; June 11.
Niederer, Otto, Titusville, N. J. Egg grading scale. 2,004,339; June 11.
Nier, Bruno, Belerfeld, Germany. Hurricane lantern. 2,004,826; June 11.
Noblitt, Quintin G., Indianapolis, assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind. Making locksecans. 2,004,535; June 11.
Noblitt-Sparks Industries, Inc. (See Noblitt, Quintin G., assignor.)
Nock, Harold E., assignor to Towle Manufacturing Company, Newburyport, Mass. Pattern selection cabinet. 2,004,900; June 11.
Novocol Chemical Mfg. Co. Inc. (See Goldberg, Samuel D., assignor.)
Nuske, Ferdinand A., East Malvern, Victoria, Australia. Production of fertilizer from cellulose materials by bacterial action. 2,004,706; June 11.
Nyhagen, Barney R., Bronx, N. Y. Necktie lining. 2,004,766; June 11.
Oakey, Clarence S., Oriskany, assignor of one-half to S. M. Birch, Clinton, N. Y. Safety catch. 2,004,795; June 11.
Ober, Ernst. (See Mueller-Conradi, M., and Ober.)
Oil Equipment Laboratories, Inc. (See Rodler, Hilmer F., assignor.)
Oilgear Company, The. (See Douglas, James K., assignor.)
Okadee Company. (See Hollingshead, Z. G., and Ploen, assignors.)
Olson, Charles A., Geneva, and G. A. Patterson, assignors to Crane Co., Chicago, Ill. Motor mounting. 2,004,536; June 11.
O'Meara, Thomas J., et al. (See Goodlin, C. L., and O'Meara.)
Orelind, John R., Moline, Ill., assignor to Minneapolis-Moline Power Implement Company, Hopkins, Minn. Planter attachment for tractors. 2,004,416; June 11.
Ostermann, Rudolf M. (See Henkel, E., Williams, and Ostermann.)
Oster Manufacturing Company, The. (See Maurer, Harry A., assignor.)
Otto, Albert T., & Sons. (See Buddeberg, Walter, assignor.)
Owen, Henry A., Lawrence, assignor to Davis & Furber Machine Company, North Andover, Mass. Spinning frame. 2,004,343; June 11.
Pacific Machinery Company. (See Thompson, Albert R., assignor.)
Pako Corporation. (See Houch, J. W., and Dye, assignors.)
Palicki, Robert C., Toledo, Ohio. Work glove. 2,004,382; June 11.
Palmer, Dwight R. G., South Orange, N. J., assignor to General Cable Corporation, New York, N. Y. Electrical conductor. 2,004,901; June 11.
Palmer Electric & Manufacturing Co., The. (See Dante, Joseph D., assignor.)
Palmer Electric & Manufacturing Co., The. (See Johansson, Ernest G., assignor.)
Palmer, Keith W., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Hydroxy aryl mercapto compounds and preparing the same. 2,004,728; June 11.
Paraffine Companies, The. (See Matthews, E. C., and Clary, assignors.)
Park, Robert E., Jr., Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electric apparatus. 2,004,616; June 11.
Parker, Donald, Administrator et al. (See Twomley, Herbert E., assignor.)
Parker, George H. (See Twomley, Herbert E.)
Parkinson, Roy W., assignor to E. F. McDonald, Buffalo, N. Y. Smoker's accessory. 2,004,537; June 11.
Parmelee, Alfred E. (See Downing, F. B., Parmelee, Pedersen, and Stecher.)
Parsons, Fred A., et al. (See Kearney, E. J., Parsons, and Armitage.)
Patterson, Glenn A. (See Olson, C. A., and Patterson.)
Patterson, Luther M., New Philadelphia, Ohio. Casting method and apparatus. 2,004,340; June 11.
Paul, Talbert W., Kansas City, Kans., assignor to Deere & Company, Moline, Ill. Hitch connection. 2,004,213; June 11.
Paul, Talbert W., Kansas City, Kans., assignor to Deere & Company, Moline, Ill. Tractor propelled implement. 2,004,729; June 11.
Payne, Elmer H., Wood River, assignor to Standard Oil Company (Indiana), Chicago, Ill. Cleaning filter screens. 2,004,796; June 11.
Payne, Oscar V., Leicester, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft detecting mechanism for drop box looms. 2,004,341; June 11.
Payne, Oscar V., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft detecting mechanism for drop box looms. 2,004,342; June 11.
Pedersen, Charles J. (See Downing, F. B., Parmelee, Pedersen, and Stecher.)
Penn, Albert, Des Moines, Iowa, assignor to Penn Electric Switch Co. Air volume controlling device for water storage tanks. 2,004,417; June 11.
Penn Electric Switch Co. (See Penn, Albert, assignor.)
Peo, Ralph F., and C. F. Lantz, assignors to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,902; June 11.

Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,903; June 11.

Peo, Ralph F., and J. Sullivan, assignors to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,904; June 11.

Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,004,905; June 11.

Pensel, George R., Amsterdam, N. Y. Production of leather. 2,004,472; June 11.

Pensel, George R., Amsterdam, N. Y. Production of leather. 2,004,473; June 11.

Penta, Patrick W., Stoneham, Mass. Pocket case. 2,004,672; June 11.

Perkins, John L., Baltimore, Md. Game. 2,004,707; June 11.

Peters, Elmer P. (See Kent, J. W., and Peters.)

Peterson, Adolphe C., Minneapolis, Minn. Variable incidence plane. 2,004,214; June 11.

Peterson, Adolphe C., Minneapolis, Minn. Unit assembly engine and drive means. 2,004,215; June 11.

Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Antenna regulator for diversity reception. 2,004,127; June 11.

Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Successive antenna selector. 2,004,128; June 11.

Petterson, Arthur R., Marblehead, Mass., assignor to Thomson-Judd Wire Machinery Company, Lynn, Mass. Cable stranding machine. 2,004,634; June 11.

Pezzella, Rocco, Washington, D. C. Hair curling device. 2,004,249; June 11.

Pfanstiehl, Carl, Highland Park, Ill., assignor to Pfanstiehl Chemical Company. Bearing metal and bearing. 2,004,708; June 11.

Pfanstiehl Chemical Company. (See Pfanstiehl, Carl, assignor.)

Pfeiffer, Fred B., assignor to National Rubber Machinery Company, Akron, Ohio. Collapsible drum. 2,004,797; June 11.

Pfrommer, Gustav. (See Beer, K., and Pfrommer.)

Philip, Morris, New York, N. Y. Fashioning attachment for knitting machines. 2,004,384; June 11.

Phillips, Octavia E., Santa Clara, Calif. Suit box. 2,004,509; June 11.

Phillips, Robert S., assignor to American Hair & Felt Company, Chicago, Ill. Felt punching machine. 2,004,709; June 11.

Piazzoli, Louis P., Jr. (See McNamara, W. L., and Piazzoli.)

Pieper, Ernest, Berlin-Tempelhof, and W. Wolffenstein, assignors to Schering-Kahlbaum A. G., Berlin, Germany. Manufacture of a nutrient medium. 2,004,673; June 11.

Pike, Reginald, Philadelphia, Pa. Full fashioned knit stocking. 2,004,216; June 11.

Piper, Walter F., Oak Park, assignor to The Beardsley & Piper Company, Chicago, Ill. Shake out apparatus for foundry flasks. 2,004,292; June 11.

Piper, Walter F., Oak Park, assignor to The Beardsley & Piper Company, Chicago, Ill. Shaking out flasks. 2,004,293; June 11.

Piranl, Marcello, Berlin-Wilmersdorg, H. Ewest, Berlin, and G. Gaidies, Berlin-Pankow, Germany, assignors to General Electric Company. Gaseous electric discharge device. 2,004,585; June 11.

Pittman, Walter F. (See Ford, G. F., and Pittman.)

Planck, Russell M., Jackson, Mich., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Automatic volume controls for radio receiving sets. 2,004,294; June 11.

Pleister, Henry W., Westfield, and J. Karitzky, Garwood, N. J., assignors to Henry B. Newhall Corporation, Garwood, N. J. Bolt anchor. 2,004,480; June 11.

Ploen, Curtis W. (See Hollingshead, A. G., and Ploen.)

Plummer, Henry L. (See Dietz, J. B., and Plummer.)

Plummer, Lloyd F., Brockton, Mass. Calking welt. 2,004,447; June 11.

Popovich, Nicholas, Teaneck, N. J., assignor of one-third to J. A. Taferner and one-third to L. J. Schlitzer, New York, N. Y. Eye set for dolls. 2,004,173; June 11.

Poser, Max, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Illuminating surfaces. 2,004,798; June 11.

Potdevin, Adolph, Garden City, assignor to Potdevin Machine Company, Brooklyn, N. Y. Apparatus for handling strip material. 2,004,129; June 11.

Potdevin Machine Company. (See Potdevin, Adolph, assignor.)

Pranke, Edward J., Great Barrington, Mass., assignor to E. I. du Pont de Nemours & Company, Inc. Cyanide process and the product. 2,004,130; June 11.

Price, Joseph, West New Brighton, and R. C. Jones, Bronxville, assignors to The Griscom-Russell Company, New York, N. Y. Heat exchanger. 2,004,391; June 11.

Price, Wilbur F., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa. Emblem or sign. 2,004,635; June 11.

Prince, David C., Swarthmore, Pa., assignor to General Electric Company. Battery charging system. 2,004,767; June 11.

Progressive Service Company. (See Deubel, Carl G., assignor.)

Protectoglass Limited. (See Bonniksen, Cyril W., assignor.)

Public, The Free Use of the. (See Gaus, George E., assignor.)

Punte, William F., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Metal container. 2,004,828; June 11.

Pymm, James, Brooklyn, N. Y. Temperature controlled valve. 2,004,636; June 11.

Pyzel, Frederic M., Piedmont, Calif., assignor to Universal Oil Products Company, Chicago, Ill. Oil cracking apparatus. 2,004,217; June 11.

Quandt, Carrie A., executrix. (See Quandt, H. L., and Horak.)

Quandt Chemical Co. (See Quandt, H. L., and Horak, assignors.)

Quandt, Herbert L., and J. J. Horak, assignors, by mesne assignments, to Quandt Chemical Co., San Francisco, Calif. Core compound. 2,004,344; June 11.

Quandt, Herbert L., deceased, C. A. Quandt, executrix, and J. J. Horak, assignors to Quandt Chemical Co., San Francisco, Calif. Core oil compound. 2,004,345; June 11.

Quick, Cecil G., D. A. Ball, and T. R. Bennett, London, England, assignors to Irving Trust Company, receiver for R. Hoe & Co., Inc., New York, N. Y. Reel supporting mechanism for use in printing machines. 2,004,493; June 11.

Quinn, Floyd P., W. Horrobin, and W. F. Hawkins, Vancouver, British Columbia, Canada. Reversing transmission. 2,004,827; June 11.

Quisenberry, Frank R., assignor of twenty-five per cent to F. E. Geary, twenty-five per cent to G. W. Mansfield, and twenty-five per cent to M. H. Sampson, and twenty-five per cent to N. L. Spengler, Tampa, Fla. Closure forming awning. 2,004,674; June 11.

Radio Corporation of America. (See Bedford, Alda V., assignor.)

Radio Corporation of America. (See Goldsmith, Alfred N., assignor.)

Radio Corporation of America. (See Moore, John R., assignor.)

Radio Corporation of America. (See Peterson, Harold O., assignor.)

Radio Corporation of America. (See Planck, Russell M., assignor.)

Radio Corporation of America. (See Thomas, Adolph, A., assignor.)

Radio Patent Corporation. (See Schroter, Fritz, assignor.)

Radtke, Bruno, Libertyville, assignor to Mills Novelty Company, Chicago, Ill. Vending machine. 2,004,418; June 11.

Rafanelli, Cesare. (See Ferrari, A. Scalione, and Rafanelli.)

Raffinerie Tiriemontoise, Société Anonyme. (See Berge, Julien, assignor.)

Ragsdale, Earl J. W., Norristown, assignor to Budd Wheel Company, Philadelphia, Pa. Braking member. 2,004,829; June 11.

Rab, Joseph, assignor to The Delta Star Electric Company, Chicago, Ill. High potential or current indicator. 2,004,392; June 11.

Ratcliff, Arthur, assignor to Hummel & Downing Co., Milwaukee, Wis. Container. 2,004,218; June 11.

Rathbun, William A., and F. J. Doyle, Grand Rapids, Mich. Can cover. 2,004,675; June 11.

Raymond Manufacturing Company. (See Stowe, Lloyd, assignor.)

Ready, William A., Brookline, Mass., assignor to Ames Baldwin Wyoming Co., Parkinsburg, W. Va. Handle. 2,004,538; June 11.

Rector, Nelson G., Jonesboro, Ark. Pipe wrench. 2,004,830; June 11.

Reichert, Joseph S. (See Gilbert, H. N., and Reichert.)

Reid, Ebenezer E., Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Separating alcohols. 2,004,131; June 11.

Reidenbach, Hazel V., Richmond Hill, N. Y. Girdle. 2,004,730; June 11.

Reinforced Paper Bottle Corporation. (See Rodor, Andrew, assignor.)

Remington, Alfred M., assignor to Simonds Saw and Steel Company, Fitchburg, Mass. Heat treatment of saws, etc. 2,004,174; June 11.

Remington Arms Company. (See Brün, Willi, assignor.)

Remington Rand Inc. (See Lasker, William W., assignor.)

Reo Motor Car Company. (See Thomas, Horace T., assignor.)

Reynell, Carew H., and A. J. V. Ware, assignors to Reynell-Ware Incorporated, Memphis, Tenn. Defibrating. 2,004,731; June 11.

Reynell-Ware Incorporated. (See Reynell, C. H., and Ware, assignors.)

Rhodes, Joseph F., South Pasadena, Calif. Soil pulverizer. 2,004,393; June 11.

Rice, Clifford M., Daytona Beach, Fla. Automobile headlight. 2,004,831; June 11.

Richardson, Donald E. (See Fischer, H. G., Musket and Richardson.)

Richardson, Roger W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing ammonium sulphite or bisulphite solutions. 2,004,799; June 11.

Richter, Max, West Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa. Automatically variable tensioning device for draw-off reels. 2,004,219; June 11.

Rider, Theodore H., Cincinnati, Ohio. Phenyl carbomates of aminopropanediols. 2,004,132; June 11.

Ridge Tool Company, The. (See Thewes, William O., assignor.)

Riegler, Riewen, Buffalo, assignor to National Aniline & Chemical Company, Inc., New York, N. Y. Recovery of vapor phase oxidation products and apparatus therefor. 2,004,586; June 11.

Roberts, Joseph L., Jamaica, N. Y., assignor of one-half to H. J. McCarthy, Baltimore, Md. Acetylene burning iron. 2,004,832; June 11.

Rodler, Hilmer F., Woodcliff, N. J., assignor to Oil Equipment Laboratories, Inc. Oil burning apparatus. 2,004,346; June 11.

Roell, Ernst. (See Wulff, C., and Roell.)

Rogers, John V. (See Colvin, F. S., and Rogers.)

Rogers, Thomas E., assignor to A. R. Cleveland and J. E. Belden, jointly, Los Angeles, Calif. Tire retreading mold. 2,004,800; June 11.

Romano, Eugene J., Seattle, Wash. Maneuvering means for under water salvage equipment. 2,004,133; June 11.

Rosenblum, Israel, Jackson Heights, N. Y. Mixed ester resin. 2,004,880; June 11.

Ross, George H., Brooklyn, N. Y. Pneumatic carrier. 2,004,134; June 11.

Rossman, Edwin F., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Shock absorber. 2,004,539; June 11.

Rothchild, Lester, and R. T. Anderson, Denver, Colo.; said Anderson assignor to said Rothchild. Dispensing attachment for containers. 2,004,285; June 11.

Rothrock, Henry S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of polyhydric alcohols. 2,004,135; June 11.

Rothstein, Isidore. (See Yanchus, Edward L., assignor.)

Routh, Arthur F. (See Seidman, S. H., and Routh.)

Rowe, Alvin V., Galesburg, Ill. Baler tie. 2,004,732; June 11.

Rowe, Victor C., Roundup, Mont. Self lighting cigarette. 2,004,394; June 11.

Rowley, Arthur C., Drexel Hill, assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa. Sprinkler head for fire extinguishing systems. 2,004,833; June 11.

Roy, Edmond O., assignor to Franklin Needle Company, Franklin, N. H. Jack for knitting machine needles. 2,004,617; June 11.

Royce, Doris, East Orange, N. J. Table. 2,004,296; June 11.

Runge, Wilhelm. (See Muth, H., and Runge.)

Rupple, Harry W., Shaker Heights, assignor to The Cleveland Automatic Machine Company, Cleveland, Ohio. Multiple turret machine tool. 2,004,347; June 11.

Ruscetta, Ralph A. (See Clark, F. M., and Ruscetta.)

Russell, Julian G., North Chattanooga, assignor, by mesne assignments, to Carter Brothers, Incorporated, Chattanooga, Tenn. Tufting attachment for sewing machines. 2,004,834; June 11.

Ruth Dredger Manufacturing Corporation. (See Schauer, Lawrence B., assignor.)

S K F Industries, Inc. (See Larsson, J., and Styri, assignors.)

Sachs, Max, Far Rockaway, N. Y. Lady's hand bag. 2,004,220; June 11.

Saenger, Hans. (See Wolf, H., Leuchs and Saenger.)

Safety Car Heating & Lighting Company, The. (See Hulse, George E., assignor.)

Sage, Herbert R., Los Angeles, Calif. Manufacturing hot caps. 2,004,396; June 11.

Salzberg, Paul L. (See Izard, E. F., and Salzberg.)

Sampson, Frederick W. (See Geyer, H. D., and Sampson.)

Samson, Martin H., et al. (See Quisenberry, Frank R., assignor.)

Samuels, Racmon C., Philadelphia, Pa., assignor to General Electric Company. Protective system. 2,004,768; June 11.

Sansonetti, John, Chicago, Ill. Roof gutter bracket. 2,004,448; June 11.

Sawdon, Joseph, Montrose, Calif., and V. J. Sawdon, New York, N. Y.; said J. Sawdon assignor to said V. J. Sawdon. Envelope. 2,004,733; June 11.

Sawdon, Victor J. (See Sawdon, Joseph and V. J.)

Scalione, Mario. (See Ferrari, A., Scalione and Rafanelli.)

Schaer, Charles, Lancenthal, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland. Compressor. 2,004,474; June 11.

Schafer, Lawrence R., Huntington Park, assignor to Ruth Dredger Manufacturing Corporation, Los Angeles, Calif. Bucket. 2,004,637; June 11.

Schering Kahlbaum A. G. (See Pieper, E., and Wolffenstein, assignors.)

Schimmelschmidt, Kurt, and H. Thomae, Frankfort on the Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azo dyestuff and fiber dyed therewith. 2,004,383; June 11.

Schindlholm, Hans, and R. Gast, Frankfort on the Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azo dyestuffs and making same. 2,004,250; June 11.

Schinkez, Albert. (See Smith, E. R., and Schinkez.)

Schlage Lock Co. (See Schlage, Walter R., assignor.)

Schlage, Walter R., assignor to Schlage Lock Co., San Francisco, Calif. Metal door reenforcement and lock mounting. 2,004,510; June 11.

Schlecht, Leo. (See Miller, C., Schlecht and Kennecke.)

Schlitzer, Leo J., et al. (See Popovich, Nicholas, assignor.)

Schmid, Anton. (See Kazenmaier, A., Allendorff, and Schmid.)

Schmidt, Oscar C., assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio. Press-head for stuffing machines. 2,004,618; June 11.

Schmobl, Alfred C., Beaver Falls, and H. N. D. Asper, Koppel, assignors, by mesne assignments, to Koppel Industrial Car and Equipment Company, McKees Rocks, Pa. Car coupler. 2,004,221; June 11.

Schmobl, Alfred C., Beaver Falls, assignor to Koppel Industrial Car and Equipment Company, Koppel, Pa. Cylindrical drum tumbler used in the process of mixing paint. 2,004,222; June 11.

Schneider, Ernest P., Washington, D. C. Money counting machine. 2,004,835; June 11.

Schneider & Cie, et al. (See Daum, Leon, assignor.)

Schröter, Fritz, Berlin-Schmargendorf, Germany, assignor to Radio Patents Corporation, New York, N. Y. Glow discharge tube circuit. 2,004,587; June 11.

Schulz, Ernst H., Dortmund, assignor to firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Production of chromium steel alloys by the basic process. 2,004,836; June 11.

Scott, Norman D., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Condensation of alcohols. 2,004,350; June 11.

Schottky, Walter, Berlin-Charlottenburg, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Discharge tube. 2,004,175; June 11.

Schriever, Otto. (See Schröter, F., and Schriever.)

Schriever, Otto, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Light amplifier. 2,004,177; June 11.

Schrock, Eugene B., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Railway draft device. 2,004,348; June 11.

Schröter, Fritz, and O. Schriever, assignors, to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Photo-electric tube. 2,004,176; June 11.

Schultz, Oswald R., New York, N. Y. Printing cylinder. 2,004,136; June 11.

Schumacher, Fritz G., Basel, Switzerland. Device for the wet treatment, removal of moisture from, and drying of balls of thread or the like. 2,004,419; June 11.

Schwab, John C. E., Clarksburg, assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Glass transfer apparatus. 2,004,349; June 11.

Schwab, Martin C., Chicago, Ill. Sterilizer apparatus. 2,004,351; June 11.

Seft, Rudolph R., Brackenridge, Pa. Collapsible miter box. 2,004,475; June 11.

Segny, Jean D., assignor to Universal Oil Products Company, Chicago, Ill. Conversion or cracking of high boiling hydrocarbon oils into low boiling hydrocarbon oils. 2,004,223; June 11.

Seidman, Solomon H., New York, N. Y., and A. F. Routh, New Haven, Conn. Ironing device. 2,004,384; June 11.

Seitter, Albert G., Wilmington, N. C. Hand car. 2,004,676; June 11.

Semen Falls Machine Company. (See Smith, E. R., and Schinkez, assignors.)

Setter, Joseph A., Schenectady, N. Y., assignor to General Electric Company. Bridge control system. 2,004,770; June 11.

Seymour, George W., and R. B. White, Cumberland, Md., assignors to Celanese Corporation of America. Resin and coating or plastic composition containing the same. 2,004,297; June 11.

Shambow Shuttle Company. (See Fuller, Emil E., assignor.)

Shanklin, George B., Schenectady, N. Y., assignor to General Electric Company. Detecting and ascertaining the region of oil leaks in cable systems. 2,004,769; June 11.

Sharar, Fred H., Williamsport, Pa. Motor vehicle brake. 2,004,556; June 11.

Sharp, John H. (See Anderson, Harley E., assignor.)

Shell Development Company. (See Davisson, D. W., Welke, and Maynard, assignors.)

Sheppard, Joel F., assignor to U. P. M.-Kidder Press Co., Inc., Dover, N. H. Printing press. 2,004,801; June 11.

Sherman, John Q., Dayton, Ohio. Paper handling. 2,004,395; June 11.

Shewell, Wilfrid, and H. A. Cherry, Northfield, Birmingham, assignors to Morland & Impey Limited, Birmingham, England. Loose leaf binder. 2,004,837; June 11.

Shoe, Esta L., and F. C. Landis, Pleasant Hill, Ohio. Well drilling apparatus. 2,004,494; June 11.

Shoe Form Co. (See DeWitt, William J., assignor.)

Shoemaker, Henry B., assignor to General Motors Corporation, Detroit, Mich. Universal joint. 2,004,298; June 11.

Sieb, Henry, Hammond, Ind. Pressboard. 2,004,710; June 11.

Siebert, Selmar R., and L. King, San Diego, Calif. Loading tool. 2,004,420; June 11.

Siemens & Halske Aktiengesellschaft. (See Schottky, Walter, assignor.)

Silber, Tj., assignor of one-fourth to J. D. Goodrich, one-fourth to D. B. Marshall, and one-fourth to R. Sorenson, Omaha, Nebr. Driving means for electric generators. 2,004,224; June 11.

Simister, Louis W., assignor of one-half to J. Farese, New York, N. Y. Pneumatic shoe. 2,004,906; June 11.
Simon, Alfred W., Eagle River, Wis. Electrostatic generator. 2,004,352; June 11.
Simonds Saw and Steel Company. (See Remington, Alfred M., assignor.)
Simpson, Alexander, London, England. Garment supporting means. 2,004,481; June 11.
Simpson, Jerry H., assignor to The Babinson Company, Winston-Salem, N. C. Humidity controlled valve. 2,004,251; June 11.
Singer Manufacturing Company, The. (See Zabriskie, Henry L., assignor.)
Sinnaeve, Baldwin J., Detroit, Mich. Cable supporting clip for chassis and body. 2,004,353; June 11.
Sloan, Philip W., Grosse Pointe Park, Mich. Table-net bracket. 2,004,397; June 11.
Slye, Edward A., East Hartford, Conn., assignor to Veeders-Root Incorporated. Counter. 2,004,881; June 11.
Smedley, Anderson R., Flushing, assignor to Anaconda Wire & Cable Company, New York, N. Y. Electrical conductor. 2,004,580; June 11.
Smith, Ed R., Jr., assignor to Builders Iron Foundry, Providence, R. I. Speed governor for hydraulic drives. 2,004,638; June 11.
Smith, Raymond D., Pleasantville, N. Y. Plural set time switch. 2,004,137; June 11.
Small, Arthur E., assignor to Union Metal Products Company, Chicago, Ill. Operating device for car couplers. 2,004,598; June 11.
Smidth, F. L., & Co. (See Middelboe, Kristian, assignor.)
Smith, A. O. Corporation. (See Martin, Wesley G., assignor.)
Smith, Edwin R., and A. Schinkez, assignors to Seneca Falls Machine Company, Seneca Falls, N. Y. Work-handling mechanism for centering and like machines. 2,004,540; June 11.
Smulski, Theodore J., assignor to Anderson Company, Gary, Ind. Indicating apparatus. 2,004,421; June 11.
Snyder, Jacob R., Pittsburgh, Pa. Universal joint. 2,004,299; June 11.
Société de l'Outillage R. B. V. (Société Anonyme Français. (See Vorms, Armand, assignor.)
Society of Chemical Industry in Basle. (See Barz, F., Landolt, Gelgy, Kaegi, and Graenacher, assignors.)
Society of Chemical Industry in Basle. (See Graenacher, C., and Ackermann, assignors.)
Sonn, Fred W., Pottstown, Pa. Electric switch. 2,004,772; June 11.
Sonn, Fred W., Pottstown, Pa. Electric switch. 2,004,773; June 11.
Sorensen, Einar N., Fernandina, Fla. Fuel conditioning device. 2,004,252; June 11.
Sorenson, Ray, et al. (See Silber, TJ., assignor.)
Souczek, Ferdinand, Brusau, Czechoslovakia. Device for grinding and sharpening razor blades. 2,004,838; June 11.
Souther, George H., Jr., Columbiaville, N. Y. Under arm protector. 2,004,511; June 11.
Sovereign Machinery Company. (See Kershaw, Henry, assignor.)
Sparks, William. (See Ahronheim, Albert A., assignor.)
Spengler, Nathaniel L., et al. (See Quisenberry, Frank R., assignor.)
Standard Oil Development Company. (See Fischer, H. G. M., and Gustafson, assignors.)
Standard Oil Company (Indiana). (See Payne, Elmer H., assignor.)
Standard Steel Works. (See Gredell, Otto N., assignor.)
Stanley, George S., Winnipeg, Manitoba, Canada. Dish. 2,004,449; June 11.
Stecher, Joseph L. (See Downing, F. B., Parmelee, Pedersen, and Stecher.)
Steenson, James H., Plainfield, assignor to Breeze Corporations, Inc., Newark, N. J. Tie rod construction. 2,004,398; June 11.
Steien, Peder, Lancaster, Minn. Shingle gauge. 2,004,839; June 11.
Steinle, Adolf, assignor to the firm Carl Zeiss, Jena, Germany. Instrument for testing the pitch of threads. 2,004,225; June 11.
Stertzbach, Harry W., J. S. McPherson, and A. H. Filander, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Pin retaining means. 2,004,300; June 11.
Stevenson, Alexander R., Jr., Schenectady, N. Y., assignor to General Electric Company. Oil burner. 2,004,771; June 11.
Stewart, Howard R., assignor of one-third to L. D. Collings, Los Angeles, Calif. Nonresealable container. 2,004,512; June 11.
Stickle, John B., Indianapolis, Ind. Steam heating system. 2,004,226; June 11.
Stickle, John B., Indianapolis, Ind. Steam heating apparatus. 2,004,227; June 11.
Stokes, Charles L., Los Angeles, Calif., assignor, by mesne assignments, to L. A. Williams, Evanston, and C. C. Bradbury, Glencoe, Ill., as successor trustees. Automatic fuel regulator. 2,004,178; June 11.
Storkline Furniture Corporation. (See Michal, James, assignor.)
Storm, Adolph, and T. Thorsen, assignors to Storm Manufacturing Co. Inc., Minneapolis, Minn. Boring machine. 2,004,228; June 11.
Storm Manufacturing Co. Inc. (See Storm, A., and Thorsen, assignors.)
Story, Edward B., Dormont, and C. E. Gross, assignors to A. M. Byers Company, Pittsburgh, Pa. Making wrought iron pipe. 2,004,138; June 11.
Stowe, Lloyd, assignor to Raymond Manufacturing Company, Corry, Pa. Repair link. 2,004,677; June 11.
Strouse, George C. (See Lubs, H. A., and Strouse.)
Strube, Edward W., Brightwaters, N. Y. Cross draft means for incinerators. 2,004,734; June 11.
Sturtevant, B. F., Company. (See Hagen, Harold F., assignor.)
Styri, Haakon. (See Larsson, J., and Styri.)
Sullivan, Alexander H. (See McCullough, P. J., and Sullivan.)
Sullivan, John. (See Peo, R. F., and Sullivan.)
Sullivan Machinery Company. (See Wineman, Wade H., assignor.)
Sulzer Frères Société Anonyme. (See Kägi, Emil, assignor.)
Sulzer Frères Société Anonyme. (See Schaer, Charles, assignor.)
Sundstrand, Oscar J., Rockford, Ill., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y. Transfer mechanism. 2,004,495; June 11.
Sunnen, Joseph, Kirkwood, Mo. Combined valve lifter and spring compressor. 2,004,590; June 11.
Sunskes, Max, New York, N. Y. Amusement device. 2,004,591; June 11.
Superheater Company, The. (See Henkel, E., Williams, and Ostermann, assignors.)
Svenson, Ernest J., Rockford, Ill. Fluid transmission. 2,004,399; June 11.
Taferner, Joseph, et al. (See Popovich, Nicholas, assignor.)
Tarbox, John P., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Welding system and method. 2,004,619; June 11.
Tarbox, John P., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Portable welding tool. 2,004,620; June 11.
Tasker, Homer G., Douglaston, Long Island, assignor to United Research Corporation, Long Island City, N. Y. Signal translating and correcting system. 2,004,253; June 11.
Taub, Alex, assignor to General Motors Corporation, Detroit, Mich. Crankshaft bearing. 2,004,254; June 11.
Tautz, Herbert E., assignor to Delta Manufacturing Company, Milwaukee, Wis. Scroll saw chuck. 2,004,678; June 11.
Taylor, William L., Spondon, near Derby, England, assignor to Celanese Corporation of America. Textile materials and its production. 2,004,139; June 11.
Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H. (See Moser, W., and Leng, assignors.)
Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H. (See Muth, H., and Runge, assignors.)
Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H. (See Schröter, F., and Schriever, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schriever, Otto, assignor.)
Textile Machine Works. (See Richter, Max, assignor.)
Thewes, William O., assignor to The Ridge Tool Company, North Ridgeville, Ohio. Die stock. 2,004,630; June 11.
Thieman, William B., Albert City, Iowa, assignor, by mesne assignments, to Deere & Company, Moline, Ill. Corn picker. 2,004,711; June 11.
Thiry, Leon, Huy, Belgium. Elastic shaft coupling. 2,004,712; June 11.
Thomae, Alfred O., Berlin-Steglitz, Germany. Preparation of talking machine plates. 2,004,400; June 11.
Thomae, Hans. (See Schimmelschmidt, K., and Thomae.)
Thomann, Frederick A., East Moline, assignor to Deere & Company, Moline, Ill. Harvester. 2,004,713; June 11.
Thomas, Adolph A., assignor to Radio Corporation of America, New York, N. Y. Loud speaker. 2,004,735; June 11.
Thomas, Adolph A., assignor to Radio Corporation of America, New York, N. Y. Electrostatic loud speaker. 2,004,736; June 11.
Thomas, Horace T., assignor to Reo Motor Car Company, Lansing, Mich. Delivery vehicle. 2,004,385; June 11.
Thomason-Judd Wire Machinery Company. (See Petterson, Arthur R., assignor.)
Thompson, Albert R., San Jose, assignor to Pacific Machinery Company, San Francisco, Calif. Fruit pitting device with vibratory pitting means. 2,004,301; June 11.
Thompson, Charles L., T. S. Bacon, and J. E. Bludworth, Eastland, Tex., assignor, by mesne assignments, to Hanlon-Buchanan, Inc. Treatment of hydrocarbons. 2,004,714; June 11.
Thompson, John L., assignor of one-half to G. Laganas, Lowell, and one-half to L. A. Wilson, Somerville, Mass. Pneumatic press for cementing soles on shoes. 2,004,541; June 11.
Thomson, Hugh A., Kensington, London, England. Facilitating reference to and reading of books and the like. 2,004,450; June 11.
Thornton, Mathew H., St. Paul, Minn. Shoe shining machine. 2,004,140; June 11.
Thornton, Mathew H., St. Paul, Minn. Shoe cleaning and polishing machine. 2,004,640; June 11.
Thorsen, Thor. (See Storm, A., and Thorsen.)

Thwaits, Frederick G., Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis. Valve mechanism. 2,004,715; June 11.
Thwaits, Frederick G., Wauwatosa, assignor to The Heil Co., Milwaukee, Wis. Valve structure. 2,004,716; June 11.
Thwaits, Frederick G., Wauwatosa, assignor to The Heil Co., Milwaukee, Wis. Valve actuating mechanism. 2,004,717; June 11.
Tierney, Columbus A. (See Enger, W. W., and Tierney.)
Tierney, James S., Upper Darby, Pa. Preparing apples for cold packing. 2,004,354; June 11.
Tilley, John N., Woodbury, and H. Whitehead, South Orange, N. J., assignors of one-half to E. I. du Pont de Nemours & Company, Wilmington, Del., and one-half to Baker and Company, Inc., Newark, N. J. Oxidation of ammonia and improved catalyst therefor. 2,004,141; June 11.
Tipp & Co. (See Burkhard, Heinrich, assignor.)
Tips Tool Company. (See Walsh, Carroll H., assignor.)
Tinnerman, Albert H. (See Tinnerman, George A., assignor.)
Tinnerman, George A., Rocky River, assignor to A. H. Tinnerman, Cleveland, Ohio. Fastening device. 2,004,679; June 11.
Tonks Manufacturing Company. (See Tonks, Thomas, assignor.)
Tonks, Thomas, assignor to Tonks Manufacturing Company, Saginaw, Mich. Wood hog. 2,004,737; June 11.
Torsion Balance Company, The. (See Becker, Christopher A., assignor.)
Towle Manufacturing Company. (See Nock, Harold E., assignor.)
Towne, Willis H., Wilmette, Ill., assignor to Gifford-Wood Company. Stabilizer for traversing hoist buckets. 2,004,451; June 11.
Trane, Reuben N., La Crosse, Wis. Air conditioning unit. 2,004,255; June 11.
Trans-Lux Daylight Picture Screen Corporation. (See Newman, David F., assignor.)
Traut, Rudolf, Mulheim-Ruhr, Germany. Sealing tubes. 2,004,422; June 11.
Traver, William A., assignor to Franklin Process Company, Providence, R. I. Apparatus for processing textiles and like materials. 2,004,229; June 11.
Treppenhauer, Max. (See Wulff, C., Nicodemus, and Treppenhauer.)
Trey, Serge, and W. Howard, College Point, and A. Chessin, Brooklyn, N. Y. Aerofoil. 2,004,256; June 11.
Trotter, John L., and V. Hall, St. Louis, Mo. Direction indicator. 2,004,557; June 11.
Trumbull Electric Manufacturing Company, The. (See Harvey, Frank, assignor.)
Truscon Steel Company. (See Hughes, Grover A., assignor.)
Tschirner, Frederick, Medford, N. J., assignor to Zeolite Chemical Company, New York, N. Y. Purification of water by zeolites. 2,004,257; June 11.
Turner, James F., and C. P. Breidenbaugh, assignors to Flynn & Emrich Company, Baltimore, Md. Stoker motor. 2,004,558; June 11.
Twomley, Herbert E., Riverside, Calif. assignor to D. Parker and Citizens National Trust and Savings Bank of Riverside, administrators of G. D. Parker, deceased. Box framing machine. 2,004,355; June 11.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Clamping device for weft replenishing looms. 2,004,302; June 11.
U. P. M.-Kidder Press Co. (See Sheppard, Joel F., assignor.)
Ullery, Fred E. (See Fox, M. L., and Ullery.)
Underwood Elliott Fisher Company. (See Curtis, Edward W., Jr., assignor.)
Underwood Elliott Fisher Company. (See Sundstrand, Oscar J., assignor.)
Union Metal Products Company. (See Small, Arthur E., assignor.)
Union Switch & Signal Company, The. (See Goodlin, C. L., and O'Meara, assignors.)
Union Switch & Signal Company, The. (See Miller, Alfred B., assignor.)
United Engineering & Foundry Company. (See Biggert, Florence C., Jr., assignor.)
United Research Corporation. (See Tasker, Homer G., assignor.)
United Shoe Machinery Corporation. (See Balcom, Charles H., assignor.)
United Shoe Machinery Corporation. (See Cavanagh, James, assignor.)
United Shoe Machinery Corporation. (See Hadaway, John B., assignor.)
United States Gypsum Company. (See Hann, George L., assignor.)
United States Rubber Company. (See Madge, Norman G., assignor.)
United States Rubber Company. (See Mead, Frederic S., assignor.)
U. S. Slicing Machine Company. (See Folk, Joseph, assignor.)
Universal Oil Products Company. (See Dubbs, Carlton P., assignor.)
Universal Oil Products Company. (See Morrell, Jacque C., assignor.)
Universal Oil Products Company. (See Pyzel, Frederic M., assignor.)
Universal Oil Products Company. (See Seguy, Jean D., assignor.)
Urbain, Leon F., et al. (See Johnson, Oscar L., assignor.)
Valentine, Irving R., Erie, Pa., assignor to General Electric Company. Short cycle anneal of malleable iron. 2,004,774; June 11.
Vandever, James R., Pampa, Tex., assignor to Richard P. Abele, Tulsa, Okla. Chemical heater for oil wells. 2,004,452; June 11.
Van Suchtelen, Eduard F., Amsterdam, Netherlands. Apparatus for dispersing liquids and mixtures. 2,004,840; June 11.
Veeder-Root Incorporated. (See Slye, Edward A., assignor.)
Vereinigte Stahlwerke Aktiengesellschaft. (See Schulz, Ernst H., assignor.)
Vibroscope, Inc. (See Davey, Peter, assignor.)
Victor Chemical Works. (See Gilbert, James M., assignor.)
Vinson, Guy, Miami, Fla. Exterminator for insects. 2,004,841; June 11.
Vogel, Joseph A., Company. (See Woolley, William J., assignor.)
Volmer, Max, Neubabelsberg-Steins-tucken, Germany. Open electric arc-lamp for the generation of ultra-violet radiations. 2,004,880; June 11.
Von Holtz, Charles T., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn. Adjustable neck reflector. 2,004,142; June 11.
Von Till, Louis A., Brooklyn, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Measuring device. 2,004,230; June 11.
Voorhees, Vanderveer, Hammond, Ind. Absorbent paper dispensing. 2,004,143; June 11.
Vorms, Armand, assignor to Societe de l'Outillage R. B. V. (Société Anonyme français), Paris, France. Apparatus for delivering flat elements one at a time, more especially for delivering envelopes to an obliterating machine. 2,004,882; June 11.
Vose, Lewis S., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Shuttle changing loom. 2,004,681; June 11.
Vulcan Soot Blower Corporation. (See Arey, Fred C., assignor.)
Wagner, Harlan A., Ruthven, Iowa. Ball holder. 2,004,542; June 11.
Wahlin, Fritz, assignor to Binks Manufacturing Company, Chicago, Ill. Spray gun. 2,004,303; June 11.
Walker Cement Products, Inc. (See Dietrichs, Charles, assignor.)
Walker, Harold L., assignor to The Jacobs Bros. Co. Inc., Brooklyn, N. Y. Coin controlled scale. 2,004,179; June 11.
Wallen, Arthur C., Bronxville, N. Y., and T. J. Crawford, Youngstown, Ohio; said Wallen assignor to said Crawford. Composite structure. 2,004,907; June 11.
Walsh, Carroll H., Pine Bluff, Ark., assignor to Tips Tool Company, Inc., Taylorville, Ill. Fusible line tapping device. 2,004,621; June 11.
Wandell, Frederic H., Los Gatos, Calif. Brake. 2,004,842; June 11.
Wappler, Frederick C. (See Wappler, Reinhold H. and F. C.)
Wappler, Reinhold H., Yonkers, and F. C. Wappler, New York, N. Y.; said F. C. Wappler administrator of said Reinhold H. Wappler, deceased. Method and instrument for electro-surgical treatment of tissue. 2,004,559; June 11.
Ward, Edward W., North Girard, Pa. Shoe. 2,004,802; June 11.
Ware, Arthur J. V. (See Reynell, C. H., and Ware.)
Warren, Roy E., Houston, Tex. Flow controlling mechanism. 2,004,423; June 11.
Warren, Walter G., Chicago, Ill. Aerial target. 2,004,543; June 11.
Washington Institute of Technology, Inc. (See Brockstedt, Theophile E., assignor.)
Wasson, George G., Kansas City, Mo. Clip. 2,004,231; June 11.
Watanabe, Shumpei, Koishikawa Ku, Tokyo, Japan. Recording sounds. 2,004,453; June 11.
Waterbury, Ronald J., Pleasant Ridge, assignor to General Motors Corporation, Detroit, Mich. Radiator and front fender support. 2,004,258; June 11.
Waters, William H., and J. S. Kern, assignors to Fleetwood Craftsmen, Inc., Fleetwood, Pa. Apparatus for making shape retaining fiber mattresses. 2,004,544; June 11.
Watervliet Tool Company. (See Becker, F. W., and Kinsley, assignors.)
Watkins, Frederick R., Los Angeles, Calif. Bridge bidding machine. 2,004,543; June 11.
Watson, Roger B., Colorado Springs, Colo. Fountain pen. 2,004,641; June 11.
Weed, Walter A., Lakeland, Fla. X-ray or radiographic apparatus. 2,004,232; June 11.
Weeks, Charles, assignor to The Armand Company, Des Moines, Iowa. One hand compact. 2,004,424; June 11.
Wehrly, Clarence G., Detroit, Mich. Apparatus for lubricating trolleys. 2,004,386; June 11.
Weiger, Joseph A., assignor to P. R. Mallory & Co., Incorporated, Indianapolis, Ind. Valve seat. 2,004,259; June 11.
Weir, G. & J., Limited. (See Hillier, Harold, assignor.)
Weis, John A. (See Miller, Samuel C., assignor.)
Weisbrenner, R. F. (See Heath, Albert, assignor.)

Welch, Sidney A., A. F. Guyler, J. T. Ashby, and W. H. Boaler, Spondon, near Derby, England, assignors to Celanese Corporation of America. Knitting machine. 2,004,260; June 11.

Welke, Ferdinand G. (See Davisson, D. W., Welke, and Maynard.)

Weller, Benjamin D., Cleveland Heights, Ohio. Check opening guard and check. 2,004,357; June 11.

Wells, Leland E., Cleveland Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery separator. 2,004,304; June 11.

Wells, Lloyd L., Honeoye Falls, N. Y. Card holder. 2,004,401; June 11.

Werts, Daniel L., assignor to Eclipse Machine Company, Elmira, N. Y. Electrical system for internal combustion engines. 2,004,642; June 11.

Western Electric Company. (See Alden, John L., assignor.)

Western Electric Company. (See Goodchild, F. D., and Benham, assignors.)

Western Electric Company. (See Massingham, Henry R., assignor.)

Western Electric Company. (See Park, Robert E., Jr., assignor.)

Westinghouse Air Brake Company, The. (See Dempsey, Philip W., assignor.)

Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)

Westinghouse Air Brake Company, The. (See Farmer, C. C., and Miller, assignors.)

Westinghouse Air Brake Company, The. (See Mautsch, Robert H., assignor.)

Westinghouse Air Brake Company, The. (See Miller, Raymond E., assignor.)

Westinghouse Air Brake Company, The. (See Woernley, Henry F., assignor.)

Westman, William W., assignor to First National Institute of Violin, South Bend, Ind. Shoulder pad. 2,004,356; June 11.

Whipp, Leslie H., administrator. (See Zander, Milton W., assignor.)

White, Blanche B. (See Seymour, G. W., and White.)

White, Charles L., Thomasville, N. C., and G. T. Johnson, assignors to Yates-American Machine Company, Beloit, Wis. Adjustable stop pin for routers. 2,004,738; June 11.

White, Everett H., St. Paul, Minn. Remote control regulator motor. 2,004,622; June 11.

White, Harry B., assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,004,261; June 11.

Whitehead & Kales Company. (See Judd, Irving H., assignor.)

Whitehead, Earl B., assignor to Atlantic Carton Corporation, Norwich, Conn. Folding carton. 2,004,908; June 11.

Whitehead, Harold. (See Tilley, J. N., and Whitehead.)

Whitehead & Kales Company. (See Judd, Irving H., assignor.)

Whitney, Maurice P., Elmira, assignor to Eclipse Machine Company, Elmira Heights, N. Y. Starter drive 2,004,643; June 11.

Whritenour, George E., Sloatsburg, N. Y. Building construction. 2,004,739; June 11.

Widman, Erwin R., Little Neck, N. Y. Curtain supporting arrangement. 2,004,262; June 11.

Wigge, Heinrich. (See Junkers, H., and Wigge.)

Wilcox-Rich Corporation. (See Hedlund, Oscar, assignor.)

Wilkes Avery Corporation. (See Wilkes, G., and Avery, assignors.)

Wilkes, Gilbert, Jacksonwald, and J. S. Avery, Pennside, Pa., assignors to Wilkes Avery Corporation, New York, N. Y. Absorption cycle temperature control apparatus. 2,004,843; June 11.

Wilkinson, William J., Great Neck, N. Y., assignor of one half to The Miehle Printing Press and Manufacturing Company, Chicago, Ill. Photographically producing printing plates. 2,004,144; June 11.

Willard Storage Battery Company. (See Wells, Leland E., assignor.)

Williams, Arthur. (See Henkel, E., Williams, and Ostermann.)

Williams, Leo C. (See Brackett, E. M., Daneke, and Williams.)

Williams, Lynn A., et al., trustee. (See Stokes, Charles L., assignor.)

Williams, Marion R., Kansas City, Mo. Container closure 2,004,844; June 11.

Williams Oil-O-Matic Heating Corporation. (See Celander, Philip A., assignor.)

Wilson, Eugene W., Oak Park, Ill. Burial vault. 2,004,454; June 11.

Wilson-Jones Company. (See Dawson, George H., assignor.)

Wilson, Lena A., et al. (See Thompson, John L., assignor.)

Wilson, Robert E., Chicago, Ill., assignor, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del. Motor fuel products. 2,004,560; June 11.

Winchester Repeating Arms Company. (See McNutt, Joseph D., assignor.)

Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Pumping mechanism. 2,004,145; June 11.

Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Motor for pumping mechanisms. 2,004,146; June 11.

Wingfoot Corporation. (See Wolfe, William D., assignor.)

Winkler, Franz, Schweinfurt, Germany. Spring-mounted cycle hub with brake. 2,004,740; June 11.

Winn, Sidney B., Lapeer, Mich. Semi-trailer. 2,004,803; June 11.

Wittmers, Otto. (See Breddin, P., and Wittmers.)

Woernley, Henry F., deceased, by T. R. Woernley, executor, Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Train pipe coupling. 2,004,644; June 11.

Woernley, Theodore R., executor. (See Woernley, Henry F.)

Wolcott, Frank E., West Hartford, Conn., assignor to Hartford Products Corporation. Beverage pot or the like. 2,004,883; June 11.

Wolf, Elias et al. (See Wolf, Elias, assignor.)

Wolf, Elias, Elkins Park, assignor to L., H. A., and E. Wolf, copartners trading as National Metal Edge Box Company, Philadelphia, Pa. Box. 2,004,358; June 11.

Wolf, Hans, and H. Leuchs, Ludwigshafen-on-the Rhine, and H. Saenger, Hitterfeld, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of porous building materials. 2,004,545; June 11.

Wolf, Howard A., et al. (See Wolf, Elias, assignor.)

Wolf, Louis, et al. (See Wolf, Elias, assignor.)

Wolfe, William D., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Amino derivative of hydroxy diphenyls. 2,004,914; June 11.

Wolffenstein, Walter. (See Pieper, E., and Wolffenstein.)

Wolfson, Morris, Brooklyn, N. Y. Bookbinding 2,004,482; June 11.

Woolley, William J., Chicago, Ill., assignor to Joseph A. Vogel Company, Wilmington, Del. Antisiphonage device for water closets and like water service systems. 2,004,455; June 11.

World Bestos Corporation. (See Brockway, Carl P., assignor.)

Worms, Jacques, Versailles, France. Bogie for vehicles traveling upon rails. 2,004,845; June 11.

Worrall, Robert H., Washington, D. C. Humidifying system. 2,004,147; June 11.

Wright, Alfred M. (See Wright, L. S., and A. M.)

Wright, Leonard S., and A. M., Oyster Bay, N. Y. Wheel chair. 2,004,683; June 11.

Wright, Robert A., et al. (See Crary, Palmer H., assignor.)

Wright, Stephen G., Chicago, Ill. Artificially coloring roofing granules. 2,004,682; June 11.

Wright, Vincent, Alameda, Calif. Apparatus for cooking material. 2,004,775; June 11.

Wulff, Carl, and E. Roell, Ludwigshafen-on-the Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Sulphonic acid. 2,004,546; June 11.

Wulff, Carl, Ludwigshafen-on-the-Rhine, O. Nicodemus, Frankfort-on-the-Main-Hochst, and M. Treppenhauer, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of acenaphthylene. 2,004,884; June 11.

Wyrick, Clayton E., Wyandotte, assignor to Wyrick Engineering Company, Detroit, Mich. Compensator. 2,004,263; June 11.

Wyrick, Clayton E., Wyandotte, assignor to Wyrick Engineering Company, Detroit, Mich. Clearance regulator. 2,004,264; June 11.

Wyrick Engineering Company. (See Wyrick, Clayton, assignor.)

Xetal Products Limited. (See Head, Percy H., assignor.)

Yanchus, Edward L., Masontown, Pa., assignor of one half to I. Rothstein. Rotoplane. 2,004,885; June 11.

Yates-American Machine Company. (See White, C. L., and Johnson, assignors.)

Yohe, Albert S., Jersey City, N. J., assignor to The Bias Buff & Wheel Company, Inc., New York, N. Y. Buffing or polishing wheel. 2,004,623; June 11.

Young, Edgar J., Trowbridge, Wilts, England, assignor to The Chandler and Price Company, Cleveland, Ohio. Platen printing press. 2,004,148; June 11.

Zabriskie, Henry L., Westfield, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine motor controller. 2,004,496; June 11.

Zacharias, Edwin H., Reading, Pa. Garment pressing machine. 2,004,547; June 11.

Zadek, Arthur, and I. E. Cohn, New York, N. Y. Flexible handle for rattles. 2,004,265; June 11.

Zander, Milton W., deceased, Chicago, Ill., Leslie H. Whipp, administrator. Air cleaner. 2,004,150; June 11.

Zeiss, Carl. (See Steinle, Adolf, assignor.)

Zeitlin, Wladislaw. (See Lebedenko, N., Levy, and Zeitlin.)

Zeolite Chemical Company. (See Tschirner, Frederick, assignor.)

Zimmerman, Herman W., assignor to Automotive Maintenance Machinery Co., Chicago, Ill. Cylinder ridge reamer. 2,004,741; June 11.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Anesthetic solutions, Production of. M. Woelm. 19,608; June 11.

Dam construction. W. H. Bailey. 19,603; June 11.

Electrical condenser. L. Endenburg. 19,604; June 11.

Resistor, Variable. J. A. Flanzer, L. L. Jones, and E. Reisman. 19,605; June 11.

Rheostat potentiometer and constructing the same. D. T. Siegel. 19,607; June 11.

Truck, Industrial. R. T. Romine. 19,606; June 11.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. L. K. Stupell. 95,936; June 11.

Ash tray or similar article. J. B. Clark. 95,896; June 11.

Badge, Pall-bearer's. C. D. Roberts. 95,929; June 11.

Battery case, Storage. O. O. Rieser. 95,928; June 11.

Bottle. J. L. Donnock. 95,900; June 11.

Bottle. L. M. Sutton, Jr. 95,937; June 11.

Building. N. B. Geddes and C. Landefeld. 95,906; June 11.

Cabinet, Vending machine. R. and B. Bentley. 95,891; June 11.

Cap, Bottle. E. W. Fuerst. 95,904; June 11.

Carton. M. M. Smith. 95,934; June 11.

Chair, Aircraft. L. C. McCarty, Jr., and D. M. Helwig. 95,919; June 11.

Clamp, Cable. C. H. Thomas. 95,939; June 11.

Coat. M. Miller. 95,909; June 11.

Container, Vanity. G. H. Beck. 95,889; June 11.

Cup, Edible. H. Dicker. 95,899; June 11.

Dish. E. L. Snyder. 95,935; June 11.

Dress. C. Weinberg. 95,942; June 11.

Emblem or similar article. M. E. Schwalbe. 95,932; June 11.

Extinguisher, Fire. P. Evans. 95,902; June 11.

Finger ring. J. M. H. Le Bolt. 95,914; June 11.

Game board. R. J. Byrnes. 95,895; June 11.

Game board for pin ball games. H. G. Breitenstein. 95,893; June 11.

Game device, Pin board. A. S. Moorman. 95,920; June 11.

Game scoring board, Card. W. A. O'Brien. 95,922; June 11.

Glass, Whisky. F. L. Fenton. 95,903; June 11.

Glove. G. V. Larom and A. L. Russo. 95,913; June 11.

Handle or similar article. L. S. Keeler. 95,910; June 11.

Handle or similar article. K. Rettich. 95,926; June 11.

Hat. O. Friedman. 95,905; June 11.

Horse, Rocking. I. K. Nyland. 95,921; June 11.

Jar. W. B. Adams. 95,888; June 11.

Lantern, Electric. L. M. Wiley. 95,943; June 11.

Letter box, House. J. Kim. 95,911; June 11.

Lighting fixture. C. D. McCann. 95,917–18; June 11.

Lip stick holder. A. L. Ogden. 95,924; June 11.

Locomotive, Electric. C. C. C. Burkhardt. 95,894; June 11.

Nail. M. G. Rodriquez. 95,930; June 11.

Pen clip or similar article, Fountain. M. G. Sypher. 95,938; June 11.

Shaker or similar article, Cocktail. H. F. Reichenbach. 95,925; June 11.

Shelf and radiocabinet, Combined wall. D. W. Kussman. 95,912; June 11.

Shoe. B. Benjamin. 95,890; June 11.

Shoe. F. W. Ellington. 95,901; June 11.

Shoe. A. Turiansky. 95,940; June 11.

Spectacle bridge. H. Clements. 95,897; June 11.

Spoon or other article of flatware. V. M. Conner. 95,898; June 11.

Sweater. D. Rheinauer. 95,927; June 11.

Sweater, Lady's. H. Roepple. 95,892; June 11.

Swing. E. L. Weaver. 95,941; June 11.

Table top. W. A. O'Brien. 95,923; June 11.

Telephone, Hand. G. R. Lum. 95,915; June 11.

Textile fabric. D. F. Greenawalt. 95,907–8; June 11.

Textile fabric or similar article of manufacture. A. Schumacher. 95,933; June 11.

Tire. C. E. Maynard. 95,916; June 11.

Waffle iron. J. A. Salvia. 95,931; June 11.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading machine. J. B. Hadaway. 2,004,109; June 11.
Abrasive. J. B. Dietz and H. L. Plummer. 2,004,466; June 11.
Absorption cycle temperature control apparatus. G. Wilkes and J. S. Avery. 2,004,843; June 11.
Acenaphthylene, Production of. C. Wulff, O. Nicodemus, and M. Treppenhauer. 2,004,884; June 11.
Acid; *See*—
Sulphonic acid.
Acid and salts thereof, Aminocarboxylic. R. Fleck. 2,004,523; June 11.
Acid esters and their preparation, Levulinic. K. F. Izard and P. L. Salzberg. 2,004,115; June 11.
Adhesive. M. T. Harvey. 2,004,370; June 11.
Advertisement pictures and others, Apparatus for presenting. H. Heaulme. 2,004,111; June 11.
Aerofoil. S. Trey, W. Howard and A. Chessin. 2,004,256; June 11.
Air cleaner. M. W. Zander. 2,004,150; June 11.
Air conditioning unit. R. N. Trane. 2,004,255; June 11.
Aircraft. H. F. Krug. 2,004,411; June 11.
Airships, Bracing the circumference of gas-inflated rigid. A. Förster. 2,004,785; June 11.
Air volume controlling device for water storage tanks. A. Penn. 2,004,417; June 11.
Alarm, Gas tank. E. S. Johnson. 2,004,872; June 11.
Alcohols, Condensation of. N. D. Scott. 2,004,350; June 11.
Alcohols, Production of polyhydric. H. S. Rothrock. 2,004,135; June 11.
Alcohols, Separating. E. E. Reid. 2,004,131; June 11.
Alloy steels. J. Larsson and H. Styri. 2,004,331; June 11.
Alloys by the basic process, Production of chromium steel. E. H. Schulz. 2,004,836; June 11.
Alloys, Producing columbium. F. M. Becket. 2,004,498; June 11.
Alloys, Treatment of. E. F. Bainbridge. 2,004,483; June 11.
Amino derivative of hydroxy diphenyls. W. D. Wolfe. 2,004,914; June 11.
Ammonia and improved catalyst therefor, Oxidation of. J. N. Tilley and H. Whitehead. 2,004,141; June 11.
Ammonium sulphite or bisulphite solutions, Preparing. R. W. Richardson. 2,004,799; June 11.
Ammunition supplying device for pairs of guns mounted in turrets or the like. L. Daum. 2,004,855–6; June 11.
Amusement device. P. J. McCullough and E. H. Sullivan. 2,004,290; June 11.
Amusement device. M. Silnskes. 2,004,591; June 11.
Anchor, Bolt. H. W. Pleister and J. Karitzky. 2,004,480; June 11.
Anesthetic composition. S. D. Goldberg. 2,004,891; June 11.
Anneal of malleable iron, Short cycle. I. R. Valentine. 2,004,774; June 11.
Annunciator. R. B. Baker. 2,004,645; June 11.
Antenna regulator for diversity reception. H. O. Peterson. 2,004,127; June 11.
Antenna selector. J. B. Moore. 2,004,126; June 11.
Antenna selector, Successive. H. O. Peterson. 2,004,128; June 11.
Antisiphonage device for water closets and like water service systems. W. J. Woolley. 2,004,455; June 11.
Apples for cold packing, Preparing. J. S. Tierney. 2,004,334; June 11.
Applicator roll. J. Kirsch. 2,004,576; June 11.
Arc-lamp for the generation of ultra-violet radiations, Open electric. M. Volmer. 2,004,680; June 11.
Article holder. W. H. Inman. 2,004,326; June 11.
Articles through treating liquids, Apparatus for handling. J. W. Houche and G. M. Dye. 2,004,410; June 11.
Artificial materials, Manufacture of. L. Lilienfeld. 2,004,875; June 11.
Artificial products, Production of. H. Dreyfus. 2,004,272; June 11.
Asphalt, Producing. J. C. Morrell. 2,004,210; June 11.
Atomizer. J. E. Conklin. 2,004,402; June 11.
Atomizer, Steam pressure. A. Janesick. 2,004,371; June 11.
Automobiles, Transportation of. I. H. Judd. 2,004,438; June 11.
Awning, Closure forming. F. R. Quisenberry. 2,004,674; June 11.
Awning fastening device. C. W. Gasswint. 2,004,862; June 11.
Azo-dyestuff and fiber dyed therewith. K. Schimmelschmidt and P. Thomæ. 2,004,383; June 11.
Azo-dyestuffs and making same. H. Schindhelm and R. Gast. 2,004,250; June 11.
Bag; *See*—
Lady's hand bag.
Bail holder. H. A. Wagner. 2,004,542; June 11.
Bait, Artificial. J. Catarau. 2,004,308; June 11.
Bakery products, Device for packaging. O. B. Andrews. 2,004,098; June 11.
Bale tie. A. V. Rowe. 2,004,732; June 11.
Ball, Golf. N. G. Madge. 2,004,167; June 11.
Balls of thread or the like, Device for the wet treatment, removal of moisture from, and drying of. F. G. Schumacher. 2,004,419; June 11.
Bank bandit trap. W. B. Coleman and F. J. Ebel. 2,004,551; June 11.
Bar; *See*—
Handle bar.
Barrel drum beading machine, Metal. B. J. Lindgren. 2,004,816; June 11.
Battery; *See*—
Storage battery.
Battery charging system, D. C. Prince. 2,004,767; June 11.
Battery clamp device. E. A. Duval. 2,004,653; June 11.
Battery separator, Storage. L. E. Wells. 2,004,304; June 11.
Beam, Structural. G. A. Hughes. 2,004,894; June 11.
Beans, Treating cacao. J. J. Rajda. 2,004,497; June 11.
Bearing; *See*—
Crankshaft bearing. Shaft bearing.
Bed. R. Boyd. 2,004,549; June 11.
Belt, Apparel. I. E. Mather. 2,004,477; June 11.
Belt for personal wear. M. Luftig. 2,004,412; June 11.
Belt, Transmission. A. B. Merrill. 2,004,479; June 11.
Binder, Corn. T. C. Askland. 2,004,090; June 11.
Binder, Loose leaf. G. H. Dawson. 2,004,570; June 11.
Binder, Loose leaf. W. Shewell and H. A. Cherry. 2,004,837; June 11.
Block; *See*—
Leveling and adjusting. Starting block.
block.
Blotting attachment for pens. R. Innes. 2,004,870; June 11.
Board; *See*—
Shirt board.
Boards, Attaching floor. O. L. Johnson. 2,004,917; June 11.
Board of the tongue and groove type. F. W. Cherry. 2,004,193; June 11.
Bobber. J. W. Menefee. 2,004,414; June 11.
Bobbin traverse motion. E. K. Gladding and D. F. Evans. 2,004,162; June 11.
Bogie for vehicles traveling upon rails. J. Worms. 2,004,845; June 11.
Boiler. H. J. Kerr. 2,004,895; June 11.
Bolt, Panic. N. B. Hurd. 2,004,811; June 11.
Bookbinding. M. Wolfson. 2,004,482; June 11.
Books and the like, Facilitating reference to and reading of. H. A. Thomson. 2,004,450; June 11.
Boring machine. A. Storm and T. Thorsen. 2,004,228; June 11.
Bottle bottom inserting and spinning mechanism for paper bottle making machines. A. Bodor. 2,004,186; June 11.
Bottle Closure. A. Fonyo. 2,004,690; June 11.
Box; *See*—
Collapsible miter box. Suit box
Box framing machine. H. E. Twomley. 2,004,355; June 11.
Box. E. Wolf. 2,004,358; June 11.
Box making machine. G. F. Ford and W. F. Pittman. 2,004,604; June 11.
Box structure. A. S. Ethridge. 2,004,197; June 11.
Bracket; *See*—
Roof gutter bracket. Table-net bracket.
Brake; *See*—
Fluid pressure brake. Vehicle brake.
Remote controlled brake.
Brake. F. H. Wandell. 2,004,842; June 11.
Brake head. H. E. Anderson. 2,004,743; June 11.
Brake linings, Method and apparatus for impregnating. C. P. Brockway. 2,004,267; June 11.
Brake shoe. E. C. Folsom. 2,004,278; June 11.
Braking member. E. J. W. Ragsdale. 2,004,829; June 11.
Breathing apparatus, Operating. A. Bloch. 2,004,243; June 11.
Bridge bidding machine. F. B. Watkins. 2,004,513; June 11.
Bridge control system. J. A. Setter. 2,004,770; June 11.
Brush and stubble cutter. L. E. Carter. 2,004,100; June 11.
Brush, Massage. S. C. Miller. 2,004,633; June 11.
Bucket. L. B. Schauer. 2,004,637; June 11.
Buckle. D. J. Harvey. 2,004,406; June 11.
Buffing or polishing wheel. A. S. Yohe. 2,004,623; June 11.
Building construction. G. E. Whittenour. 2,004,739; June 11.

Building materials, Production of porous. H. Wolf, H. Leuchs and H. Saenger. 2,004,545; June 11.
Bung withdrawal machinery. A. M. Munzinger. 2,004,211; June 11.
Burner; *See*—
Gas burner. Oil burner
Bushing. R. C. Evans. 2,004,784; June 11.
Cabinet for electromechanical oscillators, Temperature controlled. R. B. Meyer. 2,004,125; June 11.
Cabinet, Pattern selection. H. E. Nock. 2,004,900; June 11.
Cable and making same. H. R. Massingham. 2,004,612; June 11.
Cable, Electrical conductor. J. L. Alden. 2,004,592; June 11.
Cable stranding machine. A. R. Petterson. 2,004,634; June 11.
Calipering mechanism. M. H. Arms and J. B. Johnson. 2,004,361; June 11.
Can accessory, Paint. J. W. Kent and E. P. Peters. 2,004,285; June 11.
Can cover. W. A. Rathbun and F. J. Doyle. 2,004,675; June 11.
Candler and grader combined. Egg. O. Niederer. 2,004,338; June 11.
Cap, Ventilated engineer's. R. Klein. 2,004,913; June 11.
Caps, Manufacturing hot. H. R. Sage. 2,004,396; June 11.
Car construction. G. T. Johnson. 2,004,330; June 11.
Car coupler. A. C. Schmohl and H. N. D. Asper. 2,004,221; June 11.
Car end, Pressed steel. J. P. Gallagher. 2,004,190; June 11.
Car, Hand. A. G. Seitter. 2,004,676; June 11.
Carbon removing composition. C. R. Keen and C. E. Meore. 2,004,628; June 11.
Carburetor. F. H. Heltger. 2,004,242; June 11.
Card holder. L. I. Wells. 2,004,401; June 11.
Carrier; *See*—
Pneumatic carrier.
Carton, Folding. E. B. Whitehead. 2,004,908; June 11.
Cartridge fuse extractor. J. J. Dante. 2,004,314; June 11.
Case; *See*—
Pocket case.
Casting apparatus. E. Beringer. 2,004,457; June 11.
Casting method and apparatus. L. M. Patterson. 2,004,340; June 11.
Catalytic apparatus. A. O. Jaeger. 2,004,758; June 11.
Catalytic dehydration. M. Mueller-Cunradi and E. Ober. 2,004,521; June 11.
Catch, Safety. C. S. Oakey. 2,004,795; June 11.
Cathode ray apparatus. A. V. Bedford. 2,004,099; June 11.
Cathode ray tube. C. W. Becker. 2,004,646; June 11.
Ceiling, Sleeping car. L. E. Marchant. 2,004,898; June 11.
Cellulose derivative products, Production of. H. Dreyfus. 2,004,273; June 11.
Cement and the like, Manufacture of hydraulic. K. Middelboe. 2,004,381; June 11.
Cement, Production of hydraulic. G. O. Case. 2,004,463; June 11.
Centrifugal machine. W. Buddeberg. 2,004,268; June 11.
Centrifugal separator. C. G. Hawley. 2,004,468; June 11.
Chain; *See*—
Universal joint chain.
Chair; *See*—
Wheel chair.
Chair. F. G. Brixner. 2,004,718; June 11.
Charge forming device. J. W. Hogg. 2,004,869; June 11.
Chaser holder. H. A. Maurer. 2,004,333; June 11.
Chemical digestions, Apparatus for use in. A. Henwood and R. M. Garey. 2,004,868; June 11.
Cigarette, Self lighting. V. C. Rowe. 2,004,394; June 11.
Cigarettes, Manufacture of. S. W. Hunker. 2,004,461; June 11.
Cinder chrome building unit. A. Hede. 2,004,323; June 11.
Circuit, Glow discharge tube. F. Schröter. 2,004,587; June 11.
Circuit, Transmission control. B. G. Bjornson. 2,004,598; June 11.
Clamping device for weft replenishing looms. R. G. Turner. 2,004,302; June 11.
Clasp. E. Morehouse. 2,004,336; June 11.
Clasp or connecting device for straps, bands, and bracelets, Extendible. C. H. Kestenman. 2,004,206; June 11.
Cleaner; *See*—
Air cleaner. Suction cleaner.
Cleaning apparatus and method, Dry. J. E. Martin. 2,004,376; June 11.
Cleaning method and apparatus. J. E. Martin. 2,004,375; June 11.
Clearance regulator. C. E. Wyrick. 2,004,264; June 11.
Clip; *See*—
Self tying clip.
Clip. G. G. Wasson. 2,004,231; June 11.
Clip for chassis and body, Cable supporting. E. J. Sinnaeve. 2,004,353; June 11.
Clock. A. F. Benson. 2,004,909; June 11.
Clock movement. M. Knobel. 2,004,814; June 11.
Clutch. A. J. Meyer. 2,004,291; June 11.
Clutch. F. E. Munschauer. 2,004,794; June 11.
Clutch device for variable speed transmission mechanism. J. Eckhard. 2,004,750; June 11.
Clutch mechanism for engine starters. J. W. Fitz Gerald. 2,004,431; June 11.
Coaster. S. J. Low. 2,004,166; June 11.
Cock with relief valve, Automatic cylinder. A. G. Hollingshead and C. W. Ploen. 2,004,697; June 11.
Coin collecting apparatus. P. E. Mills. 2,004,615; June 11.
Coin slide. H. G. Breitenstein. 2,004,189; June 11.
Collapsible miter box. R. R. Sefl. 2,004,475; June 11.
Collar-stay. H. T. Krick. 2,004,288; June 11.
Color system, Additive fixed filter. W. A. Koskon. 2,004,442; June 11.
Compact, One hand. C. Weeks. 2,004,424; June 11.
Compensator. C. E. Wyrick. 2,004,263; June 11.
Composite structure. A. C. Wallen and T. J. Crawford. 2,004,907; June 11.
Compressor. B. Bogoslowsky. 2,004,563; June 11.
Compressor. E. Kügl. 2,004,726; June 11.
Compressor. C. Schnar. 2,004,474; June 11.
Compression unit. P. A. Celander. 2,004,889; June 11.
Condenser; *See*—
Electric condenser. Electrical condenser.
Conductor, Electrical. D. R. G. Palmer. 2,004,901; June 11.
Conductor, Electrical. A. B. Smedley. 2,004,589; June 11.
Confection. H. C. Gibson. 2,004,863; June 11.
Connecter; *See*—
Electrical connecter.
Container; *See*—
Metal container. Nonresealable container.
Container. E. W. Curtis, Jr. 2,004,501; June 11.
Container. G. C. Erb. 2,004,104; June 11.
Container. M. S. MacNaught. 2,004,878; June 11.
Container. A. Ratcliff. 2,004,218; June 11.
Container closure. H. B. Hemb. 2,004,407; June 11.
Container closure. M. R. Williams. 2,004,844; June 11.
Container for absorbent cotton. G. B. Meagher. 2,004,614; June 11.
Container for spectacle temples. G. E. Nerney. 2,004,415; June 11.
Container transfer apparatus. F. W. Hankins. 2,004,095; June 11.
Containers, Producing. O. Hofmann. 2,004,164; June 11.
Control apparatus for refrigeration machines. G. E. Hulse. 2,004,503; June 11.
Control device. D. H. Mitchell. 2,004,918; June 11.
Control equipment, Automatic. H. Bany. 2,004,776; June 11.
Control for baby carriages, Foot. J. Michal. 2,004,470; June 11.
Control regulator motor, Remote. E. H. White. 2,004,622; June 11.
Control system, Remote. A. B. Miller. 2,004,209; June 11.
Controlling system for sound recording devices. F. Hall. 2,004,893; June 11.

Pot or the like, Beverage. F. E. Wolcott. 2,004,883; June 11.
Potassium oxalate, Making. E. Hene. 2,004,867; June 11.
Potato cutter. G. M. Farnbough. 2,004,858; June 11.
Powder puff and making the same. E. Burkhardt 2,004,307; June 11.
Power control system. B. W. Hamilton. 2,004,478; June 11.
Power generating plant, Unit electric. H. D. Gumpper 2,004,405; June 11.
Power transmission. W. H. Furness. 2,004,572; June 11.
Power unit, Air operated. P. H. Crary. 2,004,853; June 11.
Press: *See*—
Platen printing press. Printing press.
Pressboard. H. Sieb. 2,004,710; June 11.
Press for cementing soles on shoes, Pneumatic. J. L. Thompson. 2,004,541; June 11.
Press-head for stuffing machines. O. C. Schmidt 2,004,618; June 11.
Pressure control for pneumatic tires. L. M. Mercier 2,004,822; June 11.
Pre-welt shaping machine. C. G. Deubel. 2,004,195; June 11.
Priming mixture. W. Brün. 2,004,719; June 11.
Priming mixture. J. D. McNutt. 2,004,505; June 11.
Printing plate and making the same. J. MacLean 2,004,824; June 11.
Printing plates, Photographically producing. W. J. Wilkinson. 2,004,144; June 11.
Printing press. J. F. Sheppard. 2,004,801; June 11.
Product and process for preparing same. W. A. Lazier. 2,004,874; June 11.
Propeller construction, Hollow steel. D. A. Dickey 2,004,102; June 11.
Protective system. R. C. Samuels. 2,004,768; June 11.
Protector: *See*—
Paint brush protector. Under arm protector.
Pulley drum for motor vehicles. D. S. Kennedy 2,004,554; June 11.
Pump: *See*—
Fluid pump.
Pump and electric motor unit, Submersible. J. F. Haldeman. 2,004,866; June 11.
Pumping mechanism. W. H. Wineman. 2,004,145; June 11.
Punching machine. W. W. Lasker. 2,004,208; June 11.
Racket, Tennis. H. Johnston. 2,004,609; June 11.
Radiator and front fender support. R. J. Waterbury. 2,004,258; June 11.
Radiator core. N. S. Diamant. 2,004,890; June 11.
Radio power supply system. A. Crossley. 2,004,368; June 11.
Radio receiving system. A. N. Goldsmith. 2,004,107; June 11.
Radio steering control. T. E. Brockstedt. 2,004,460; June 11.
Radio tube grids, Producing. H. Kershaw. 2,004,246; June 11.
Rafter marking apparatus. R. L. Greve. 2,004,318; June 11.
Railway draft device. E. B. Schrock. 2,004,348; June 11.

Razor blades, Device for grinding and sharpening. F. Somczek. 2,004,838; June 11.
Razor, Safety. J. E. Hedlund. 2,004,322; June 11.
Recuperator for open hearth furnaces. W. H. Fitch 2,004,916; June 11.
Receptacle: *See*—
Paper receptacle.
Receptacle closure. G. F. Ionitz. 2,004,698; June 11.
Receptacle for wrist watch bands and chains, Ornamental link. G. W. Best. 2,004,685; June 11.
Receptacles, Apparatus and method for forming edible. C. W. Howe and J. A. Nevin. 2,004,530; June 11.
Reel. A. S. Howell. 2,004,608; June 11.
Reel supporting mechanism for use in printing machines. C. G. Quick, D. A. Ball, and T. R. Bennett. 2,004,493; June 11.
Reenforcement for mats. O. W. Jackson. 2,004,204; June 11.
Reflector, Adjustable neck. C. T. Von Holtz. 2,004,142; June 11.
Refractory products and the like, Making. C. McMullen. 2,004,378; June 11.
Refrigerator. G. E. Friedrich. 2,004,692; June 11.
Refrigerator, Florist's. G. E. Friedrich. 2,004,691; June 11.
Regulator: *See*—
Clearance regulator. Liquid level regulator.
Fuel regulator. Oven regulator.
Furnace regulator.
Remote controlled brake. C. C. Farmer and R. E. Miller. 2,004,655; June 11.
Resin and coating or plastic composition containing the same. G. W. Seymour and B. B. White. 2,004,297; June 11.
Resin, Mixed ester. I. Rosenblum. 2,004,880; June 11.
Resistor grid for electric furnaces. F. T. Cope. 2,004,851; June 11.
Ringing repeater. A. T. Jester. 2,004,759; June 11.
Rivets, Device for setting tubular. J. B. S. Antelme. 2,004,624; June 11.
Rivets in structural members, Tightening loose. A. G. Leake. 2,004,665; June 11.
Rod: *See*—
Hair waver rod.
Rollers, Manufacture of printing. C. Neubert. 2,004,508; June 11.
Roof construction. J. W. Fall. 2,004,198; June 11.
Roof gutter bracket. J. Sansonetti. 2,004,448; June 11.
Roofing granules, Artificially coloring. S. G. Wright. 2,004,682; June 11.
Rotary furnace. A. G. McGregor. 2,004,334; June 11.
Rotoplane. E. L. Yanchus. 2,004,885; June 11.
Sander, Automobile surface. L. T. Farley. 2,004,859; June 11.
Sash construction. W. E. Keller. 2,004,727; June 11.
Sash ventilator. C. H. Larson. 2,004,762; June 11.
Saw chuck, Scroll. H. E. Tautz. 2,004,678; June 11.
Saw, Electric scroll. E. L. Meyer. 2,004,580; June 11.
Saw frame and guide, Hack. W. H. Kelner. 2,004,286; June 11.
Scale, Balance or weighing. C. A. Becker. 2,004,745; June 11.
Scale, Coin controlled. H. L. Walker. 2,004,179; June 11.
Scale, Egg grading. O. Niederer. 2,004,339; June 11.
Scale, Weighing. E. G. Hedman. 2,004,096; June 11.
Screen from wire, Apparatus and method for forming. D. K. Hopkins. 2,004,409; June 11.
Screens, Cleaning filter. E. H. Payne. 2,004,796; June 11.
Scrubber. C. G. Hawley. 2,004,467; June 11.
Seal for collecting mains of distillation ovens or the like, Liquid. W. Belmann. 2,004,266; June 11.
Seat: *See*—
Valve seat. Window seat.

Teleticket system. E. Hopkins. 2,004,112; June 11.
Temperature controlled valve. J. Pymm. 2,004,636; June 11.
Temperature device, Thermostatically and suction controlled mixture. E. E. Dean and O. C. Berry. 2,004,033; June 11.
Temperature of liquids, Device for indicating the. J. I. Chaney. 2,004,092; June 11.
Tennis net and making the same, Reenforced. V. Lichtenstein. 2,004,579; June 11.
Tensioning device for draw-off reels, Automatically variable. M. Richter. 2,004,219; June 11.
Tent. M. J. McAuliffe. 2,004,668; June 11.
Testing system. R. E. Hersey. 2,004,607; June 11.
Textile material and its production. W. I. Taylor. 2,004,130; June 11.
Textiles and like materials, Apparatus for processing. W. A. Traver. 2,004,229; June 11.
Textiles, Dyeing of. F. Barz, A. Landolt, W. Geigy, H. Kaegi, and C. Graenacher. 2,004,476; June 11.
Thermometer, Self-supporting. J. G. Hoeflich. 2,004,627; June 11.
Thermostat. R. H. Mautsch. 2,004,667; June 11.
Thiosulphate esters and their production. A. Kirstahler and W. J. Kaiser. 2,004,873; June 11.
Thread on a bobbin, Apparatus for winding. S. W. Brainard. 2,004,153; June 11.
Threads and other products from cellulose compounds, Manufacture of artificial. L. Lilienfeld. 2,004,876-7; June 11.
Threads, Apparatus and method for conveying. F. S. Mead. 2,004,169; June 11.
Ticket-stringing apparatus. J. F. Graeber. 2,004,163; June 11.
Tie rod construction. J. H. Steensen. 2,004,398; June 11.
Time announcing system. C. G. Miller and A. R. Bonorden. 2,004,248; June 11.
Time release apparatus. P. Beghetti. 2,004,515; June 11.
Time switch, Plural set. R. D. Smith. 2,004,137; June 11.
Tipper for fast delivery vans, Hydraulic rear. O. Ballert. 2,004,754; June 11.
Tire building machine. W. J. Breth and M. L. Engler. 2,004,886; June 11.
Tire, Pneumatic. W. A. Griesbaber. 2,004,892; June 11.
Tire retreading mold. T. E. Rogers. 2,004,800; June 11.
Tissue, Method and instrument for electro-surgical treatment of. R. H. and F. C. Wappler. 2,004,559; June 11.
Tobacco for insecticidal purposes, Treatment of. R. G. Mewborne. 2,004 124; June 11.
Tool: See—
  Fruit jar tool. Pattern maker's tool.
  Household tool. Turret machine tool.
  Loading tool. Welding tool.
Tool for preparing laminated fabrics for splicing. O. F. Homeier. 2,004,517; June 11.
Toothpick dispenser. J. D'Agustino. 2,004,805; June 11.
Toy airplane. H. Burkhard. 2,004,235; June 11.
Toy gun, Repeating. C. H. Leonard. 2,004,531; June 11.
Toy, Sounding. A. T. Linney. 2,004,817; June 11.
Toy transportation system. J. J. Clark. 2,004,915; June 11.
Track structure, Railway. H. Etheridge. 2,004,369; June 11.
Traction, Electric. L. R. E. Gratzmüller. 2,004,240; June 11.
Tractor propelled implement. T. W. Paul. 2,004,729; June 11.
Transfer mechanism. O. J. Sundstrand. 2,004,405; June 11.
Transmission, Reversing. F. P. Quinn, W. Horrobin, and W. F. Hawkins. 2,004,827; June 11.
Trap: See—
  Bank bandit trap.
Tray, Flexible metal ice. R. H. Chilton. 2,004,519; June 11.
Tray, Freezing. H. D. Geyer and F. W. Sampson. 2,004,525; June 11.
Trimming and cutting machine. E. M. Brackett, D. Daneke, and L. C. Williams. 2,004,566; June 11.
Trolleys, Apparatus for lubricating. C. G. Webrly. 2,004,386; June 11.
Truck trailer combination. I. H. Judd. 2,004,437; June 11.
Tube: See—
  Cathode ray tube. Electron discharge tube.
  Discharge tube. Photo-electric tube.
Tubes between couples of rotating cylinders, Direct manufacture of fibrous cement. A. Magnani. 2,004,703; June 11.
Tubes, Scaling. R. Traut. 2,004,422; June 11.
Tubing, Manufacture of finned. E. A. Dewald. 2,004,387-8; June 11.
Tubing, Manufacture of finned. R. C. Jones. 2,004,389; June 11.
Tuning device, Automatic. R. L. Heeren. 2,004,324; June 11.
Turbine, Elastic fluid. K. Bassler. 2,004,777; June 11.
Turret machine tool, Multiple. H. W. Rupple. 2,004,347; June 11.
Under arm protector. G. H. Souther, Jr. 2,004,511; June 11.
Universal joint. H. B. Shoemaker. 2,004,298; June 11.
Universal joint. J. R. Snyder. 2,004,299; June 11.
Universal joint chain. W. Hay. 2,004,321; June 11.
Upholstery method. A. S. Mitchell 2,004,705; June 11.
Vacuum tube oscillator. R. I. Cohn. 2,004,101; June 11.
Valve: See—
  Dispensing valve. Temperature controlled valve.
  Humidity controlled valve
Valve actuating mechanism. F. G. Thwaits. 2,004,717; June 11.
Valve controlling system. P. DeLacy-Mulhall. 2,004,194; June 11.
Valve converting apparatus, Electric. B. D. Bedford. 2,004,778; June 11.
Valve for internal combustion engines, Revoluble. H. C. Heinel. 2,004,912; June 11.
Valve lifter and spring compressor, Combined. J. Sumnen. 2,004,590; June 11.
Valve mechanism. F. G. Thwaits. 2,004,715; June 11.
Valve seat. J. A. Welger. 2,004,259; June 11.
Valve structure. F. G. Thwaits. 2,004,716; June 11.
Valves, Making. O. Hedlund. 2,004,528; June 11.
Vault, Burial. E. W. Wilson. 2,004,454; June 11.
Vehicle. H. J. Dillon. 2,004,748-9; June 11.
Vehicle brake, Motor. F. H. Sharar. 2,004,556; June 11.
Vehicle, Delivery. H. T. Thomas. 2,004,385; June 11.
Vehicle direction signal. A. A. Martinez. 2,004,289; June 11.
Vending machine. B. Radtke. 2,004,418; June 11.
Ventilator: See—
  Sash ventilator. Window ventilator.
Vessel handling and finishing device. W. L. McNamara and L. P. Piazzoli, Jr. 2,004,492; June 11.
Visor, Adjustable cap. W. H. David. 2,004,471; June 11.
Volume controls for radio receiving sets, Automatic. R. M. Planck. 2,004,294; June 11.
Wagon, Dump. T. C. Harvey. 2,004,754-5; June 11.
Wall and post construction. C. T. Hansen. 2,004,319; June 11.
Watch, Waterproof. W. C. Handley. 2,004,280; June 11.
Water by zeolites, Purification of. F. Tschirner 2,004,257; June 11.
Water, Treating. J. M. Gillet. 2,004,694; June 11.
Weather strip. W. S. Hamm. 2,004,722; June 11.
Weatherstrip. D. T. Main. 2,004,413; June 11.
Weft detecting mechanism for drop box looms. O. V. Payne. 2,004,341-2; June 11.
Welding system and method. J. P. Tarbox. 2,004,619; June 11.
Welding tool, Portable. J. P. Tarbox. 2,004,620; June 11.
Well drilling apparatus. E. I. Shoe and F. C. Landis. 2,004,494; June 11.
Wells, Cementing. E. P. Halliburton. 2,004,606; June 11.
Welt, Calking. L. F. Plummer. 2,004,447; June 11.
Welting and producing li G. H. Jennings. 2,004,116; June 11.

Welting and producing welting. G. H. Jennings. 2,004,117; June 11.
Welting and producing welting. E. E. Kent. 2,004,118; June 11.
Welting, Goodyear. W. Brown. 2,004,887; June 11.
Wheel: See—
  Buffing or polishing wheel
Wheel chair. L. S. and A. M. Wright. 2,004,683; June 11.
Wheel driving mechanism, Free. J. R. Collyear and S. L. Bapty. 2,004,650; June 11.
Whipper and scraper for ice cream freezers, Combined. H. S. Mills. 2,004,446; June 11.
Window seat. J. A. Costello 2,004,237; June 11.
Window ventilator. R. G. Liprott. 2,004,444; June 11.
Wires taut, Device for holding. M. A. Comeau. 2,004,312; June 11.
Wrench: See—
  Pipe wrench.
Wood chipping machine, Rotary. W. I. Brown. 2,004,367; June 11.
Wood hog. T. Tonks. 2,004,737; June 11.
Work-handling mechanism for centering and like machines. E. R. Smith and A. Schinkez. 2,004,540; June 11.
Workpieces, Grinding. C. Booth and S. Einstein. 2,004,649; June 11.
X-ray ore radiographic apparatus. W. A. Weed. 2,004,232; June 11.

CLASSIFICATION OF PATENTS

ISSUED JUNE 11, 1935

NOTE.—First number=class, second number=subclass, third number=patent number

1— 10: 2,004,355
33: 2,004,233
2— 10: 2,004,471
2,004,701
30: 2,004,854
37: 2,004,730
53: 2,004,511
82: 2,004,765
132: 2,004,288
146: 2,004,490
2,004,766
164: 2,004,382
195: 2,004,913
237: 2,004,481
3— 11: 2,004,487
4— 23: 2,004,455
57: 2,004,564
172: 2,004,825
5— 37: 2,004,287
210: 2,004,549
256: 2,004,697
6— 5: 2,004,476
6: 2,004,458
19: 2,004,229
2,004,479
9— 30: 2,004,684
10— 120: 2,004,323
124: 2,004,639
11— 1: 2,004,710
12— 7: 2,004,195
33: 2,004,309
2,004,541
2,004,820
107: 2,004,239
128.4: 2,004,159
128.5: 2,004,157
2,004,158
142: 2,004,236

Fuel, particularly coal. Farm Service Stores, Inc. 325,244; June 18; Serial No. 361,460; published Apr. 9, 1935.

Leather. Ohio Leather Company. 325,236; June 18; Serial No. 361,576; published Apr. 9, 1935.

Pitch and pitch-like goods for use in breweries. Chemische Werke Marienfelde A. G. 325,310; June 18; Serial No. 357,942; published Apr. 9, 1935.

Sand and mixtures including sand and pulverulent glass. Libbey Owens-Ford Glass Company. 325,354; June 18; Serial No. 355,363; published Apr. 9, 1935.

Seeds. Farm Service Stores, Inc. 325,243; June 18; Serial No. 361,461; published Apr. 9, 1935.

Wood pulp. Gottesman and Company. 325,371; June 18; Serial No. 360,270; published Apr. 9, 1935.

CLASS 2

Compacts, waste paper baskets and make-up boxes, Empty. James McCutcheon & Co. 325,227; June 18; Serial No. 360,566; published Apr. 9, 1935.

Containers for liquids. W. & A. Products, Inc. 325,321; June 18; Serial No. 361,130; published Apr. 9, 1935.
Flower-boxes, vases, bowls, etc., Cast stone. Arterete Products Company. 325,253; June 18; Serial No. 361,201; published Apr. 9, 1935.
Trays and food and drink dishes. Westinghouse Electric & Manufacturing Company. 325,267; June 18; Serial No. 354,784; published Apr. 9, 1935.
Tubes, Collapsible. Aluminum Company of America. 325,224; June 18; Serial No. 360,613; published Apr. 9, 1935.

CLASS 3

Pocketbooks. James McCutcheon & Co. 325,228; June 18; Serial No. 360,565; published Apr. 9, 1935.
Structural shapes for handbags. Fang-Grip Corporation. 325,364; June 18; Serial No. 360,434; published Apr. 9, 1935.

CLASS 4

Preparation for cleaning bright metals, Chemical. C. O. Eschbaugh. 325,255; June 18; Serial No. 361,140; published Apr. 9, 1935.
Soap. Sherwin-Williams Co. 325,376; June 18; Serial No. 360,083; published Apr. 9, 1935.
Solvents for cleaning purposes. Standard Oil Company of California. 325,292; June 18; Serial No. 361,825; published Apr. 9, 1935.

CLASS 5

Adhesive used in the making of cores. Frederic B. Stevens, Inc. 325,223; June 18; Serial No. 360,615; published Apr. 9, 1935.

CLASS 6

Antiseptic. K. & S. Laboratories, Inc. 325,220; June 18; Serial No. 360,671; published Apr. 9, 1935.
Antiseptic and bactericide. L. Clement. 325,333; June 18; Serial No. 360,954; published Apr. 2, 1935.
Brilliantine, soapless shampoo, after shave lotion, etc. G. W. Berman. 325,258; June 18; Serial No. 359,709; published Apr. 9, 1935.
Cologne, face powder, tonic, etc. W. E. Bugbee. 325,304; June 18; Serial No. 346,287; published May 29, 1934.
Composition for use in connection with laundering clothes, etc., Perfumed. Lee, Alexander & Sheid. 325,277; June 18; Serial No. 359,360; published Apr. 2, 1935.
Cream, circulation cream, face powder, Whipped cleansing. National Mineral Company. 325,388; June 18.
Creams, salves, ointments, etc. Scholl Mfg. Co. Inc. 325,377; June 18; Serial No. 360,080; published Apr. 9, 1935.
Culture of Bacillus acidophilus in soy bean milk. Condensed pure. United Laboratories, Ltd. 325,306; June 18; Serial No. 348,303; published Apr. 9, 1935.
Dyes and chemicals suitable for application in dyeing. J. S. Young Company. 325,318; June 18; Serial No. 359,072; published Apr. 2, 1935.
Electro plating solutions. Oxoseal Rustproofing Company. 325,278; June 18; Serial No. 359,400; published Apr. 9, 1935.
Hormone preparation. Schering Corporation. 325,335; June 18; Serial No. 360,906; published Apr. 2, 1935.
Insecticides, fungicides and flocculators. Sherwin-Williams Co. 325,379; June 18; Serial No. 360,003; published Apr. 9, 1935.
Laxatives. Burrell-Dugger Company. 325,330; June 18; Serial No. 360,987; published Apr. 9, 1935.
Licorice mass or paste. Tamsin Corporation. 325,378; June 18; Serial No. 360,052; published Apr. 9, 1935.
Liniments, salves, and decoctions manufactured from herbs. V. Baudendistel & Son. 103,146; renewed Mar. 16, 1935.
Lotion, bay rum, camphorated oil, etc., Almond. R. Sachs. 325,270; June 18; Serial No. 352,647; published Apr. 9, 1935.
Medical compound tablets. Bo-Ha-Ni Laboratories. 325,283; June 18; Serial No. 359,701; published Apr. 2, 1935.
Medicated pads, medicated fabrics and medicaments. Forest City Rubber Company. 325,328; June 18; Serial No. 361,005; published Apr. 9, 1935.
Medicine for relief of neuritis, rheumatism, etc., Internal. T. Boschmeyer. 325,338; June 18; Serial No. 360,839; published Apr. 2, 1935.
Medicines for coughs, colds, etc. A. B. C. O. Laboratories. 325,221; June 18; Serial No. 360,661; published Apr. 9, 1935.
Ointment or salve. Georgian Pharmacal Co. 325,323; June 18; Serial No. 361,089; published Apr. 9, 1935.
Ointments and jellies for the treatment of burns and scalds. Vadsco Sales Corporation. 325,275; June 18; Serial No. 359,248; published Apr. 9, 1935.
Oleaginous composition used as a plasticiser for pyroxylin, etc. Dreyy Products Company. 325,370; June 18; Serial No. 360,306; published Apr. 2, 1935.
Pharmaceutical preparations. N. P. Steckler. 325,393; June 18.
Pills, Liver. Carter Medicine Company. 325,251; June 18; Serial No. 361,256; published Apr. 9, 1935.
Plasticizing and softening agents, artificial resins, drying oils, etc. I. G. Farbenindustrie Aktiengesellschaft. 325,315; June 18; Serial No. 358,846; published Apr. 2, 1935.
Powder, liquid and salve for the relief of feet. Milson Company. 325,217; June 18; Serial No. 360,782; published Apr. 2, 1935.
Preparation for cleansing, softening and toning the skin. Sylvia of Hollywood. 325,234; June 18; Serial No. 360,565; published Apr. 2, 1935.
Preparation for exterminating rats and mice. Corn Fix Company. 325,329; June 18; Serial No. 360,992; published Apr. 9, 1935.
Preparation for making artificial mineral water. Concentrated. S. M. Bartok. 325,272; June 18; Serial No. 359,075; published Apr. 9, 1935.
Preparation for the destruction of rats and mice. Botanical Manufacturing Company. 101,618; renewed Jan 5, 1935.
Preparation for the treatment of ailments of the liver, kidneys, etc. M. de Lanmoise. 325,312; June 18; Serial No. 358,201; published Apr. 2, 1935.
Preparation for the treatment of digestive disorders. Dean Wallace Corporation. 325,225; June 18; Serial No. 360,579; published Apr. 2, 1935.
Preparation for treatment of dandruff and hair. Dandr-O Laboratories. 325,336; June 18; Serial No. 360,881; published Apr. 9, 1935.
Preparation for use as a preservative. Seydel Chemical Company. 325,309; June 18; Serial No. 357,787; published Apr. 2, 1935.
Preparation for use in the treatment of wire cuts, sore shoulders, etc. I. N. Fagg. 325,394; June 18.
Preparations for coughs and colds, headaches, etc. E. J. Sermani. 325,269; June 18; Serial No. 352,991; published Apr. 9, 1935.
Products for dyeing, finishing and processing textiles. Sandox Chemical Works, Inc. 325,322; June 18; Serial No. 361,122; published Apr. 9, 1935.
Sealing compound, Chemical metallic. W. F. Boeckel. 325,373; June 18; Serial No. 360,208; published Apr. 2, 1935.
Solution and ointment, Healing and antiseptic. M. S. Clauser. 325,231; June 18; Serial No. 360,535; published Apr. 9, 1935.
Solvent, Drain pipe. Merchants Service Corporation. 325,356; June 18; Serial No. 361,757; published Apr. 9, 1935.
Tonic formula. Harrower Laboratory, Inc. 325,363; June 18; Serial No. 360,410; published Apr. 2, 1935.
Vaccines. Laboratorio Brasileiro de Chimiotherapia, Ltda. 325,301; June 18; Serial No. 342,008; published Apr. 9.

CLASS 10

Fertilizers. American Agricultural Chemical Company. 325,381; June 18; Serial No. 359,976; published Apr. 9, 1935.
Fish meal used as a fertilizer. California Packing Corporation. 325,339; June 18; Serial No. 360,821; published Apr. 9, 1935.

CLASS 13

Hardware supplies. Andrews Wire and Iron Works. 101,728; renewed Jan. 12, 1935.
Vases, shower curtains, and pewter hollow ware, Base metal. James McCutcheon & Co. 325,226; June 18; Serial No. 360,568; published Apr. 9, 1935.

CLASS 14

Electrodes for electric arc welding. Hollup Corporation. 325,281; June 18; Serial No. 359,584; published Apr. 9, 1935.
Gold leaf, roll gold leaf, silver leaf, etc. W. H. Kemp Co. 325,326; June 18; Serial No. 361,018; published Apr. 9, 1935.
Paramagnetic material, Metallic comminated. Magnadux Corporation. 325,366; June 18; Serial No. 360,564; published Apr. 9, 1935.
Type. American Type Founders Sales Corporation. 325,337; June 18; Serial No. 360,873; published Apr. 9, 1935.

CLASS 16

Paints, varnishes, driers, etc., Ready-mixed. Vita-Var Corporation. 325,254; June 18; Serial No. 361,155; published Apr. 9, 1935.
Zinc oxide for use as paint pigment. American Zinc Sales Company. 325,284-7; June 18; Serial Nos. 359,765-8; published Apr. 9, 1935.

CLASS 19

Wheels for motor vehicles, Emergency. American Tire Guard Company. 325,279; June 18; Serial No. 359,535; published Apr. 9, 1935.

CLASS 21

Apparatus for electric arc welding. Lincoln Electric Company. 325,382; June 18; Serial No. 359,956; published Apr. 9, 1935.
Brushes for electrical purposes. National Carbon Company. 325,216; June 18; Serial No. 360,815; published Apr. 9, 1935.
Electric lighting fixtures. Marked Electric Products, Inc. 325,365; June 18; Serial No. 360,366; published Apr. 9, 1935.
Electric pressing irons, electric steam irons, electric heating tools, etc. Reiners Electric Appliance Company. 325,392; June 18.

CLASS 22

Dolls. B. Behrman. 325,298; June 18; Serial No. 362,009; published Apr. 9, 1935.
Game, Card. V. Dean. 325,246; June 18; Serial No. 361,385; published Apr. 9, 1935.
Game of chance. Werts Novelty Co. 325,268; June 18; Serial No. 354,543; published Apr. 9, 1935.

Sachs, Morris, assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt for personal wear. 95,986; June 18.

Sachs, Morris, assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt for personal wear. 95,987; June 18.

Sakier, George, assignor to Schenley Products Company, New York, N. Y. Bottle. 95,988; June 18.

Sakier, George, assignor to Schenley Products Company, New York, N. Y. Bottle. 95,989; June 18.

Schenley Products Company. (See Sakier, George, assignor.)

Schu, Matt, Chicago, Ill. Combined game apparatus and vending machine. 95,990; June 18.

Seigel, Paul M., Chicago, Ill., assignor to Valley Shoe Corporation, St. Louis, Mo. Shoe. 95,991; June 18.

Shaffer, Albert, Brooklyn, N. Y. Pencil sharpener. 95,992; June 18.

Stevens, Clifford B., assignor to Holsum Products, Inc., Milwaukee, Wis. Jar. 95,993; June 18.

Travis, John S., Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc. Carpet. 95,994; June 18.

Troxel Manufacturing Company, The. (See Faulhaber, Roland W., assignor.)

Turiansky, Abraham, New York, N. Y. Shoe. 95,995; June 18.

Turiansky, Abraham, New York, N. Y. Shoe. 95,996; June 18.

Valley Shoe Corporation. (See Seigel, Paul M., assignor.)

Western Molded Products, Inc. (See LeClercq, Raymond, assignor.)

Westinghouse Electric & Manufacturing Company. (See Kruck, Ralph E., assignor.)

Workman, Bernard, New York, N. Y. Hat. 95,997; June 18.

Zahn, Samuel, New York, N. Y. Ensemble dress. 95,998; June 18.

Zeitlin, Joseph, New York, N. Y. Candle light or similar article. 95,999; June 18.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 18TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abadjieff, Ivan V., Auburn, assignor to Leland-Gifford Company, Worcester, Mass. Igniting device for oil burners. 2,005,065; June 18.

Abadjieff, Ivan V., Auburn, assignor to Leland-Gifford Company, Worcester, Mass. Oil supply apparatus for oil burners. 2,005,066; June 18.

Abel, Emil G. L., assignor to Brander Farbwerke Chemische Fabrik Gesellschaft mit Beschränkter Haftung, Brand-Erbisdorf, Germany. Production of silico fluorides. 2,005,488; June 18.

Abernethy, David, Philadelphia, Pa. Weatherstripping. 2,004,969; June 18.

Abrahamsen, Alfred, and J. E. Hansen, Lillesand, Norway. Manufacturing impregnated textile belting. 2,005,407; June 18.

Adams, James L., Jr., Youngstown, Ohio. Centrifugally-cast circular ingot. 2,005,175; June 18.

Adams, James L., Jr., Youngstown, Ohio. Method and apparatus for welding. 2,005,329; June 18.

Adler, Howard, and W. H. Woodstock, assignor to The Victor Chemical Works, Chicago Heights, Ill. Acid-containing package. 2,004,926; June 18.

Adler, Samuel. (See Dubitsky, S., Adler, Grieshaber, Dearcopp, and Wood.)

Air Reduction Company. (See Anderson, James L., assignor.)

Aisen, Maurice, Norwalk, Conn. Bleaching and stripping material and making same. 2,005,448; June 18.

Aktiebolaget Formator. (See von Segebaden, Ernst S. D., assignor.)

Albeck, Albert, assignor to Hauser & Co., G. m. b. H., Augsburg, Germany. Seal for axle boxes. 2,005,526; June 18.

Allin, Matthew C., Weston, assignor to Riley Engineering & Supply Co., Ltd., Toronto, Ontario, Canada. Fan inlet guard and manufacturing the same. 2,005,408; June 18.

Allis-Chalmers Manufacturing Company. (See Journeaux, Didier, assignor.)

Allmanna Svenska Elektriska Aktiebolaget. (See Eriksson, K. E., and Lamm, assignors.)

Alten, George H. (See Winland, Henry A., assignor.)

Alten's Foundry and Machine Works. (See Winland, Henry A., assignor.)

Alther, Joseph G., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,005,527; June 18.

Alvey, William S., and J. M. Mikkelsen, Philadelphia, Pa. Gasoline vapor and air mixing device. 2,004,919; June 18.

American Brass Company, The. (See Kamack, Henry W., assignor.)

American Can Company. (See Holloway, William M., assignor.)

American Can Company. (See Hothersall, John M., assignor.)

American Engineering Company. (See Preston, Herbert E., assignor.)

American Laundry Machinery Company, The. (See Mall, Edwin A., assignor.)

American Laundry Machinery Company, The. (See Otis, Charles M., assignor.)

American Laundry Machinery Company, The. (See Singiser, John P., assignor.)

American Lurgi Corporation. (See Debuch, C. P., and Markworth, assignors.)

American Meter Company. (See Diehl, John C., assignor.)

American Sheet and Tin Plate Company. (See Belding, Harvey R., assignor.)

American Sheet and Tin Plate Company. (See Goodhue, William L., assignor.)

American Sheet and Tin Plate Company. (See Lorig, Edwin T., assignor.)

American Sheet and Tin Plate Company. (See Peterson, Rolland E., assignor.)

American Sheet and Tin Plate Company. (See Tamplin, William C., assignor.)

American Sheet and Tin Plate Company. (See Whetzel, J. C., and Zimmerman, assignors.)

American Smelting and Refining Company. (See Fleming, E. P., and Palmer, assignors.)

American Steel and Wire Company of New Jersey. (See Beatty, C. C., and Lloyd, assignors.)

American Steel and Wire Company of New Jersey, The. (See Gleason, G. A., and Hayden, assignors.)

American Steel & Wire Company of New Jersey, The. (See Williams, Thomas D., assignor.)

American Telephone and Telegraph Company. (See Nyquist, Harry, assignor.)

American Telephone and Telegraph Company. (See Watson, Edward F., assignor.)

Amo, Ivan J. (See Gutzwiller, Erwin C., assignor.)

Anacin Company. (See Hulbert, Edwin F., assignor.)

Anaconda Wire & Cable Company. (See Bassett, William H., assignor.)

Anchor Cap & Closure Corporation. (See Raney, Marion H., assignor.

Anderson, Bentil. (See Skoogh, Harry L., assignor.)

Anderson, Fred A., Oakland, Calif. Signal apparatus. 2,005,214; June 18.

Anderson, Gustaf E., Brockton, Mass. Automatic feed control for folding and other machines. 2,005,124; June 18.

Anderson, James L., Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Welding burner. 2,005,308; June 18.

Anderson, John P. (See Schmohl, A. C., and Anderson).

Anbuckle, John Le B., Columbus, Ohio. Camper's tool. 2,005,176; June 18.

Armenault, René. (See Malet, J., and Armenault.)

Armenault, René, Paris, assignor of one-half to Fabriques de Products de Chimie Organique de Laire, Societe Anonyme, Issy, France. Manufacture of urea-formaldehyde condensation products and artificial material therefrom. 2,004,970; June 18.

Armistead, George, Jr., Lockport, Ill., and W. Ulrich, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y. Manufacture of motor fuel from sludge oil. 2,005,309; June 18.

Armstrong, Walter R. (See Mayo, Franklin, assignor.)

Arness, William B., assignor, by mesne assignments, to Rustless Iron Corporation of America, Baltimore, Md. Producing alloys. 2,005,409; June 18.

Arrowsmith, William W., All Saints, Chorlton-on-Medlock, England. Baking pan. 2,005,449; June 18.

Ashbridge, Harry H., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, England. Internal grinding machine. 2,005,331; June 18.

Ashbridge, Harry H., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, England. Internal grinding machine. 2,005,332; June 18.

Asserson, Raymond. (See Farnham, P. O., and Asserson.)

Atlantic Register Company. (See Pierce, Arthur G., assignor).

Atlas Powder Company. (See Huyett, Daniel D., assignor.)

Atlas Supply Company. (See Heyer, Benjamin F. W., assignor.)

Aupperl, George H., Leechburg, assignor to Hyde Park Foundry and Machine Company, Hyde Park, Pa. Roll and making the same. 2,005,358; June 18.

Bacon, Daniel R., and L. H. Downs, Goshen, assignors to Perey Manufacturing Company, New York, N. Y. Turnstile. 2,004,971; June 18.

Bagnoli, Oreste J., Woodcliff, N. J., T. C. Wilson, Brooklyn, and J. H. Young, assignors to T. C. Wilson, Incorporated, New York, N. Y. Tube cleaner. 2,005,359; June 18.

Ballew, Elmer L., et al. (See Flukes, Andrew, assignor.)

Balz, Emil A., Athens, Wis. Fruit jar opener and tightener. 2,005,410; June 18.

Bannister, Bryant, Mount Lebanon, Pa. Apparatus for sinking tubular work pieces. 2,005,125; June 18.

Bargar, Edgar. (See Sucky, R. R., McGonigal, and Bargar.)

Bark, William, J. H. Schmidt, and J. V. Mazurie, Gary, Ind., assignors to National Tube Company. Apparatus for rolling pipe. 2,005,310; June 18.

Barrett Company, The. (See Dickson, John V. E., assignor.)

Barrett Company, The. (See Miller, Stuart P., assignor.)

Barrett, William, Hinton, Iowa. Animal trap. 2,005,489; June 18.

Bartlett Hayward Company, The. (See Wagner, Frederick H., assignor.)

Basseches, Jacob T. (See Jaffin, G. M., and Basseches.)

Bassett, William H., Jr., Scarsdale, assignor to Anaconda Wire & Cable Company, New York, N. Y. Hollow conductor. 2,004,972. June 18.

Batie, Joseph E., assignor, by mesne assignments, to The Kelsey Hayes Wheel Company, Detroit, Mich. Forming an annulus and apparatus therefor. 2,005,215; June 18.

Batsel, Max C., Yonkers, N. Y., assignor to Radio Corporation of America. Sound reproducing apparatus. 2,005,068; June 18.

Baxter, Burke M., assignor to The Crystal Waxing Company, Middletown, Ohio. Dispensing packages and container therefor. 2,005,490; June 18.

Beatty, Claire C., and E. J. Lloyd, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Aerial tramway. 2,005,126; June 18.

Beaverson, George, Minneapolis, Minn. Multiple line holder. 2,005,491; June 18.

Becker, Peter, Dusseldorf-Wersten, Germany, assignor to United States Envelope Company, Springfield, Mass. Apparatus for conveying envelope blanks. 2,005,492; June 18.

Behr, Harry C. A. (See Westgate, R. S., and Behr.)

Behrman, Abraham S., assignor to A. S. Behrman, trustee of Porous Rubber Products Trust, Chicago, Ill. Porous separator. 2,004,973; June 18.

Behrman, A. S., trustee. (See Behrman, Abraham S., assignor.)

Behr-Manning Corporation. (See Schacht, Elmer C., assignor.)

Belden, Edward H., Detroit, Mich. Rotary compressor. 2,004,920; June 18.

Belding, Harvey R., Vandergrift, Pa., assignor to American Sheet and Tin Plate Company. Stopper rod for ladles. 2,005,311 June 18.

Belgard-Spero, Inc. (See Braucht, Frederick A., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bowne, Langford J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Given, Frederick J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Hampton, L. N., and Smith, assignors.)

Bell Telephone Laboratories, Incorporated. (See Mallina, Rudolph F., assignor.)

Bell Telephone Laboratories, Incorporated. (See Martin, John J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Meszar, John, assignor.)

Benko, Andrew. (See Spitzer, B. L., and Benko.)

Bennett, Herbert G. R., Duquesne, Pa. Metal processing machine. 2,005,127 June 18.

Berchulc, John A., Detroit, Mich. Handle attachment for liquid or powder-containing cans. 2,005,528; June 18.

Bernier, Napoleon M., Cambridge, Mass. Acoustical plaster or tile and making the same. 2,005,060; June 18.

Berthold, Erich. (See Kuns, M. A., Berthold, and Koeberle.)

Bertram, Henry J., Kansas City, Mo. Rheostat. 2,005,516; June 18.

Bertrand, Frederic E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Actuating mechanism. 2005,019; June 18.

Bishop & Babcock Mfg. Company, The. (See Mayo, Edward L., assignor.)

Bishop, Eva P., executrix et al. (See Wuertz, A. J., and Bishop.)

Bishop, Oakley M. (See Wuertz, A. J., and Bishop.)

Bishop, Oakley M., and A. J. Wuertz, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Anthraquinone derivative. 2,005,529; June 18.

Bitzer, Gottlob, Assignor to Textile Machine Works, Wyomissing Pa. Lace attachment for full fashioned knitting machines. 2,005,070; June 18.

Blackwell, Evaline, Los Angeles, Calif. Greeting card. 2,005,493; June 18.

Blodgett, Albert G., assignor to Riley Stoker Corporation, Worcester, Mass. Fuel burning apparatus. 2,005,644; June 18.

Bloom, Marty, et al. (See Flukes, Andrew, assignor.)

Blue, Joseph N., Big Spring, Tex. Box and bearing for railway vehicles. 2,004,921; June 18.

Bobroff, Burnett L., Racine, Wis. Signaling device. 2,005,714 June 18.

Bodman, John W., Winchester, assignor to Lever Brothers Company, Cambridge, Mass. Refining a soap base. 2,005,333 June 18.

Boggs, Charles R., Waban, assignor to Simplex Wire & Cable Company, Boston, Mass. High tension rubber insulated cable. 2,005,360; June 18.

Bond, Harlan A., Metuchen, and L. B. Smith, Woodbridge, N. J., assignors, by mesne assignments, to E. I. du Pont de Nemours and Company. Oxidizing aliphatic alcohols to aldehydes. 2,005,645; June 18.

Bonnie, Joseph. (See Rick, E., and Bonnie.)

Booharin, Leo Y., San Francisco, Calif., assignor of one-third to W. H. Lea and one-third to B. Werner. Breathing mask. 2,005,072; June 18.

Booss, Frederick E. E., Lancaster, assignor to Gould Storage Battery Corporation, Depew, N. Y. Specific gravity indicator. 2,005,671; June 18.

Bordener, John, Detroit, Mich. Combination bottle opener. 2,004,974 June 18.

Bossert, Fritz, Mannheim, Germany. Bookkeeping machine. 2,005,020; June 18.

Bourdon, Pierre M., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Twin tire construction for vehicles. 2,004,922; June 18.

Bourdon, Pierre M., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Coupling for bogie axles. 2,005,607 June 18.

Bower, Henry, Chemical Manufacturing Company. (See Grove, Samuel F., assignor.)

Bower, Raymond G., assignor to Burroughs Adding Machine Company, Detroit, Mich. Paper feeding mechanism. 2,005,450; June 18.

Bowes, George S., Cleveland, Ohio. Valve. 2,005,128; June 18.

Bowles, Arthur G., Oakland, Calif. Cylinder press motion. 2,005,216 June 18.

Bowne, Lanford J., Howard Beach, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Selective switch. 2,005,575; June 18.

Boyd, Robert C., Louisville, Ky., assignor to Standard Sanitary Manufacturing Company. Shower bath spray head. 2,005,073; June 18.

Boyer, George D. (See Stanitz, J., and Boyer.)

Boykow, Johann M., Berlin-Lichterfelde-West, Germany. Automatic control device for aircraft. 2,005,530; June 18.

Bradford, James L. (See Gowen, R. F., and Bradford.)

Branche, Nelson T., assignor to Surface Combustion Corporation, Toledo, Ohio. Gas burning apparatus. 2,005,252; June 18.

Brander Farbwerke Chemische Fabrik Gesellschaft mit beschränkter Haftung. (See Abel, Emil G. L., assignor.)

Brandstein, Samuel J., Brooklyn, N. Y. Adjustable protective transparent lampshade cover. 2,005,531; June 18.

Brasch, Arno, and F. Lange, Berlin, Germany. Vacuum tube. 2,005,021; June 18.

Braucht, Frederick A., Chicago, Ill., assignor to Belgard-Spero, Inc. Mounting lenses. 2,004,923; June 18.

Brauer, Arthur J. (See Wagner, Frederick P., assignor.)

Braun, August J., Chicago, Ill. Toaster. 2,005,253; June 18.

Breda-Visadia Limited. (See Sagar, H., VanWeyenbergh, and Jones, assignors.)

Brennels Manufacturing Company Inc. (See Furrer, Samuel S., assignor.)

Bresnahan, William H., Lynn, Mass., assignor, by mesne assignments, to Compo Shoe Machinery Corporation, New York, N. Y. Apparatus for use in making footwear. 2,005,608; June 18.

Bridgeport Brass Company. (See McIlvane, William J., assignor.)

Brockton Last Company. (See Moorhouse, Henry L., assignor.)

Brooker, Leslie G. S., and F. L. White, assignors to Eastman Kodak Company, Rochester, N. Y. Selenazoles and preparing them. 2,005,411; June 18.

Brown Company. (See Schur, Milton O., assignor.)

Brown, Milton L. and S., Mobile, Ala. Permanent marker for cotton bales. 2,004,924; June 18.

Brown, Samuel. (See Brown, Milton L. and S.)

Brown, Thomas C., San Francisco, Calif., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Phonograph. 2,005,074; June 18.

Browne, Ralph C., Salem, Mass. High voltage electrical machine. 2,005,451; June 18.

Brumm, George O., Worcester, Mass. Oil burner. 2,005,532; June 18.

Brumund Bros. & Hufker Foundry, Incorporated. (See Brumund, Elmer G., assignor.)

Brumund, Elmer G., assignor to Brumund Bros. & Hufker Foundry, Incorporated, Chicago, Ill. Marker. 2,005,217; June 18.

Brunner, Walter. (See Krauss, C., and Brunner.)

Brunzel, Norbert, Vitkovice-Zelezarny, Czechoslovakia. Boiler plant. 2,005,646; June 18.

Buehner, Wm. F. A., et al. (See Matteson, Edward C., assignor.)

Buehner, William F. A. (See Endlich, Karl, assignor.)

Buhl, Oscar, and H. V. Jacobus, Belleville, N. J. Bathtub safety grip. 2,005,576; June 18.

Bulkeley, Claude A., Kenmore, assignor to Niagara Blower Company, Buffalo, N. Y. Method and apparatus for ventilating buildings. 2,004,927; June 18.

Bull, William F., Brooklyn, N. Y. Indicating device. 2,005,452; June 18.

Burns, Bruce, assignor, by mesne assignments, to Hughes Industries Co., Ltd., Los Angeles, Calif. Film take-up mechanism. 2,005,254; June 18.

Burriss, Oliver G., assignor of forty one-hundredths to E. P. Vandiver and forty one hundredths to J. C. Taylor, Anderson, S. C. Metallic sheet roofing. 2,005,218. June 18.

Burriss, Oliver G., assignor of forty one-hundredths to E. P. Vandiver and forty one-hundredths to J. C. Taylor, Anderson, S. C. Metallic sheet roofing. 2,005,219 June 18.

Burriss, Oliver G., assignor of forty one-hundredths to E. P. Vandiver and forty one hundredths to J. C. Taylor, Anderson, S. C. Metallic sheet roofing. 2,005,220. June 18.

Burroughs Adding Machine Company. (See Bower, Raymond G., assignor.)

Butler Manufacturing Company. (See Nelson, J., and Norquist, assignors.)

Butler Manufacturing Company. (See Norquist, Victor C., assignor.)

Cabot Carbon Company. (See Damon, Edward H., assignor.)

Campbell, Sterling H. and F. H. Pletzsch, assignors to Western Railway Equipment Company, St. Louis, Mo. Brake beam safety support. 2,004,975; June 18.

Canadian International Paper Company. (See Jayne, Georg, assignor.)

Caputo, James V., Crafton, Pa. Dynamo-electric machine. 2,005,609; June 18.

Carborundum Company, The. (See Newcomb, Edward R., assignor.)

Card, William C., Jr., Winthrop, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y. Shoe press pad. 2,005,177; June 18.

Card, William C., Jr., Waverly, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y. Sole affixing machine. 2,005,610; June 18.

Cardinal Products, Inc. (See Schmitt, George P., assignor.)

Carey, Philip, Manufacturing Company, The. (See Fischer, Albert C., assignor.)

Carleton, Robert A., Brooklyn, assignor to National Electric Heating Company, Inc., New York, N. Y. Electric fluid heater. 2,004,976; June 18.

Carnegie Steel Company. (See Hill, William W., assignor.)

Carpenter, Charles E., Chicago, Ill. Doughnut machine and the like. 2,005,178; June 18.

Carrillo, Leopoldo A., Big Wells, Tex. Machine gun. 2,004,925; June 18.

Carroll, James H., Atlanta, Ga. Self-service store with revolubile shelves. 2,005,280; June 18.

Carson, William W., Jr., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Dry ice refrigerating system. 2,005,611; June 18.

Caruthers, Abe, Jr., Nashville, Tenn. Safety device for andirons. 2,005,695; June 18.

Casper, Ervin J., San Francisco, Calif. Adjustable suspension device. 2,005,334; June 18.

Caterpillar Tractor Co. (See Wickersham, Elmer E., assignor.)

Cat's Paw Rubber Company. (See Esterson, Albert A., assignor.)

Celanese Corporation of America. (See Ellis, G. H., and Olpiuk, assignors.)

Celanese Corporation of America. (See Pool, William, assignor.)

Centervall, Hugo A., assignor to Manly Corporation, New York, N. Y. Control mechanism for hydraulic power systems. 2,004,928; June 18.

Centervall, Hugo A., assignor to Manly Corporation, New York, N. Y. Control means for varying the relative speeds of members driven through a common differential mechanism. 2,004,929; June 18.

Chadwick, Robert A., Jr., Milwaukee, Wis. Card index. 2,005,453; June 18.

Chaffee, Raymond O., Belmont, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Self-tapping screw. 2,005,672; June 18.

Chamberlin, Frank B., Columbus, Ohio. Fountain pen. 2,005,179; June 18.

Chapman, Paul, New York, N. Y. Roof construction. 2,005,533; June 18.

Chase, Raymond H., Providence, assignor to W. W. Potter, Pawtucket, R. I. Apparatus for splicing yarns. 2,005,129; June 18.

Chemical Works Formerly Sandoz. (See Stoll, A., and Wiedemann, assignor.)

Chesney, Robert M. (See Marsh, H., and Chesney.)

Chester, Alden P., and D. H. Hill, assignor to Globe American Corporation, Kokomo, Ind. Oven control. 2,004,977; June 18.

Chicago Flexible Shaft Company. (See McArdle, Michael W., assignor.)

Chilcote, Ray A., assignor of one half to McLaughlin Glass Co., Los Angeles, Calif. Glass feeder. 2,005,494; June 18

Childers, Charles T., Galesburg, Ill. Washing machine. 2,005,287. June 18.

Church, Harold D., assignor to The White Motor Company, Cleveland, Ohio. Motor vehicle. 2,005,312; June 18.

Churchill Machine Tool Company Limited, The. (See Asbridge, Harry H., assignor.)

Cinch Manufacturing Corporation. (See Pool, Esson J., assignor.)

Clark, William A., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Spring structure. 2,005,454; June 18.

Clark, William A., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Spring structure. 2,005,455; June 18.

Clausen, Henry P., White Plains, N. Y. Magnifying attachment for slide rules. 2,005,362; June 18.

Cleaners Appliance Company. (See Schlesinger, Harry, assignor.)

Clough, Raymon W., Cranston, R. I. Shingle. 2,005,335; June 18.

Clouse, William L., assignor to The National Machinery Company, Tiffin, Ohio. Bolt making machine. 2,005,495; June 18.

Cluett, Peabody & Co. (See Cluett, Sanford L., assignor.)

Cluett, Sanford L., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y. Cloth finishing. 2,005,517; June 18.

Coates, Fielding C., assignor to Mole-Richardson, Inc., Los Angeles, Calif. Voltage regulator. 2,005,363; June 18.

Cohen, Samuel H., Boston, and J. Wasserman, Cambridge, Mass. Multi-ply flashing structure. 2,005,221; June 18.

Colby, Clyde W., East Cleveland, Ohio. Sill heater cabinet construction. 2,005,313; June 18.

Coleman, James D. (See Staud, C. J., and Coleman.)

Collison, Edward E. (See Kirk, C. R., and Collison.)

Colman, Howard D. (See Greenlee, Theodore K., assignor.

Columbian Carbon Company. (See Glaxner, Herman J., assignor.)

Communication Patents, Inc. (See Marks, Alvin M., assignor.)

Communication Patents, Inc. (See Nicolson, Alexander M., assignor.)

Compo Shoe Machinery Corporation. (See Bresnahan, William H., assignor.)

Compo Shoe Machinery Corporation. (See Card, William C., Jr., assignor.)

Compo Shoe Machinery Corporation. (See Franzen, E. T., and Weiss, assignors.)

Compo Shoe Machinery Corporation. (See Habicht, Otto, assignor.)

Conley, Hugh A., Lynwood, assignor to Conley Plastering Machine Company, Inc., Compton, Calif. Apparatus for applying protective coatings. 2,004,978; June 18.

Conley Plastering Machine Company. (See Conley, Hugh A., assignor.)

Connolly, Gerald C., and J. A. Pierce, assignors, by mesne assignments, to C. F. Hockley, receiver for Silica-Gel Corporation, Baltimore, Md. Platinum contact mass containing promoter and making same. 2,005,412; June 18.

Connor, John H., Newton, assignor to The Tanning Process Company, Boston, Mass. Removing liquids from hides, skins, and leather. 2,004,930; June 18.

Continental Can Company. (See Sedwick, Matthew M., assignor.)

Continental Equipment Company. (See Phillips, I. M., and Kalinsey, assignors.)

Cool, David E., St. Louis, Mo. Attaching heels to shoes. 2,004,979; June 18.

Cooling Tower Co. Inc., The. (See Tappen, Alexander B., assignor.)

Cooper, William H., Buffalo, N. Y. Permanent hair waving device. 2,005,288; June 18.

Cornwell, Arthur L., Wellsville, N. Y. Wheel puller. 2,005,534; June 18.

Coulston, Melvin H., Washington, D. C. Book structure and binder for leaves. 2,005,717; June 18.

Creager, Frederick L., Merchantville, N. J., assignor to Radio Corporation of America. Variable resistance device. 2,005,456; June 18.

Crilley, William W., Cleveland, Ohio. Header slide. 2,005,222; June 18.

Crouch, Richard H., Pulaski, Va. Dovetail attachment for dovetail machines. 2,005,647; June 18.

Cronin, James A., Berkeley, assignor to Standard Oil Company of California, San Francisco, Calif. Tank cleaning device. 2,005,180 June 18.

Crown Stove Works. (See Rogers, John C., assignor.)

Crumb, Charles F. (See Roscoe, M. W., and Crumb.)

Crystal Waxing Company, The. (See Baxter, Burke M., assignor.)

Cunningham, Katherine E., assignor to I. Newman & Sons, Inc., New Haven, Conn. Foundation garment. 2,005,612; June 18.

Daimler-Benz Aktiengesellschaft. (See Schildknecht, Heinrich, assignor.)

Dalton, John W., Wimbledon, London, England. Electrical circuit and apparatus. 2,005,130; June 18.

Damon, Edward H., Skellytown, assignor, by mesne assignments, to Cabot Carbon Company, Pampa, Tex. Improving carbon black. 2,005,022; June 18.

Daudt, Herbert W., and E. L. Mattison, assignors to Kinetic Chemicals, Incorporated, Wilmington, Del. Fluorination of carbon compounds. 2,004,931; June 18.

Daudt, Herbert W., M. A. Youker, and H. LaB. Jones, assignors, by mesne assignments, to Kinetic Chemicals, Incorporated, Wilmington, Del. Production of fluorine compounds. 2,004,932; June 18.

Daudt, Herbert W., and M. A. Youker, assignors, by mesne assignments, to Kinetic Chemicals, Incorporated, Wilmington, Del. Preparation of carbon compounds containing fluorine. 2,005,705; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemicals Inc., Wilmington, Del. Organic fluorine compounds. 2,005,706; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemical Inc., Wilmington, Del. Production of organic fluorine compounds. 2,005,707; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Production of halogenated ethane derivatives containing fluorine. 2,005,708; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Production of organic fluorine compounds. 2,005,709; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Preparation of fluorine compounds. 2,005,710; June 18.

Daudt, Herbert W., and M. A. Youker, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Preparation of organic fluorine compounds. 2,005,711; June 18.

Davis, George and J. H., Dallas, Tex. Hose coupling. 2,005,631; June 18.

Davis, Jack H. (See Davis, George and J. H.)

Davis, Walter F., Nassau County, assignor to Fairchild Aviation Corporation, New York, N. Y. Engine cooling device. 2,005,336; June 18.

Davison, Robert L., assignor to John B. Pierce Foundation, New York, N. Y. Bathroom unit. 2,004,933; June 18.

Dawson, Sidney, assignor to E. L. Stalle, Chicago, Ill., administratrix of the estate of A. P. Stalle, deceased. Automatic circular oven. 2,005,023; June 18.

Dayton Accessories Manufacturing Company, The. (See Smelker, Le Roy, assignor.)

Dearcopp, Charles. (See Dubitsky, S., Adler, Grieshaber, Dearcopp, and Wood.)

Debuch, Carl P., and E. Markworth, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y. Process of and apparatus for the heat treatment of substances in rotary tube furnaces. 2,005,648; June 18.

DeLaval Separator Company, The. (See Lindgren, Hans O., assignor.)

Delaware Chemical Engineering Company. (See Kasley, Alexander T., assignor.)

Dellert, Louis, Brooklyn, N. Y. Chair. 2,004,934; June 18.

DeLuce, Robert E., assignor to Star Box & Printing Co., Chattanooga, Tenn. Folding box. 2,005,131; June 18.

DeLuce, Robert E., assignor to Star Box & Printing Co., Chattanooga, Tenn. Gluing machine. 2,005,132; June 18.

DeLuxe Metal Furniture Company. (See Onlons, H. J., and Sandberg, assignors.)

Dennison, Brook J., Tarentum, assignor to Duplate Corporation, Allegheny County, Pa. Laminated glass and making the same. 2,005,075; June 18.

Dennison, Frank G., Newton, Mass. Hobbyhorse. 2,005,181; June 18.

De Oslund, Herbert, Minneapolis, Minn. Letter outlining templet. 2,005,255; June 18.

Derringer, Percy O., assignor to Knapp-Monarch Company, Belleville, Ill. Toaster construction. 2,005,361; June 18.

Detroit Dental Manufacturing Co. (See La Riche, Authony M., assignor.)

De Wasme, Joseph A., Chicago, Ill. Planting implement. 2,005,518; June 18.

Dewey, Haywood G. (See Jones, J. G., and Dewey.)

De Witt, Leo V. (See Wood, S. K., Eales, and De Witt.)

Dexter Folder Company. (See Ehlig, Harry, assignor.)

Dick, Barns, Ferguson, assignor to Wagner Electric Corporation, St. Louis, Mo. Fluid pressure mechanism. 2,004,986; June 18.

Dickson, John, Swarthmore, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Auxiliary air arrangement for Diesel locomotives 2,005,536; June 18.

Dickson, John V. E., Yonkers, assignor to The Barrett Company, New York, N. Y. Coal tar oil and pitch. 2,005,577; June 18.

Diehl, John C., Erie, Pa., assignor to American Meter Company, New York, N. Y. Gas meter. 2,005,024; June 18.

Diehl, John C., Erie, Pa., assignor to American Meter Company, New York, N. Y. Tangent. 2,005,025; June 18.

Di Giarinto, Rosario, Toughkenamon, Pa. Mushroom spawn. 2,005,365; June 18.

Dixon, Harold C., Chicago, Ill., assignor to Pressed Steel Car Company, Pittsburgh, Pa. Railway brake beam support. 2,005,076; June 18.

Dobbs, Ernestine H. (See Rollins, G. DeW., and Dobbs.)

Dodgem Corporation. (See Stoehrer, H., and Markey, assignors.)

Doll, Emil, West New York, N. J. Toothbrush. 2,005,337; June 18.

Donovan, John F., and G. Illingworth, East Cleveland, Ohio, assignors to General Electric Company. Apparatus for feeding fragile rods, tubes, and similar articles. 2,005,496; June 18.

Dorn, René and M. Willis, New Orleans, La. Cementitious sheet. 2,004,935; June 18.

Dorn, René and M. Willis, New Orleans, La. Apparatus for the manufacture of cementitious sheets. 2,004,936; June 18.

Douglas, Harry A., Bronson, Mich. Aeroplane. 2,005,078; June 18.

Dowd, Archie J., Plainfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for positioning liners. 2,005,577; June 18.

Downs, Leon H. (See Bacon, D. R., and Downs.)

Dr. Bein & Kaulen Chemische Fabrik G. m. b. H. (See Thimann, Max, assignor.)

Dragoo, Thomas J., Jr., Spofford, Texas. Buck mask. 2,005,649; June 18.

Draper Corporation. (See Snow, Isaac, assignor.)

Dreyer, Adolf, Potsdam, and W. Kutzner, Potsdam; said Kutzner assignor to F. Kutzner, Halensee, near Berlin, Germany. Apparatus for treating binding materials in the form of powder or grit, to produce dextrine and other adhesives of vegetable origin, as well as for treating other materials. 2,005,537; June 18.

Dreyfus, Henry, London, England. Manufacture of cellulose esters. 2,005,223; June 18.

Driver-Harris Company. (See Hunter, Matthew A., assignor.)

Driver-Harris Company. (See Lohr, James M., assignor.)

Drysdale, William D., Buffalo, N. Y., assignor to Walter J. Bugden, Boston, Mass. Compressing machine. 2,005,578; June 18.

Duarte, John T., Honolulu, Hawaii. Theft resisting hub cap and wheel lock. 2,005,535; June 18.

Dubitsky, Simon, Glendale, Long Island, S. Adler, Bronx, E. Grieshaber, C. Dearcopp, Glendale, Long Island, and R. Wood, South Ozone Park, N. Y. Doorcheck. 2,005,457; June 18.

Du Bois, Ernest, Itterbeek, Chateau de Pierrefonds, Belgium, assignor to International Carbonic Engineering Company, Kennett Square, Pa. Apparatus for automatically controlling discharge of fluids under pressure into a pressure chamber. 2,005,650; June 18.

Dudley, Wray, Mount Lebanon Borough, Pa., assignor to National Tube Company. Electrically welding pipe. 2,005,579; June 18.

Dunham, Aubra R. (See Dunham, Clayton A., and A. R.)

Dunham, C. A., Company. (See Dwyer, Lawrence P., assignor.)

Dunham, Clayton A. and A. R., Glencoe, Ill., assignor to Experimental Laboratories Incorporated, Chicago, Ill. Heating apparatus. 2,005,224; June 18.

Dunlap, DeClermont, Newark, N. J. Monorail switch. 2,005,133; June 18.

Duplate Corporation. (See Dennison, Brook, J., assignor.)

Du Pont, E. I., de Nemours & Company. (See Bishop, O. M., and Wuertz, assignors.)

Du Pont, E. I., de Nemours and Company. (See Rond, H. A., and Smith, assignors.)

Du Pont, E. I., de Nemours & Company. (See Dykstra, Harry B., assignor.)

Du Pont, E. I., de Nemours & Company. (See Engelmann, Max, assignor.)

Du Pont, E. I., de Nemours & Company. (See Graves, George De W., assignor.)

Du Pont, E. I., de Nemours & Company. (See Spiegler, L., and Lee, assignors.)

Du Pont, E. I., de Nemours & Company. (See Strouse, George C., assignor.)

Du Pont, E. I., de Nemours & Company. (See Wuertz, A. J., and Bishop, assignors.)

Dwyer, Lawrence P., Winnetka, Ill., assignor to C. A. Dunham Company, Marshalltown, Iowa. Concealed radiator. 2,005,226; June 18.

Dyess, Earl J., Longview, Tex. Switch structure 2,005,413; June 18.

Dykstra, Harry B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose derivative composition. 2,005,414; June 18.

Eames, George M., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine. 2,005,673; June 18.

Eastman Kodak Company. (See Brooker, L. G. S., and White, assignors.)

Eastman Kodak Company. (See Fuerst, Carl C., assignor.)

Eastman Kodak Company. (See Hickman, Kenneth C. D., assignor.)

Eastman Kodak Company. (See Hull, David C., assignor.)

Eastman Kodak Company. (See Hughey, Carter J., assignor.)

Eastman Kodak Company. (See Jones, J. G., and Dewey, assignors.)

Eastman Kodak Company. (See McDougal, Homer R., assignor.)

Eastman Kodak Company. (See Murray, T. F., and Staud, assignors.)

Eastman Kodak Company. (See Riddell, William A., assignor.)

Eastman Kodak Company. (See Staud, C. J., and Coleman, assignors.)

Eastman Kodak Company. (See Wittel, Otto, assignor.)

Eales, Ben L. (See Wood, S. K., Eales, and De Witt.)

Ebert, Edward A. (See Gary, E. R., and Ebert.)

Ebner, Henry M., Cameron, Wis. Folding berry box 2,005,415; June 18.

Eclipse Aviation Corporation. (See Havill, Clinton H., assignor.)

Eclipse Aviation Corporation. (See Marcus, Charles, assignor.)

Economic Machinery Company. (See Holm, Carl, assignor.)

Edison General Electric Appliance Company. (See Randolph, Charles P., assignor.)

Edison, Thomas A., Incorporated. (See Brown, Thomas C., assignor.)

Ehlig, Harry, Pearl River, assignor to Dexter Folder Company, New York, N. Y. Sheet feeder. 2,005,079; June 18.

Eitel, William W., and J. McCullough, San Bruno, assignors to Heintz & Kaufman, Ltd., San Francisco, Calif. Spot welding refractory metals. 2,005,256; June 18.

Eitel, William W., and J. McCullough, San Bruno, assignors to Heintz & Kaufmann, Ltd., San Francisco, Calif. Vacuum tube grid. 2,005,257; June 18.

Electric and Musical Industries Limited. (See Tedham, William F., assignor.)

Electric Trading Corporation. (See Fletcher, John, assignor.)

"Elin" Aktiengesellschaft fürelektrisch Industrie. (See Geyer, Franz, assignor.)

Ellis, George H., and H. C. Olpin, Spondon, near Derby, England, assignors to Celanese Corporation of America. Production of pattern effects on textile and other materials. 2,005,182; June 18.

Ellsworth, Charles K., Detroit, Mich. Package for bottles. 2,005,026; June 18.

Ellsworth, Charles K., Toledo, Ohio. Box construction 2,005,027; June 18.

Ellsworth, Edgar, McLoud, Okla. Veterinary instrument. 2,005,289; June 18.

Emery, I. C., Baltimore, Md., assignor to The Lock Nut Corporation of America, Chicago, Ill. Making lock nuts 2,005,651; June 18.

Emley, Jay N., Forest Hills, assignor to National Process Company, Inc., New York, N. Y. Support for flexible posters. 2,005,134; June 18.

Emmens, Hendrik. (See van Geel, W. C., and Emmens.)

Endlich, Karl, assignor of one-half to W. F. A. Buehner, Miami, Fla. Automobile license plate holder. 2,005,703; June 18.

Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Alkoxy-phenyl-imidazoles. 2,005,538; June 18.

Ensko, Robert, Freeport, assignor to Seeman Brothers, Inc., New York, N. Y. Container and its cover. 2,005,314; June 18.

Erlesson Telephones Limited. (See Limb, Frederick, assignor.)

Erie City Iron Works. (See Kaemmerling, Gustav H., assignor.)

Eriksson, Karl E., and U. Lamm, Ludvika, assignors to Allmanna Svenska Elektriska Aktiebolaget, Västerås, Sweden. Ion valve for producing alternating currents. 2,005,458; June 18.

Esterson, Albert A., assignor to Cat's Paw Rubber Company, Inc., Baltimore, Md. Carton for rubber heels and the like. 2,005,135; June 18.

Evans, Robert D. Swissvale, and W. A. Lewis, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Relaying system with directional indication storage. 2,005,136; June 18.

Everett, Silas, Atlantic Beach, Long Island, N. Y. Yarn. 2,005,539; June 18.

Experimental Laboratories Incorporated. (See Dunham, Clayton A. and A. R., assignors.)

Eynon, James H., Bath, N. Y. Lubricating connections between connecting rod, piston, and crankshaft. 2,005,028; June 18.

F. & N. Lawn Mower Company, The. (See Lontz, Harry R., assignor.)

Fabriques de Produits de Chimie Organique de Laire, Societe Anonyme. (See Armenault, René, assignor.)

Fabriques de Produits de Chimie Organique de Laire, Societe Anonyme. (See Malet, J., and Armenault, assignors.)

Fafnir Bearing Company, The. (See Smith, John W., assignor.)

Fairbanks, Morse & Co. (See Petersen, E. W., and Singer, assignors.)

Fairbanks, Morse & Company. (See Rix, Milton H., assignor.)

Fairchild Aerial Camera Corporation. (See Gaty, John P., assignor.)

Fairchild Aviation Corporation. (See Davis, Walter F., assignor.)

Falk, Morris, Fitchburg, Mass. Key blank. 2,005,497; June 18.

Farnham, Paul O., and Raymond Asserson, Boonton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Audion amplifier. 2,005,080; June 18.

Fashion Park Manufacturing Corporation. (See Shaw, Burt J., assignor.)

Fassbender, Josef, assignor to Land und Seekabelwerke A. G., Cologne-Nippes, Germany. Rubber insulated cable. 2,005,614; June 18.

Faulkner, David S. Los Angeles, A. E. Rice, Hermosa Beach, and Lewis E. Zerbe, Moneta, Calif., assignors, by mesne assignments, to The National-Superior Company, Toledo, Ohio. Rotary machine. 2,005,137; June 18.

Fausett, Floyd, assignor to Supreme Instruments Corporation, Greenwood, Miss. Electric metering device. 2,005,138; June 18.

Federal Foundation, Inc. (See Whitlock, R. G., and Sharp, assignors.)

Fer-O-Con Corporation. (See Kotrbaty, Guy F., assignor.)

Ferre, Albert W., Wellesley, assignor to B. F. Sturtevant Company, Inc., Boston, Mass. Drying apparatus. 2,005,580; June 18.

Ferris, Robert G., assignor to Starline, Inc., Harvard, Ill. Ventilating means. 2,005,615; June 18.

Ferrous Magnetic Corporation. (See Specht, Sigfrid, assignor.)

Fidelity Trust Company, The, Administrator. (See Johansen, T., and Jones.)

Field, Ethel A., New York, N. Y. Dispenser. 2,005,029; June 18.

Filastic Holding S. A. (See Schildrowitz, Philip, assignor.)

Filer & Stowell Company, The. (See Pelton, George M., assignor.)

Finn, Ida L., Racine, Wis. Strainer for sinks. 2,005,459; June 18.

Firestone, John R., Brooklyn, N. Y., assignor to John F. Meyer, Chicago, Ill. Game apparatus. 2,004,981; June 18.

Firestone Tire & Rubber Company, The. (See Saurer, Curt, assignor.)

Fischer, Albert C., Chicago, Ill., assignor to The Philip Carey Manufacturing Company. Combined expansion and contraction joint. 2,005,139; June 18.

Fischoff, Eugene, South Bend, Ind. Table seat. 2,005,652; June 18.

Fisher, Henry A., and J. P. Lindsay, Parkersburg, W. Va. Method and apparatus for making glass articles. 2,005,519; June 18.

Fisher, John H., Elyria, Ohio. Coal shovel. 2,005,416; June 18.

Fleming, Edward P., Salt Lake City, Utah, and S. L. Palmer, San Francisco, Calif., assignors to American Smelting and Refining Company, New York, N. Y. Treating molten metal. 2,005,540; June 18.

Flemming, Walter, and W. Speer, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Catalytic oxidation of ketones. 2,005,183; June 18.

Fletcher, John, assignor to Electric Trading Corporation, New York, N. Y. Portable electric cooker. 2,004,937; June 18.

Flukes, Andrew, assignor of one-third to E. L. Ballew and one-third to M. Bloom, Chicago, Ill. Refrigeration. 2,005,258; June 18.

Forrest, Thomas W. W., Fresno, Calif., assignor to Sun-Maid Raisin Growers of California. Fruit coating method. 2,005,184; June 18.

Foster Wheeler Corporation. (See Lichstenetsin, Joseph, assignor.)

Franklin, John L., Atlanta, Ga. Time controlled mechanism. 2,005,653; June 18.

Franze, Johannes, Liestal, near Basel, Switzerland. Fastener with sliding attachment for garments, bags, and the like. 2,005,116; June 18.

Franzen, Eric T., Maplewood, and A. J. Weiss, West Orange, N. J., assignors to Compo Shoe Machinery Corporation, New York, N. Y. Sole-affixing machine. 2,005,616; June 18.

French, Charles A., Riverside, Ill. Fuel vaporizer and burner. 2,005,541; June 18.

Freydberg Brothers, Inc. (See Lasztoczy, Stephen, assignor.)

Fried, Jacob, New York, N. Y. Safety bathing suit. 2,005,460; June 18.

Friedmann, Otto, Vienna, Austria. Cleaning attachment for combs. 2,005,520; June 18.

Friesel, David, U. S. Army, Washington, D. C. Typewriter attachment. 2,004,938; June 18.

Fritsche, Rudolf, New York, N. Y. Lithographic plate graining device. 2,005,654; June 18.

Frost, Frank R., assignor to Superior Steel Corporation, Pittsburgh, Pa. Making composite ingots. 2,005,338; June 18.

Fry, Walter L., Scarsdale, assignor, by mesne assignments, to Milton Loewe, New York, N. Y. Covers for seat side arms. 2,004,982; June 18.

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. Air vent for camera bellows. 2,005,417; June 18.

Fulton Sylphon Company, The. (See Carson William W., Jr., assignor.)

Furrer, Samuel S., assignor to Brenneis Manufacturing Company Inc., Oxnard, Calif. Disk harrow with right and left turning mechanism. 2,005,225; June 18.

Fussenegger, Adolph J., Louisville, Ky. Garment hanger. 2,005,290; June 18.

G & G Atlas Systems, Inc. (See Scanlan, Joseph M., assignor.)

Garbell, Max, assignor to Victor Adding Machine Company, Chicago, Ill. Typewriting machine. 2,005,185; June 18.

Gary, Edwin B., and E. A. Ebert, Buffalo, Combination windshield wiper and heater. 2,005,581; June 18.

Gastrich, Gustav, assignor to Textile Machine Works, Wyomissing, Pa. Mechanism for narrowing flat knit full fashioned hosiery. 2,005,461; June 18.

Gastrich, Gustav, assignor to Textile Machine Works, Wyomissing, Pa. Mounting means for needles and the like. 2,005,674; June 18.

Gaty, John P., Woodside, N. Y., assignor to Fairchild Aerial Camera Corporation. Machine gun camera. 2,005,366; June 18.

Gebsinger, Nelson O., Dover, Ohio. Veneer fastening means. 2,005,030; June 18.

General Aniline Works, Inc. (See Helwert, F., and Palm, assignors.)

General Aniline Works, Inc. (See Krauss, C., and Brunner, assignors.)

General Aniline Works, Inc. (See Kunz, M. A., Berthold, and Koeberle, assignors.)

General Cable Corporation. (See Snyder, Edward, assignor.)

General Controls Co. (See Ray, William A., assignor.)

General Electric Company. (See Donovan, J. F., and Illingworth, assignors.)

General Electric Company. (See McCarty, Orin P., assignor.)

General Electric Company. (See Wilson, Guy W., assignor.)

General Motors Corporation. (See Rockwell, Edward A., assignor.)

General Motors Corporation. (See Summers, Otto M., assignor.)

General Tire & Rubber Company, The. (See Maranville, Alger G., assignor.)

Genz, Frederick W., assignor to Virginia-Carolina Chemical Corporation, Richmond, Va. Simultaneous production of available phosphoric acid and available lime common elements. 2,005,617; June 18.

Gephart, Bruce O., Chicago, Ill. Fishing rod. 2,005,081; June 18.

Geyer, Franz, assignor to "Elin" Aktiengesellschaft für elektrische Industrie, Vienna, Austria. Air-cooling of glass bulb rectifiers. 2,005,031; June 18.

Gibson Electric Refrigerator Corporation. (See Tonborg, J., and Rosebrook, assignors.)
Gibson, John H., assignor to The Weaver-Wall Company, Cleveland, Ohio. Building corner construction and units therefor. 2,005,462; June 18.
Girard, James B., Phoenix, Ariz. Gold recovering device and method. 2,004,939; June 18.
Given, Frederick J., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Inductive device. 2,005,582; June 18.
Glaxner, Herman J., Monroe, La., assignor to Columbian Carbon Company, New York, N. Y. Apparatus for compacting powders. 2,005,542; June 18.
Gleason, George A., and A. P. Hayden, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Traffic guard. 2,005,418; June 18.
Gleason Works. (See Hill, Maxwell H., assignor.)
Globar Corporation. (See Heyroth, Albert H., assignor.)
Globe-American Corporation. (See Chester, A. P., and Hill, assignors.)
Glolite Corporation, The. (See Schmitt, George P., assignor.)
Goldberg, Lilian, Madison, N. J. Plant support. 2,004,983; June 18.
Goodhue, William L., Cleveland, Ohio, assignor to American Sheet and Tin Plate Company. Rolling sheet metal. 2,005,315; June 18.
Goodman Manufacturing Company. (See Sloane, William W., assignor.)
Gorton, George, Machine Company. (See Gorton, G., Henkes, and Horner, assignors.)
Gorton, George, 3d, P. M. Henkes, and G. Horner, assignors to George Gorton Machine Company, Racine, Wis. Machine tool. 2,005,696; June 18.
Gottwald, Christian, Cleveland Heights, assignor to The Ric-wil Company, Cleveland, Ohio. Conduit and like construction. 2,005,699; June 18.
Gottwald, Christian, Cleveland Heights, and H. R. Hawgood, assignors to The Ric-wil Company, Cleveland, Ohio. Conduit. 2,005,704; June 18.
Gould Storage Battery Corporation. (See Booss, Frederick E. E., assignor.)
Gowen, Robert F., Ossining, N. Y., and J. L. Bradford, Elizabeth, N. J., assignors, by mesne assignments, to Radio Corporation of America. Vacuum device. 2,005,419; June 18.
Graafen, Ferdinand, Zwickau, Germany. Water tube boiler. 2,005,543; June 18.
Graafen, Ferdinand, Zwickau, Germany. Furnace grate. 2,005,544; June 18.
Grabler Manufacturing Company, The. (See McCabe, Frank E., assignor.)
Graff-Baker, William S., Kensington, London, England, assignor to Otis Elevator Company, New York, N. Y. Moving stairway. 2,005,067; June 18.
Graham, William S., Canton, Ill., assignor to International Harvester Company. Tractor cultivator. 2,005,618; June 18.
Grant, Bert. (See Hocking, Edward P., assignor.)
Grattan, David. (See Weaver, Harry C., assignor.)
Graves, George D., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Esters of acids of phosphorus. 2,005,619; June 18.
Greenawalt, John E., New York, N. Y. Incinerator furnace. 2,005,082; June 18.
Greenlee, Theodore K., Rockford, Ill., assignor to H. D. Colman. Control for air conditioning systems. 2,004,940; June 18.
Grieshaber, Eugene. (See Dubitsky, S., Adler, Grieshaber, Dearcopp, and Wood.)
Griffin, Joseph E., Savannah, Ga. Vehicle horn. 2,005,620; June 18.
Grimes, Thaddeus S., assignor to The Lummus Cotton Gin Company, Columbus, Ga. Baling press. 2,005,291; June 18.
Griscom, Samuel B., Swissvale, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., Obtaining service continuity by high speed reclosing. 2,005,140; June 18.
Griswold, Hugh T., Toledo, Ohio, assignor to Owens-Illinois Glass Company. Apparatus for tightening caps on jars. 2,005,186; June 18.
Grove, Samuel F., Swarthmore, assignor to Henry Bower Chemical Manufacturing Company, Philadelphia, Pa. Manufacture of iron blues. 2,005,697; June 18.
Grove, Samuel F., Swarthmore, assignor to Henry Bower Chemical Manufacturing Company, Philadelphia, Pa. Manufacture of iron blues. 2,005,698; June 18.
Guiberson Corporation, The. (See Guiberson, William R., assignor.)
Guiberson, William R., assignor to The Guiberson Corporation, Dallas, Tex. Oil saver. 2,005,259; June 18.
Gustin-Bacon Manufacturing Co. (See Stephens, Joseph F., assignor.)
Gutzwiller, Erwin C., assignor of one-half to I. J. Amo, North Plainfield, N. J. Internal combustion engine. 2,005,141; June 18.
Habicht, Otto, Frankfort-on-the-Main, Germany, assignor to Compo Shoe Machinery Corporation, New York, N. Y. Apparatus for subjecting shoes and other articles to pressure. 2,005,621; June 18.
Haemmerle, Oscar, Union City, N. J. Kitchen utensil lifter. 2,005,032; June 18.
Haffter, Hans W. (See Roome, F. A., and Haffter.)
Halslip, Albert S., Fredericksburg, Va. Ice cube tray. 2,005,292; June 18.
Hale, George C., Dover, N. J. Explosive. 2,004,941; June 18.
Hall, Claude C., Portland, Oreg. Forming machine for compressed feeds. 2,005,689; June 18.
Hall, Frank W., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Apparatus for fractionating hydrocarbon oil vapor. 2,005,316; June 18.
Hall, Frank W., and H. A. Smith, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y. Cracking hydrocarbon oils. 2,005,675; June 18.
Hall, William B. F., Fort Wayne, Ind. Display sign. 2,005,420; June 18.
Halliburton, Erle P., Los Angeles, Calif. Grouting plug. 2,005,367; June 18.
Halloh, John, Sunnyside, N. Y. Hairdressing device. 2,005,187; June 18.
Hampton, Leon N., New York, N. Y., and A. K. Smith, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling device. 2,005,583; June 18.
Hano, Edward, G. U. Lacroix, and G. Hogan, Holyoke, Mass. Counter sales book. 2,004,942; June 18.
Hanover, Bert H., assignor to The Kendall Company, Chicago, Ill. Adhesive tape and gauze dressing package. 2,005,676; June 18.
Hansell, Clarence W., Rocky Point, N. Y., assignor to Radio Corporation of America. Filter. 2,005,083; June 18.
Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Transmission system. 2,005,084; June 18.
Hansen, Johannes E. (See Abrahamsen, A., and Hansen.)
Harrington, William A., Leichhardt, near Sydney, New South Wales, Australia. Determining wearing qualities of materials. 2,005,521; June 18.
Harris, Arthur L. and C. L., assignors to L. M. Harris, New Albany, Ind. Rotary display apparatus. 2,005,293; June 18.
Harris, Charles L. (See Harris, Arthur L. and C. L.)
Harris, Louise M. (See Harris, Arthur L. and C. L., assignors.)
Harryman, Helma J., Glendale, Calif. Head and back support for a legless seat. 2,005,463; June 18.
Hart, Raymond S., Fanwood, N. J. Detachable bit for rock drills. 2,005,498; June 18.
Hauerken, George H., trustee. (See McMillan, Wesley K., assignor.)
Haugh, Raymond R., assignor, by mesne assignments, to Kraft Egg Machine Company, Chicago, Ill. Testing color of egg yolks. 2,004,943; June 18.
Hauser & Co., G. m. b. H. (See Albeck, Albert, assignor.)
Havill, Clinton H., South Orange, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Driving mechanism. 2,005,655; June 18.
Hawgood, Harvey R. (See Gotwald, C., and Hawgood.)
Hawle, Michael, Greens Farms, Conn. Hose supporter. 2,005,622; June 18.
Hayden, Albert P. (See Gleason, G. A., and Hayden.)
Hedrick, Clarence E., Newton, Kans. Feeder. 2,005,188; June 18.
Heintz & Kaufman, Ltd. (See Eitel, W. W., and McCullough.)
Heltman, Charles H. (See Kuhn, A., and Heltman.)
Helwert, Fritz and A. Palm, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Product of 2-acetylamino-3-chloranthraquinone. 2,005,317; June 18.
Henkes, Peter M. (See Gorton, G., Henkes, and Horner.)
Herberts Machinery Co. (See Merrigan, William J., assignor.)
Herlon, Heinrich G., New York, N. Y. Fan. 2,004,984; June 18.
Hermann, John F., Havana, Ill. High pressure journal lubricator. 2,005,404; June 18.
Herr, Albert H., Port Huron, Mich. Solder coupling. 2,005,189; June 18.
Hertz, Hjalmar, New York, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dust-bag support fastening for portable suction cleaners. 2,005,690; June 18.
Hertz, Hjalmar, New York, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dust-bag support for portable suction cleaners. 2,005,691; June 18.
Heyer, Benjamin F. W., Bloomfield, assignor to Atlas Supply Company, Newark, N. J. Storage battery charging rack and display stand. 2,005,623; June 18.
Heyroth, Albert H., assignor to Globar Corporation, Niagara Falls, N. Y. Temperature controlling device. 2,005,584; June 18.
Hickman, Kenneth C. D., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic reversal process. 2,005,368; June 18.
Higbee, Earl V., assignor to The Stanley Works, New Britain, Conn. Collable measuring rule. 2,005,677; June 18.
High, John M., New York, N. Y. Light display apparatus. 2,005,421; June 18.
Hill, Dewey H. (See Chester, A. P., and Hill.)
Hill, Maxwell H., assignor to Gleason Works, Rochester, N. Y. Cutter sharpener. 2,005,142; June 18.

Hill, Rowland, Cheadle Hulme, assignor to Imperial Chemical Industries Limited, Westminster, England. Resinous compounds. 2,005,499; June 18.
Hill, William W., Duquesne, Pa., assignor to Carnegie Steel Company. Coiling rods or bars. 2,005,369; June 18.
Hobart Manufacturing Company, The. (See Johnston, H. L., and Singer, assignors.)
Hocking, Edward P., assignor of one-half to B. Grant, Toronto, Ontario, Canada. Milk cooler. 2,005,033; June 18.
Hockley Chester F., receiver. (See Connolly, G. C., and Pierce.)
Hogan, Celia M., Chicago, Ill. Beach garment. 2,004,985; June 18.
Hogan, George. (See Hano, E., Lacroix, and Hogan.)
Hogeman, Hans. (See Wild, J. E., Hogeman, and Schwarzmann.)
Hogg, William C., Pittsburgh, Pa. Tapping furnace. 2,005,143; June 18.
Holloway, William M., Oak Park, Ill., assignor to American Can Company, New York, N. Y. Flange lining machine. 2,004,944; June 18.
Holm, Carl, assignor to Economic Machinery Company, Worcester, Mass. Bottle conveying mechanism. 2,005,522; June 18.
Holt, Annon W., Long Beach, Calif. Roof demonstrator. 2,005,034; June 18.
Holt, Lee C., Edgemoor, and E. L. Mattison, Richardson Park, assignors to Kinetic Chemicals Inc., Wilmington, Del. Organic fluorine compounds and production thereof. 2,005,712; June 18.
Holt, Lee C., Edgemoor, Del., and E. L. Mattison, Pennsgrove, N. J., assignors to Kinetic Chemicals Inc., Wilmington, Del. Production of fluorinated acyclic hydrocarbons. 2,005,713; June 18.
Holzwarth Gas Turbine Co. (See Holzwarth, Hans, assignor.)
Holzwarth, Hans, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif. Method and apparatus for igniting explosive charges. 2,004,945; June 18.
Horner, George. (See Gorton, G., Henkes, and Horner.)
Hotherall, John M., Brooklyn, assignor to American Can Company, New York, N. Y. Container. 2,004,946; June 18.
Houde Engineering Corporation. (See Peo, Ralph F., assignor.)
Houtman, Jacobus M., assignor, by mesne assignments, to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. X-ray apparatus. 2,005,035; June 18.
Howe, Alonzo H. Don, Chicago, Ill. Method and apparatus for gas analyses. 2,005,036; June 18.
Hughes, Archibald. (See Toohey, E. A., and Hughes.)
Hughes Industries Co. (See Burns, Bruce, assignor.)
Hughey, Carter J., assignor to Eastman Kodak Company, Rochester, N. Y. Document receptacle for a photographic reproducing machine. 2,005,370; June 18.
Hulbert, Edwin F., Glenview, assignor to Anacin Company, Chicago, Ill. Automatic container filling device. 2,005,545; June 18.
Hull, David C., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Manufacture of triproplonin. 2,005,371; June 18.
Hungerbühler, Paul, Zug, Switzerland, assignor to Landis & Gyr, A. G. Time controlled switch. 2,005,085; June 18.
Hunicke, Clarence C., Palisade, and Charles L. Wagner, Boonton, N. J. Concentrating waste liquors. 2,005,422; June 18.
Hunter, Matthew A., Troy, N. Y., assignor to Driver-Harris Company, Harrison, N. J. Alloy. 2,005,423; June 18.
Hussmann-Ligonier Company. (See Reed, C. S., and Rubin, assignors.)
Hutto Engineering Company. (See Isom, Benjamin O., assignor.)
Huyett, Daniel D., assignor to Atlas Powder Company, Wilmington, Del. Press mechanism. 2,005,260; June 18.
Hyde Park Foundry and Machine Company. (See Aupperl, George H., assignor.)
Hygrade Sylvania Corporation. (See LeBel, Clarence J., assignor.)
Hyman, Henry, Brooklyn, N. Y. Flash light hanger. 2,005,339; June 18.
I. G. Farbenindustrie Aktiengesellschaft. (See Flemming, W., and Speer.)
I. G. Farbenindustrie Aktiengesellschaft. (See Konrad, E., and Schwerdtel, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Krey, Willi, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Meisenburg, Kurt, assignor.)
Ideal Hose Coupling Company. (See Williams, Philip H., assignor.)
Ideal Novelty & Toy Co. (See Katz, Abraham M., assignor.)
Illingworth, George. (See Donovan, J. F., and Illingworth.)
Imperial Chemical Industries Limited. (See Hill, Rowland, assignor.)
Industrial Rayon Corporation. (See terHorst, William P., assignor.)
Ingram, Harry, Brooklyn, N. Y. Closure cap for tumblers, bottles, jars, and other receptacles. 2,005,318; June 18.
International Carbonic Engineering Company. (See Du Rois, Ernest, assignor.)
International Harvester Company. (See Graham, William S., assignor.)
International Harvester Company. (See Johnson, Arnold E. W., assignor.)
International Harvester Company. (See MacDonald, Raymore, D., assignor.)
International Harvester Company. (See Morkovski, James, assignor.)
International Harvester Company. (See Roscoe, M. W., and Crumb, assignors.)
International Harvester Company. (See Smith, Hiram P., assignor.)
International Motor Company. (See Post, Edwin M., assignor.)
Irsch, George J., Harvey, and W. B. Stephenson, Chicago, Ill. Automatic draft controller. 2,004,947; June 18.
Irsch, George J., Harvey, and W. B. Stephenson, Chicago, Ill. Automatic draft controller. 2,004,948; June 18.
Isom, Benjamin O., assignor to Hutto Engineering Company, Inc., Detroit, Mich. Grinding apparatus. 2,004,949; June 18.
Jackman, Fred W., Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Composite motion pictures. 2,004,986; June 18.
Jackman, Fred W., Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Composite motion pictures. 2,004,987; June 18.
Jackson, Corwill, Chicago, Ill. Tamper and like impact tool. 2,004,988; June 18.
Jaffin, George M., and J. T. Basseches, New York, N. Y. Seal. 2,005,340; June 18.
James, Edward M. (See Jones, L. D., and James.)
Janda, Anna J., assignor to J. J. Ryan, Chicago, Ill. Marcel waver. 2,005,465; June 18.
Jayme, Georg, assignor to Canadian International Paper Company, Hawkesbury, Ontario, Canada. Esterification of cellulose. 2,005,678; June 18.
Jenkins, Bernard F., U. S. Navy. Torque-measuring device. 2,004,950; June 18.
Jenkins, George M. O., Neasden, London, England. Window curtain support. 2,005,546; June 18.
Jensen, Henry M., U. S. Navy. Navigational instrument. 2,004,951; June 18.
Jesser, Albert E., Vandergrift, assignor to Pittsburgh Steel Drum Company, Pittsburgh, Pa. Sealing ring. 2,005,341; June 18.
Jacobus, Henry V. (See Buhl, O., and Jacobus.)
Johancen, Thomas, deceased, late of Linthicum Heights, by the Fidelity Trust Company, and J. A. Jones, Baltimore, Md., administrator. Paper web connecting mechanism for printing presses. 2,005,037; June 18.
Johannessohn, Fritz, Mannheim-Feudenheim, and E. Rabald, Mannheim, Germany, assignors to Rare Chemicals, Inc., Nepera Park, N. Y. Extracting sex hormones and a compound of a sex hormone with an alkaloid. 2,005,700; June 18.
Johns, Carl A., Chicago, Ill. Shelf. 2,005,372; June 18.
Johns-Manville Corporation. (See Toohey, Edward A., assignor.)
Johns-Manville Corporation. (See Toohey, E. A., and Hughes, assignors.)
Johnson, Arnold E. W., Chicago, Ill., assignor to International Harvester Company. Tillage disk bearing. 2,005,547; June 18.
Johnson, James P., Shaker Heights, Ohio. Variable speed transmission. 2,005,227; June 18.
Johnson Laboratories, Inc. (See Polydoroff, Wladimir J., assignor.)
Johnson, Milton C., Company. (See Neff, John W., assignor.)
Johnston, Clarence S., Amarillo, Tex. Expansible piston. 2,005,373; June 18.
Johnston, Herbert L., Troy, and J. C. Slager, Dayton, assignors to The Hobart Manufacturing Company, Troy, Ohio. Food handling apparatus. 2,005,374; June 18.
Johnston, Harry M., McKeesport, Pa., assignor to National Tube Company. Opposed reciprocatory tool machine. 2,005,319; June 18.
Jones, Harold L., et al. (See Daudt, H. W., Youker, and Jones.)
Jones, John A. (See Johancen, T., and Jones.)
Jones, John G., and H. G. Dewey, assignors to Eastman Kodak Company, Rochester, N. Y. Automatic all-metal spool making machine. 2,005,375; June 18.
Jones, Leo D., Philadelphia, and E. M. James, Moylan, assignors to The Sharples Specialty Company, Philadelphia, Pa. Refining of hydrocarbons. 2,005,342; June 18.
Jones, Les, Peoria, assignor to Premier-Pabst Corporation, Chicago, Ill. Movable partition for vehicles. 2,005,086; June 18.
Jones, Richard O. (See Sagar, H., Van Weyenbergh, and Jones.)
Jones, Walter L., Arlington, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Upholstery covering structure. 2,005,670; June 18.

Joshua, Walter P., Ceham, and H. M. Stanley, Tadworth, England. Separation and recovery of olefines from gases containing the same. 2,005,500; June 18.

Journeaux, Didier, Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electron discharge device control system. 2,004,952; June 18.

Kaemmerling, Gustav H., assignor to Erie City Iron Works, Erie, Pa. Wall structure. 2,005,376; June 18.

Kallo Inc. (See Lieberknecht, Karl R., assignor.)

Kalinsey, Paul W. (See Phillips, I. M., and Kalinsey.)

Kálmán, Márton, Budapest, Hungary, assignor to Universal Postal Frankers, Limited, London, England. Value stamping device. 2,005,038; June 18.

Kamack, Henry W., assignor to The American Brass Company, Waterbury, Conn. Securing spuds and similar fittings in range boilers and other vessels, pipes, etc. 2,005,087; June 18.

Kammerdiner, James A., Los Angeles, Calif. Torsion set rotary jar. 2,005,228; June 18.

Kantor, James, assignor to The Liquid Carbonic Corporation, Chicago, Ill. Bottle crowning machine. 2,005,585; June 18.

Karsel, William, Chicago, Ill., and C. W. Taylor, St. Louis, Mo., said Taylor assignor to said Karsel. Automobile heater. 2,004,993; June 18.

Kasley, Alexander T., Prospect Park, Pa., assignor to Delaware Chemical Engineering Company, Wilmington, Del. Power plant. 2,005,377; June 18.

Katz, Abraham M., assignor to Ideal Novelty & Toy Co., Brooklyn, N. Y. Doll. 2,005,088; June 18.

Kaye, James W., assignor to Kaye & MacDonald, Inc., West Orange, N. J. Steam trap. 2,004,953; June 18.

Kaye & MacDonald, Inc. (See Kaye, James W., assignor.)

Kayner, Morris S., New York, N. Y. Cigar package. 2,005,039; June 18.

Kelly, William W., Cleveland, Ohio. Dispensing device. 2,005,501; June 18.

Kelsey-Hayes Wheel Company, The. (See Batie, Joseph E., assignor.)

Kendall Company, The. (See Hanover, Bert H., assignor.)

Kent, Forrest M., Spokane, Wash. Variable propeller. 2,005,343; June 18.

Keystone Tool Manufacturing Company. (See Vosbikian, Peter S. and T. S., assignors.)

Kiel, Frank, assignor to Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany. Manufacture of cellulose material. 2,005,373; June 18.

Kindle, Frank, and R. E. Speck, Pendleton, Ind. Broadhead hunting point. 2,005,424; June 18.

Kinetic Chemicals, Incorporated. (See Daudt, H. W., and Mattison, assignors.)

Kinetic Chemicals, Inc. (See Daudt, H. W., and Youker, assignors.)

Kinetic Chemicals, Incorporated. (See Daudt, H. W., and Youker, assignors.)

Kinetic Chemicals, Inc. (See Holt, L. C., and Mattison, assignors.)

Kipper, Herman B., Accord, Mass. Digestion of vegetable growths to produce cellulose. 2,005,190; June 18.

Kirk, Claude R., Oak Park, and E. E. Collison, assignors to Standard Ticket Games Corporation, Chicago, Ill. Game apparatus. 2,004,989; June 18.

Kirk, Claude R., Oak Park, and E. E. Collison, assignors to Standard Ticket Games Corporation, Chicago, Ill. Game apparatus. 2,004,990; June 18.

Kirk, Claude R., Oak Park, and E. E. Collison, assignors to Standard Ticket Games Corporation, Chicago, Ill. Game apparatus. 2,005,548; June 18.

Klahn, Emil, New Vernon, N. J. Thermostatically operated electrical device. 2,005,549; June 18.

Klemmer, Edward H. (See LeVesconte, L. B., and Klemmer.)

Klemmer, Edward H., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Relaying system. 2,005,144; June 18.

Klots, Henry O., Bethel, assignor to The Redding Marble Company, New Haven, Conn. Precast concrete joist and slab construction. 2,004,991; June 18.

Knapp-Monarch Company. (See Derringer, Percy O., assignor.)

Knowlton, Norwood H., Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for slitting covers attached to heels. 2,005,040; June 18.

Knox, Herbert W., Administrator. (See Pelton, George M.)

Keci, Ludvik J., Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Control system. 2,005,586; June 18.

Koeberle, Karl. (See Kunz, M. A., Berthold, and Koeberle.)

Koenekamp, Hans F., Los Angeles, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Composite motion picture. 2,004,992; June 18.

Konrad, Erich, and F. Schwerdtel, Leverkusen-I.-G. Werk, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Preparing chlorinated rubbers. 2,005,320; June 18.

Koski, Carlo D., Brainerd, Minn. Molecular weight indicator. 2,005,191; June 18.

Kotrbaty, Guy F., Laurelton, assignor to Fer-O-Con Corporation, New York, N. Y. Partition wall assembly. 2,005,145; June 18.

Kotrbaty, Guy F., assignor to Fer-O-Con Corporation, New York, N. Y. Self-supporting building member and joint therefor. 2,005,146; June 18.

Kovats, John, Fairfield, assignor to The Leg-O-Matic Company, Bridgeport, Conn. Folding chair. 2,005,715; June 18.

Kovats, John, Fairfield, assignor to The Leg-O-Matic Company, Bridgeport, Conn. Folding article of furniture. 2,005,716; June 18.

Kowalski, Marion F., New York, N. Y. Gas and air mixing device. 2,005,624; June 18.

Kraft Egg Machine Company. (See Haugh, Raymond R., assignor.)

Krauch, Carl, Ludwigshafen-on-the-Rhine, and M. Pier, Heidelberg, Germany, assignors to Standard-I. G. Company, Linden, N. J. Conversion of solid fuel and product derived therefrom or other materials into valuable liquids. 2,005,192; June 18.

Krauss, Carl, and W. Brunner, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. 6-Methoxy-6'-Ethoxythioindigo. 2,005,041; June 18.

Krebs, Henry, Detroit, assignor to Packard Motor Car Company, Detroit, Mich. Valve spring. 2,005,089; June 18.

Krey, Willi, Uerdingen, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Manufacture of compounds of the ethylene series substituted by an aromatic residue. 2,005,042; June 18.

Krieger, Adolf W., Brooklyn, N. Y. One piece folding razor. 2,005,090; June 18.

Kubiak, Frank, et al. (See Zemanek, Frank, assignor.)

Kuenstler, Walter E., Grantwood, N. J. Bottle cap and spreading device. 2,005,091; June 18.

Kuhn, Anthony, and C. H. Heitman, New York, N. Y.; said Heitman assignor to D. Reid, Weehawken, N. J. Bottle dispensing device. 2,005,092; June 18.

Kunz, Max A., Mannheim, E. Berthold, and K. Koeberle, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Dyestuffs of the anthraquinonecridone series. 2,005,321; June 18.

Kutzner, Fred. (See Dreyer, A., and Kutzner, assignor.)

Kutzner, Willy. (See Dreyer, A., and Kutzner.)

Kwartin, Bernard, Brooklyn, N. Y. Regenerative sound recording device. 2,005,425; June 18.

LaBour, Harry E., Elkhart, Ind. Self priming pump. 2,005,466; June 18.

Lacroix, George U. (See Hano, E., Lacroix, and Hogan.)

Lath, William L., Oak Park, assignor to Reynolds Electric Company, Chicago, Ill. Electric circuit controller for electric sign flashers, signaling devices and similar mechanisms. 2,005,230; June 18.

Lamm, Uno. (See Eriksson, K. E., and Lamm.)

Land, Edwin H., Wellesley Farms, Mass. Polarizing vizor or sunshade. 2,005,426; June 18.

Land und Seekabelwerke A. G. (See Fassbender, Josef, assignor.)

Landis & Gyr, A. G. (See Hungerbühler, Paul, assignor.)

Landis & Gyr, A.-G. (See Pudelko, Ricard, assignor.)

Lange, Fritz. (See Brasch, A., and Lange.)

Langguth, Paul O., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Potential device. 2,004,954; June 18.

Langguth, Paul O., Irwin, and W. A. Lewis, Wilkensburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Coupling capacitor system. 2,005,147; June 18.

Lapointe Machine Tool Company, The. (See West, D. H., and Monroe, assignors.)

La Riche, Anthony M., Cleveland, Ohio, assignor to Detroit Dental Manufacturing Co., Detroit, Mich. Saliva ejector. 2,005,625; June 18.

Laszlozcy, Stephen, Bergenfield, N. J., assignor to Freydberg Brothers, Inc., New York, N. Y. Feed reversing mechanism for sewing machines. 2,005,656; June 18.

Latimer, O. O. (See Pace, Jefferson D., assignor.)

Lawrence Paper Company, The. (See Siler, Edward H., assignor.)

Lazare, Jacob R., Brooklyn, N. Y. Anaesthesia apron. 2,005,294; June 18.

Lea, William H., et al. (See Booharin, Leo Y., assignor.)

LeBel, Clarence J., Lynn, assignor to Hygrade Sylvania Corporation, Salem, Mass. Glow discharge sign. 2,004,995; June 18.

Ledbetter, William H., Dallas, Texas. Tractor wheel. 2,005,550; June 18.

Lee, Henry R. (See Spiegler, L., and Lee.)

Lee, John, Zurich, Switzerland, assignor, to E. R. Squibb & Sons, New York, N. Y. Amidines. 2,004,994; June 18.

Leg-O-Matic Company. (See Kovats, John, assignor.)

Leishman, Le Roy J., Los Angeles, Calif. Television apparatus and method. 2,005,344; June 18.

Leland Electric Company, The. (See Leland, George H., assignor.)

Leland, George H., assignor of one-half to The Leland Electric Company, Dayton, Ohio. Riveting machine. 2,005,261; June 18.

Leland-Gifford Company. (See Abadjieff, Ivan V., assignor.)

Lenke, George H., Elmhurst, assignor of one-half to Julius J. Ohlis, Oak Park, Ill. Tiling and the like. 2,005,427; June 18.

Lever Brothers Company. (See Bodman, John W., assignor.)

Le Vesconte, Lester B., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Continuous carrier relaying. 2,004,955; June 18.

Le Vesconte, Lester B., Irwin, and E. H. Klemmer, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Carrier current relay. 2,005,148; June 18.

Leyine, Henry, Philadelphia, Pa. Box or carton. 2,005,345; June 18.

Levy, Lester L., Brooklyn, N. Y. Shoe size measuring device. 2,005,428; June 18.

Lewis, William A. (See Evans, R. D., and Lewis.)

Lewis, William A. (See Langguth, P. O., and Lewis.)

Lewis, William A., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Out-of-step protection. 2,005,149; June 18.

Lewis, William A. Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Continuous carrier relaying. 2,005,150; June 18.

Lichtenstein, Joseph, Brooklyn, assignor to Foster Wheeler Corporation, New York, N. Y. Centrifugal pump and the like. 2,005,429; June 18.

Lieberknecht, Karl R., Oberlungwitz, Germany, assignor to Kallo Inc., New York, N. Y. Knitted fabric. 2,005,093; June 18.

Lima Locomotive Works, Incorporated. (See Sloaen, William W., assignor.)

Limb, Frederick, Beeston, assignor to Ericsson Telephones Limited, London, England. Control of switches in totalizer systems. 2,005,151; June 18.

Lindgren, Hans O., Appelviken, Sweden, assignor to The DeLaval Separator Company, New York, N. Y. Centrifugal separator. 2,005,094; June 18.

Lindsay, James P. (See Fisher, H. A., and Lindsay.)

Liquid Carbonic Corporation, The. (See Kantor, James, assignor.)

Liverance, Frank E., Jr., Grandville, Mich. Throttle control mechanism. 2,005,262; June 18.

Lloyd, Elmer J. (See Beatty, C. C., and Lloyd.)

Lock Nut Corporation of America, The. (See Emery, I. C., assignor.)

Loewe, Milton. (See Fry, Walter L., assignor.)

Lohr, James M., Morristown, assignor to Driver-Harris Company, Harrison, N. J. Alloy. 2,005,430; June 18.

Lohr, James M., Morristown, assignor to Driver-Harris Company, Harrison, N. J. Alloy. 2,005,431; June 18.

Lohr, James M., Morristown, assignor to Driver-Harris Company, Harrison, N. J. Alloy. 2,005,432; June 18.

Lohr, James M., Morristown, assignor to Driver-Harris Company, Harrison, N. J. Alloy. 2,005,433; June 18.

Long, Spencer W. (Young, F. J., and Long.)

Lontz, Harry R., assignor to The F. & N. Lawn Mower Company, Richmond, Ind. Bearing. 2,005,502; June 18.

Loos, Clarence J., and L. J. Miller, Chicago, Ill. Vaporizer. 2,005,229; June 18.

Lorig, Edwin T., Gary, Ind., assignor to American Sheet and Tin Plate Company. Oil seal. 2,005,587; June 18.

Lose, James E., Munhall, Pa. Apparatus for manufacturing plates and the like. 2,005,152; June 18.

Lubrication Corporation, The. (See Parker, Clark W., assignor.)

Ludwig, Richard, Dusseldorf-Unterrath, Germany. Pilger rolling mill. 2,005,657; June 18.

Lummus Cottom Gin Company, The. (See Grimes, Thaddeus S., assignor.)

Lummus Cotton Gin Company. (See Murray, Ethan F., assignor.)

Lyon, Etta R. (See Russell, W. E., and Lyon.)

Macdonald, Angus S., New York, N. Y., assignor to Snead & Company, Jersey City, N. J. Convertible bookstack. 2,005,434; June 18.

Macdonald, Murdock, East Cleveland, Ohio. Ticket and ticket holder. 2,005,346; June 18.

MacDonald, Raymore D., Western Springs, Ill., assignor to International Harvester Company. Grinding device for reeeling cutters. 2,005,551; June 18.

MacFarland, Sam H., Evanston, Ill. Apparatus for pressing clothing. 2,005,435; June 18.

MacLean, Gordon, Flushing, N. Y. Making jelly. 2,005,095; June 18.

Macourek, Jerry F., assignor to G. W. Snyder, Columbus, Ohio. Amusement apparatus. 2,005,231; June 18.

Mahin, Walter T., Lorain, and J. L. Mauthe, Elyria, Ohio, assignors to National Tube Company. Butt-welding pipe. 2,005,322; June 18.

Malet, Julien and R. Armenault, Paris, assignors of one-half to Fabriques de Products de Chimie Organique de Laire, Societe Anonyme, Issy-les-Moulineaux, France. Condensing urea with formaldehyde or the polymeric bodies thereof and the product obtained therefrom. 2,004,996; June 18.

Malickson, Philip S., Bala, Pa. Reel arm for motion picture projectors. 2,005,096; June 18.

Malkin-Illion Corporation. (See Malkin, Samuel M., assignor.)

Malkin, Samuel M., assignor to Malkin-Illion Corporation, Newark, N. J. Vending machine. 2,005,097; June 18.

Mall, Edwin A., Norwood, assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Control arrangement for tandem operation pressing machines. 2,005,043; June 18.

Mallina, Rudolph F., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Stylus feed mechanism for phonographs. 2,005,588; June 18.

Mamiya, Fusajiro, Los Angeles, Calif. Stop and turn signal. 2,005,658; June 18.

Manly Corporation. (See Centervall, Hugo A., assignor.)

Maranville, Alger G., assignor to General Tire & Rubber Company, Akron, Ohio. Aircraft landing wheel. 2,005,626; June 18.

Maranville, Alger G., assignor to The General Tire & Rubber Company, Akron, Ohio. Airplane landing wheel. 2,005,627; June 18.

Maranville, Alger G., assignor to The General Tire & Rubber Company, Akron, Ohio. Vehicle wheel. 2,005,628; June 18.

Marcus, Charles, New York, N. Y., assignor by mesne assignments to Eclipse Aviation Corporation, East Orange, N. J. Aircraft deviation indicator. 2,005,379; June 18.

Margolith, Mordicha, Hawthorne, assignor to National Merchandising Company, Ltd., Santa Monica, Calif. Amusement device. 2,005,692; June 18.

Marinsky, Davis. (See Morin, L. H., and Marinsky.)

Markey, Fred L. (See Stoehrer, H., and Markey.)

Marks, Alvin M., Brooklyn, assignor to Communication Patents, Inc., New York, N. Y. Synchronizing system. 2,005,153; June 18.

Markush, Eugene A., Jersey City, N. J., assignor to Pharma Chemical Corporation, New York, N. Y. Dyeing composition. 2,005,347; June 18.

Markworth Ernst. (See Debauch, C. P., and Markworth.)

Marsden, Leonard, Newton-le-Willows, assignor to T. and T. Vicars Limited, Earlestown, Newton-le-Willows, England. Stacking or arranging substantially flat articles such as biscuits. 2,005,629; June 18.

Marsh, Harry, Youngstown, and R. M. Chesney, assignors to Porcelain Tile Corporation, Warren, Ohio. Tile. 2,005,380; June 18.

Marsh, Harry V., Chicago, Ill. Dress shield. 2,005,232; June 18.

Martin, Clarence L., Hazardville, Conn. Cigarette holder. 2,005,233; June 18.

Martin, John J., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Plastic composition. 2,004,956; June 18.

Matteson, Edward C., assignor of one-fourth to W. F. A. Buehner and one-fourth to A. M. Moore, Miami, Fla. Floor mat. 2,005,659; June 18.

Mattison, Edwin L. (See Daudt, H. W., and Mattison.)

Mattison, Edwin L. (See Holt, L. C., and Mattison.)

Mauthe, James L. (See Mahin, W. T. and Mauthe.)

Maxwell, John N., Pittsburgh, Pa. Hand pool game. 2,005,660; June 18.

Mayer, Carl A., assignor to United American Bosch Corporation, Springfield, Mass. Variable condenser. 2,005,098; June 18.

Mayo, Edward L., assignor to The Bishop & Babcock Mfg. Company, Cleveland, Ohio. Temperature responsive liquid pump. 2,005,193; June 18.

Mayo, Franklin, assignor to W. R. Armstrong, Chicago, Ill. Headlight lamp. 2,005,194; June 18.

Mazurie, James V. (See Bark, W. Schmidt, and Mazurie.)

McAfee, Earl H., Detroit, Mich. Coal delivery truck. 2,005,552; June 18.

McArdle, Michael W., Assignor to Chicago Flexible Shaft Company, Chicago, Ill. Sadiron sole plate. 2,005,234; June 18.

McCabe, Frank E., Shaker Heights, assignor to The Grabler Manufacturing Company, Cleveland, Ohio. Sealing device. 2,004,997; June 18.

McCabe, Ira E., Chicago, Ill. Delayed action switch mechanism. 2,005,195; June 18.

McCann, John F. (See Sprague, R. C., and McCann.)

McCann, Michael, Ozone Park, Long Island, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Stop-motion device for sewing machines. 2,005,679; June 18.

McCarty, Orin P., Pittsfield, Mass., assignor to General Electric Company. Transformer tap changing mechanism. 2,004,998; June 18.

McClatchie, Stanley, Newark, N. J. Phonograph pick-up. 2,005,154; June 18.

McCoy, Clarence E., Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Article conveying mechanism. 2,005,589; June 18.

McCullough, Jack. (See Eitel, W. W., and McCullough.)

McDougal, Homer R., assignor to Eastman Kodak Company, Rochester, N. Y. Recovery of ingredients of plastic materials. 2,005,381; June 18.

McGavack, John, Leonia, and R. F. Tefft, Nutley, N. J., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y. Rubber for electrical insulation and water resistant materials and method of producing the same. 2,005,382; June 18.

McGonigal, Edward F. (See Sucky, R. R., McGonigal, and Bargar.)

McGraw Electric Company. (See Scharf, Frank W., assignor.)

McIlvane, William J., Bellerose, N. Y., assignor to Bridgeport Brass Company, Bridgeport, Conn. Ground rod. 2,004,999; June 18.

McKinney Tool and Manufacturing Company, The. (See Rubin, Norbert C., assignor.)

McLanahan, Charles M., Detroit, Mich. Motor vehicle drive. 2,005,263; June 18.

McLaughlin Glass Co. (See Chilcote, Ray A., assignor.)

McLeod, John D., Oakmont, Pa., assignor to Pittsburgh Plate Glass Company. Glass rack. 2,005,099; June 18.
McMillan-Miller Engineering Co. (See McMillan, Wesley K., assignor.)
McMillan, Wallace A., Beacon, assignor to The Texas Company, New York, N. Y. Distilling and fractionating apparatus. 2,005,323; June 18.
McMillan, Wesley K., San Francisco, Calif., assignor, by mesne assignments, to G. H. Hauerken, trustee for McMillan-Miller Engineering Co., San Francisco, Calif. Track assembly. 2,005,436; June 18.
McNamara, Edward M., Chicago, Ill. Boiler and like furnaces. 2,005,264; June 18.
McNutt, Joseph D., assignor to Winchester Repeating Arms Company, New Haven, Conn. Priming mixture. 2,005,197; June 18.
Mears, George E., Los Angeles, Calif. Shower bath apparatus. 2,005,196; June 18.
Meisenburg, Kurt, Leverkusen, near Cologne-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Polymerising organic compounds containing a double linkage and products obtainable thereby. 2,005,295; June 18.
Menge, Emma M., Newton, Mass. Flower holder. 2,005,467; June 18.
Mengel Company, The. (See Sliger, Oscar, assignor.)
Merrigan, William J., assignor to Herberts Machinery Company, Ltd., Los Angeles, Calif. Tiltable table top. 2,005,100; June 18.
Merrigan, William J., assignor to Herberts Machinery Co., Ltd., Los Angeles, Calif. Lathe. 2,005,101; June 18.
Mers & Co. (See Steinbrenck, Adolf, assignor.)
Messner, Arthur J., Rochester, N. Y., assignor of one-half to Elmer L. Schumacher, Southbridge, Mass. Capsule. 2,004,957; June 18.
Messar, John, Bogota, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,005,590; June 18.
Metcalfe-Shaw, Edward, Chiswick, London, England. Cooling slab for viscous liquids. 2,005,271; June 18.
Meyer, John F. (See Firestone, John B., assignor.)
Meyercord, George R., Chicago, Ill., assignor, by mesne assignments to Reconstruction Finance Corporation. Making dies. 2,005,591; June 18.
Michelin et Cie. (See Bourdon, Pierre M., assignor.)
Michell, Anthony G. M., Canton, Mass. Nut, screw, and like article. 2,005,348; June 18.
Michigan Wire Goods Company. (See Smith, Benjamin H., assignor.)
Mika, Herbert L. (See Olson, O. R., and Mika.)
Mikkelsen, John M. (See Alvey, W. S., and Mikkelsen.)
Miles, Ephraim E., South Lancaster, Mass.; W. E. and M. V. Miles, executors of said Miles, deceased. Renewable pad and support therefor. 2,005,680; June 18.
Miles, Martha V., executor et al. (See Miles, Ephraim E., assignor.)
Miles, Walter E., executor, et al. (See Miles, Ephraim E., assignor.)
Miller, Charles A., and D. A. Smith, Franklin, Pa., assignors to Valvoline Oil Company. Solid lubricating compound. 2,005,553; June 18.
Miller, Laurits N., Eugene, Oreg., assignor to L. N. Miller Engineering Corporation. Differential motor. 2,005,000; June 18.
Miller, L. N., Engineering Corporation. (See Miller, Laurits N., assignor.)
Miller, Louis J. (See Loos, C. J., and Miller.)
Miller, Stuart P., Englewood, N. J., assignor to The Barrett Company, New York, N. Y. Distillation of tar. 2,005,102; June 18.
Milner, Bertram, St. Bernard, Ohio. Artificial bait or fish lure. 2,005,554; June 18.
Mining Engineering Company Limited, The. (See Moore, Matthew S., assignor.)
Mitchell, Bryce, Seattle, Wash. Rotary pump. 2,004,958; June 18.
Mitchell, John E., Dallas, Tex. Cotton cleaning and reclaiming machine. 2,005,265; June 18.
Modine, Arthur B., assignor to Modine Manufacturing Company, Racine, Wis. Radiator structure. 2,005,235; June 18.
Modine, Arthur B., assignor to Modine Manufacturing Company, Racine, Wis. Engine cooling device. 2,005,468; June 18.
Modine Manufacturing Company. (See Modine, Arthur B., assignor.)
Moise, Bolton C., Pittsburgh, Pa. Tube expanding mill. 2,005,155; June 18.
Mole-Richardson, Inc. (See Coates, Fielding C., assignor.)
Monroe, Kenneth C. (See West, D. H., and Monroe.)
Montgomery, H. A. (See Winter, John R., assignor.)
Moore, A. M., et al. (See Matteson, Edward C., assignor.)
Moore, Matthew S., Malvern, assignor of one-half to The Mining Engineering Company, Limited, Meco Works, Worcester, England. Haulage gear for mining machines. 2,005,523; June 18.
Moore, Matthew S., Malvern, assignor of one-half to The Mining Engineering Company Limited, Worcester, England. Loading machine. 2,005,524; June 18.
Moorhouse, Alfred, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,005,103; June 18.
Moorhouse, Henry L., assignor to Brockton Last Company, Brockton, Mass. Last. 2,005,324; June 18.
Morin, Louis H., and D. Marinsky, assignors to Whitehall Patents Corporation, New York, N. Y. Manufacturing fastener stringers. 2,004,959; June 18.
Moritz-Bennett Corporation. (See Porter, Kenneth W., assignor.)
Morkovski, James, Canton, Ill., assignor to International Harvester Company. Lift mechanism for tractor drawn implement. 2,005,535; June 18.
Morrill, Alfred R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating upon shoes. 2,005,104; June 18.
Morrison, Willard L., Chicago, Ill. Automobile door. 2,005,198; June 18.
Moullin, Eric B., Oxford, England, assignor to Radio Corporation of America. Stabilizing the frequency of a valve generator. 2,005,236; June 18.
Muehlberg, Walter F., Cleveland, Ohio. Determining copper in copper coated wire and the like. 2,005,156; June 18.
Müller, Carl W., Dresden-Weisser Hirsch, Germany. Process and apparatus for the manufacture of cigarettes with a short mouthpiece of wadding, crepe paper, or the like. 2,005,661; June 18.
Müller, Johannes, and M. Müller, Homberg-on-the-Lower-Rhine, assignor to the firm Sachtleben Aktiengesellschaft für Bergbau und Chemische Industrie, Cologne-on-the-Rhine, Germany. Purifying natural heavy spar. 2,005,296; June 18.
Müller, Manfred. (See Müller, Johannes and M.)
Muntsel, Frederick H., Boonville, Mo. Agricultural implement. 2,005,044; June 18.
Murray, Ethan F., assignor to Lummus Cotton Gin Company, Columbus, Ga. Adjustable inlet structure for conduits. 2,005,297; June 18.
Murray, Thomas F., Jr., and C. J. Staud, assignors to Eastman Kodak Company, Rochester, N. Y. Hydrolysis of cellulose esters. 2,005,383; June 18.
Mussy, René, Hempstead, N. Y. Hair curler. 2,005,662; June 18.
N. V. Philips' Gloielampenfabrieken. (See Houtman, Jacobus M., assignor.)
N. V. Philips' Gloielampenfabrieken. (See van Geel, W. C., and Emmens, assignors.)
Nardulli, Michael J. (See Nardulli, Peter F. and M. J.)
Nardulli, Peter F. and M. J., Chicago, Ill. Machine for cleaning window shades. 2,005,199; June 18.
Nasmith, John W., Manchester, England. Combing machine. 2,005,001; June 18.
National Blank Book Company. (See Schade, Frank S., assignor.)
National Electric Heating Company. (See Carleton, Robert A., assignor.)
National Machinery Company, The. (See Clouse, William L., assignor.)
National Merchandising Company Ltd. (See Margolith, Mordicha, assignor.)
National Metal Edge Box Company. (See Wismer, Linwood, assignor.)
National Process Company. (See Emley, Jay N., assignor.)
National Superior Company, The. (See Faulkner, D. S., Rice, and Zerbe, assignors.)
National Superior Company, The. (See Young, F. J., and Long, assignors.)
National Superior Company, The. (See Zerbe, Lewis E., assignor.)
National Tube Company. (See Bark, W., Schmidt, and Mazurie, assignors.)
National Tube Company. (See Dudley, Wray, assignor.)
National Tube Company. (See Johnston, Harry M., assignor.)
National Tube Company. (See Mahla, W. T., and Mauthe, assignors.)
National Tube Company. (See Wallis, Clarence H., assignor.)
Naum, Harry D., Brooklyn, N. Y. Bottle nipple. 2,005,437; June 18.
Neff, John W., New Rochelle, assignor to M. C. Johnson Company, New York, N. Y. Safety paper. 2,005,105; June 18.
Nelson, Harry W., Brownville, Nebr. Relief attachment for cultivators. 2,005,045; June 18.
Nelson, John, Minneapolis, Minn., and V. C. Norquist, assignors to Butler Manufacturing Company, Kansas City, Mo. Tank closure. 2,005,469; June 18.
Newcomb, Edward R., assignor to The Carborundum Company, Niagara Falls, N. Y. Printing apparatus. 2,005,046; June 18.
Newman, I., & Sons, Inc. (See Cunningham, Katherine E., assignor.)
Niagara Blower Company. (See Bulkeley, Claude A., assignor.)
Nichols, John T., Pittsburgh, Pa. Control operating. 2,005,157; June 18.
Nicolson, Alexander M., New York, assignor to Communication Patents, Inc., New York, N. Y. Combination radio receiver and timepiece. 2,005,158; June 18.
Nodler, Francis X., assignor of one-half to M. Nodler, Arkansas City, Ark. Method and appliance for determining degree of dough fermentation. 2,005,592; June 18.
Nodler, Martha. (See Nodler, Francis X., assignor.)
Norddeutsche Seekabelwerke A.-G. (See Studt, Ernst, assignor.)
Norquist, Victor C. (See Nelson, J., and Norquist.)

Norquist, Victor C., assignor to Butler Manufacturing Company, Kansas City, Mo. Coal stoker agitator. 2,005,681; June 18.
Nunes, Manuel A., Santa Clara County, Calif. Ladder. 2,005,384; June 18.
Nyquist, Harry, Millburn, N. J., assignor to American Telephone and Telegraph Company. Signaling circuit. 2,005,047; June 18.
O'Brien, R. J., and A. A. Rubin, Paterson, N. J. Sanitary napkin. 2,005,298; June 18.
O'Gorman, Thomas F., Nutley, N. J. Mold for brick-faced blocks. 2,005,200; June 18.
O'Hara, William Y., Waipahu. Outboard motor washer. 2,005,385; June 18.
Ohlis, Julius J. (See Lenke, George H., assignor.)
Ohnesorge, Otto, Bochum, Germany. Rope gearing. 2,005,438; June 18.
Olpin, Henry C. (See Ellis, G. H., and Olpin.)
Olson, Olof R., Kansas City, Mo., and H. L. Mika, Kansas City, Kans.; said Mika assignor to said Olson. Windmill. 2,005,470; June 18.
Onions, Herbert J., and R. E. Sandberg, Warren, Pa., assignors to De Luxe Metal Furniture Company. Shelving. 2,005,593; June 18.
Osgood, George H., Tacoma, Wash. Plywood knockdown box. 2,005,159; June 18.
Otis, Charles M., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Drying tumbler. 2,005,388; June 18.
Otis Elevator Company. (See Graff-Baker, William S., assignor.)
Overell, Walter E., Flintridge, Calif. Machine for removing floor coverings. 2,005,630; June 18.
Owens-Illinois Glass Company. (See Griswold, Hugh T., assignor.)
Pace, Jefferson D., assignor of one-half to O. O. Latimer, Alexandria, La. Pipe coupling. 2,005,631; June 18.
Packard Motor Car Company. (See Krebs, Henry, assignor.)
Packard Motor Car Company. (See Moorhouse, Alfred, assignor.)
Page, Frank R., Brooklyn, assignor to Scott & Williams, Incorporated, New York, N. Y. Knitting machine. 2,005,632; June 18.
Palm, Albert. (See Helwert, F., and Palm.)
Palmer, Sidney L. (See Fleming, E. P., and Palmer.)
Pape, Wilhelm, Benrath-on-the-Rhine, Germany, assignor, by mesne assignments, to Procter & Gamble Company, Ivorydale, Ohio. Producing high-percentage transparent soaps. 2,005,160; June 18.
Parker, Clark W., Brewster, N. Y., assignor, by mesne assignments, to The Lubrication Corporation, South Bend, Ind. Coupling means for lubricating systems. 2,005,556; June 18.
Parsons, Fred A., Milwaukee, Wis. Operation of thermionic tubes. 2,005,237; June 18.
Parsons, George K., assignor to Unitor Corporation, Detroit, Mich. Folding standard. 2,005,002; June 18.
Patton, Louis J., and H. J. Terrill, Benton Harbor, Mich. Wheel holder. 2,005,003; June 18.
Peck, George W., Muscatine, Iowa. Farming implement. 2,005,633; June 18.
Peebles, David D., Eureka, Calif. Manufacturing dried food products. 2,005,238; June 18.
Peer Electric Co. Inc. (See Rosen, Joseph, assignor.)
Pelton, George E., Popkins Farms, Fairfax County, Va. Supplying ink to ink transfer members. 2,005,503; June 18.
Pelton, George M., deceased, late of Milwaukee, Wis., by H. W. Knox, Administrator, assignor to The Filer & Stowell Company. Tapering mechanism. 2,005,387; June 18.
Penney, Robert L., Brooklyn, N. Y. Pocket cigarette case and lighter. 2,005,557; June 18.
Penrod, John, Okmulgee, Okla. Valve assembly for well pumps. 2,005,299; June 18.
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Shock absorber. 2,004,960; June 18.
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Link. 2,005,004; June 18.
Perey Manufacturing Company. (See Bacon, D. R., and Downs, assignors.)
Perry Automatic Burner Corporation. (See Schroeder, O. C., and (Perry assignor).)
Perry, Stanley. (See Schroeder, O. C., and Perry.)
Petersen, Eyvind W., Beloit, Wis., and W. A. Singer, assignors to Fairbanks, Morse & Co., Chicago, Ill. Induction machine. 2,005,261; June 18.
Petersen, Thorvald, assignor to Reed Manufacturing Company, Erie, Pa. Pipe vise. 2,005,161; June 18.
Petersen, Thorvald, assignor to Reed Manufacturing Company, Erie, Pa. Pipe vise gripping member. 2,005,162; June 18.
Petersen, Thorvald, assignor to Reed Manufacturing Company, Erie, Pa. Pipe cutter. 2,005,163; June 18.
Peterson, Henry F., Rockford, Ill. Shop instrument. 2,005,106; June 18.
Peterson, Rolland E., Aetna, Ind., assignor to American Sheet and Tin Plate Company. Rolling millwork measuring. 2,005,325; June 18.
Pettman, Albert V., and W. Reed-Lethbridge, Auckland, New Zealand. Wireless apparatus. 2,005,388; June 18.
Pfalzer, Arthur M., Hollywood, Calif. Baffle for loud speakers. 2,005,300; June 18.
Pharma Chemical Corporation. (See Markush, Eugene A., assignor.)
Phillips, Irving M., and P. W. Kalinsey, assignors to Continental Equipment Company, Chicago, Ill. Pump piston lubrication construction. 2,005,107; June 18.
Pilly, Fernand, Lyon, France. Electric drive for looms, weaving machines, and the like. 2,005,663; June 18.
Pieper, Chester R., La Crosse, Wis. Guy anchor. 2,005,239; June 18.
Pier, Mathias. (See Krauch, C., and Pier.)
Pierce, Arthur G., Quincy, assignor to Atlantic Register Company, Waltham, Mass. Aligning device for manifolding typewriters. 2,005,693; June 18.
Pierce, Jeremiah A. (See Connolly, G. C., and Pierce.)
Pierce, John B., Foundation. (See Davison, Robert L., assignor.)
Pietzsch, Frank H. (See Campbell, S. H., and Pietzsch.)
Pilcher, Charles F., St. Louis, Mo. Motor vehicle transmission control. 2,005,389; June 18.
Pilger, Emil F., assignor to Snap-On Tools, Inc., Kenosha, Wis. Universal joint. 2,005,202; June 18.
Pittaluga, Stefano, San Leandro, Calif. Fruit and vegetable juice filling machine. 2,005,471; June 18.
Pittsburgh Plate Glass Company. (See McLeod, John D., assignor.)
Pittsburgh Steel Drum Company. (See Jesser, Albert E., assignor.)
Platinum Products Corporation. (See Schmitt, George P., assignor.)
Platt, Haviland H., New York, N. Y., assignor to Frederick W. Wilkening, Philadelphia, Pa. Aircraft. 2,004,961; June 18.
Polydoroff, Wladimir J., assignor to Johnson Laboratories, Inc., Chicago, Ill. Variable inductance device. 2,005,203; June 18.
Pool, Esson J., assignor to Cinch Manufacturing Corporation, Chicago, Ill. Separable electrical contact device. 2,005,682; June 18.
Pool, William, Spondon, near Derby, England, assignor to Celanese Corporation of America. Shuttleless loom and thread measuring and cutting mechanism therefor. 2,005,390; June 18.
Pool, William, Spondon, near Derby, England, assignor to Celanese Corporation of America. Shuttleless loom and weft-selecting mechanism therefor. 2,005,391; June 18.
Porcelain Tile Corporation. (See Marsh, H., and Chesney, assignors.)
Porous Rubber Products Trust. (See Behrman, Abraham S., assignor.)
Porter, Kenneth W., assignor to Moritz-Bennett Corporation, Effingham, Ill. Road grading machine. 2,005,683; June 18.
Post, Edwin M., Jr., assignor to International Motor Company, New York, N. Y. Apparatus for hydrating air in refrigerating mechanisms. 2,005,558; June 18.
Potter, William W. (See Chase, Raymond H., assignor.)
Potterf, Edward C., Notl, Oreg. Inclinometer. 2,005,634; June 18.
Poynter, Ralph R., Lebanon, Ind. Lawn mower. 2,005,204; June 18.
Pratt & Whitney Company. (See Shaw, Robert D., assignor.)
Praditzsch, Richard, Hamburg, Germany. Pump for automatic periodically working gas analysers. 2,005,504; June 18.
Pratt & Whitney Company. (See Shaw, Robert D., assignor.)
Premier-Pabst Corporation. (See Jones, Les., assignor.)
Pressed Steel Car Company. (See Dixon, Harold C., assignor.)
Pressentin, Herbert G., Madison, Wis. Razor. 2,005,164; June 18.
Preston, Herbert E., assignor to American Engineering Company, Philadelphia, Pa. Stoker drive mechanism. 2,005,005; June 18.
Preston, Herbert E., assignor to American Engineering Company, Philadelphia, Pa. Drive mechanism for mechanical stokers. 2,005,006; June 18.
Procter & Gamble Company. (See Pape, Wilhelm, assignor.)
Pudelko, Riccard, Zug, assignor to Landis & Gyr, A.-G. Recording meter. 2,005,108; June 18.
Rabald, Erich. (See Johannessohn, F., and Rabald.)
Radio Corporation of America. (See Batsel, Max C., assignor.)
Radio Corporation of America. (See Creager, Frederick L., assignor.)
Radio Corporation of America. (See Farnham, P. O., and Asserson, assignors.)
Radio Corporation of America. (See Gowen, R. F., and Bradford, assignors.)
Radio Corporation of America. (See Hansell, Clarence W., assignor.)
Radio Corporation of America. (See Moullin, Eric B., assignor.)
Radio Corporation of America. (See Shore, Henry, assignor.)
Rafter, Albert, Glen Ridge, assignor to Rafter Machine Company, Belleville, N. J. Metal frames for constructing building boards. 2,005,301; June 18.
Rafter Machine Company. (See Rafter, Albert, assignor.)

Randall, Martin H., Beach Bluff, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe and the manufacture thereof. 2,005,048; June 18.
Randolph, Charles P., Oak Park, assignor to Edison General Electric Appliance Company, Chicago, Ill. Electric toaster. 2,005,635; June 18.
Raney, Marion H., Flushing, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Sealed package and parts thereof. 2,005,349; June 18.
Rare Chemicals, Inc. (See Johannessohn, F., and Rabald, assignors.)
Ray, William A., San Francisco, Calif., assignor to General Controls Co. Slow-opening valve. 2,005,266; June 18.
Reconstruction Finance Corporation. (See Meyercord, George R., assignor.)
Redding Marble Company, The. (See Klotz, Henry O., assignor.)
Reed, Carl R., and A. Rubin, assignors to Hussmann-Ligonier Company, St. Louis, Mo. Slicing machine. 2,005,108; June 18.
Reed-Lethbridge, William. (See Pettman, A. V., and Reed-Lethbridge.)
Reed Manufacturing Company. (See Petersen, Thorvald, assignor.)
Rehder, Christian, Kiel-Gaarden, Germany. Pipe flange connection. 2,005,267; June 18.
Reid, Andrew D. (See Kuhn, A., and Heitman, assignors.)
Remus, William Frank, Pembroke, Ontario, Canada. Combination snowplow. 2,005,392; June 18.
Reuter, Baptist, Krailling-Planegg, Germany. Producing 1-phenyl-2,3-dimethyl-5-pyrazolone. 2,005,505; June 18.
Reuter, Baptist, Krailling-Planegg, Germany. Producing 4-dimethylamino-1-phenyl-2,3-dimethyl-5-pyrazolone. 2,005,506; June 18.
Reynolds Electric Company. (See Laib, William L., assignor.)
Rheinische Metall waaren- und Maschinenfabrik. (See Schlafer, Valentin, assignor.)
Rice, Allen E. (See Faulkner, D. S., Rice, and Zerbe.)
Rice, Charles D., West Hartford, Conn. Railway car body. 2,005,165; June 18.
Rice, Trew & Rice Co. Inc. (See Trew, James W., assignor.)
Richter, Robert, assignor to Carl Zeiss, Jena, Germany. Optical system for instruments reproducing sounds with the aid of light. 2,005,240; June 18.
Rick, Edward, and J. Bonnie, Fresno, Calif. Locking means for distributors. 2,005,393; June 18.
Rickwood, Henry J., assignor to Trojan Limited, Croydon, England. Centrifugal clutch. 2,005,350; June 18.
Rick-wiL Company, The. (See Gottwald, C., and Hawgood, assignors.)
Ric-wiL Company, The. (See Gottwald, Christian, assignor.)
Ric-wiL Company, The. (See Spackman, Morton L., assignor.)
Riddell, William A., assignor to Eastman Kodak Company, Rochester, N. Y. Automatic photographic shutter. 2,005,394; June 18.
Ridgway, Carl E., Seattle, Wash. Liner for fruit boxes. 2,005,594; June 18.
Riley Engineering & Supply Co. Ltd. (See Allin, Matthew C., assignor.)
Riley Stoker Corporation. (See Blodgett, Albert G., assignor.)
Ritzert, Robert W., assignor to Rolin Manufacturingg Company, Dayton, Ohio. Writing implement. 2,005,110; June 18.
Rix, Milton H., Three Rivers, Mich., assignor to Fairbanks, Morse & Company, Chicago, Ill. Connecting tubular members. 2,005,205; June 18.
Roberts, Raleigh R., Redlands, Calif. Automatic bookmarker. 2,005,559; June 18.
Roberts, Samuel S., Pittsburgh, Pa. Lubrication system. 2,005,166; June 18.
Robinson, Carl I., Chicago, Ill. Game practice means. 2,005,241; June 18.
Rockwell, Edward A., Chicago, Ill., assignor to General Motors Corporation, Detroit, Mich. Fuel pump. 2,005,206; June 18.
Roeder, Clyde A., Omaha, Nebr. Change speed transmission. 2,005,167; June 18.
Rogers, John C., assignor to Crown Stove Works, Cicero, Ill. Gas stove. 2,005,242; June 18.
Rogers, John C., assignor to Crown Stove Works, Cicero, Ill. Gas burner. 2,005,560; June 18.
Rolin Manufacturing Company. (See Ritzert, Robert W., assignor.)
Rollins, Grace D., New Rochelle, and E. H. Dobbs, Larchmont, N. Y. Cap. 2,005,361; June 18.
Romane, Georges, St. Mande, France. Apparatus for making imitation astrakhan fur. 2,005,049; June 18.
Ronning, Adolph, Minneapolis, Minn. Power operated control mechanism. 2,005,243; June 18.
Roome, Frank A., and H. W. Haffter, Antwerp, Belgium, assignors to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 2,005,595; June 18.
Roscoe, Merrill W., Batavia, and C. F. Crumb, Chicago, Ill., assignors to International Harvester Company. Feed control for hammer mills. 2,005,561; June 18.
Rose, George H., Cleveland Heights, Ohio. Rolling mill. 2,005,168; June 18.
Rosebrook, Homer E. (See Touborg, J., and Rosebrook.)
Rosen, Joseph, Brooklyn, assignor to Peer Electric Co. Inc., Long Island City, N. Y. Electrical switch. 2,005,207; June 18.
Rosenblatt, Irving S., San Francisco, Calif. Package wrapper. 2,005,351; June 18.
Ross, William J., Tarrant, Ala. Portable hoist. 2,005,050; June 18.
Rothfeld, Charles W., Philadelphia, Pa. Food preparing device. 2,005,395; June 18.
Rowe, Alvin V., Galesburg, Ill. Bale tie. 2,005,472; June 18.
Rowe, Andrew R., Midland, Pa. Casting metal ingots. 2,005,169; June 18.
Rubin, Abraham A. (See O'Brien, R. J., and Rubin.)
Rubin, Adolph. (See Reed, C. S., and Rubin.)
Rubin, Norbert C., assignor to The McKinney Tool and Manufacturing Company, Cleveland, Ohio. Mechanical movement. 2,005,051; June 18.
Rubin, Norbert C., assignor to The McKinney Tool and Manufacturing Company, Cleveland, Ohio. Cut-off machine. 2,005,052; June 18.
Russell, William E., and E. R. Lyon, Cumberland, Md. Antislipping cane. 2,005,507; June 18.
Rustless Iron Corporation of America. (See Arness, William R., assignor.)
Ritter, Rudolf, Cologne-Deutz, Germany. Treatment of flour. 2,005,268; June 18.
Ruth Company, The. (See Ruth, Joseph P., assignor.)
Ruth, Joseph P., assignor to The Ruth Company, Denver, Colo. Locomotive. 2,005,562; June 18.
Ryan, John J. (See Janda, Anna J., assignor.)
Sachs, Joseph, West Hartford, Conn. Electric switch. 2,005,684; June 18.
Sachs, Joseph, West Hartford, Conn. Electric circuit controlling appliance. 2,005,685; June 18.
Sachs, Joseph, West Hartford, Conn. Electric circuit controlling appliance. 2,005,686; June 18.
Sachs, Joseph, West Hartford, Conn. Current responsive element and manufacture therefor. 2,005,687; June 18.
Sachs, Joseph, West Hartford, Conn. Electric circuit controlling appliance. 2,005,688; June 18.
Sachtlehen Aktiengesellschaft für Bergbau und Chemische Industrie. (See Müller, Johannes and M., assignors.)
Sagar, Harold, Whitworth, E. VanWeyenbergh, Rochdale, and R. O. Jones, Manchester, assignors to Breda-Visada Limited, Littleborough, England. Manufacture of viscose artificial silk. 2,005,664; June 18.
Saignier, Etienne, Paris, France. Opening containers of all kinds. 2,005,665; June 18.
St. Joseph Iron Works. (See Schmidtke, Albert H., assignor.)
Sanchez, Richard F., and B. M. Zullo, Brooklyn, N. Y. Automatic machine tool assembly. 2,005,563; June 18.
Sandberg, Robert E. (See Onions, H. J., and Sandberg.)
Sanden, Arthur G., Bellingham, Wash. Air-jet propelled conveyance. 2,005,473; June 18.
Sandler, Jacob, Brookline, Mass. Shoe. 2,005,007; June 18.
Saurer, Curt, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Car wheel. 2,005,302; June 18.
Scanlan, Joseph M., Great Neck, assignor to G & G Atlas Systems, Inc., New York, N. Y. Carrier system. 2,005,396; June 18.
Schacht, Elmer C., assignor to Behr-Manning Corporation, Troy, N. Y. Rug holder. 2,005,638; June 18.
Schade, Frank S., assignor to National Blank Book Company, Holyoke, Mass. Combined fly-strip and ruler for ring binders. 2,005,474; June 18.
Schaer, Charles, assignor to Sulzer Freres Societe Anonyme, Winterthur, Switzerland. Fuel injection pump. 2,005,008; June 18.
Schalscha, Max, Summit, N. J. Pile driving apparatus. 2,005,564; June 18.
Scharf, Frank W., assignor, by mesne assignments, to McGraw Electric Company, Chicago, Ill. Electric iron. 2,004,962; June 18.
Scharf, Frank W., assignor to McGraw Electric Company, Chicago, Ill. Thermostatic switch and mounting for same. 2,004,963; June 18.
Scheibell, Gordon B., Newark, N. J. Sound reproduction projector. 2,005,596; June 18.
Schermerhorn, George D., Reading, Mich. Chair construction. 2,005,565; June 18.
Scheu Products Company Limited. (See Scheu, Willis L., assignor.)
Scheu, Willis L., assignor to Scheu Products Company Limited, Ontario, Calif. Flame stabilizing attachment for orchard heaters. 2,005,009; June 18.
Schidrowitz, Philip, London, England, assignor, by mesne assignments, to Filastic Holding S. A., Binningen, near Basel, Switzerland. Impregnation of textile materials. 2,005,637; June 18.
Schildknecht, Heinrich, Gaggenau, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany. Clutch operating mechanism. 2,005,269; June 18.
Schindler, Walter R., Los Angeles, Calif. Machine for making plant protectors. 2,005,326; June 18.
Schläfer, Valentin, Sommerda, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Fuse for projectiles and particularly for small caliber high explosive projectiles. 2,005,053; June 18.

Schlesinger, Harry, assignor to Cleaners Appliance Company, Des Moines, Iowa. Hat cleaning device. 2,005,327; June 18.
Schmid, Karl, Reutlingen, assignor to the firm Vereinigte Metalltuch-Fabriken Peter Villforth, Reutlingen, Germany. Process and apparatus for the manufacture of wire gauze. 2,005,270; June 18.
Schmidt, Edward F., Spokane, Wash. Electrical connecter. 2,005,475; June 18.
Schmidt, John H. (See Bark, W., Schmidt, and Mazurie.)
Schmidt, Wilhelm, Berlin, Germany. Vaporizer. 2,005,244; June 18.
Schmidtke, Albert H., assignor to St. Joseph Iron Works, St. Joseph, Mich. Basket making machine and method. 2,005,439; June 18.
Schmitt, George P., New York, N. Y., assignor to Cardinal Products, Inc. Lighter. 2,005,476; June 18.
Schmitt, George P., New York, N. Y., assignor to The Glolite Corporation. Lighter. 2,005,477; June 18.
Schmitt, George P., New York, N. Y., assignor to Platinum Products Corporation. Lighter. 2,005,478; June 18.
Schmohl, Alfred C., Beaver Falls, and J. P. Anderson, Koppel, Pa. Lock lid for journal boxes. 2,005,479; June 18.
Schroeder, Oscar C., and S. Perry; said Perry assignor to Perry Automatic Burner Corporation, Chicago, Ill. Oil combustion apparatus. 2,005,639; June 18.
Schuchat, Jonas, Chicago, Ill. Wrapping. 2,005,208; June 18.
Schumacher, Elmer L. (See Messner, Arthur J., assignor.)
Schur, Milton O., assignor to Brown Company, Berlin, N. H. Manufacture of strengthened absorptive paper. 2,005,397; June 18.
Schwabe, Edwin J., New York, N. Y. Folding caddy wagon. 2,005,568; June 18.
Schwarzmann, Wolfgang E. (See Wild, J. E., Hogeman, and Schwarzmann.)
Schwerdtel, Fritz. (See Konrad, E., and Schwerdtel.)
Sciarini, Edmund M., Modesto, Calif. Bean cutter. 2,005,440; June 18.
Scott & Williams, Incorporated. (See Page, Frank R., assignor.)
Sedwick, Matthew M., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Hand seamer for cans. 2,005,640; June 18.
Seeman Brothers, Inc. (See Ensko, Robert, assignor.)
Segelhorst, George, Stowe, Ohio. Traffic marker. 2,005,170; June 18.
Segelin, David and S., Rochester, N. Y. Crease holding means for garments. 2,005,480; June 18.
Segelin, Solomon. (See Segelin, David and S.)
Sharp, Lewis. (See Whitlock, R. G., and Sharp.)
Sharples Specialty Company. (See Jones, L. D., and James, assignors.)
Shaw, Burt J., assignor to Fashion Park Manufacturing Corporation, Rochester, N. Y. Cloth shrinking machine. 2,005,352; June 18.
Shaw, Robert D., assignor to Pratt & Whitney Company, Hartford, Conn. Screeding machine. 2,005,508; June 18.
Shaw, Robert D., assignor to Pratt & Whitney Company, Hartford, Conn. Electrically operated lathe. 2,005,509; June 18.
Shearer, William J., Elmhurst, N. Y. Electrical connecter. 2,005,441; June 18.
Shore, Henry, Elizabeth, N. J., assignor to Radio Corporation of America. Amplifier. 2,005,111; June 18.
Siler, Edward H., assignor to The Lawrence Paper Company, Lawrence, Kans. Container. 2,005,597; June 18.
Silica Gel Corporation, The. (See Connolly, G. C., and Pierce, assignors.)
Simplex Wire & Cable Company. (See Boggs, Charles R., assignor.)
Singer Manufacturing Company, The. (See Eames, George M., assignor.)
Singer Manufacturing Company, The. (See Hertz, Hjalmar, assignor.)
Singer Manufacturing Company, The. (See McCann, Michael, assignor.)
Singer, William A. (See Peterson, E. W., and Singer.)
Singiser, John P., Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Tandem power press. 2,005,171; June 18.
Skoogh, Harry L., assignor of one-half to B. Anderson, Jamestown, N. Y. Folding table. 2,005,481; June 18.
Slager, John C. (See Johnston, H. L., and Slager.)
Sliger, Oscar, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky. Crate fastener. 2,005,272; June 18.
Sloane, William W., Chicago, Ill., assignor, by mesne assignments, to Lima Locomotive Works, Incorporated, Lima, Ohio. Hydraulic power shovel. 2,005,482; June 18.
Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Feeder head for shaker or jigging conveyers. 2,005,567; June 18.
Smelker, Le Roy, assignor to The Dayton Accessories Manufacturing Company, Dayton, Ohio. Vehicle seat. 2,005,112; June 18.
Smiley, Orvall, Indianapolis, Ind. Product for treating bitumens. 2,005,113; June 18.
Smith, Albert K. (See Hampton, L. N., and Smith.)
Smith, August L., Harrison, N. Y. Device for introducing dry granular materials into the soil. 2,005,598; June 18.
Smith, Benjamin H., assignor to Michigan Wire Goods Company, Niles, Mich. Hand grill. 2,005,010; June 18.
Smith, David A. (See Miller, C. A., and Smith.)
Smith, Harris A. (See Hall, F. W., and Smith.)
Smith, Hiram P., Canton, Ill., assignor to International Harvester Company. Tractor mounted cultivator. 2,005,568; June 18.
Smith, John K., Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacturing shoes. 2,005,054; June 18.
Smith, John W., assignor to The Fafnir Bearing Company, New Britain, Conn. Loading device. 2,005,666; June 18.
Smith, Lee B. (See Bond, H. A., and Smith.)
Smith, Roy M., North Arlington, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Continuous carrier relaying. 2,005,172; June 18.
Smith, Sydney, assignor to Wellman Seaver Rolling Mill Co. Ltd., London, England. Push bench guide. 2,005,328; June 18.
Smith, William J., Ridgefield Park, N. J. Shoulder strap holder. 2,005,569; June 18.
Smith, William J., Ridgefield Park, N. J. Shoulder strap holder. 2,005,570; June 18.
Snap-On Tools, Inc. (See Pilger, Emil F., assignor.)
Snead & Company. (See Macdonald, Angus S., assignor.)
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Automatically threading shuttle. 2,005,636; June 18.
Snyder, Edward, Fort Wayne, Ind., assignor to General Cable Corporation, New York, N. Y. Power transmitting mechanism. 2,005,519; June 18.
Snyder, Gustavus W. (See Macourek, Jerry F., assignor.)
Spackman, Morton L., assignor to The Ric-wiL Company, Cleveland, Ohio. Conduit construction. 2,005,701; June 18.
Specht, Sigfrid, Fieldston, assignor to Ferrous Magnetic Corporation, New York, N. Y. Magnetic testing apparatus and method. 2,005,011; June 18.
Speck, Roy E. (See Kindle, F., and Speck.)
Speer, Walter. (See Flemming, W., and Speer.)
Spezzano, Frank M., Bristol, Pa. Handle fastening device. 2,005,353; June 18.
Spiegl, Ellis H., Salinas, Calif. Conveyer. 2,005,442; June 18.
Spiegler, Louis, and H. R. Lee, South Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dyeing of cellulose derivatives. 2,005,303; June 18.
Spitzer, Benjamin L., and A. Benko, New York, N. Y. Dental model. 2,005,114; June 18.
Sprague, Robert C., and J. F. McCann, Williamstown, assignors to Sprague Specialties Company, North Adams, Mass. Electrolytic device. 2,005,055; June 18.
Sprague-Sells Corporation. (See Weiss, Wenzel F., assignor.)
Sprague Specialties Company. (See Sprague, R. C., and McCann, assignors.)
Sprinkel, Paul E., Baltimore, Md. Combined shade roller and curtain rod support. 2,005,012; June 18.
Squibb, E. R., & Sons. (See Lee, John, assignor.)
Squibb, E. R., & Sons. (See Westgate, R. S., and Behr, assignors.)
Stalle, Albert P. (See Dawson, Sidney, assignor.)
Stalle, Eloise R., administratrix. (See Dawson, Sidney, assignor.)
Standard-I. G. Company. (See Krauch, C., and Pier, assignors.)
Standard Oil Company. (See Voorhees, Vanderveer, assignor.)
Standard Oil Company of California. (See Cronin, James A., assignor.)
Standard Sanitary Manufacturing Company. (See Boyd, Robert C., assignor.)
Standard Ticket Games Corporation. (See Kirk, C. R., and Collison, assignors.)
Stanitz, Jacques, and G. D. Boyer, assignors to The Youngstown Pressed Steel Company, Warren, Ohio. Sheet metal receptacle. 2,005,641; June 18.
Stanley, Herbert M. (See Joshua W. P., and Stanley.)
Stanley Works, The. (See Higbee, Earl V., assignor.)
Stanley Works, The. (See Volz, Frederick A., assignor.)
Star Box & Printing Co. (See DeLuce, Robert E., assignor.)
Starline, Inc. (See Ferris, Robert G., assignor.)
Staud, Cyril J. (See Murray, T. F., Jr., and Staud.)
Staud, Cyril J., Rochester, N. Y., and J. D. Coleman, Columbus, Ohio, assignors to Eastman Kodak Company, Rochester, N. Y. Esterification of cellulose with a modified perchloric acid catalyst. 2,005,398; June 18.
Steele, Walter R., Lemon Grove, Calif. Harmonica. 2,005,443; June 18.
Steinbrenck, Adolf, assignor to Merz & Co., Frankfort-on-the-Main, Germany. Stable solution of morphine. 2,005,667; June 18.
Stephens, Joseph F., assignor to Gustin-Bacon Manufacturing Co., Kansas City, Mo. Pipe coupling. 2,005,056; June 18.

Stephenson, William B. (See Irsch, G. J., and Stephenson.)

Sterling, Ernst, Magdeburg, Germany. Apparatus for the tailoring trade for reproducing the shape of the body of the customer. 2,005,399; June 18.

Stevens Metal Products Company, The. (See Thompson, Edward D., assignor.)

Still, Andrew L., Los Angeles, Calif. Refrigerating method and apparatus. 2,005,354; June 18.

Stoehrer, Harold, Manatee, Fla., and F. L. Markey, Exeter, N. H., assignors to Dodgem Corporation, Lawrence, Mass. Amusement apparatus. 2,005,400; June 18.

Stoll, Arthur, and E. Wiedemann, assignor to Chemical Works Formerly Sandos, Basel, Switzerland. Basic derivatives of porphins and metalloporphins and their manufacture. 2,005,511; June 18.

Stora, Leon A., Worcester, Mass. Golf club. 2,005,401; June 18.

Stover, Russell, Kansas City, Mo. Packaged confection. 2,005,245; June 18.

Stricker, William, Kansas City, Mo. Automatic food molding and wrapping machine. 2,005,599; June 18.

Strouse, George C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. N[para-(beta-naphthylamino) phenyl] morpholine and its production. 2,005,571; June 18.

Studt, Ernst, assignor to Norddeutsche Seekabelwerke A.-G., Nordenham, Germany. Submarine signaling cable. 2,005,273; June 18.

Stuntebeck, Alois J. (See Stuntebeck, John A., assignor.)

Stuntebeck, John A., assignor to A. J. Stuntebeck, St. Gregor, Saskatchewan, Canada. Shower bath structure. 2,005,246; June 18.

Sturtevant, B. F., Company. (See Ferre, Albert W., assignor.)

Stutz, John C., Kansas City, Mo. Golf ball washer and drier. 2,005,115; June 18.

Sucky, Rudolph R., E. F. McGonigal, and E. Bargar, Blaine, Ohio. Gear shift lever switch. 2,005,483; June 18.

Sugden, Walter J. (See Drysdale, William D., assignor.)

Sukumlyn, Thomas W., Los Angeles, Calif. Electron emission device. 2,005,330; June 18.

Sulzer Freres Societe Anonyme. (See Schaer, Charles, assignor.)

Summers, Otto M., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,005,057; June 18.

Sun-Maid Raisin Growers of California. (See Forrest, Thomas W. W., assignor.)

Superior Steel Corporation. (See Frost, Frank R., assignor.)

Supreme Instruments Corporation. (See Fausett, Floyd, assignor.)

Surface Combustion Corporation. (See Branche, Nelson T., assignor.)

Talbot, Stanley E., London, England. Head lamps incorporating glare-preventing devices. 2,005,058; June 18.

Tamplin, William C., Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company. Apparatus for shipping metal. 2,005,117; June 18.

Tanning Process Company, The. (See Connor, John H., assignor.)

Tappen, Alexander B., Briarcliff Manor, assignor to The Cooling Tower Co. Inc., New York, N. Y. Distributor nozzle. 2,005,600; June 18.

Taylor, Charles W. (See Karsel, W., and Taylor.)

Taylor, George J., Cleveland, Ohio. Keyhole illuminating device. 2,005,274; June 18.

Taylor, John C., et al. (See Burriss, Oliver G., assignor.)

Tedham, William F., London, assignor to Electric and Musical Industries Limited, Hayes, England. Light sensitive apparatus. 2,005,059; June 18.

Tefft, Ralph F. (See McGavack, J., and Tefft.)

Ter Horst, William P., Bay Village, assignor to Industrial Rayon Corporation, Cleveland, Ohio. Pickling of ferrous metals. 2,005,601; June 18.

Terrill, Horace J. (See Patton, L. J., and Terrill.)

Teves, Alfred, Frankfort-on-the-Main, Germany. Evaporator for refrigeration machines. 2,005,013; June 18.

Texas Company, The. (See Armistead, G., and Ulrich, assignors.)

Texas Company, The. (See Hall, Frank W., assignor.)

Texas Company, The. (See Hall, F. W., and Smith, assignors.)

Texas Company, The. (See McMillan, Wallace A., assignor.)

Texas Company, The. (See Weir, James W., assignor.)

Textile Machine Works. (See Bitzer, Gottlob, assignor.)

Textile Machine Works. (See Gastrich, Gustav, assignor.)

Thimann, Max, Cologne-Braunsfeld, assignor to firm Dr. Bekk & Kaulen Chemische Fabrik G. m. b. H., Loevenich, near Cologne, Germany. Shellac solution for the production of etched photographic printing forms and preparing it. 2,005,060; June 18.

Thomas, Frank W., Lincoln Place, Pa. Airplane control. 2,005,061; June 18.

Thomas, Thomas A. W., Los Angeles, Calif. Insulator for storage battery plates. 2,005,275; June 18.

Thompson-Allen, Aubrey. (See Willis, H., and Thompson-Allen.)

Thompson, Edward D., Warren, assignor to The Stevens Metal Products Company, Niles, Ohio. Insulated metallic container. 2,005,247; June 18.

Thompson, Edward D., Warren, assignor to The Stevens Metal Products Company, Niles, Ohio. Metallic receptacle. 2,005,248; June 18.

Thomson, Frederick, Port Huron, Mich. Combination fountain and bird bath. 2,005,602; June 18.

Thorin, Harry, Monson, Mass. Glazier's points. 2,005,484; June 18.

Thornton, Harry A., Elkhart, Ind. Combined closing and outlet cap for collapsible tubes. 2,005,642; June 18.

Thrine, Emily, Battle Creek, Mich. Tool chest and spare wheel carrier for automobiles. 2,005,604; June 18.

Tichota, Vencel J., Dodge, Nebr. Draft equalizer. 2,005,525; June 18.

Tidmarsh, George P. and P. M., Tucson, Ariz. System for conditioning air. 2,005,276; June 18.

Tidmarsh, Patrick M. (See Tidmarsh, G. P. and P. M.)

Tierney, Thomas P., Jr., Montgomery, N. Y. Flower cutter. 2,005,355; June 18.

Tietig, Chester, Los Angeles, Calif. Exhaust gas purifier. 2,005,249; June 18.

Tondreau, Albert W., Hollywood, Calif., assignor to Warner Brothers Pictures, Inc., New York, N. Y. Focusing device for a motion picture camera. 2,005,014; June 18.

Toohey, Edward A., Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Article of manufacture. 2,005,304; June 18.

Toohey, Edward A., and A. Hughes, Somerville, N. J., assignors to Johns-Manville Corporation, New York, N. Y. Heat insulating material and waterproofing same. 2,005,356; June 18.

Touborg, Jens, and H. E. Rosebrook, assignors to Gibson Electric Refrigerator Corporation, Greenville, Mich. Evaporator. 2,005,277; June 18.

Traudt, William F., Buffalo, N. Y. Apparatus for washing or treating materials. 2,005,015; June 18.

Trew, James W., Gettysburg, assignor to Rice, Trew & Rice Co. Inc., Biglerville, Pa. Edge guard. 2,005,402; June 18.

Trimble, Homer L., Cleveland Heights, Ohio. Display container. 2,005,278; June 18.

Trojan Limited. (See Rickwood, Henry J., assignor.)

Twemlow, Edwin. (See Whittle, R. W., and Twemlow.)

Tyler, W. S., Company, The. (See Wettlaufer, William L., assignor.)

Ullrich, Walter. (See Armistead, G., and Ullrich.)

United American Bosch Corporation. (See Mayer, Carl A., assignor.)

United American Bosch Corporation. (See Wild, J. E., Hogeman, and Schwarzmann, assignors.)

United-Carr Fastener Corporation. (See Chaffee, Raymond O., assignor.)

United-Carr Fastener Corporation. (See Jones, Walter L., assignor.)

United-Carr Fastener Corporation. (See Walters, Rollo F., assignor.)

United Shoe Machinery Corporation. (See Bertrand, Frederic E., assignor.)

United Shoe Machinery Corporation. (See Knowlton, Norwood H., assignor.)

United Shoe Machinery Corporation. (See Morrill, Alfred R., assignor.)

United Shoe Machinery Corporation. (See Randall, Martin H., assignor.)

United Shoe Machinery Corporation. (See Smith, John K., assignor.)

United States Envelope Company. (See Becker, Peter, assignor.)

United States Gypsum Company. (See Vass, Michael G., assignor.)

United States Rubber Company. (See McGavack, J., and Tefft, assignors.)

Unitor Corporation. (See Parsons, George K., assignor.)

Universal Oil Products Company. (See Alther, Joseph G., assignor.)

Universal Postal Frankers, Limited. (See Kalman, Marton, assignor.)

Valvoline Oil Company. (See Miller, C. A., and Smith, assignors.)

Van Buskirk, Lesher W., Easton, Pa. Digging tooth. 2,005,016; June 18.

Vandiver, E. P., et al. (See Burriss, Oliver G., assignor.)

Van Geel, Willem C., and H. Emmens, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Electrical condenser. 2,005,279; June 18.

Van Weyenbergh, Emile. (See Sagar, H., Van Weyenbergh, and Jones.)

Varley, Thomas W., New York, N. Y. Telephone time-announcing system. 2,005,357; June 18.

Vass, Michael G., Maywood, assignor to United States Gypsum Company, Chicago, Ill. Building arch construction. 2,005,572; June 18.

Vereinigte Metalltuch-Fabriken Peter Villforth. (See Schmid, Karl, assignor.)

Vicars, T. and T., Limited. (See Marsden, Leonard, assignor.)

Victor Adding Machine Company. (See Garbell, Max, assignor.)

Victor Chemical Works. (See Adler, H., and Woodstock, assignors.)

Vinz, Alfred O., Beaver Dam, Wis. Oil treatment of coal. 2,005,512; June 18.

Virginia-Carolina Chemical Corporation. (See Genz, Frederick W., assignor.)

Volz, Frederick A., assignor to The Stanley Works, New Britain, Conn. Collable measuring rule. 2,005,608; June 18.

Von Segebaden, Ernst S. D., assignor to Aktiebolaget Formator, Stockholm, Sweden. Device for continuous compressing and drying of cigar bunches. 2,005,280; June 18.

Voorhees, Vendeveer, Hammond, assignor to Standard Oil Company, Whiting, Ind. Conversion process. 2,005,118; June 18.

Voorhees, Vanderveer, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Process and bath for pickling metals. 2,005,605; June 18.

Voshikian, Peter S. and T. S., Philadelphia, Pa., assignors to Keystone Tool Manufacturing Company. Hedge shears. 2,005,694; June 18.

Voshikian, Thomas S. (See Voshikian, Peter S. and T. S.)

Wagner, Charles L. (See Hunicke, C. C., and Wagner.)

Wagner Electric Corporation. (See Dick, Burns, assignor.)

Wagner, Frederick H., Baltimore, Md., assignor to The Bartlett Hayward Company. Dust collector. 2,005,305; June 18.

Wagner, Frederick P., assignor of one-half to A. J. Brauer, St. Louis, Mo. Shoe. 2,005,071; June 18.

Wagner, Gerritt, Orange City, Iowa. Piston. 2,005,702; June 18.

Walker, Brooks, Piedmont, Calif. Vehicle lifting and traversing device. 2,005,173; June 18.

Wall, Byron T., Raymond, Alberta, Canada. Safety ash tray. 2,005,606; June 18.

Wallis, Clarence H., Ellwood City, Pa., assignor to National Tube Company. Making tubes. 2,005,306; June 18.

Walters, Rollo F., Detroit, Mich., assignor to United-Carr Fastener Corporation, Cambridge, Mass. Making upholstery panels and applying fasteners thereto. 2,005,669; June 18.

Warfield, Gordon, Baltimore, Md. Automobile safety appliance. 2,005,281; June 18.

Warner Bros. Pictures, Inc. (See Jackman, Fred W., assignor.)

Warner Bros. Pictures, Inc. (See Koenekamp, Hans F., assignor.)

Warner Brothers Pictures, Inc. (See Tondreau, Albert W., assignor.)

Wasserman, Jacob. (See Cohen, S. H., and Wasserman.)

Watson, Edward F., Larchmont, N. Y., assignor to American Telephone and Telegraph Company. Facsimile telegraph system. 2,005,017; June 18.

Watson, Richard M., Detroit, Mich. Loose leaf binder. 2,005,573; June 18.

Weaver, Harry C., San Gabriel, assignor of one-half to D. Grattan, Los Angeles, Calif. Spring suspension mechanism for vehicles. 2,005,513; June 18.

Weaver-Wall Company, The. (See Gibson, John H., assignor.)

Weir, James W., Los Angeles, Calif., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Dewaxing oils. 2,005,062; June 18.

Weiss, Arthur J. (See Franzen, E. T., and Weiss.)

Weiss, Carl W., Brooklyn, N. Y. Transmission. 2,005,444; June 18.

Weiss, Samuel, Brooklyn, N. Y. Tag-fastener and guide therefor. 2,005,119; June 18.

Weiss, Wenzel F., San Jose, Calif., assignor to Spragueselis Corporation, Hoopeston, Ill. Exhaust box. 2,005,282; June 18.

Wellman Seaver Rolling Mill Co. Ltd. (See Smith, Sydney, assignor.)

Wells, Albert C., Chicago, Ill. Pencil. 2,005,485; June 18.

Wemp, Ernest E., Detroit, Mich. Driving mechanism and clutch. 2,005,250; June 18.

Wender, Eugen, Sinsheim (Elsenz), Germany. Combined gas and liquid shut-off device for gas heated liquid heaters. 2,005,403; June 18.

Werner, Bertram, et al. (See Boobarin, Leo Y., assignor.)

West, Donald H., Marlboro, and K. C. Monroe, Hudson, assignors to The Lapointe Machine Tool Company, Hudson, Mass. Hydraulic actuating mechanism for planers. 2,005,018; June 18.

Western Electric Company. (See Dowd, Archie J., assignor.)

Western Electric Company. (See Kocl, Ludvik J., assignor.)

Western Electric Company. (See McCoy, Clarence E., assignor.)

Western Electric Company. (See Roome, F. A., and Haffter, assignors.)

Western Railway Equipment Company. (See Campbell, S. H., and Pletzsch, assignors.)

Westgate, Ralph S., Bloomfield, N. J., and H. C. A. Behr, York, Pa., assignors to E. R. Squibb & Sons, New York, N. Y. Making container seals. 2,004,964; June 18.

Westinghouse Electric & Manufacturing Company. (See Dickson, John, assignor.)

Westinghouse Electric & Manufacturing Company. (See Evans, R. D., and Lewis, assignors.)

Westinghouse Electric & Manufacturing Company. (See Griscom, Samuel R., assignor.)

Westinghouse Electric & Manufacturing Company. (See Klemmer, Edward H., assignor.)

Westinghouse Electric & Manufacturing Company. (See Langguth, Paul O., assignor.)

Westinghouse Electric & Manufacturing Company. (See Langguth, P. O., and Lewis, assignors.)

Westinghouse Electric & Manufacturing Company. (See Le Vesconte, L. B., and Klemmer, assignors.)

Westinghouse Electric & Manufacturing Company. (See Le Vesconte, Lester B., assignor.)

Westinghouse Electric & Manufacturing Company. (See Lewis, William A., assignor.)

Westinghouse Electric & Manufacturing Company. (See Smith, Roy M., assignor.)

Wettlaufer, William L., Buffalo, N. Y., assignor to The W. S. Tyler Company, Cleveland, Ohio. Machine for treating gravel, sand and like materials. 2,004,965; June 18.

Whetzel, Joshua C., and R. E. Zimmerman, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company. Recovering salts and other compounds. 2,005,120; June 18.

Whitaker, Harry South Barre, Mass. Cleaning device for gill-box fallers. 2,005,209; June 18.

White, Frank L. (See Brooker, L. G. S., and White.)

White, Reginald H., Toronto, Ontario, Canada. Safety blade sharpener. 2,005,210; June 18.

Whitehall Patents Corporation. (See Morin, L. H., and Marinsky, assignors.)

White Motor Company, The. (See Church, Harold D., assignor.)

Whitlock, Ralph G., Los Angeles, and L. Sharp, Huntington Park, Calif., assignors to Federal Foundation, Inc., Las Vegas, Nev. Conduit cap. 2,004,966; June 18.

Whitlock, Ralph G., Los Angeles, and L. Sharp, Huntington Park, Calif., assignors to Federal Foundation, Inc., Las Vegas, Nev. Conduit cap. 2,005,211; June 18.

Whittle, Reginald W., Urmston, and E. Twemlow, Sandbach, England. Change speed gearing. 2,005,514; June 18.

Wickersham, Elmer E., Stockton, assignor, by mesne assignments, to Caterpillar Tractor Co., San Leandro, Calif. Threshing. 2,005,212; June 18.

Wiedemann, Erwin. (See Stoll, A., and Wiedemann.)

Wiedhofft, Alfred H., Chicago, Ill. Regulator. 2,005,445; June 18.

Wild, Julius E., H. Hogeman, Springfield, and W. E. Schwarzmann, Longmeadow, assignors to United American Bosch Corporation, Springfield, Mass. Operating internal combustion engines. 2,005,063; June 18.

Wilder, John, assignor to Wilder Metal Company, Niles, Ohio. Deflector for gas stoves, or the like. 2,005,121; June 18.

Wilder Metal Company. (See Wilder, John, assignor.)

Wilkening, Frederick W. (See Platt, Haviland H., assignor.)

Williams, Gershom G., La Jolla, Calif. Electric tubing connecter. 2,005,174; June 18.

Williams, Philip H., Spokane, Wash., assignor to Ideal Hose Coupling Company, Coeur d'Alene, Idaho. Hose coupling. 2,004,967; June 18.

Williams, Thomas D., Garfield Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey. Apparatus for coating metal strips. 2,005,307; June 18.

Willis, Henry, and A. Thompson-Allen, London, England. Swell louver action for organs. 2,005,643; June 18.

Willis, Martin. (See Dorn, R., and Willis.)

Wilmington Trust Co., executor et al. (See Wuertz, A. J., and Bishop.)

Wilson Box (Foreign Rights) Limited. (See Wilson, Edward B., assignor.)

Wilson, Edward B., Westminster, assignor to Wilson Box (Foreign Rights) Limited, London, England. Brake operating mechanism. 2,005,284; June 18.

Wilson, Guy W., Erie, Pa., assignor to General Electric Company. Electric generator system. 2,005,486; June 18.

Wilson, Thomas C., Incorporated. (See Bagnoli, O. J., Wilson, and Young, assignors.)

Winchester Repeating Arms Company. (See McNutt, Joseph D., assignor.)

Winkler, Joseph F., Philadelphia, Pa. Fluid conditioning device. 2,005,515; June 18.

Winland, Henry A., assignor to G. H. Alten, doing business as Alten's Foundry and Machine Works, Lancaster, Ohio. Beam hanger. 2,005,283; June 18.

Winter, John R., Detroit, Mich., assignor of one-half to H. A. Montgomery. Grease seal. 2,005,446; June 18.

Wismer, Linwood, Audubon, N. J., assignor to L., H. A., and E. Wolf, doing business as National Metal Edge Box Company, Philadelphia, Pa. Blank cutting and creasing machine. 2,005,064; June 18.

Wittel, Otto, assignor to Eastman Kodak Company, Rochester, N. Y. Motion picture film machine. 2,005,404; June 18.

Wittel, Otto, assignor to Eastman Kodak Company, Rochester, N. Y. Photographic film cartridge and spool for use therein. 2,005,405; June 18.

Wolf, Howard A., et al. (See Wismer, Linwood, assignor.)

Wolf, Louis, et al. (See Wismer, Linwood, assignor.)

Wood, Ralph. (See Dubitsky, S., Adler, Grieshaber, Dearcopp, and Wood.)

Wood, Strand K., B. L. Eales, and L. V. De Witt, Hutchinson, Kans. Light for gasoline dispensing nozzles. 2,005,251; June 18.

Woodstock, Willard H. (See Adler, H., and Woodstock.)

Woody, Paul O., Clearfield, Utah. Tool and accessory container. 2,005,285; June 18.
Wuertz, Alexander J. (See Bishop, O. M., and Wuertz.)
Wuertz, Alexander J., Carrollville, Wis., and O. M. Bishop, deceased, Wilmington, Del., by Eva P. Bishop, and Wilmington Trust Co., executors, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dyestuffs of the dibenzanthrone series. 2,005,574; June 18.
Wurm, Max, Brooklyn, N. Y. Extension slide device. 2,005,273; June 18.
Wurster, Oscar H., Chicago, Ill. Apparatus for splitting fats. 2,005,447; June 18.
Youker, Mortimer A. (See Daudt, H. W., and Youker.)
Youker, Mortimer A., et al. (See Daudt, H. W., Youker, and Jones.)
Young, Forrest J., Los Angeles, and S. W. Long, Redondo Beach, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio. Power transmission unit. 2,005,122; June 18.
Young, James H., et al. (See Bagnoll, O. J., Wilson, and Young.)
Young, L. A., Spring and Wire Corporation. (See Clark, William A., assignor.)
Young, Leonard A., Detroit, Mich. Golf club. 2,004,968; June 18.
Youngstown Pressed Steel Company, The. (See Stanitz, J., Boyer, assignors.)
Zeiss, Carl. (See Richter, Robert, assignor.)
Zemanek, Frank, Mason City, assignor of one-fourth to F. Kublak, and one-fourth to T. Zemanek, Manson City, Iowa. Glass breaker tool. 2,005,487; June 18.
Zemanek, Tony, et al. (See Zemanek, Frank, assignor.)
Zellstoffabrik Waldhof. (See Kiel, Franz, assignor.)
Zerbe, Lewis E. (See Faulkner, D. S., Rice, and Zerbe.)
Zerbe, Lewis E., Moneta, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio. Rotary machine. 2,005,123; June 18.
Zimmer, Heinrich, Varnsdorf, Czechoslovakia. Suction filter. 2,005,406; June 18.
Zimmerman, Rufus E. (See Whetzel, J. C., and Zimmerman.)
Zullo, Basil M. (See Sanchez, R. F., and Zullo.)

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Articles, Method of and apparatus for forging upset. W. H. Spire. 19,616; June 18.
Coating composition. W. Koch. 19,612; June 18.
Guard, Window. H. van Dresser. 19,617; June 18.
Hearing device support. M. Albert. 19,609; June 18.
Iron alloys free from gases, especially oxygen, Process and device for the production of. C. Brackelsberg. 19,610; June 18.
Liquid cooling apparatus. L. Samel. 19,615; June 18.
Magnetic testing method and means. A. V. de Forest 19,611; June 18.
Telegraph communication system. D. B. Perry. 19,614; June 18.
Type surfacing machine, Planetary. H. L. Myers. 19,613; June 18.

LIST OF DESIGN INVENTIONS

Air-conditioning control device or similar article. L. I. Friez. 95,951; June 18.
Automobile body. A. E. Northup. 95,979; June 18.
Badge. A. R. Rowles. 95,985; June 18.
Battery box. R. LeClercq. 95,971; June 18.
Belt for personal wear. M. Sachs. 95,986–7; June 18.
Bottle. G. Sakier. 95,988 9; June 18.
Bottle, Glass. L. J. Kihn. 95,965; June 18.
Cabinet or the like, Heater. D. F. Jones. 95,962; June 18.
Candle light or similar article. J. Zeitlin. 95,999; June 18.
Carpet. J. S. Travis. 95,994; June 18.
Carton, Christmas tree lighting unit. M. E. Holy. 95,956; June 18.
Crucifixion cross or similar article. B. E. Pucilosli. 95,983; June 18.
Dial, Signal and code. A. Opler. 95,980; June 18.
Display rack. N. E. Heil. 95,955; June 18.
Dress, Ensemble. J. Kirschner. 95,966; June 18.
Dress, Ensemble. S. Zahn. 95,998; June 18.
Game apparatus and vending machine, Combined. M. Schu. 95,990; June 18.
Hat. S. Neger. 95,978; June 18.
Hat. B. Workman. 95,997; June 18.
Jar. C. B. Stevens. 95,993; June 18.
Knitted fabric. M. Moskowitz. 95,977; June 18.
Lighting fixture, Surface supported. C. D. McCann. 95,973–4; June 18.
Mirror, Hand. H. L. Berlnstein. 95,944; June 18.
Motor-cycle. E. M. De Long. 95,948; June 18.
Pump assembly. L. G. Lindsay. 95,972; June 18.
Radiocabinet. N. G. Horwitt. 95,961; June 18.
Range, Gas. W. T. Bradbury. 95,946; June 18.
Saddle, Cycle. R. W. Faulhaber. 95,950; June 18.
Sandal. W. H. Joyce, Jr. 95,963; June 18.
Sharpener, Pencil. A. Shaffer. 95,992; June 18.
Shoe. L. Goodkind. 95,953; June 18.
Shoe. J. Lanz. 95,968–9; June 18.
Shoe. P. M. Siegel. 95,991; June 18.
Shoe. A. Turlansky. 95,995–6; June 18.
Shoe or article of analogous nature. A. E. Gordon. 95,954; June 18.
Spoon, Ice cube. M. S. Dunkelberger. 95,949; June 18.
Stand or similar article, Vending machine. E. A. Laughery. 95,970; June 18.
Sweeper shell, Carpet. F. W. Pullen. 95,984; June 18.
Tablecloth. W. C. Miller. 95,975–6; June 18.
Tablecloth, Lace. H. D. Hooven, Jr. 95,957–60; June 18.
Tablecloth, Lace. F. P. Otto. 95,981–2; June 18.
Textile fabric. F. O. Boessneck. 95,945; June 18.
Textile fabric. M. U. Juestrich. 95,964; June 18.
Textile fabric or similar article of manufacture. J. F. Gaul, Jr. 95,952; June 18.
Tray and saltcellar stand, Combination. M. J. Buchanan. 95,947; June 18.
Tray, Ice. R. E. Krueck. 95,967; June 18.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid and available less common elements. Simultaneous production of available phosphoric. F. W. Genz. 2,005,617; June 18.
Acid-containing package. H. Adler and W. H. Woodstock. 2,004,926; June 18.
Actuating mechanism. F. E. Bertrand. [D]2,005,019; June 18.
Actuating mechanism for planers, Hydraulic. D. H. West and K. C. Monroe. 2,005,018; June 18.
Adhesive tape and gauze dressing package. B. H. Hanover. 2,005,676; June 18.
Aeroplane. H. A. Douglas. 2,005,078; June 18.
Agitator, Coal stoker. V. C. Norquist. 2,005,681; June 18.
Agricultural implement. F. H. Muntzel. 2,005,044; June 18.
Air arrangement for Diesel locomotives, Auxiliary. J. Dickson. 2,005,536; June 18.
Air-cooling of glass bulb rectifiers. F. Geyer. 2,005,031; June 18.
Aircraft. H. H. Platt. 2,004,961; June 18.
Aircraft deviation indicator. C. Marcus. 2,005,379; June 18.
Aircraft landing wheel. A. G. Maranville. 2,005,626; June 18.
Air in refrigerating mechanisms, Apparatus for hydrating. E. M. Post, Jr. 2,005,558; June 18.
Air-jet propelled conveyance. A. G. Sanden. 2,005,473; June 18.
Airplane control. F. W. Thomas. 2,005,061; June 18.
Airplane landing wheel. A. G. Maranville. 2,005,627; June 18.
Air, System for conditioning. G. P. Tidmarsh and P. M. Tidmarsh. 2,005,276; June 18.
Air vent for camera bellows. C. C. Fuerst. 2,005,417; June 18.
Alcohols to aldehydes, Oxidizing aliphatic. H. A. Bond and L. B. Smith. 2,005,645; June 18.
Aligning device for manifolding typewriters. A. G. Pierce. 2,005,693; June 18.
Alkoxy-phenyl-imidazoles. M. Engelmann. 2,005,538; June 18.
Alloy. M. A. Hunter. 2,005,423; June 18.
Alloy. J. M. Lohr. 2,005,430–3; June 18.
Alloys, Producing. W. B. Arness. 2,005,409; June 18.
Amidines. J. Lee. 2,004,994; June 18.
Amplifier. H. Shore. 2,005,111; June 18.
Amplifier, Audion. P. O. Farnham and R. Assersun. 2,005,080; June 18.
Amusement apparatus. J. F. Macourek. 2,005,231; June 18.
Amusement apparatus. H. Stoebrer and F. Markey. 2,005,400; June 18.
Amusement device. M. Margolith. 2,005,692; June 18.
Anchor, Guy. C. R. Pieper. 2,005,239; June 18.
Animal trap. W. Barrett. 2,005,489; June 18.
Annulus and apparatus therefor, Forming an. J. E. Batle. 2,005,215; June 18.
Anthraquinone derivative. O. M. Bishop and A. J. Wuertz. 2,005,529; June 18.
Apparatus for the tailoring trade for reproducing the shape of the body of the customer. E. Sterling. 2,005,399; June 18.
Apron, Anæsthesia. J. B. Lazare. 2,005,294; June 18.
Article conveying mechanism. C. E. McCoy. 2,005,589; June 18.
Article of manufacture. E. A. Toohey. 2,005,304; June 18.
Automobile heater. W. Karsel and C. W. Taylor. 2,004,993; June 18.
Automobile safety appliance. G. Warfield. 2,005,281; June 18.
Baffle for loud speakers. A. M. Pfalzer. 2,005,300; June 18.
Bait for fish lure, Artificial. B. Milner. 2,005,554; June 18.
Bale tie. A. V. Rowe. 2,005,472; June 18.
Baling press. T. S. Grimes. 2,005,291; June 18.
Basket making machine and method. A. H. Schmidtke. 2,005,439; June 18.
Bathroom unit. R. L. Davison. 2,004,933; June 18.
Bath spray head, Shower. R. C. Boyd. 2,005,073; June 18.
Bath structure, Shower. J. A. Stuntebeck. 2,005,246; June 18.
Bathtub safety grip. O. Buhl and H. V. Jacobus. 2,005,576; June 18.
Beam hanger. H. A. Winland. 2,005,283; June 18.
Bean cutter. E. M. Sciarini. 2,005,440; June 18.
Bearing: *See*—
  Tillage disk bearing.
Bearing. H. R. Lontz. 2,005,502; June 18.
Belting, Manufacturing impregnated textile. A. Abrahamsen and J. E. Hansen. 2,005,407; June 18.
Bench guide, Push. S. Smith. 2,005,328; June 18.
Binder, Loose leaf. R. M. Watson. 2,005,573; June 18.
Binding materials in the form of powder or grit, to produce dextrine and other adhesives of vegetable origin, as well as for treating other materials, Apparatus for treating. A. Dreyer and W. Kutzner. 2,005,537; June 18.
Bit for rock drills, Detachable. R. S. Hart. 2,005,498; June 18.
Blank cutting and creasing machine. L. Wismer. 2,005,064; June 18.
Bleaching and stripping material and making same. M. Alsen. 2,005,448; June 18.
Boiler: *See*—
  Water tube boiler.
Boiler and like furnaces. E. M. McNamara. 2,005,264; June 18.
Boiler plant. N. Brunzel. 2,005,646; June 18.
Bolt making machine. W. L. Clouse. 2,005,495; June 18.
Book, Counter sales. E. Hano, G. U. Lacroix, and G. Hogan. 2,004,942; June 18.
Book structure and binder for leaves. M. H. Coulston. 2,005,717; June 18.
Bookkeeping machine. F. Bossert. 2,005,020; June 18.
Bookstack, Convertible. A. S. Macdonald. 2,005,434; June 18.
Bottle cap and spreading device. W. E. Kuenstler. 2,005,031; June 18.
Bottle conveying mechanism. C. Holm. 2,005,522; June 18.
Bottle crowning machine. J. Kantor. 2,005,585; June 18.
Bottle dispensing device. A. Kuhn and C. H. Heitman. 2,005,092; June 18.
Box: *See*—
  Exhaust box. Folding box
  Folding berry box Plywood knockdown box.
Box and bearing for railway vehicles. J. N. Blue. 2,004,921; June 18.
Box construction. C. K. Ellsworth. 2,005,027; June 18.
Box or carton. H. Levine. 2,005,345; June 18.
Brake beam safety support. S. H. Campbell and F. H. Pletzsch. 2,004,975; June 18.
Brake beam support, Railway. H. C. Dixon. 2,005,076; June 18.
Brake operating mechanism. E. B. Wilson. 2,005,284; June 18.
Broadhead hunting point. F. Kindle and R. E. Speck. 2,005,424; June 18.
Building arch construction. M. G. Vass. 2,005,572; June 18.
Building corner construction and units therefor. J. H. Gibson. 2,005,462; June 18.
Building member and joint therefor, Self-supporting. G. F. Kotrbaty. 2,005,146; June 18.
Buildings, Method and apparatus for ventilating. C. A. Bulkeley. 2,004,927; June 18.
Burner: *See*—
  Gas burner. Welding burner
  Oil burner.
Butt welding pipe. W. T. Mahla and J. L. Maurike. 2,005,322; June 18.
Cable, High tension rubber insulated. C. R. Boggs. 2,005,360; June 18.
Cable, Rubber insulated. J. Fassbender. 2,005,614; June 18.
Cable, Submarine signaling. E. Studt. 2,005,273; June 18.
Camera, Machine gun. J. P. Gaty. 2,005,366; June 18.
Camper's tool. J. Le B. Arbuckle. 2,005,176; June 18.
Cane, Antislipping. W. E. Russell and E. R. Lyon. 2,005,507; June 18.
Cap. G. De W. Rollins. 2,005,361; June 18.
Cap, Conduit. R. G. Whitlock and L. Sharp. 2,005,211; June 18.
Cap for collapsible tubes, Combined closing and outlet. H. A. Thornton. 2,005,642; June 18.
Caps on jars, Apparatus for tightening. H. T. Griswold. 2,005,186; June 18.
Capsule. A. J. Messner. 2,004,957; June 18.
Car body, Railway. C. De L. Rice. 2,005,165; June 18.
Car wheel. C. Saurer. 2,005,302; June 18.
Carbon black. E. H. Damon. 2,005,022; June 18.
Carbon compounds containing fluorine, Preparation of. H. W. Daudt and M. A. Youker. 2,005,705; June 18.
Carbon compounds, Fluorination of. H. W. Daudt and E. L. Mattison. 2,004,931; June 18.
Card, Greeting. E. Blackwell. 2,005,493; June 18.
Carrier current relay. L. B. LeVesconte. 2,005,148; June 18.
Carrier for automobiles, Tool chest and spare wheel. E. Thrine. 2,005,604; June 18.

Carrier relaying, Continuous. L. B. LeVesconte. 2,004,955; June 18.
Carrier relaying, Continuous. W. A. Lewis. 2,005,150; June 18.
Carrier relaying, Continuous. R. M. Smith. 2,005,172; June 18.
Carrier system. J. M. Scanlan. 2,005,396; June 18.
Carton for rubber heels and the like. A. A. Esterson. 2,005,135; June 18.
Catalytic oxidation of ketones. W. Flemming and W. Speer. 2,005,183; June 18.
Cellulose derivative composition. H. B. Dykstra. 2,005,414; June 18.
Cellulose derivatives, Dyeing of. L. Spiegler and H. R. Lee. 2,005,303; June 18.
Cellulose, Esterification of. G. Jayme. 2,005,678; June 18.
Cellulose esters, Hydrolysis of. T. F. Murray, Jr., and C. J. Staud. 2,005,383; June 18.
Cellulose esters, Manufacture of. H. Dreyfus. 2,005,223; June 18.
Cellulose material, Manufacture of. F. Kiel. 2,005,378; June 18.
Cellulose with a modified perchloric acid catalyst, Esterification of. C. J. Staud and J. D. Coleman. 2,005,398; June 18.
Cementitious sheets, Apparatus for the manufacture of. R. Dorn and M. Willis. 2,004,936; June 18.
Centrifugal clutch. H. J. Rickwood. 2,005,350; June 18.
Centrifugal separator. H. O. Lindgren. 2,005,094; June 18.
Chair: *See*—
  Folding chair.
Chair. L. Dellert. 2,004,934; June 18.
Chair construction. G. D. Schermerhorn. 2,005,565; June 18.
Cigar bunches, Device for continuously compressing and drying of. E. S. D. von Segebaden. 2,005,280; June 18.
Cigarette case and lighter, Pocket. R. L. Penney. 2,005,557; June 18.
Cigarette holder. C. L. Martin. 2,005,233; June 18.
Cigarettes with a short mouthpiece of wadding, crepe paper or the like, Process and apparatus for the manufacture of. C. W. Müller. 2,005,661; June 18.
Circuit and apparatus, Electrical. J. W. Dalton. 2,005,130; June 18.
Circuit controller for electric sign flashers, signaling devices, and similar mechanisms, Electric. W. L. Laib. 2,005,230; June 18.
Circuit controlling appliance, Electric. J. Sachs. 2,005,685–6; June 18.
Circuit controlling appliance, Electric. J. Sachs. 2,005,688; June 18.
Circuit, Signaling. H. Nyquist. 2,005,047; June 18.
Cleaner: *See*—
  Tube cleaner.
Cleaning attachment for combs. O. Friedmann. 2,005,520; June 18.
Cleaning device for gill-box fallers. H. Whitaker. 2,005,209; June 18.
Closure cap for tumblers, bottles, jars, and other receptacles. H. Ingram. 2,005,318; June 18.
Cloth finishing. S. L. Cluett. 2,005,517; June 18.
Cloth shrinking machine. B. J. Shaw. 2,005,352; June 18.
Clothing, Apparatus for pressing. S. H. MacFarland. 2,005,435; June 18.
Clutch: *See*—
  Centrifugal clutch.
Clutch operating mechanism. H. Schildknecht. 2,005,269; June 18.
Coatings, Apparatus for applying protective. H. A. Conley. 2,004,978; June 18.
Combing machine. J. W. Nasmith. 2,005,001; June 18.
Compounds of the ethylene series substituted by an aromatic residue, Manufacture of. W. Krey. 2,005,042; June 18.
Compressing machine. W. D. Drysdale. 2,005,578; June 18.
Compressor, Rotary. E. H. Belden. 2,004,920; June 18.
Concrete joist and slab construction, Precast. H. O. Klotz. 2,004,991; June 18.
Condenser: *See*—
  Electrical condenser. Variable condenser.
Conductor, Hollow. W. H. Bassett, Jr. 2,004,972; June 18.
Conduit. C. Gottwald and H. R. Hawgood. 2,005,704; June 18.
Conduit and like construction. C. Gottwald. 2,005,699; June 18.
Conduit cap. R. G. Whitlock and L. Sharp. 2,004,966; June 18.
Conduit construction. M. L. Spackman. 2,005,701; June 18.
Confection, Packaged. R. Stover. 2,005,245; June 18.
Connecter: *See*—
  Electric tubing connecter. Electrical connecter.
Connection, Pipe flange. C. Rehder. 2,005,267; June 18.
Connections between connecting rod piston, and crankshaft, Lubricating. J. H. Eynon. 2,005,028; June 18.
Container: *See*—
  Display container. Tool and accessory container.
  Insulated metallic container. Mixer.
Container. J. M. Hothersall. 2,004,946; June 18.
Container. E. H. Siler. 2,005,597; June 18.
Container and its cover. R. Ensko. 2,005,314; June 18.
Container filling device, Automatic. E. F. Hulbert. 2,005,545; June 18.
Containers of all kinds, Opening. E. Saignier. 2,005,665; June 18.
Control arrangement for tandem operation pressing machines. E. A. Mall. 2,005,043; June 18.
Control device for aircraft, Automatic. J. M. Boykow. 2,005,530; June 18.
Control for air conditioning systems. T. K. Greenlee. 2,004,940; June 18.
Control means for varying the relative speeds of members driven through a common differential mechanism. H. A. Centervall. 2,004,929; June 18.
Control mechanism for hydraulic power systems. H. A. Centervall. 2,004,928; June 18.
Control mechanism, Power operated. A. Ronning. 2,005,243; June 18.
Control operating. J. T. Nichols. 2,005,157; June 18.
Control system. L. J. Koci. 2,005,586; June 18.
Conversion process. V. Voorhees. 2,005,118; June 18.
Conveyer. E. H. Spiegl. 2,005,442; June 18.
Cooker, Portable electric. J. Fletcher. 2,004,937; June 18.
Cooler: *See*—
  Milk cooler.
Copper in copper coated wire and the like, Determining. W. F. Muehlberg. 2,005,156; June 18.
Cotton cleaning and reclaiming machine. J. E. Mitchell. 2,005,265; June 18.
Coupling: *See*—
  Hose coupling. Solder coupling.
  Pipe coupling.
Coupling capacitor system. P. O. Langguth and W. A. Lewis. 2,005,147; June 18.
Coupling for bogie axles. P. M. Bourdon. 2,005,607; June 18.
Coupling means for lubricating systems. C. W. Parker. 2,005,556; June 18.
Cover: *See*—
  Lampshade cover.
Covers for seat side arms. W. L. Fry. 2,004,982; June 18.
Crate fastener. O. Sliger. 2,005,272; June 18.
Crease holding means for garments. D. and S. Segelin. 2,005,480; June 18.
Cultivator, Tractor mounted. H. P. Smith. 2,005,568; June 18.
Cultivators, Relief attachment for. H. W. Nelson. 2,005,045; June 18.
Current responsive element and manufacture therefor. J. Sachs. 2,005,687; June 18.
Cut-off machine. N. C. Rubin. 2,005,052; June 18.
Cutter: *See*—
  Bean cutter. Pipe cutter.
  Flower cutter.
Deflector for gas stoves, or the like. J. Wilder. 2,005,121; June 18.
Dental model. B. L. Spitzer and A. Benko. 2,005,114; June 18.
Derivatives of porphins and metalloporphins and their manufacture, Basic. A. Stoll and E. Wiedemann. 2,005,511; June 18.
Dies, Making. G. R. Meyercord. 2,005,591; June 18.
Differential motor. L. N. Miller. 2,005,000; June 18.
Digging tooth. L. W. Van Buskirk. 2,005,016.
Dispenser. E. A. Field. 2,005,029; June 18.
Dispensing device. W. W. Kelly. 2,005,501; June 18.
Display container. H. L. Trimble. 2,005,278; June 18.
Display sign. W. B. F. Hall. 2,005,420; June 18.
Distilling and fractionating apparatus. W. A. McMillan. 2,005,323; June 18.
Doll. A. M. Katz. 2,005,088; June 18.
Door, Automobile. W. L. Morrison. 2,005,198; June 18.
Doorcheck. S. Dubitsky, S. Adler, E. Grieshaber, C. Bearcopp, and R. Wood. 2,005,457; June 18.
Dough fermentation, Method and appliance for determining degree of. F. X. Nodler. 2,005,592; June 18.
Doughnut machine and the like. C. E. Carpenter. 2,005,178; June 18.
Dovetail attachment for dovetail machines. R. H. Crouch. 2,005,647; June 18.
Draft controller, Automatic. G. J. Irsch and W. B. Stephenson. 2,004,947–8; June 18.
Draft equalizer. V. J. Tichota. 2,005,525; June 18.
Drive mechanism for mechanical stokers. H. E. Preston. 2,005,006; June 18.
Driving mechanism. C. H. Havill. 2,005,655; June 18.
Driving mechanism and clutch. E. E. Wemp. 2,005,250; June 18.
Drying apparatus. A. W. Ferre. 2,005,580; June 18.
Dust collector. F. H. Wagner. 2,005,305; June 18.
Dyeing composition. E. A. Markush. 2,005,347; June 18.
Dyestuffs of the anthraquinonacridone series, M. A. Kunz, E. Berthold, and K. Koeberle. 2,005,321; June 18.
Dyestuffs of the dibenzanthrone series. A. J. Wuertz and O. M. Bishop. 2,005,574; June 18.
Dynamo-electric machine. J. V. Caputo. 2,005,609; June 18.
Egg yolks, Testing color of. R. R. Haugh. 2,004,943; June 18.
Ejector, Saliva. A. M. La Riche. 2,005,625; June 18.
Electric drive for looms, weaving machines, and the like. F. Philly. 2,005,663; June 18.
Electric fluid heater. R. A. Carleton. 2,004,976; June 18.

Electric metering device. F. Fausett. 2,005,138; June 18.
Electric switch. J. Sachs. 2,005,684; June 18.
Electric tubing connecter. G. G. Williams. 2,005,175; June 18.
Electrical condenser. W. C. van Geel and H. Emmens. 2,005,279; June 18.
Electrical connecter. E. F. Schmidt. 2,005,475; June 18.
Electrical connecter. W. J. Shearer. 2,005,441; June 18.
Electrical contact device, Separable. E. J. Pool. 2,005,682; June 18.
Electrical device, Thermostatically operated. E. Klahn. 2,005,549; June 18.
Electrical machine, High voltage. R. C. Browne. 2,005,451; June 18.
Electrical switch. J. Rosen. 2,005,207; June 18.
Electrolytic device. R. C. Sprague and J. F. McCann. 2,005,035; June 18.
Electron discharge device control system. D. Journeaux. 2,004,932; June 18.
Electron emission device. T. W. Sukumlyn. 2,005,530; June 18.
Engine: *See*—
Internal combustion engine.
Engine cooling device. W. F. Davis. 2,005,336; June 18.
Engine cooling device. A. B. Modine. 2,005,468; June 18.
Engines, Operating internal combustion. J. E. Wild, H. Hogeman, and W. E. Schwarzmann. 2,005,063; June 18.
Envelope blanks, Apparatus for conveying. P. Becker. 2,005,482; June 18.
Esters of acids of phosphorus. G. De W. Graves. 2,005,610; June 18.
Evaporator. J. Touborg and H. E. Rosebrook. 2,005,277; June 18.
Evaporator for refrigeration machines. A. Teves. 2,005,015; June 18.
Exhaust box. W. F. Weiss. 2,005,282; June 18.
Expansion and contraction joint, Combined. A. C. Fischer. 2,005,139; June 18.
Explosive. G. C. Hale. 2,004,941; June 18.
Explosive charges, Method and apparatus for igniting. H. Holzwarth. 2,004,945; June 18.
Fabric: *See*—
Knitted fabric.
Facsimile telegraph system. E. F. Watson. 2,005,017; June 18.
Fan. H. C. Herion. 2,004,984; June 18.
Fan inlet guard and manufacturing the same. M. C. Allin. 2,005,408; June 18.
Farming implement. G. W. Peck. 2,005,633; June 18.
Fastener: *See*—
Crate fastener.
Fastener stringers, Manufacturing. L. H. Morin and D. Marinsky. 2,004,959; June 18.
Fastener with sliding attachment for garments, bags, and the like. J. Franze. 2,005,116; June 18.
Fats, Apparatus for splitting. O. H. Wurster. 2,005,447; June 18.
Feed control for folding and other machines, Automatic. G. E. Anderson. 2,005,124; June 18.
Feed control for hammer mills. M. W. Roscoe and C. F. Crumb. 2,005,561; June 18.
Feeder: *See*—
Glass feeder. Sheet feeder.
Feeder. C. E. Hedrick. 2,005,188; June 18.
Feeder head for shaker or jigging conveyers. W. W. Sloan. 2,005,567; June 18.
Film cartridge and spool for use therein, Photographic. O. Wittel. 2,005,405; June 18.
Film magazine, Motion picture. O. Wittel. 2,005,404; June 18.
Film take-up mechanism. B. Burns. 2,005,254; June 18.
Filter: *See*—
Suction filter.
Filter. C. W. Hansell. 2,005,083; June 18.
Fishing rod. B. O. Gephart. 2,005,081; June 18.
Flame stabilizing atachment for orchard heaters. W. L. Schen. 2,005,009; June 18.
Flange lining machine. W. M. Holloway. 2,004,944; June 18.
Flash light hanger. H. Hyman. 2,005,339; June 18.
Flashing structure, Multi-ply. S. H. Cohen and J. Wasserman. 2,005,221; June 18.
Flat articles such as biscuits, Stacking or arranging substantially. L. Marsden. 2,005,629; June 18.
Flour, Treatment of. R. Rüter. 2,005,268; June 18.
Flower cutter. T. P. Tierney, Jr. 2,005,355; June 18.
Flower holder. E. M. Menge. 2,005,467; June 18.
Fluid conditioning device. J. F. Winkler. 2,005,515; June 18.
Fluid pressure mechanism. B. Dick. 2,004,980; June 18.
Fluids under pressure into a pressure chamber, Apparatus for automatically controlling discharge of. E. Du Bois. 2,005,650; June 18.
Fluorine compound, Organic. H. W. Daudt and M. A. Youker. 2,005,706; June 18.
Fluorine compounds and production thereof, Organic. L. C. Holt and E. L. Mattison. 2,005,712; June 18.
Fluorine compounds, Preparation of. H. W. Daudt and M. A. Youker. 2,005,710; June 18.
Fluorine compounds, Preparation of organic. H. W. Daudt and M. A. Youker. 2,005,711; June 18.
Fluorine compounds, Production of. H. W. Daudt, M. A. Youker, and H. LaB. Jones. 2,004,932; June 18.
Fluorine compounds, Production of organic. H. W. Daudt and M. A. Youker. 2,005,707; June 18.
Fluorine compounds, Production of organic. H. W. Daudt and M. A. Youker. 2,005,709; June 18.
Fly-strip and ruler for ring binders, Combined. F. S. Schade. 2,005,474; June 18.
Focusing device for a motion picture camera. A. W. Tondreau. 2,005,014; June 18.
Folding berry box. H. M. Ebner. 2,005,415; June 18.
Folding box. R. E. De Luce. 2,005,131; June 18.
Folding chair. J. Kovats. 2,005,715; June 18.
Folding table. H. L. Skough. 2,005,481; June 18.
Food handling apparatus. H. L. Johnston and J. C. Slager. 2,005,374; June 18.
Food molding and wrapping machine, Automatic. W. Stricker. 2,005,599; June 18.
Food preparing device. C. W. Rothfeld. 2,005,395; June 18.
Food products, Manufacturing dried. D. D. Peebles. 2,005,238; June 18.
Footwear, Apparatus for use in making. W. H. Bresnahan. 2,005,608; June 18.
Forming machine for compressed feeds. C. C. Hall. 2,005,689; June 18.
Fountain and bird bath, Combination. F. Thomson. 2,005,602; June 18.
4-dimethylamino-1 phenyl-2,3-dimethyl-5-pyrazolone, Producing. B. Reuter. 2,005,506; June 18.
Frames for constructing building boards, Metal. A. Rafter. 2,005,391; June 18.
Fruit and vegetable juice filling machine. S. Pittaluga. 2,005,471; June 18.
Fruit coating method. T. W. W. Forrest. 2,005,184; June 18.
Fuel and product derived therefrom or other materials into valuable liquids, Conversion of solid. C. Kranch and M. Pier. 2,005,192; June 18.
Fuel burning apparatus. A. G. Blodgett. 2,005,644; June 18.
Fuel from sludge oil, Manufacture of motor. G. Armistead, Jr. 2,005,309; June 19.
Fuel injection pump. C. Schner. 2,005,008; June 18.
Fuel pump. E. A. Rockwell. 2,005,206; June 18.
Fur, Apparatus for making imitation Astrakhan. G. Remane. 2,005,049; June 18.
Furnace: *See*—
Incinerator furnace. Tapping furnace.
Furniture, Folding article of. J. Kovats. 2,005,716; June 18.
Fuse for projectiles and particularly for small caliber high explosive projectiles. V. Schläfer. 2,005,053; June 18.
Game apparatus. J. B. Firestone. 2,004,981; June 18.
Game apparatus. C. R. Kirk and E. E. Collison. 2,004,989–90; June 18.
Game apparatus. C. R. Kirk and E. E. Collison. 2,005,548; June 18.
Game, Hand pool. J. N. Maxwell. 2,005,660; June 18.
Game practice means. C. I. Robinson. 2,005,241; June 18.
Garment, Beach. C. M. Hogan. 2,004,985; June 18.
Garment, Foundation. K. E. Cunningham. 2,005,612; June 18.
Garment hanger. A. J. Fussenegger. 2,005,290; June 18.
Gas analyses, Method and apparatus for. A. H. D. Howe. 2,005,036; June 18.
Gas and air mixing device. M. F. Kowalski. 2,005,624; June 18.
Gas burner. J. C. Rogers. 2,005,560; June 18.
Gas burning apparatus. N. T. Branche. 2,005,252; June 18.
Gas meter. J. C. Diehl. 2,005,024; June 18.
Gas purifier, Exhaust. C. Tierig. 2,005,249; June 18.
Gasoline vapor and air mixing device. W. S. Alvey and J. M. Mikkelsen. 2,004,919; June 18.
Gear for mining machines, Haulage. M. S. Moore. 2,005,523; June 18.
Gear shift lever switch. R. R. Sucky, E. F. McGonigal, and E. Burger. 2,005,483; June 18.
Gearing, Change speed. R. W. Whittle and E. Twembow. 2,005,514; June 18.
Generator system, Electric. G. W. Wilson. 2,005,486; June 18.
Glass and making the same, Laminated. B. J. Pennison. 2,005,075; June 18.
Glass articles, Method and apparatus for making. H. A. Fisher and J. P. Lindsay. 2,005,519; June 18.
Glass breaker tool. F. Zemanek. 2,005,487; June 18.
Glass feeder. R. A. Chilcote. 2,005,494; June 18.
Glass rack. J. D. McLeod. 2,005,099; June 18.
Glazier's points. H. Thorin. 2,005,484; June 18.
Glow discharge sign. C. J. LeBel. 2,004,995; June 18.
Gluing machine. R. E. De Luce. 2,005,132; June 18.
Gold recovering device and method. J. B. Girard. 2,004,939; June 18.
Golf club. L. A. Storz. 2,005,401; June 18.
Golf club. L. A. Young. 2,004,968; June 18.
Granular materials into the soil, Device for introducing dry. A. L. Smith. 2,005,598; June 18.
Grate, Furnace. F. Graafen. 2,005,544; June 18.
Grill, Hand. B. H. Smith. 2,005,010; June 18.
Grinding apparatus. B. O. Isom. 2,004,949; June 18.
Grinding device for revolving cutters. R. D. MacDonald. 2,005,551; June 18.
Grinding machine, Internal. H. H. Ashbridge. 2,005,331 2; June 18.

Ground rod. W. J. McIlvane. 2,004,999; June 18.
Grouting plug. E. P. Halliburton. 2,005,367; June 18.
Guard, Edge. J. W. Trew. 2,005,402; June 18.
Guard, Traffic. G. A. Gleason and A. P. Hayden. 2,005,418; June 18.
Gun, Machine. L. A. Carrillo. 2,004,925; June 18.
Hair curler. R. Mussy. 2,005,662; June 18.
Hairdressing device. J. Halloh. 2,005,187; June 18.
Hair waving device, Permanent. W. H. Cooper. 2,005,288; June 18.
Halogenated ethane derivatives containing fluorine, Production of. H. W. Daudt and M. A. Youker. 2,005,708; June 18.
Handle attachment for liquid or powder-containing cans. J. A. Berchale. 2,005,528; June 18.
Handle fastening device. F. M. Spezzano. 2,005,353; June 18.
Hanger: *See*—
Beam hanger. Garment hanger.
Flash light hanger.
Harmonica. W. R. Steele. 2,005,443; June 18.
Harrow with right and left turning mechanism, Disk. S. S. Furrer. 2,005,225; June 18.
Hat cleaning device. H. Schlesinger. 2,005,327; June 18.
Header slide. W. W. Crilley. 2,005,222; June 18.
Headlamps incorporating glare-preventing devices. S. E. Talbot. 2,005,058; June 18.
Headlight lamp. F. Mayo. 2,005,194; June 18.
Heat treatment of substances in rotary tube furnaces, Process of and apparatus for the. C. P. Debuch and E. Markworth. 2,005,648; June 18.
Heater: *See*—
Automobile heater. Electric fluid heater.
Heater cabinet construction, Sill. C. W. Colby. 2,005,313; June 18.
Heating apparatus. C. A. and A. R. Dunham. 2,005,224; June 18.
Heels to shoes, Attaching. D. E. Cool. 2,004,979; June 18.
Hobbyhorse. F. G. Dennison. 2,005,181; June 18.

Holder: *See*—
Cigarette holder. Rug holder.
Flower holder. Shoulderstrap holder.
License plate holder. Wheel holder.
Multiple line holder.
Horn, Vehicle. J. E. Griffin. 2,005,620; June 18.
Hose coupling. G. Davis and J. H. Davis. 2,005,613; June 18.
Hose coupling. P. H. Williams. 2,004,967; June 18.
Hosiery, Mechanism for narrowing flat knit full fashioned. G. Gastrich. 2,005,461; June 18.
Hub cap and wheel lock, Theft resisting. J. T. Duarte. 2,005,535; June 18.
Hydrocarbons, Production of fluorinated acyclic. L. C. Holt and E. L. Mattison. 2,005,713; June 18.
Hydrocarbons, Refining of. L. D. Jones and E. M. James. 2,005,342; June 18.
Ice refrigerating system, Dry. W. W. Carson, Jr. 2,005,611; June 18.
Igniting device for oil burners. I. V. Abadjieff. 2,005,065; June 18.
Incinerator furnace. J. E. Greenawalt. 2,005,082; June 18.
Inclinometer. E. C. Potterf. 2,005,634; June 18.
Index, Card. R. A. Chadwick, Jr. 2,005,453; June 18.
Indicating device. W. F. Bull. 2,005,452; June 18.
Indicator: *See*—
Aircraft deviation indicator. Specific gravity indicator.
Weight indicator.
Inductance device, Variable. W. J. Polydoroff. 2,005,203; June 18.
Induction machine. E. W. Petersen and W. A. Singer. 2,005,201; June 18.
Inductive device. F. J. Given. 2,005,582; June 18.
Ingot, Centrifugally-cast circular. J. L. Adams, Jr. 2,005,175; June 18.
Ingots, Casting metal. A. R. Rowe. 2,005,169; June 18.
Ingots, Making composite. F. R. Frost. 2,005,338; June 18.
Ink to ink transfer members, Supplying. G. E. Pelton. 2,005,503; June 18.
Inlet structure for conduits, Adjustable. E. F. Murray. 2,005,297; June 18.
Insulated metallic container. E. D. Thompson. 2,005,247; June 18.
Insulating material and waterproofing same, Heat. E. A. Toohey and A. Hughes. 2,005,356; June 18.
Insulator for storage battery plates. T. A. W. Thomas. 2,005,275; June 18.
Internal combustion engine. E. C. Gutzwiller. 2,005,141; June 18.
Iron blues, Manufacture of. S. F. Grove. 2,005,697 8; June 18.
Iron, Electric. F. W. Scharf. 2,004,962; June 18.
Jar, Torsion set rotary. J. A. Kammerdiner. 2,005,228; June 18.
Jelly, Making. G. MacLean. 2,005,095; June 18.
Joint: *See*—
Expansion and contraction. Universal joint.
Joint.
Journal lubricator, High pressure. J. F. Hermann. 2,005,464; June 18.
Key blank. M. Falk. 2,005,497; June 18.
Keyhole illuminating device. G. J. Taylor. 2,005,274; June 18.
Knitted fabric. K. R. Lieberknecht. 2,005,093; June 18.
Knitting machine. F. R. Page. 2,005,632; June 18.
Lace attachment for full fashioned knitting machines. G. Bitzer. 2,005,070; June 18.
Ladder. M. A. Nunes. 2,005,384; June 18.
Lamp: *See*—
Headlight lamp.
Lampshade cover, Adjustable protective transparent. S. J. Brandstein. 2,005,531; June 18.
Last. H. L. Moorhouse. 2,005,324; June 18.
Lathe. W. J. Merrigan. 2,005,101; June 18.
Lathe, Electrically operated. R. D. Shaw. 2,005,509; June 18.
Lenses, Mounting. F. A. Brauchl. 2,004,923; June 18.
License plate holder, Automobile. K. Endlich. 2,005,703; June 18.
Lift mechanism for tractor drawn implements. J. Morkovski. 2,005,555; June 18.
Lifter: *See*—
Utensil lifter.
Light display apparatus. J. M. High. 2,005,421; June 18.
Light for gasoline dispensing nozzles. S. K. Wood, B. L. Eales, and L. V. De Witt. 2,005,251; June 18.
Light sensitive apparatus. W. F. Tedham. 2,005,059; June 18.
Lighter. G. P. Schmitt. 2,005,476 8; June 18.
Liner for fruit boxes. C. E. Ridgway. 2,005,594; June 18.
Liners, Method of and apparatus for positioning. A. J. Dowd. 2,005,577; June 18.
Link. R. F. Peo. 2,005,004; June 18.
Liquid pump, Temperature responsive. E. L. Mayo. 2,005,193; June 18.
Liquids from hides, skins, and leather, Removing. J. H. Connor. 2,004,930; June 18.
Liquors, Concentrating waste. C. C. Hunicke and C. L. Wagner. 2,005,422; June 18.
Lithographic plate graining device. R. Fritsche. 2,005,654; June 18.
Loading device. J. W. Smith. 2,005,666; June 18.
Loading machine. M. S. Moore. 2,005,524; June 18.
Lock lid for journal boxes. A. C. Schmohl and J. P. Anderson. 2,005,479; June 18.
Locking means for distributors. E. Rick and J. Bonnie. 2,005,393; June 18.
Locomotive. J. P. Ruth. 2,005,562; June 18.
Loom and thread measuring and cutting mechanism therefor, Shuttleless. W. Pool. 2,005,390; June 18.
Loom and weft-selecting mechanism therefor, Shuttleless. W. Pool. 2,005,391; June 18.
Lubricating compounds, Solid. C. A. Miller and D. A. Smith. 2,005,553; June 18.
Lubricating system. S. S. Roberts. 2,005,166; June 18.
Lubricator: *See*—
Journal lubricator.
Machine for cleaning window shades. P. F. Nardulli and M. J. Nardulli. 2,005,199; June 18.
Machine for operating upon shoes. A. R. Morrill. 2,005,104; June 18.
Machine for making plant protectors. W. R. Schindler. 2,005,326; June 18.
Machine for removing door coverings. W. E. Overell. 2,005,630; June 18.
Machine for slitting covers attached to heels. N. H. Knowlton. 2,005,040; June 18.
Machine for treating gravel, sand and like materials. W. L. Wettlaufer. 2,004,965; June 18.
Machine tool. G. Gerton, III, P. M. Henkes and G. Horner. 2,005,696; June 18.
Magnetic testing apparatus and method. S. Specht. 2,005,041; June 18.
Magnifying attachment for slide rules. H. P. Clausen. 2,005,362; June 18.
Marker. E. G. Brummud. 2,005,217; June 18.
Marker, Automatic book. R. R. Roberts; 2,005,559; June 18.
Marker for cotton bales, Permanent. M. L. Brown and S. Brown. 2,004,924; June 18.
Marker, Traffic. G. Segelhorst. 2,005,170; June 18.
Mask, Breathing. L. V. Boolarin. 2,005,072; June 18.
Mask, Buck. T. J. Dracott, Jr. 2,005,649; June 18.
Mat, Floor. E. C. Matteson. 2,005,659; June 18.
Materials, Apparatus for washing or treating. W. F. Trandt. 2,005,015; June 18.
Materials, Determining wearing qualities of. W. A. Harrington. 2,005,521; June 18.
Mechanical movement. N. C. Rubin. 2,005,051; June 18.
Metal, Apparatus for shipping. W. C. Tumplin. 2,005,117; June 18.
Metal processing machine. H. G. R. Bennett. 2,005,127; June 18.
Metal, Rolling sheet. W. L. Goodhue. 2,005,315; June 18.
Metal strips, Apparatus for coating. T. D. Williams. 2,005,307; June 18.
Metal, Treating molten. E. P. Fleming and S. L. Palmer. 2,005,540; June 18.
Metals, Process and bath for pickling. V. Voorhees. 2,005,605; June 18.
Metals, Spot welding refractory. W. W. Eitel and J. McCullough. 2,005,256; June 18.
Metallic receptacle. E. D. Thompson. 2,005,248; June 18.

Metals, Pickling of ferrous. W. P. ter Horst. 2,005,601; June 18.
Meter: *See*—

Shield, Dress. H. V. Marsh. 2,005,232; June 18.
Shingle. R. W. Clough. 2,005,335; June 18.
Shock absorber. R. F. Peo. 2,004,960; June 18.
Shoe. J. Sandler. 2,005,007; June 18.
Shoe. F. P. Wagner. 2,005,071; June 18.
Shoe and the manufacture thereof. M. H. Randall. 2,005,048; June 18.
Shoe press pad. W. C. Card, Jr. 2,005,177; June 18.
Shoe size measuring device. L. L. Levy. 2,005,428; June 18.
Shoes and other articles to pressure, Apparatus for subjecting. O. Habicht. 2,005,621; June 18.
Shoes, Manufacturing. J. K. Smith. 2,005,054; June 18.
Shop instrument. H. F. Peterson. 2,005,106; June 18.
Shoulder strap holder. W. J. Smith. 2,005,569–70; June 18.
Shovel, Coal. J. H. Fisher. 2,005,416; June 18.
Shovel, Hydraulic power. W. W. Sloane. 2,005,482; June 18.
Shower bath apparatus. G. E. Mears. 2,005,196; June 18.
Shut-off device for gas heated liquid heaters, Gas and liquid. E. Wender. 2,005,403; June 18.
Shuttle, Automatically threading. I. Snow. 2,005,636; June 18.
Sign: *See*—
Display sign. Glow discharge sign.
Signal: *See*—
Stop and turn signal.
Signal apparatus. F. A. Anderson. 2,005,214; June 18.
Signaling device. B. L. Bobroff. 2,005,714; June 18.
Signaling device. L. N. Hampton and A. K. Smith. 2,005,583; June 18.
Silico fluorides, Production of. E. G. L. Abel. 2,005,488; June 18.
Silk, Manufacture of viscose artificial. H. Sagar, E. Van Weyenbergh, and R. O. Jones. 2,005,664; June 18.
6-methoxy-6'-ethoxythioindigo. C. Krauss and W. Brunner. 2,005,041; June 18.
Slab for viscous liquids, Cooling. E. Metcalfe-Shaw. 2,005,271; June 18.
Slicing machine. C. S. Reed and A. Rubin. 2,005,109; June 18.
Slide device, Extension. M. Wurm. 2,005,213; June 18.
Slow-opening valve. W. A. Ray. 2,005,266; June 18.
Snow-plow, Combination. F. Williams. 2,005,392; June 18.
Soap base, Refining a. J. W. Bodman. 2,005,333; June 18.
Soaps, Producing high-percentage transparent. W. Pape. 2,005,160; June 18.
Solder coupling. A. H. Herr. 2,005,189; June 18.
Sole affixing machine. W. C. Card, Jr. 2,005,610; June 18.
Sole-affixing machine. E. T. Franzen. 2,005,616; June 18.
Solution of morphine, Stable. A. Steinbrenck. 2,005,667; June 18.
Sound recording device, Regenerative. B. Kwartin. 2,005,425; June 18.
Sound reproducing apparatus. M. C. Batsel. 2,005,068; June 18.
Sound reproduction projector. G. B. Scheibell. 2,005,596; June 18.
Spar, Purifying natural heavy. J. and M. Müller. 2,005,296; June 18.
Specific gravity indicator. F. E. E. Booss. 2,005,671; June 18.
Spool making machine, Automatic all-metal. J. G. Jones and H. G. Dewey. 2,005,375; June 18.
Spring: *See*—
Valve spring.
Spring structure. W. A. Clark. 2,005,545–5; June 18.
Spring suspension mechanism for vehicles. H. C. Weaver. 2,005,513; June 18.
Spuds and similar fittings in range boilers and other vessels, pipes, etc., Securing. H. W. Kamack. 2,005,087; June 18.
Stairway, Moving. W. S. Graff-Baker. 2,005,067; June 18.
Stand: *See*—
Rack and display stand.
Standard, Folding. G. K. Parsons. 2,005,002; June 18.
Steam trap. J. W. Kaye. 2,004,953; June 18.
Stoker drive mechanism. H. E. Preston. 2,005,005; June 18.
Stop and turn signal. F. Mamlya. 2,005,658; June 18.
Store with revoluble shelves, Self-service. J. H. Carroll 2,005,286; June 18.
Stove, Gas. J. C. Rogers. 2,005,242; June 18.
Strainer for sinks. I. L. Flun. 2,005,459; June 18.
Stylus feed mechanism for phonographs. R. F. Mallins. 2,005,588; June 18.
Suction filter. H. Zimmer. 2,005,406; June 18.
Suit, Safety bathing. J. Fried. 2,005,460; June 18.
Support: *See*—
Brake beam safety support. Plant support.
Brake beam support. Roller and curtain rod support.
Hearing device support. Window curtain support.
Support fastening for portable suction cleaners, Dust bag. H. Hertz. 2,005,690; June 18.
Support for a legless seat, Head and back. H. J. Harryman. 2,005,463; June 18.
Support for flexible posters. J. N. Emley. 2,005,134; June 18.
Support for portable suction cleaners, Dust bag. H. Hertz. 2,005,691; June 18.
Supporter, Hose. M. Hawie. 2,005,622; June 18.
Suspension device, Adjustable. E. J. Casper. 2,005,334; June 18.
Switch: *See*—
Electric switch. Monorail switch.
Electrical switch. Selective switch.
Gear shift lever switch. Time controlled switch.
Switch and mounting for same, Thermostatic. F. W. Scharf. 2,004,963; June 18.
Switch mechanism, Delayed action. I. E. McCabe. 2,005,195; June 18.
Switch structure. E. J. Dyess. 2,005,413; June 18.
Switches in totalizer systems, Control of. F. Limb. 2,005,151; June 18.
Synchronizing system. A. M. Marks. 2,005,153; June 18.
Table: *See*—
Folding table.
Table seat. E. Fischoff. 2,005,652; June 18.
Table top, Tiltable. W. J. Merrigan. 2,005,100; June 18.
Tag-fastener and guide therefor. S. Weiss. 2,005,119; June 18.

Tamper and like impact tool. C. Jackson. 2,004,988; June 18.
Tandem power press. J. P. Singiser. 2,005,171; June 18.
Tangent. J. C. Diehl. 2,005,025; June 18.
Tank cleaning device. J. A. Cronin. 2,005,180; June 18.
Tank closures. J. Nelson and V. C. Norquist. 2,005,469; June 18.
Tapering mechanism. G. M. Pelton. 2,005,387; June 18.
Tapping furnace. W. C. Hogg. 2,005,143; June 18.
Tar, Distillation of. S. P. Miller. 2,005,102; June 18.
Telephone system. J. Mezar. 2,005,590; June 18.
Telephone system. F. A. Roome and H. W. Haffter. 2,005,357; June 18.
Telephone time-announcing system. T. W. Varley. 2,005,357; June 18.
Television apparatus and method. LeR. J. Leishman. 2,005,344; June 18.
Temperature controlling device. A. H. Heyroth. 2,005,584; June 18.
Templet, Letter outlining. H. De Oslund. 2,005,255; June 18.
Textile materials, Impregnation of. P. Schidrowitz. 2,005,637; June 18.
Threshing. E. E. Wickersham. 2,005,212; June 18.
Throttle control mechanism. F. E. Liverance, Jr. 2,005,202; June 18.
Ticket and ticket holder. M. Macdonald. 2,005,346; June 18.
Tile. H. Marsh and R. M. Chesney. 2,005,380; June 18.
Tiling and the like. G. H. Lenke. 2,005,427; June 18.
Tillage disk bearing. A. E. W. Johnson. 2,005,547; June 18.
Time controlled mechanism. J. L. Franklin. 2,005,653; June 18.
Time controlled switch. P. Hungerbühler. 2,005,085; June 18.
Tire construction for vehicles, Twin. P. M. Bourdon. 2,005,922; June 18.
Toaster. A. J. Braun. 2,005,253; June 18.
Toaster construction. P. O. Derringer. 2,005,364; June 18.
Toaster, Electric. C. P. Randolph. 2,005,635; June 18.
Tool: *See*—
Camper's tool.
Glass breaker tool.
Machine tool.
Tamper and like impact tool.
Tool and accessory container. P. O. Wood. 2,005,285; June 18.
Tool assembly, Automatic machine. R. F. Sanchez and B. M. Zallo. 2,005,563; June 18.
Tool machine, Opposed reciprocatory. H. M. Johnston 2,005,319; June 18.
Toothbrush. E. Doll. 2,005,337; June 18.
Torque-measuring device. B. F. Jenkins. 2,004,950; June 18.
Track assembly. W. K. McMillan. 2,005,436; June 18.
Tractor cultivator. W. S. Graham. 2,005,618; June 18.
Tractor wheel. W. H. Ledbetter. 2,005,550; June 18.
Tramway, Aerial. C. C. Beatty and E. J. Lloyd. 2,005,126; June 18.
Transformer tap changing mechanisms. O. P. McCarty. 2,004,998; June 18.
Transmission. C. W. Weiss. 2,005,444; June 18.
Transmission, Change speed. C. A. Roeder. 2,005,167; June 18.
Transmission control, Motor vehicle. C. F. Pilcher 2,005,389; June 18.
Transmission system. C. W. Hansell. 2,005,084; June 18.
Transmission, Variable speed. J. P. Johnson 2,005,227; June 18.
Trap: *See*—
Animal trap.
Steam trap.
Tray, Ice cube. A. S. Halslip. 2,005,292; June 18.
Tray, Safety ash. B. T. Wall. 2,005,606; June 18.
Tripropolin, Manufacture of. D. C. Hull. 2,005,371; June 18.
Truck, Coal delivery. E. H. McAfee. 2,005,552; June 18.
Tube: *See*—
Vacuum tube.
Tube cleaner. O. J. Bagnoll, T. C. Wilson and J. H. Young. 2,005,359; June 18.
Tube expanding mill. B. C. Moise. 2,005,155; June 18.
Tubes, Making. C. H. Wallis. 2,005,306; June 18.
Tubes, Operation of thermionic. F. A. Parsons. 2,005,237; June 18.
Tubular members, Connecting. M. H. Rix. 2,005,205; June 18.
Tumbler, Drying. C. M. Otis. 2,005,386; June 18.
Turnstile. D. R. Bacon and L. H. Downs. 2,004,971; June 18.
2-acetylamino-3-chloranthraquinone, Product of. F. Helwert and A. Palm. 2,005,317; June 18.
Typewriter attachment. D. Friesel. 2,004,938; June 18.
Typewriting machine. M. Garbell. 2,005,185; June 18.
Universal joint. E. F. Pilger. 2,005,202; June 18.
Upholstery covering structure. W. I. Jones. 2,005,670; June 18.
Upholstery panels and applying fasteners thereto, Making. R. F. Walters. 2,005,669; June 18.
Urea-formaldehyde condensation products and artificial material therefrom, Manufacture of. R. Armenault. 2,004,970; June 18.
Urea with formaldehyde or the polymeric bodies thereof and the product obtained therefrom, Condensing. J. Malet and R. Armenault. 2,004,996; June 18.
Utensil lifter, Kitchen. O. Haemmerle. 2,005,032; June 18.
Vacuum device. R. F. Gowen and J. L. Bradford. 2,005,419; June 18.
Vacuum tube. A. Brasch and F. Lange. 2,005,021; June 18.
Vacuum tube grid. W. W. Ellel and J. McCullough. 2,005,257; June 18.
Valve: *See*—
Slow-opening valve.
Valve. G. S. Bowes. 2,005,128; June 18.
Valve assembly for well pumps. J. Penrod. 2,005,299; June 18.
Valve for producing alternating currents, Ion. K. E. Eriksson and U. Lamm. 2,005,458; June 18.
Valve generator, Stabilizing the frequency of a. E. B. Moullin. 2,005,236; June 18.
Valve spring. H. Krebs. 2,005,089; June 18.
Valve stamping device. M. Kálmán. 2,005,038; June 18.
Vaporizer. C. J. Loos and L. J. Miller. 2,005,229; June 18.
Vaporizer. W. Schmidt. 2,005,244; June 18.
Vaporizer and burner, Fuel. C. A. French. 2,005,541; June 18.
Variable condenser. C. A. Mayer. 2,005,098; June 18.
Variable resistance device. F. L. Creager. 2,005,456; June 18.
Vegetable growths to produce cellulose, Digestion of. H. B. Kipper. 2,005,190; June 18.
Vehicle drive, Motor. C. M. McLanahan. 2,005,263; June 18.
Vehicle lifting and traversing device. B. Walker. 2,005,173; June 18.
Vehicle, Motor. H. D. Church. 2,005,312; June 18.
Vehicle, Motor. A. Moorhouse. 2,005,103; June 18.
Vehicle seat. LeR. Smelker. 2,005,112; June 18.
Vehicle wheel. A. G. Maranville. 2,005,628; June 18.
Vending machine. S. M. Malkin. 2,005,097; June 18.
Veneer fastening means. N. O. Geisinger. 2,005,030; June 18.
Ventilating means. R. G. Ferris. 2,005,615; June 18.
Veterinary instrument. F. Ellsworth. 2,005,289; June 18.
Vizor or sunshade, Polarizing. E. H. Land. 2,005,426; June 18.
Voltage regulator. F. C. Coates. 2,005,363; June 18.
Wagon, Folding caddy. E. J. Schwabe. 2,005,566; June 18.
Wall assembly, Partition. G. F. Kotrbaty. 2,005,145; June 18.
Wall structure. G. H. Knemmerling. 2,005,376; June 18.
Washer: *See*—
Outboard motor washer.
Washer and drier, Golf ball. J. C. Stutz. 2,005,115; June 18.
Washing machine. C. T. Childers. 2,005,287; June 18.
Water tube boiler. F. Graafen. 2,005,543; June 18.
Waver, Marcel. A. J. Janda. 2,005,465; June 18.
Weather stripping. D. Abernethy. 2,004,959; June 18.
Weight indicator, Molecular. C. D. Koski. 2,005,191; June 18.
Welding burner. J. L. Anderson. 2,005,308; June 18.
Welding, Method and apparatus for. J. L. Adams, Jr. 2,005,329; June 18.
Wheel: *See*—
Aircraft landing wheel.
Airplane landing wheel.
Car wheel.
Tractor wheel.
Vehicle wheel.
Wheel holder. I. J. Patton and H. J. Terrill. 2,005,003; June 18.
Wheel puller. A. L. Cornwell. 2,005,534; June 18.
Windmill. O. R. Olson and H. L. Mika. 2,005,470; June 18.
Window curtain support. G. M. O. Jenkins. 2,005,546; June 18.
Wiper and heater, Combination windshield. E. B. Gary and E. A. Ebert. 2,005,581; June 18.
Wire gauze, Process and apparatus for the manufacture of. K. Schmid. 2,005,270; June 18.
Wireless apparatus. A. V. Pettman and W. Reed-Lethbridge. 2,005,388; June 18.
Work pieces, Apparatus for sinking tubular. R. Bannister. 2,005,125; June 18.
Wrapper, Package. I. S. Rosenblatt. 2,005,351; June 18.
Wrapping. J. Schuchat. 2,005,208; June 18.
Writing implement. R. W. Ritzert 2,005,110; June 18.
X-ray apparatus. J. M. Houtman. 2,005,035; June 18.
Yarn. S. K. Everett. 2,005,539; June 18.
Yarns, Apparatus for splicing. R. H. Chase. 2,005,129; June 18.

CLASSIFICATION OF PATENTS

ISSUED JUNE 18, 1935

NOTE.—First number—class, second number—subclass, third number—patent number

Des. R. 19,618
1— 13.6: 2,005,439
2— 30: 2,005,612
53: 2,005,232
74: 2,004,985
198: 2,005,361
231: 2,005,480
4— 3: 2,004,933
154: 2,005,196
185: 2,005,576
290: 2,005,459
8— 2: 2,005,448
5: 2,005,182
2,005,303
6: 2,005,347
9— 20: 2,005,460

CLASS 1

Earth and the like, Sterilized. W. C. Duckham. 325,545; June 25; Serial No. 359,714; published Apr. 16, 1935.

Hair and fibre, Animal. A. Statnekoo. 325,522; June 25; Serial No. 361,338; published Apr. 16, 1935.

Packing materials, bedding and upholstery supplies. Alpine Excelsior Co. 325,546; June 25; Serial No. 359,840; published Apr. 9, 1935.

Skins, Deer. H. Loewenstein. 325,519; June 25; Serial No. 361,394; published Apr. 16, 1935.

CLASS 2

Bags, Cotton. Boott Mills. 106,401; renewed Oct. 19, 1935.

Containers composed of paper. American Paper Goods Company. 325,491; June 25; Serial No. 361,705; published Apr. 16, 1935.

Containers of metal for fluids, Dispensing. Mirax Chemical Products Corporation. 325,485; June 25; Serial No. 360,723; published Apr. 16, 1935.

CLASS 4

Cleaner, dressing, and/or polish, Liquid and/or paste. Signal Chemical Co. 325,523; June 25; Serial No. 361,280; published Apr. 16, 1935.

Polish for metals, glass, marble, etc. J. Mendelbaum. 325,498; June 25; Serial No. 361,685; published Apr. 16, 1935.

Polish, Shoe. F. H. Rand. 325,547; June 25; Serial No. 359,928; published Apr. 16, 1935.

Preparation for cleaning and whitening all kinds of white shoes. Sno-Kote Company. 325,480; June 25; Serial No. 362,096; published Apr. 16, 1935.

Soap. Otten and Lundahl. 325,415; June 25; Serial No. 359,398; published Apr. 16, 1935.

CLASS 6

Agar-agar. L. Oliver. 325,532; June 25; Serial No. 360,324; published Apr. 16, 1935.

Ampoules containing local anesthetic material. Reliance Dental Manufacturing Co. 325,562; June 25; Serial No. 341,842; published Apr. 16, 1935.

Anterior-pituitary-hormone medicinal product for the control of thyroid dys-functions. Ayerst, McKenna & Harrison, Ltd. 325,526; June 25; Serial No. 361,249; published Apr. 16, 1935.

Antirheumatic. Bayer Company. 106,200; renewed Oct. 19, 1935.

Astringents, astringent cerates, bleach and beauty creams, etc. Irresistible, Inc. 325,459-60; June 25; Serial Nos. 361,465-6; published Apr. 16, 1935.

Bleaching and disinfective tablets. Midland Chemical Company. 325,440; June 25; Serial No. 361,021; published Apr. 16, 1935.

Boiler feed water compound. Sugar Beet Products Company. 325,513-14; June 25; Serial Nos. 360,806-7; published Apr. 16, 1935.

Carbon, Activated. General Carbon & Chemical Corporation. 325,418; June 25; Serial No. 349,678; published Apr. 16, 1935.

Concentrated vitamin B medicinal product of a highly concentrated form of brewers' yeast (saccharomyces cerevisiae) and wheat embryo. Ayerst, McKenna & Harrison, Ltd. 325,527; June 25; Serial No. 361,247; published Apr. 16, 1935.

Cream, anti-wrinkle cream, hair tonic, etc., Acne. Marie Tomlin, Inc. 325,419; June 25; Serial No. 349,691; published Apr. 16, 1935.

Creams, nail powders, nail polishes, etc., Nail. Irresistible, Inc. 325,455; June 25; Serial No. 361,470; published Apr. 16, 1935. Class 6.

Energy-transmitting fluids for use in hydraulic brake systems, shock absorbers, etc. Acheson Colloids Corporation. 325,416; June 25; Serial No. 359,493; published Apr. 16, 1935.

Eyebrow and eyelash grower, eyedrops, eyebrow pencils, etc. Irresistible, Inc. 325,456-7; June 25; Serial Nos. 361,468-9; published Apr. 16, 1935.

Hernial solution. Pina-Mestre Clinics, Inc. 325,421; June 25; Serial No. 350,053; published Apr. 16, 1935.

Insecticides, Agricultural and animal. S. B. Penick & Company. 325,432-3; June 25; Serial Nos. 361,182-3; published Apr. 16, 1935.

Lipsticks, rouge, perfumes, etc. J. L. Younghusband. 325,518; June 25; Serial No. 361,407; published Apr. 16, 1935.

Medical substance, Antigonorrheic and astringent. Bayer Company. 106,285; renewed Oct. 19, 1935.

Medicinal preparation. Hoffmann-La Roche, Inc. 325,517; June 25; Serial No. 361,419; published Apr. 16, 1935.

Medicinal preparation for oak and ivy poison, sunburn, prickly heat rash, etc. S. Pfeiffer Manufacturing Company. 324,505; June 25; Serial No. 361,538; published Apr. 16, 1935.

Medicinal preparation for the relief of head and chest colds. S. Pfeiffer Manufacturing Company. 325,469; June 25; Serial No. 361,537; published Apr. 16, 1935.

Medicinal preparation for the treatment of burns. Upjohn Company. 325,506; June 25; Serial No. 361,491; published Apr. 16, 1935.

Medicinal preparation to be used as an antiseptic. Upjohn Company. 325,451-2; June 25; Serial Nos. 361,488-9; published Apr. 16, 1935.

Medicinal preparation to be used as an antiseptic. Upjohn Company. 325,507; June 25; Serial No. 361,490; published Apr. 16, 1935.

Medicinal tablets. Modern Laboratories. 325,508; June 25; Serial No. 360,853; published Apr. 16, 1935.

Medicine. H. Knorr. 12,393; re-renewed July 7, 1935.

Medicines, Veterinary. C. D. Bell. 325,548; June 25; Serial No. 359,940; published Apr. 16, 1935.

Ointment. Remederm Corporation. 325,483; June 25; Serial No. 360,904; published Apr. 16, 1935.

Pharmaceutical preparation. S. H. P. Lee Co. Inc. 325,429; June 25; Serial No. 354,511; published Apr. 16, 1935.

Purgative. Bayer Company. 106,201; renewed Oct. 19, 1935.

Rouge, talcum, perfume, etc. Viennese Laboratories, Inc. 325,551; June 25; Serial No. 360,424; published Apr. 16, 1935.

Salves, hair elixers, hair oils, etc., Hair. Irresistible, Inc. 325,458; June 25; Serial No. 361,467; published Apr. 16, 1935.

Sedative. Bayer Company. 106,199; renewed Oct. 19, 1935.

Sedative and hypnotic. Bayer Company. 106,202; renewed Oct. 19, 1935.

Solutions, powders, etc., for medical treatment of the skin, Alcoholic. A. J. H. Kongsted. 325,425; June 25; Serial No. 353,479; published Apr. 16, 1935.

Specific activators of the intestinal digestive glands. Armour and Company. 105,180; renewed July 13, 1935.

Toilet preparations. Mary Chess, Inc. 325,423; June 25; Serial No. 351,346; published Apr. 16, 1935.

Tooth powder. Dox Company. 325,552; June 25; Serial No. 360,433; published Apr. 16, 1935.

Veterinary preparations. Bob Martin (Export) Limited. 325,524; June 25; Serial No. 361,277; published Apr. 16, 1935.

CLASS 8

Ash trays. H. E. Watson. 325,528; June 25; Serial No. 361,237; published Apr. 16, 1935.

CLASS 9

Blasting caps, Electric. Hercules Powder Company. 325,488; June 25; Serial No. 361,841; published Apr. 16, 1935.

Matches. Ohio Match Company. 106,662; renewed Oct. 26, 1935.
Powder, Smokeless rifle. Hercules Powder Company. 106,325; renewed Oct. 19, 1935.

CLASS 10

Fertilizers. Patapsco Guano Company. 95,345; renewed Feb. 10, 1934.
Fertilizers. Southern Fertilizer & Chemical Company. 325,496; June 25; Serial No. 361,707; published Apr. 16, 1935.

CLASS 11

Ink, Printing. General Printing Ink Corporation. 325,399; June 25; Serial No. 357,814; published Apr. 16, 1935.
Inks and materials for producing same, Printing and lithographic. E. J. Kelly Co. 325,442; June 25; Serial No. 361,969; published Apr. 16, 1935.

CLASS 12

Brick, Refractory. Laclede-Christy Clay Products Company. 325,499; June 25; Serial No. 361,680; published Apr. 16, 1935.
Insulation material, Heat and sound. Universal Insulation Company. 325,529–30; June 25; Serial Nos. 361,195–6; published Apr. 16, 1935.
Insulation material, Thermal. May Oil Burner Corporation. 325,409; June 25; Serial No. 358,740; published Apr. 16, 1935.
Preparations for waterproofing and weatherproofing cement, bricks, etc., Chemical. Weatherfend Products, Inc. 325,350; June 25; Serial No. 360,328; published Apr. 16, 1935.
Wall board, Thermal and sound insulating. Plastergon Wall Board Company. 325,492; June 25; Serial No. 361,767; published Apr. 16, 1935.

CLASS 13

Bolts. N. Mellor. 105,804; renewed Aug. 17, 1935.
Chains and parts, of steel or other base metals, used in machinery and general purposes. Jeffery Manufacturing Company. 106,915; renewed Aug. 24, 1935.
Fasteners, Slide. Crown Fastener Corporation. 325,543; June 25; Serial No. 359,615; published Apr. 16, 1935.
Fencing, gates, and fence-posts, Metal. Dwiggins Wire Fence Company. 104,381; renewed May 25, 1935.
Regulators, Gas pressure. Air Reduction Sales Company. 325,449; June 25; Serial No. 361,866; published Apr. 16, 1935.
Sinks, bathtubs, lavatories, etc. Sears, Roebuck and Co. 325,536; June 25; Serial No. 360,001; published Apr. 16, 1935.

CLASS 14

Electrodes, Welding. American Murex Corporation. 325,438; June 25; Serial No. 361,042; published Apr. 16, 1935.
Metal, Babbit and anti-friction. E. L. Post & Co. Inc. 325,431; June 25; Serial No. 361,186; published Apr. 16, 1935.
Steel blocks and bars, forged pieces for machines, artisans' tools, etc. Poldihütte Tiegelgusstahlfabrik. 103,206; renewed Mar. 23, 1935.

CLASS 15

Candles. Socony-Vacuum Oil Company. 325,450; June 25; Serial No. 361,864; published Apr. 16, 1935.
Gasoline. Interurban Petroleum Corp. 325,560; June 25; Serial No. 346,639; published Apr. 16, 1935.
Gasoline, Ohio River Refining and Terminal Company. 325,404; June 25; Serial No. 358,563; published Apr. 16, 1935.
Gasoline, kerosene, oils and greases. Oil Refineries, Inc. 325,439; June 25; Serial No. 361,059; published Apr. 16, 1935.
Greases, Lubricating. Standard Oil Company of New Jersey. 325,486; June 25; Serial No. 361,857; published Apr. 16, 1935.
Oil, Automobile. Sears, Roebuck and Co. 104,846; renewed June 22, 1935.
Oil, Motor. Superior Oil Works. 325,573; June 25.

CLASS 16

Colors, Oil. F. Weber Co. 325,540; June 25; Serial No. 338,120; published Apr. 16, 1935.
Paint, Tar. Colorado Fuel and Iron Products Company. 325,555; June 25; Serial No. 360,524; published Feb. 26, 1935.
Paints, varnishes, etc., Ready-mixed. E. O. Gillen Corporation. 325,410; June 25; Serial No. 359,163; published Apr. 16, 1935.
Varnishes, paints, enamels, etc. Chi-Namel Company. 325,417; June 25; Serial No. 359,613; published Apr. 16, 1935.

CLASS 17

Osterman, Samuel, New York, N. Y., assignor to Guth, Stern & Co., Inc. Combined flash light and umbrella handle or similar article. 96,050; June 25.
Osterman, Samuel, New York, N. Y., assignor to Guth, Stern & Co., Inc. Combined flash light and umbrella handle or similar article. 96,051; June 25.
Osterman, Samuel, New York, N. Y., assignor to Guth, Stern & Co., Inc. Combined apparel holder and umbrella handle or similar article. 96,052; June 25.
Osterman, Samuel, New York, N. Y., assignor to Guth, Stern & Co., Inc. Combined apparel holder and umbrella handle or similar article. 96,053; June 25.
Panther-Panco Rubber Co. Inc. (See Berenstein, Frank, assignor.)
Pollack, Joseph O., Chicago, Ill. Cravat holder. 96,054; June 25.
Radio Corporation of America. (See Shrader, Terry M., assignor.)
Radio Corporation of America. (See Smith, Newell R., assignor.)
Reedy, Alfred J. (See Berry, Frank K., and Reedy, A. J.)
Ressegger, Lloyd E. (See Allen, G. N., Bennett, and Ressegger.)
Rome, Rosette, New York, N. Y. Shoe. 96,055; June 25.
Roth Fabrics Corp. (See Bruine, Andre C., assignor.)
Saker, Abraham, Chicago, Ill. Finger ring. 96,056; June 25.
Scacco, Jack, New York, N. Y. Shoe. 96,057; June 25.
Scheuer, Samuel, New York, N. Y. Hat. 96,058; June 25.
Schumacher, Albert, assignor to Botany Worsted Mills, Passaic, N. J. Textile fabric or similar article of manufacture. 96,059; June 25.
Schwartz, Hyman, New York, N. Y. Game board or similar device. 96,060; June 25.
Seng Company, The. (See Fox, Martin, assignor.)
Sheaffer, W. A., Pen Company. (See Cuthbert, William R., assignor.)
Sheffield Silver Co. (See Mascuch, Frank J., assignor.)
Shrader, Terry M., West Summit, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Electron discharge device. 96,061; June 25.
Smith, Newell R., Bloomfield, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Electron discharge device. 96,062; June 25.
Superion Felt & Bedding Co. (See Bowersox, Joseph W., assignor.)
Thorne, George T., assignor to Universal Button Fastening & Button Company, Detroit, Mich. Button. 96,063; June 25.
Travis, John S., Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc. Carpet. 96,064; June 25.
Travis, John S., Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc. Carpet. 96,065; June 25.
Turiansky, Abraham, New York, N. Y. Shoe. 96,066; June 25.
Turiansky, Abraham, New York, N. Y. Shoe. 96,067; June 25.
Turiansky, Abraham, New York, N. Y. Shoe. 96,068; June 25.
United Shoe Machinery Corporation. (See Lovejoy, Fred C., assignor.)
U. S. Lace Paper Works, Inc. (See Hutt, Robert J. and G. A., assignors.)
Universal Button Fastening & Button Company (See Thorne, George T., assignor.)
Vetter, Ignatius J., New York, N. Y., assignor to Bigelow Sanford Carpet Co., Inc. Rug. 96,069; June 25.
Wange, Gilbert, Chicago, Ill. Electric flatiron. 96,070; June 25.
Weiss, Albert F., University City, Mo. Razor blade sharpener. 96,071; June 25.
Wewetzer, Albert, assignor to Illinois Watch Case Company, Elgin, Ill. Brush or similar article 96,072; June 25.
Wewetzer, Albert, Elgin, Ill. Vanity case. 96,073; June 25.
Woodward, F. Russell, Attleboro, Mass., assignor to Gorham Manufacturing Company, Providence, R. I. Spoon or other article of flatware. 96,074; June 25.
Woodward, F. Russell, Attleboro, Mass., assignor to Gorham Manufacturing Company, Providence, R. I. Spoon or other article of flatware. 96,075; June 25.
Zell, David H., Brooklyn, N. Y. Vanity case or similar article. 96,076; June 25.
Zell, David H., Brooklyn, N. Y. Vanity case or similar article. 96,077; June 25.
Zoes, C. A. Manufacturing Co. (See Chamales, Christopher J., assignor.)

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 25TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A and Z Chain Company. (See Johnson, Sylvester A., assignor.)
Aagaard, Birger, Trondhjem, Norway. Vertical card index cabinet. 2,006,288; June 25.
Adams, Chester E., and V. Voorhees, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Dewaxing mineral oils. 2,005,984; June 25.
Agfa Ansco Corporation. (See Arens, Hans, assignor.)
Agfa-Ansco Corporation. (See Bell, Lionel R., assignor.)
Agfa Ansco Corporation. (See Bornmann, C., Lessler, and Heyer, assignors.)
Agfa Ansco Corporation. (See Schmidt, Richard, assignor.)
Agfa Ansco Corporation. (See Schneider, Wilhelm, assignor.)
Ainsworth Manufacturing Corporation. (See Potter, Albert T., assignor.)
Albertson & Company. (See Albertson, Frans O., assignor.)
Albertson, Frans O., assignor to Albertson & Company, Inc., Sioux City, Iowa. Valve seat grinder. 2,005,851; June 25.
Albright, Raymond W., assignor to American Anode, Inc., Akron, Ohio. Display card and securing articles thereto. 2,005,879; June 25.
Allardt, Hans G. (See Schoeller, W., Allardt, and Feldt.)
Allen, Raymond W., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Tire building apparatus. 2,006,307; June 25.
Allmänna Svenska Elektriska Aktiebolaget. (See Lamm, Uno, assignor.)
Almquist, Milton L., Maplewood, N. J., and A. C. Thompson, New York, N. Y., assignors to American Telephone and Telegraph Company, Signaling system. 2,005,836; June 25.
American Anode, Inc. (See Albright, Raymond W., assignor.)
American Casting & Manufacturing Corporation. (See Dietze, Emil, assignor.)
American Chemical Paint Company. (See Gravell, James H., assignor.)
American Cyanamid Company. (See Moore, William, assignor.)
American Flexible Shaft Manufacture Corporation. (See Morin, Louis H., assignor.)
American Injector Company. (See Trix, Herbert B., assignor.)
American Lurgi Corporation. (See Heinemann, Karl, assignor.)
American Radiator Company. (See Morse, Clark T., assignor.)
American Radiator & Standard Sanitary Corporation. (See Cornell, Edward S., Jr., assignor.)
American Sales Book Company. (See Stevens, Gray, assignor.)
American Shoe Machinery Corporation. (See Wright, Wallace C., assignor.)
American Smelting and Refining Company. (See Betterton, J. O., and Hanson, assignors.)
American Smelting and Refining Company. (See Betterton, Jesse O., assignor.)
American Steel Foundries. (See Baselt, Walter H., assignor.)
American Telephone and Telegraph Company. (See Almquist, M. L., and Thompson, assignors.)
American Telephone and Telegraph Company. (See Newforth, Frank, assignor.)
American Zinc, Lead & Smelting Company. (See Calbeck, John H., assignor.)
American Zinc, Lead & Smelting Company. (See Elde, A. C., and Calbeck, assignors.)
Anchor Cap & Closure Corporation. (See Darling, Frank L., assignor.)
Anciens Etablissements Barbier, Benard & Turenne. (See Charvet, Gustave, assignor.)
Andersen, Paul, Brooklyn, N. Y. Push-pole vehicle. 2,005,910; June 25.
Anderson, Arvid E., Drexel Hill, Pa., assignor to General Electric Company. Automatic reclosing circuit breaker system. 2,006,254; June 25.
Anderson, Richard D., Baton Rouge, La., assignor to Standard Oil Development Company. Adjustable overflow device. 2,006,191; June 25.
Anderson, William M., Virginia, Minn. Tire-spreader. 2,005,880; June 25.
Anderson, William T., Jr., and L. F. Bird, assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J. Electrode for vapor electric devices. 2,006,081; June 25.
Andvig, Hans, Oslo, Norway. Teeth-cleansing appliance. 2,006,289; June 25.
Antranikian, Haig, Paris, France. Electromotive forces comparing device. 2,005,962; June 25.
Appleton Electric Company. (See Torublom, Nils A., assignor.)
Ard, Charles E., Birmingham, Ala., assignor to Fred C. Fantz, Webster Groves, Mo. Return bend fitting for oil stills. 2,005,768; June 25.
Arens, Hans, Dessau-in-Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Manufacture of photographic emulsions. 2,005,857; June 25.
Arf, Herman R., Elizabeth, assignor, by mesne assignments, to Carrier Engineering Corporation, Newark, N. J. System for air conditioning railroad cars. 2,005,769; June 25.
Armstrong, Adam E., Three Rivers, Mich. Steam trap. 2,005,926; June 25.
Arnold, Edwin E., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Transmission line suspension. 2,005,882; June 25.
Arnold, Edwin E., and C. L. Fortescue, Pittsburgh, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Transmission line clamp. 2,005,881; June 25.
Arthur, James F., Dickson City, Pa. Boiler coupling device. 2,006,139; June 25.
Ashbaugh, John H., Longmeadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulating system. 2,005,883; June 25.
Atwell, Harold V., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Separating wax from oil. 2,006,010; June 15.
Atwell, Harold V., White Plains, N. Y., assignor to Standard Oil Company, Chicago, Ill. Continuous propane dewaxing. 2,006,011; June 25.
Augsburg Publishing House. (See Larson, Wallace Q., assignor.)
Austin, William E., New York, N. Y., assignor to Redro Laboratories, Inc. Unsymmetrical di-alkyl or alkyl-aralkyl derivatives of resorcinol and making same. 2,006,039; June 25.
Auto Research Corporation. (See Banfield, F. E., Nutting, and Wright, assignors.)
Auto Research Corporation. (See Wright, Warren O., assignor.)
Axelberg, Einar S., Minneapolis, assignor of one-half to T. O. Ormbreck, St. James, Minn. Turn signal. 2,005,963; June 25.
Ayers Limited. (See Milnes, Tom, assignor.)
Babcock, Bulia, administratrix. (See Babcock, George M.)
Babcock, George M., deceased, by B. Babcock, Evanston, Ill., administratrix. Method of and composition for rejuvenating fabrics. 2,006,192; June 25.
Babcock, Raymond P., West Hartford, Conn. Oil burner. 2,005,964; June 25.
Baetz, Gottwald. (See Krauch, C., Eyer, Baetz, and Korn.)
Baillio, Christie N. (See Fowler, J. W., and Baillio.)
Baird, John L., assignor to Television Limited, London, England. Television apparatus. 2,006,124; June 25.
Bakelite Building Products Co. (See Harshberger, Norman P., assignor.)
Bakelite Corporation. (See Turkington, Victor H., assignor.)
Baker, John S., Evansville, Wis. Lubricating mechanism. 2,005,724; June 25.
Baker Oil Tools, Inc. (See Burt, Clarence E., assignor.)
Ball, Charles F., assignor to Chain Belt Company, Milwaukee, Wis. Closure mechanism for the discharge openings of concrete mixer drums. 2,006,206; June 25.
Bancroft, James E., assignor, by mesne assignments, to The Richmond Fireproof Door Company, Richmond, Ind. Door operating mechanism. 2,006,082; June 25.
Banfield, Frederic E., Jr., G. B. Nutting, Saco, Me., and Warren O. Wright, Freeport, N. Y. Spinning and twister frame. 2,005,725; June 25.
Banker, Oscar H., assignor to New Products Corporation, Chicago, Ill. Planetary transmission mechanism. 2,005,726; June 25.
Barber, Theodore S., Wilkes-Barre, Pa. Headlight. 2,006,125; June 25.
Barnhart, George E., Pasadena, Calif. Airfoil control means. 2,005,965; June 25.
Barrett Company, The. (See Cowdery, Arthur B., assignor.)
Barrows, Donald S., Rochester, assignor to The Symington Company, New York, N. Y. Draft rigging. 2,006,200; June 25.
Barrows, Donald S., Rochester, N. Y. Registration control for pipe organs. 2,006,201; June 25.

Barrows, Donald S., Rochester, assignor to The Symington Company, New York, N. Y. Draft rigging. 2,006,292; June 25.

Bartlett, Louis A., Pittsburgh, Pa. Shock absorber for motor vehicles. 2,005,838; June 25.

Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Brake beam fulcrum. 2,005,927; June 25.

Bassett, Lloyd L., Los Angeles, Calif. Handle for cans. 2,006,233; June 25.

Bastian-Blessig Company, The. (See Buttner, William C., assignor.)

Baudry, René. (See Stone, M., and Baudry.)

Bazzocchi, Aldo, Milan, Italy. Washing and bleaching apparatus for artificial yarns. 2,006,154; June 25.

Beagle, Ralph G., Pasadena, Calif. Adjustable flower holder. 2,005,966; June 25.

Bear, Paul S., assignor to James Heddon's Sons, Dowagiac, Mich. Hook fastening for fish lures. 2,005,985; June 25.

Beardsley, Bruce, Brooklyn, and A. Plausics, assignors to The Western Union Telegraph Company, New York, N. Y. Drag conveyer channel. 2,006,294; June 25.

Beghetti, Peter, San Francisco, Calif. Cooking kettle device. 2,005,928; June 25.

Behr, Leo, assignor to Leeds & Northrup Company, Philadelphia, Pa. Impedance set. 2,005,986; June 25.

Bell, Edward J., Chicago, Ill. Heating system. 2,006,193; June 25.

Bell, Lionel B., Rochester, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Camera. 2,005,818; June 25.

Beloit Iron Works. (See Berry, Earl E., assignor.)

Benbow, James D., and D. A. Palmer, assignor, by mesne assignments, to Western-Austin Company, Aurora, Ill. Controlling mechanism for vehicle dump doors. 2,005,737; June 25.

Berdan, Kenneth D., assignor to Michigan Electrotype and Stereotype Company, Detroit, Mich. Package. 2,005,967; June 25.

Bernarde, Henry L., Kearny, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical measuring and regulating system. 2,005,884; June 25.

Berry, Earl E., assignor to Beloit Iron Works, Beloit, Wis. Paper making apparatus and process. 2,005,929; June 25.

Berry, François J. B., Lille, France. Sorting apparatus for substances of different densities. 2,006,126; June 25.

Bertschinger, Charles F., assignor to The Scovill Manufacturing Company, Waterbury, Conn. Combination can opener, funnel, and flexible pipe attachment. 2,006,104; June 25.

Best, Cyril, Deptford, London, England. Dampener for weighing apparatus. 2,006,235; June 25.

Better, Francis J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Mechanism for use in applying pressure to shoe bottoms. 2,005,755; June 25.

Betterton, Jesse O., Metuchen, N. J., assignor to American Smelting and Refining Company, New York, N. Y. Smelting scrap battery plates and the like. 2,006,257; June 25.

Betterton, Jesse O., and C. W. Hanson, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Treating scrap storage battery plates and lead-bearing materials of similar composition. 2,006,256; June 25.

Betzler, Martin, Neuruppin, assignor to the firm Minimax A.-G., Berlin, Germany. Device for blowing fire-extinguishing gas into storage bins carrying more or less fine materials. 2,006,258; June 25.

Bhagwat, Madhav B., Elizabeth, N. J., assignor to Combustion Utilities Corporation, New York, N. Y. Oil-soluble synthetic resin and its manufacture. 2,006,207; June 25.

Bird, Lester F. (See Anderson, W. T., Jr., and Bird.)

Blake, Harold D., Cleveland Heights, Ohio, assignor to General Electric Company. Electric lamp and the like and its mounting and electrical connection. 2,006,155; June 25.

Blake, Joseph H., Seattle, Wash. Portable power hammer. 2,006,065; June 25.

Blanchard, Benjamin F., Brea, assignor to Union Oil Company of California, Los Angeles, Calif. Core drill. 2,005,819; June 25.

Bleser, Daniel C., Manitowoc, Wis. Hop extractor. 2,005,770; June 25.

Bliss, E. W., Company. (See Crane, Edward V., assignor.)

Bloomfield Engineering Company Limited. (See Durant, Henry T., assignor.)

Blue Ribbon Products Company. (See Hussey, Frank L., assignor.)

Boeing Airplane Company. (See Minshall, Robert J., assignor.)

Bohn Aluminum & Brass Corporation. (See Nelson, Adolph L., assignor.)

Bonanno, Joseph L., Forest Hills, assignor to The Lionel Corporation, New York, N. Y. Self propelled toy. 2,006,156; June 25.

Bornmann, Carl, L. W. Lessler, and E. H. Heyer, assignors to Agfa Ansco Corporation, Binghamton, N. Y. Folding camera. 2,005,820; June 25.

Bosch, Robert, Aktiengesellschaft. (See Eisemann, Ernst, assignor.)

Bosch, Robert, Aktiengesellschaft. (See Menzel, Friedrich, assignor.)

Boston Wire Stitcher Company. (See Maynard, Arthur H., assignor.)

Bousquet, Euclid W., Wilmington, Del., assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio. Contact insecticide. 2,006,227; June 25.

Bovier, Archie M., Elmira, N. Y. Manifolding record. 2,005,930; June 25.

Bowen, William S., Westfield, N. J. Micronizer head. 2,005,987; June 25.

Bowers, Edward C., receiver, et al. (See Smith, Herbert, assignor.)

Bozel-Malétra Société Industrielle de Produits Chimiques. (See Demant, Jules E., assignor.)

Bradner, Donald B., Oxford, assignor to The Champion Coated Paper Company, Hamilton, Ohio. Dull finish coated paper. 2,006,208; June 25.

Bradner, Donald B., Oxford, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio. Dull finish coated paper. 2,006,209; June 25.

Bray, Uiric B., Palos Verdes Estates, and C. E. Swift, Huntington Park, assignors to Union Oil Company of California, Los Angeles, Calif. Production of lubricating oil. 2,006,092; June 25.

Bray, Uiric B., Los Angeles, and C. E. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Producing lubricating oils. 2,006,093; June 25.

Bray, Uiric B., Palos Verdes Estates, and C. E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif. Treating oil. 2,006,094; June 25.

Bray, Uiric B., Palos Verdes Estates, and C. E. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Production of lubricating oil. 2,006,095; June 25.

Bray, Uiric B., Palos Verdes Estates, and C. E. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Production of lubricating oil. 2,006,096; June 25.

Bray, Uiric B., Palos Verdes Estates, and C. E. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Treating oil. 2,006,097; June 25.

Bray, Uiric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Producing lubricating oil. 2,006,098; June 25.

Brindley, William E., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, Roll. 2,005,885; June 25.

Bristol Aeroplane Company Limited, The. (See Whitehead, Frederick W., assignor.)

Broderick, Frederick C., Winnetka, Ill. Hot water heating system. 2,005,852; June 25.

Brooks, Arthur N., West Springfield, Mass. Method of and apparatus for sampling anthracite coal. 2,006,066; June 25.

Brooks, Benjamin T., Old Greenwich, Conn., and R. Schuler, Elizabeth, N. J., assignors to Standard Alcohol Company. Synthetic alcohol. 2,006,157; June 25.

Brown, Bruce K., Evanston, assignor to Standard Oil Company, Chicago, Ill. Dewaxing with nonmiscible refrigerant. 2,005,988; June 25.

Brown, Davis, Los Angeles, Calif. Method of and apparatus for molding clay bodies. 2,005,886; June 25.

Brown, Earl D. (See Cone, C. N., and Brown.)

Brown, Eric F., Des Moines, Iowa. Visible shift binder for record sheets or the like. 2,005,968; June 25.

Bruffee, Archer E., Portland, Oreg. Antiskidding device. 2,006,210; June 25.

Büchi, Alfred, Winterthur, Switzerland. Internal combustion engine plant. 2,005,821; June 25.

Buck, Victor B., New York, N. Y. Navigation instrument. 2,006,127; June 25.

Buda Company, The. (See Hinkley, Carl C., assignor.)

Bull, Arthur W. (See Ewart, E. S., and Bull.)

Bull, Clyde W., Dallas, Tex. Device for controlling the speed of internal combustion engines. 2,005,771; June 25.

Burgess, Walter K., Chanute Field, Rantoul, Ill. Amphibian. 2,005,728; June 25.

Burrell, Edward P., Shaker Heights, assignor to The Warner & Swasey Company, Cleveland, Ohio. Hydraulic machine tool. 2,005,822; June 25.

Burt, Clarence E., Los Angeles, assignor to Baker Oil Tools, Inc., Huntington Park, Calif. Core barrel. 2,005,989; June 25.

Bush, Alonzo O., and R. H. Martin, assignors to Norton Company, Worcester, Mass. Grinding wheel. 2,006,308; June 25.

Buttner, William C., assignor to The Bastian-Blessing Company, Chicago, Ill. Safety valve. 2,005,931; June 25.

Calbeck, John H. (See Elde, A. C., and Calbeck.)

Calbeck, John H., Joplin, assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo. Zinc sulphide and making the same. 2,006,259; June 25.

Calhoun, John N. (See Reel, Jesse K., assignor.)

California Fruit Growers Exchange. (See Highby, Ralph H., assignor.)

Campbell, Francis E., et al. (See Marshall, James H., assignor.)

Campbell, George H. (See Smith, J. C., and Campbell.)

Capstan Glass Company. (See McNamara, William L., assignor.)

Carney, Samuel C., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Fractionating process and apparatus. 2,005,932; June 25.

Carrier Engineering Corporation. (See Arf, Herman R., assignor.)

Carson, Robert W., Rochelle Park, N. J., assignor to Westinghouse Electric & Manufacturing Company. Grid glow micrometer. 2,005,887; June 25.

Carter, Andrew G., Grand Rapids, Mich. Elastic cushion mounting. 2,005,934; June 25.

Carter, Elsie M., Ilford, assignor to Yardley & Company Limited, London, England. Container for toilet and the like preparations. 2,005,933; June 25.

Carus Chemical Company. (See Schumacher, Joseph, assignor.)

Casey, Cornelius. (See Schilling, A. B., and Casey.)

Casperson, Carl E., Tulsa, Okla. Rotary drill. 2,005,128; June 25.

Cassé, Marcel, Essonnes, France. Hat working machine. 2,006,260; June 25.

Cate, Malcolm S., assignor to Hood Rubber Company, Inc., Watertown, Mass. Machine for operating upon articles assembled from adhesive materials. 2,005,888; June 25.

Cate, Paul E., assignor to The Fulton Syphon Company, Knoxville, Tenn. Machine for charging containers. 2,006,012; June 25.

Catella, Attile, Paris, France. Ratchet device for preventing the rearward motion of power driven vehicles. 2,006,261; June 25.

Celanese Corporation of America. (See Hibbert, H. M., and Roberts, assignors.)

Celluloid Corporation. (See Walsh, James F., assignor.)

Central Radio Laboratories. (See Stoekle, Erwin R., assignor.)

Chain Belt Company. (See Ball, Charles F., assignor.)

Champion Coated Paper Company, The. (See Bradner, Donald B., assignor.)

Charvet, Gustave, assignor, by mesne assignments, to Anciens Etablissements Barbier, Benard & Turenne, Paris, France. Mechanism for angular adjustment of gun sights. 2,006,262; June 25.

Chesley, Frank, Cincinnati, Ohio. Duplicating machine. 2,006,067; June 25.

Chewning, Walter L., Cynwyd, assignor to United Engineers & Constructors Inc., Philadelphia, Pa. Apparatus for the scrubbing of gas. 2,006,295; June 25.

Chicago Flexible Shaft Company. (See Jeppsson, Ivar, assignor.)

Chireix, Henri, Paris, France, assignor to Compagne Generale de Telegraphie Sans Fil. Heterodyne receiver. 2,005,772; June 25.

Chretien, Henri, St. Cloud, France. Combined picture and sound recording and reproduction in motion pictures. 2,006,233; June 25.

Christensen, Augustus, Hellertown, Pa. Smoking pipe attachment. 2,006,296; June 25.

Christiansen, Christian, Fargo, N. Dak. Bull rake, loader and lifter. 2,005,911; June 25.

Christy, Anker L. (See Petersen, C. A., and Christy.)

Cimatti, Riccardo. (See De Faveri, S., and Cimatti.)

Cincinnati Butchers Supply Company, The. (See Schmidt, Oscar C., assignor.)

Cincinnati Milling Machine Company, The. (See Ernst, H., and Goodrich, assignors.)

Cincinnati Milling Machine Company, The. (See Ernst, H., and Sassen, assignors.)

Clark, Charles C., St. Bernard, Ohio. Hydroxy sulphonated fatty acid esters and their production. 2,006,309; June 25.

Clayton Metcalfe & Company. (See Metcalfe, Percy W., assignor.)

Claywell, Van, Siren, Wis. Automobile wheel aligner. 2,006,013; June 25.

Coe Manufacturing Company, The. (See Haumann, George, assignor.)

Coffman, Roscoe A., Pittsburgh, Pa. Motor and motive system. 2,005,913; June 25.

Collins, Harold F., assignor to H. D. Colman, Rockford, Ill. Sliding door. 2,006,228; June 25.

Colman, Howard D. (See Collins, Harold F., assignor.)

Colonial Salt Company, The. (See Shaw, James, assignor.)

Colorado Bedding Company, The. (See Knight, R. B., and Kahn, assignors.)

Colvin, Charles H., New York, N. Y. Intercommunication. 2,005,935; June 25.

Combustion Utilities Corporation. (See Bhagwat, Madhav B., assignor.)

Compagnie Generale de Telegraphie Sans Fil. (See Chireix, Henri, assignor.)

Cone, Charles N., and E. D. Brown, Seattle, Wash., assignors, by mesne assignments, to The Glidden Company, Cleveland, Ohio. Coating paper. 2,006,229; June 25.

Connor, Kirke W., Detroit, Mich., assignor to Micromatic Hone Corporation. Machining cylinders. 2,006,158; June 25.

Connor, Kirke W., Detroit, Mich., assignor to Micromatic Hone Corporation. Machining cylinders. 2,006,159; June 25.

Cook, Harmon J., Torrington, Conn. Electric pull chain socket. 2,006,195; June 25.

Coomes, Bernard J., Bristol, Ill. Doorlock. 2,006,263; June 25.

Cornell, Edward S., Jr., Larchmont, assignor to American Radiator & Standard Sanitary Corporation, New York, N. Y. Pipe fitting. 2,005,969; June 25.

Cosby, Eric L. H., London, England. Construction of brush. 2,006,234; June 25.

Couyoumjian, Karl, Detroit, Mich. Hat ironing machine. 2,006,264; June 25.

Cowdery, Arthur B., Needham, Mass., assignor to The Barrett Company, New York, N. Y. Rubber compounding. 2,006,310; June 25.

Craft, Walter B., assignor of one-fourth to C. M. Smith, Tyler, Tex. Automobile doorlatch operator. 2,006,129; June 25.

Crane, Edward V., assignor to E. W. Bliss Company, Brooklyn, N. Y. Feed for sheet metal working machines. 2,006,040; June 25.

Crane, Hubert R., Los Angeles, Calif. Flexible-rod, sewer cleaning apparatus. 2,005,936; June 25.

Crowley, Joseph P., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Supplying a polishing medium to polishing machines. 2,006,196; June 25.

Cummings, W. L. (See Knox, Granville S., assignor.)

Darley, William S., Chicago, Ill. Fire truck. 2,005,990; June 25.

Darling, Frank L., Baltimore, Md., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Glass bottle molding means. 2,006,041; June 25.

Davis, Ernest, assignor to The Prosperity Company Inc., Syracuse, N. Y. Garment or ironing press. 2,006,068; June 25.

Davis, Homer J., Wilmington, Del. Feed mechanism for rolling machines. 2,005,853; June 25.

Davis, James A., and C. L. Moyer, Chicago, Ill., assignors to Parker-Meyer-Dennis Company, Dubuque, Iowa. Sucker machine. 2,005,854; June 25.

Davis, Jesse H., Baltimore, Md. Method of and apparatus for treating grain for extermination of insect life therein. 2,006,265; June 25.

Day, Fred J., Los Angeles, Calif. Air circulating apparatus. 2,006,069; June 25.

De Christmas Dirckinck de Holmfeld, John E. (See Kalhaus, E., de Christmas Dirckinck de Holmfeld, and Valdemar.)

De Christmas, Dirckinck de Holmfeld, Valdemar. (See Kalhaus, E., de Christmas de Holmfeld, and Valdemar.)

De Faveri, Serafino, and R. Cimatti, assignors to Monocap Limited, London, England. Sealing device for collapsible tubes and the like. 2,006,235; June 25.

De Florez, Luis, Pomfret, Conn. Apparatus for indicating or controlling physical changes. 2,005,773; June 25.

Dellinger, Martin C. (See Kulp, H. W., and Dellinger, assignors.)

Demant, Jules E., assignor to Bozel-Malétra Société Industrielle de Produits Chimiques, Cuise Lamotte, France. Production of benzoic acid and benzoates. 2,005,774; June 25.

Dennison, Forrest W., assignor to Taylor Freezer Corporation, Beloit, Wis. Detachable gate. 2,005,937; June 25.

Desenberg, Josef, Cologne, Germany. Grinding. 2,005,718; June 25.

Detracolor Ltd. (See Dieterich, Ludwig M., assignor.)

Detroit Edison Company, The. (See Piron, Emil H., assignor.)

Detroit Lubricator Company. (See Wile, Daniel D., assignor.)

Diamond Match Company, The. (See Paridon, Michael, assignor.)

Dick, Burns, Ferguson, and S. Schnell, assignors to Wagner Electric Corporation, St. Louis, Mo. Braking apparatus. 2,005,855; June 25.

Dictograph Products Company. (See Koch, Henry, assignor.)

Dieterich, Ludwig M., Los Angeles, Calif., assignor to Detracolor Ltd. Color photography. 2,005,970; June 25.

Dietze, Emil, Richmond Hill, assignor to American Casting & Manufacturing Corporation, Brooklyn, N. Y. Seal. 2,006,042; June 25.

Dillon, Herbert G., W. C. Dreyer, and H. C. Jenks, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Automatic drilling system for rotary drilling equipment. 2,005,889; June 25.

Di Stasio, Joseph, Newark, N. J. Building construction. 2,006,070; June 25.

Ditchfield, Frank. (See McWilliams, J. P., and Ditchfield.)

Ditchfield, Frank, assignor to The Youngstown Steel Door Company, Cleveland, Ohio. Transporting articles. 2,005,823; June 25.

Dixon, Cornelius W., assignor to C. A. Tompkins, Jacksonville, Fla. Turpentine cup and hanger therefor. 2,006,083; June 25.

Dobbins, Edward J., assignor to Googly Limited, London, England. India-rubber and like ball. 2,006,230; June 25.

Dodge, Adiel Y., South Bend, Ind. Variable speed transmission. 2,006,160; June 25.

Dodge, Sherwood O., Medford, assignor to Guaranteed Parts, Inc., Allston, Mass. Friction device for filling carriers. 2,005,856; June 25.

Doherty Research Company. (See Morgan, John D., assignor.)

Dopp, Frank B., St. Louis, Mo., assignor to Perma Corporation. Heel attaching plate. 2,005,775; June 25.

Dörrenhaus, Gustav, and S. Walter, Mulheim-Ruhr, assignors to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Cooling furnaces by means of cooling chambers. 2,006,206; June 25.
Douglas, Harry A., Bronson, Mich. Spark plug connection. 2,005,857; June 25.
Downingtown Manufacturing Company. (See Edge, Jacob, assignor.)
Downs, Austin H., assignor to Eclipse Air Brush Company, Inc., Newark, N. J. Device for spraying paints, lacquers, and other liquids. 2,005,776; June 25.
Doyle, Joseph E., Clarks Summit, Pa. Ironing board. 2,006,014; June 25.
Doyle, Thomas J., Lynn, Mass., assignor to United Machinery Corporation, Paterson, N. J. Liquid-applying apparatus. 2,005,729; June 25.
Drader, Joseph C., Detroit, Mich., assignor to Michigan Tool Company. Checking fixture. 2,006,161; June 25.
Drake, Estes C., Wheeling, W. Va. Welding apparatus. 2,005,912; June 25.
Draper, Ernest E., Scarsdale, assignor to The Perser Corporation, New York, N. Y. Stereoscopic photography and objective system therefor. 2,005,777; June 25.
Dreyer, William C. (See Dillon, H. G., Dreyer, and Jenks.)
Droop, Goswin, Habana, Cuba. Smoker's item. 2,006,015; June 25.
Dubuc, Paul N., Danielson, Conn. Machinery. 2,006,130; June 25.
Dunham, Henry V., Bainbridge, N. Y. Casein product and making. 2,005,730; June 25.
Dunlop, James, Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company. Motor control system. 2,005,890; June 25.
Du Pont, E. I., de Nemours & Company. (See Dykstra, Harry B., assignor.)
Du Pont, E. I., de Nemours & Company. (See Northam, Alfred J., assignor.)
Du Pont, E. I., de Nemours & Company. (See Stallmann, Otto, assignor.)
Du Pont, E. I., de Nemours & Company. (See Wirth, Walter V., assignor.)
Durant, Henry T., Crawley, assignor to Bloomfield Engineering Company Limited, London, England. Filter press. 2,006,131; June 25.
Dykstra, Harry B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthetic resin. 2,006,043; June 25.
Eckert, Wilhelm, and W. Gmelin, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. 4-amino-1,8-naphthalene-dicarboxylic acid imides and 4-alkylamino-1,8-naphthalene-dicarboxylic acid alkylamides and preparing them. 2,006,017; June 25.
Eclipse Air Brush Company. (See Downs, Austin H., assignor.)
Eclipse Aviation Corporation. (See Nardone, Romeo M., assignor.)
Edge, Jacob, assignor to Downingtown Manufacturing Company, Downingtown, Pa. Cylinder machine. 2,005,839; June 25.
Edwards, Herbert E., Brookline, Mass. Assembling machine. 2,006,071; June 25.
Edwards, Herbert C., assignor to Packard Motor Car Company, Detroit, Mich. Servo-mechanism. 2,005,971; June 25.
Edwards, Samuel H. (See Rowe, E. A., Edwards, and Fossati.)
Elde, Alwin C., and J. H. Calbeck, Columbus, Ohio, assignors to American Zinc, Lead & Smelting Company, St. Louis, Mo. Making pigmented paper. 2,006,016; June 25.
Eisemann, Ernest, assignor to Robert Bosch Aktiengeiselschaft, Stuttgart, Germany. Film feeding mechanism for cinematograph apparatus. 2,006,297; June 25.
Elberty, Robert S., Jr., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Valve-operated mechanism. 2,005,891; June 25.
Electric Auto-Lite Company, The. (See Gogel, Adelbert J., assignor.)
Ellis, Lily D. (See Thomas, A. L., and Ellis.)
Emanueli, Luigi, Milan, Italy, assignor to Societá Italiana Pirelli. Feeding reservoir for oil filled cables. 2,006,236; June 25.
Engehardt, Rudolf, Leverkusen-I. G. Werk, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Insulating material. 2,005,840.
Enterprise Aluminum Company, The (See Wilcox, Albert C., assignor.)
Erlemann, Gustav. (See Schilder, T., and Erlemann.)
Ernest, Hans, and B. Sassen, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Leakage compensator for hydraulic systems. 2,006,311; June 25.
Ernst, Hans, and B. Sassen, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Compensating bleeder valve. 2,006,312; June 25.
Ernst, Hans, and C. W. M. Goodrich, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Viscosity compensating system. 2,005,731; June 25.
Ernst, Hans, and B. Sassen, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Balanced pressure hydraulic circuit. 2,005,732; June 25.
Ewart, Elliott S., St. Clair Shores, and A. W. Bull, Grosse Pointe, Mich., assignors to United States Rubber Company, New York, N. Y. Pneumatic tire. 2,006,197; June 25.
Eyer, Carl. (See Krauch, C., Eyer, Baetz, and Korn.)
Eynard, Elysee M., Boulogne-Billancourt, France. Hydraulic engine. 2,006,237; June 25.
Farnham, Paul O., Boonton, N. J., assignor by mesne assignments to Radio Corporation of America, New York, N. Y. Audion amplifier. 2,006,099; June 25.
Fedders Manufacturing Company. (See Smith, Lawrence C., assignor.)
Feigenbaum, David. (See Lind, E., and Feigenbaum.)
Feldman, Charles L., receiver, et al. (See Smith, Herbert, assignor.)
Feldt, Adolf. (See Schoeller, W., Allardt, and Feldt.)
Ferris, Walter, assignor to The Oilgear Company, Milwaukee, Wis. Blanking press. 2,006,072; June 25.
Fibreboard Products Inc. (See Leslie, Harold, assignor.)
Field, Crosby, Brooklyn, N. Y., assignor, by mesne assignments, to Flakice Corporation, Wilmington, Del. Heat Exchange apparatus. 2,005,733; June 25.
Field, Crosby, Brooklyn, N. Y., assignor to Flakice Corporation, Wilmington, Del. Heat exchange apparatus. 2,005,734; June 25.
Field, Crosby, Brooklyn, N. Y., assignor, by mesne assignments, to Flakice Corporation, Wilmington, Del. Ice. 2,005,735; June 25.
Field, Crosby, Brooklyn, N. Y., assignor to Flakice Corporation, Wilmington, Del. Ice. 2,005,736; June 25.
Finfrock, John Q., Westwood, assignor to National Postal Meter Company, Los Angeles, Calif. Manual feeding and tripping mechanism for a power driven postal machine. 2,005,778; June 25.
Firestone Tire & Rubber Company, The. (See Allen, Raymond W., assignor.)
Firestone Tire and Rubber Company, The. (See Saurer, Curt, assignor.)
Fischer, Ernest, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Colored rubber products and producing them. 2,006,211; June 25.
Flakice Corporation. (See Field, Crosby, assignor.)
Fleming, Charles F., and J. L. Havins, Houston, Tex. Block mold. 2,006,132; June 25.
Florman, Irving, and R. Rolwing, New York, N. Y. Cocktail skirt. 2,006,238; June 25.
Folts, Cyrus, Swayzee, Ind. Gate hinge. 2,006,267; June 25.
Food Machinery Corporation. (See Pierce, Harold C., assignor.)
Forbes, Allan D. (See Hellmund, R. E., and Forbes.)
Fortescue, Charles L. (See Arnold, E. E., and Fortescue.)
Fossati, Francis N. (See Rowe, E. A., Edwards, and Fossati.)
Foster Machine Company. (See McKean, John O., assignor.)
Foster, Warren D., Washington Township, Bergen County, and E. L. Parmelee, Pittsburgh, Pa., assignors to Kinatone Patents Corporation, New York, N. Y. Film handling and sound reproducing apparatus. 2,005,737; June 25.
Foster, Warren D., Washington Township, Bergen County, N. J., assignor to Kinatone Patents Corporation. Apparatus for feeding material. 2,005,738; June 25.
Fowler, Jess W., Houston, and C. N. Ballillo, Beaumont, Tex. Cable clamp. 2,006,044; June 25.
Fowler, Odel, Palisade, Colo. Pruning shears. 2,006,133; June 25.
Frantz, Fred C. (See Ard, Charles E., assignor.)
Freund, Berthold, Berlin-Schoneburg, Germany. Apparatus for making and reproducing sound and picture records. 2,005,914; June 25.
Frolich, Per K., and P. J. Wiezevich, Elizabeth, N. J., assignors to Standard Oil Development Company. Preparing halogenated ketones. 2,006,108; June 25.
Fuchs, Herman C., assignor to Permatex Company, Inc., Brooklyn, N. Y. Grinding composition. 2,006,162; June 25.
Fulton, Stewart C., Elizabeth and V. Kalichevsky, Woodbury, N. J., assignors to Standard-I. G. Company. Manufacture of resins by hydrogenation. 2,006,199; June 25.
Fulton Syphon Company. (See Cate, Paul E., assignor.)
Fulton Syphon Company. (See Smith, Edwin F., assignor.)
Fulton Syphon Company, The. (See Stewart, Alden D., assignor.)
Gagen, Thomas H., assignor to The Hinde and Dauch Paper Company, Sandusky, Ohio. Box. 2,005,991; June 25.
Gair, Robert, Company. (See Weiss, Arthur J., assignor.)
Gallop, Sidney H., Cumberless, Ember Lane, Esher, England. Back support. 2,005,972; June 25.
Gardner, Herbert A., U. S. Army, San Francisco, Calif. Broom attachment. 2,005,739; June 25.
Garrett, Thomas J., Troup, Tex. Automatic fuel supply for burners. 2,006,134; June 25.
Geddes, Charles A., New York, N. Y. Self-carbonating dispensing system. 2,006,313; June 25.
Geiger, Ludwig T. and R., Vienna, Austria. Fastener for bags. 2,006,268; June 25.
Geiger, Richard. (See Geiger, Ludwig T. and R.)
General Aniline Works, Inc. (See Eckert, W., and Gmelin, assignors.)

General Aniline Works, Inc. (See Fischer, Ernst, assignor.)
General Aniline Works, Inc. (See Kranzlein, G., Schlichenmaier, and Schönnig, assignors.)
General Aniline Works, Inc. (See Schrader, Gerhard, assignor.)
General Electric Company. (See Anderson, Arvid E., assignor.)
General Electric Company. (See Blake, Harold D., assignor.)
General Electric Company. (See Honing, Wilhelm, assignor.)
General Electric Company. (See Juhlin, Gustaf A., assignor.)
General Electric Company. (See Malloy, F. J., and Thomas, assignors.)
General Electric Company. (See McNairy, J. W., and Ogden, assignors.)
General Electric Company. (See Price, A. L., and Menger, assignors.)
General Electric Company. (See Reed, G. M., and Paxton, assignors.)
General Electric Company. (See Stark, J. H., and Witherow, assignors.)
General Motors Corporation. (See Williams, Harry M., assignor.)
General Plate Company. (See Spencer, John A., assignor.)
Gibbs, George J., Preston, England. Apparatus for the measurement by volume of delivered quantities of liquids. 2,006,135; June 25.
Gibson, Noah M., et al. (See Marshall, James H., assignor.)
Gillespie, Grady. (See Price, Nathan H., assignor.)
Gillette Safety Razor Company. (See Testi, Nicholas, assignor.)
Glidden Company, The. (See Cone, C. N., and Brown, assignors.)
Gmelin, Walter. (See Eckert, W., and Gmelin.)
Goat, Fred, Co. (See Schilder, T., and Erlemann.)
Gogel, Adelbert J., assignor to The Electric Auto-Lite Company, Toledo, Ohio. Ignition coil construction. 2,006,239; June 25.
Goodall, Charles, Tutbury, Burton-on-Trent, England. Drying of timber or other materials. 2,006,018; June 25.
Goodrich, Charles W. M. (See Ernst, H., and Goodrich.)
Googly Limited. (See Dobbins, Edward J., assignor.)
Gothe, Albrecht, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Directive aerial system. 2,005,779; June 25.
Grabler, Peter, Rocky River, assignor to L. E. Shunk, Akron, Ohio. Package. 2,006,212; June 25.
Grasselli Chemical Company, The. (See Bousquet, Euclid W., assignor.)
Grasselli Chemical Company, The. (See McQuaid, Howard S., assignor.)
Grasselli Chemical Company, The. (See Ridler, Earl S., assignor.)
Gravell, James H., Elkins Park, assignor to American Chemical Paint Company, Ambler, Pa. Material for providing metal with a paint receptive surface. 2,005,780; June 25.
Graves, Harry D., Chicago, Ill. Rack. 2,005,938; June 25.
Grelle, Charles H., Mount Carmel, Conn. Golf club. 2,005,915; June 25.
Grimsley, Gail, Little Sioux, Iowa. Speed control mechanism. 2,006,136; June 25.
Grisso, Archa D., Fort Worth, Tex. Golf practice device. 2,006,137; June 25.
Guaranteed Parts, Inc. (See Dodge, Sherwood O., assignor.)
Gulliksen, Finn H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Alternating current regulator. 2,005,892; June 25.
Gulliksen, Finn H., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Current regulating system. 2,005,893; June 25.
Gusmer, Aage. (See Hellmann, Heinrich W., assignor.)
Hadley, Garnet. (See Maguire, C. L., and Hadley.)
Hadsel, Alvah D., Oakland, Calif. Ore reducing machine. 2,006,269; June 25.
Haglund, Hakon H. (See Wilder, H. F., and Haglund.)
Hagstrom, Joseph E., Kansas City, Mo. Trailer hitch. 2,005,781; June 25.
Hallwood, Anthony J. (See Macarthur, A., and Hallwood.)
Halbig, Paul, and F. Kaufler, assignors to Dr. Alexander Wacker Gesellschaft für Elektrochemische Industrie, G. m. b. H., Munich, Germany. Preparing substituted malonic acids. 2,006,314; June 25.
Hall, William J., et al. (See Hall, William J., assignor.)
Hall, William J., Detroit, Mich., assignor, by mesne assignments, of thirty percent to O. L. Herron, thirty per cent to J. B. Zimmers, thirty-three per cent to W. J. Hall, and seven per cent to R. C. Schemmel. Hood construction. 2,006,163; June 25.
Halliday, Edgar N., Chicago, Ill. Electric control system. 2,006,213; June 25.
Hanovia Chemical & Manufacturing Company. (See Anderson, W. T., Jr., and Bird, assignors.)
Hansell, Clarence W., Port Jefferson, Long Island, N. Y., assignor to Radio Corporation of America. Frequency multiplier for ultra high frequencies. 2,005,782; June 25.
Hanson, Charles W., (See Betterton, J. O., and Hanson.)
Harbison, Clarence B., assignor to The Ohio Steel Foundry Company, Lima, Ohio. Refinery fitting. 2,006,084; June 25.
Harpster, Walter C., Elizabeth, N. J., assignor to Standard Oil Development Company. Apparatus for heat exchange. 2,006,200; June 25.
Harrer, Herbert W., New Washington, Ohio. Wrench. 2,006,073; June 25.
Harris-Jones, Winifred E., San Francisco, Calif. Bookrest for bathtubs and the like. 2,006,169; June 25.
Harris, A. T., Holding Corporation. (See Harris, Albert T., assignor.)
Harris, Albert T., New York, N. Y., assignor, by mesne assignments, to A. T. Harris Holding Corporation. Power transmission device. 2,005,740; June 25.
Harris, Charles M. (See Ketel, H., Harris, and Van Der-Heuvel.)
Harris Seybold Potter Company. (See Lewis, H. I., and Seybold, assignors.)
Harris Seybold Potter Company. (See Seybold, Frederick W., assignor.)
Harshberger, Norman P., Scarsdale, assignor to Bakelite Building Products Co., Inc., New York, N. Y. Roofing and siding element. 2,006,270; June 25.
Harvey, Ellery H., Highland Park, Ill., assignor to Perkins Glue Company. Vegetable glue and making the same. 2,006,184; June 25.
Harvey, Leo M., Los Angeles, Calif. Mounting for wind deflectors or the like. 2,005,783; June 25.
Harvey, Leo M., Los Angeles, Calif. Bottle cap remover. 2,005,784; June 25.
Haumann, George, assignor to The Coe Manufacturing Company, Painesville, Ohio. Clipper. 2,005,824; June 25.
Havins, John L. (See Fleming, C. F., and Havins.)
Hayden, Sydney, Hampstead, London, England. Embossed picture and producing it. 2,005,719; June 25.
Hayes, Harvey C., Washington, D. C. Magneto-strictive sound generator. 2,005,741; June 25.
Heaton, Herman C., Kenilworth, Ill. Ignition system. 2,005,992; June 25.
Heddon's, James, Sons. (See Bear, Paul S., assignor.)
Heffeltinger, Paul E. (See Jung, O. H., and Heffelfinger.)
Heinemann, Auguste E., executrix. (See Heinemann, Karl.)
Heinemann, Karl, deceased, Dresden, Germany, by A. E. Heinemann, executrix, Duesseldorf, Germany, assignor to American Lurgi Corporation, New York, N. Y. Apparatus for separating sulphurous acid from sulphite waste liquor. 2,006,138; June 25.
Hellmann, Heinrich W., Marienfelde-Berlin, Germany, assignor of one-fourth to A. Gusmer, Woodbridge, N. J. Apparatus for listening in on telephone calls. 2,005,973; June 25.
Hellmund, Rudolph E., Swissvale, and A. D. Forbes, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Ship propulsion automatic stability control. 2,005,894; June 25.
Hengstenberg, Paul M., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Fastening device. 2,005,895; June 25.
Heron, Donlad D. and R. S., Pittsburgh, Pa. Holder for dental X-ray films. 2,005,993; June 25.
Heron, Robert S. (See Heron, Donald D. and R. S.)
Herrick, Horace T. (See May, O. E., Herrick, Moyer, and Wells.)
Herrlinger, Albert P., assignor to The Herrlinger Paper Co., Cincinnati, Ohio. Collar support. 2,006,201; June 25.
Herrlinger Paper Co., The. (See Herrlinger, Albert P., assignor.)
Herron, Ollie L., et al. (See Hall, William J., assignor.)
Hertz, Israel M. (See Lifsitz, Sol, assignor.)
Heyer, Eric H. (See Bornmann, Lessler, and Heyer.)
Hibbard, Charles L., Jr., Brookline, assignor to Old Colony Distributing Company, Inc., Boston, Mass. Refrigerator rack. 2,005,939; June 25.
Hibbert, Harold M., and R. P. Roberts, Spondon, near Derby, England, assignors to Celanese Corporation of America. Treatment of filaments, threads, yarns, and the like. 2,005,785; June 25.
Higby, Ralph H., Ontario, Canada, assignor to California Fruit Growers Exchange, Los Angeles, Calif. Stabilized citrus beverage and sirup. 2,005,786; June 25.
High, George F., and C. H. Webb, Middlesex, England. Vending machine. 2,006,100; June 25.
Hinde and Dauch Paper Company, The. (See Gagen, Thomas H., assignor.)
Hines, James F., Lakewood, Ohio. Mold jacket. 2,006,240; June 25.
Hines, Pierre R., Portland, Oregon. Deinking imprinted paper. 2,005,742; June 25.
Hinkley, Carl C., Chicago, assignor to The Buda Company, Harvey, Ill. Compression control apparatus. 2,005,858; June 25.
Hitt, Ray C., Seattle, Wash. Pyrotechnic display. 2,006,271; June 25.

Hixon-Kelser Patents Corporation. (See Kelser, Morris, assignor.)
Hjelm, Oskar A., Stockholm, Sweden. Gearing device for bicycles and the like. 2,006,165; June 25.
Hoe, R., & Co., Inc. (See Lamatsch, Frederick, assignor.)
Hoffman, Edward L., Dayton, Ohio. Parachute pack. 2,005,743; June 25.
Hofmann, Harry E., New Providence Township, Union County, N. J., and J. G. Park, Brooklyn, assignors, by mesne assignments, to Stanco, Inc., New York, N. Y. Lacquer solvent. 2,006,166; June 25.
Hohl, Russell L., Shaker Heights, Ohio. Building construction. 2,005,994; June 25.
Hohmann, Frederick R., Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Sheet glass forming apparatus. 2,006,167; June 25.
Hoke, Walter W., assignor to R. Stuart, Forest Hills, N. Y. Mail advertising device. 2,005,859; June 25.
Holesworth, William S., Reno, Nev. Measuring dispenser. 2,006,019; June 25.
Holm, Waldemar, Furstenwalde/Spree, Germany, assignor to N. V. Machinerieen-en Apparaten Fabrieken "Meaf", Utrecht, Netherlands. Reversing mechanism for dry gas meters. 2,006,101; June 25.
Holland-Letz, John, Crown Point, Ind., assignor to The Letz Manufacturing Company. Roughage mill. 2,005,940; June 25.
Holley Carburetor Company. (See Meinzinger, Jacob, assignor.)
Holley, Earl, et al. (See Meinzinger, Jacob, assignor.)
Holley, George M., et al. (See Meinzinger, Jacob, assignor.)
Hondeville, August I., Merced, assignor to Serv-A-Towel Manufacturing Company, San Francisco, Calif. Towel cabinet. 2,005,744; June 25.
Honing, Wilhelm, Eindhoven, Netherlands, assignor to General Electric Company. Illumination. 2,006,140; June 25.
Hood Rubber Company. (See Cate, Malcolm S., assignor.)
Hooper, Fred E., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe support. 2,005,720; June 25.
Hopkins, Arthur G., Maspeth, N. Y., assignor to National Can Company. Sheet metal can and rip strip therefor. 2,006,045; June 25.
Hopkinson, Ernst, assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Automobile tire. 2,006,315; June 25.
Horton, Erwin C., Hamburg, assignor to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner blade. 2,006,322; June 25.
Horton, Erwin C., Hamburg, assignor to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner. 2,006,323; June 25.
Hotstream Heater Company, The. (See Morrow, Clarence H., assignor.)
Houde Engineering Corporation. (See Peo, Ralph F., assignor.)
Huckestein, Norman C., Pittsburgh, Pa. Shutter type partition for refrigerators. 2,006,046; June 25.
Hueber, Henry, assignor to Trico Products Corporation, Buffalo, N. Y. Diaphragm valve for tank assemblies. 2,006,319; June 25.
Hueber, Henry, assignor to Trico Products Corporation, Buffalo, N. Y. Motor vehicle construction. 2,006,320; June 25.
Hugh, Percy G. (See North, O. D., and Hugh.)
Hull, Harry E., Washington, D. C. Automobile control device. 2,005,745; June 25.
Humphrey, Walter E., Jeannette, Pa., assignor to Pennsylvania Rubber Company. Ball stencil. 2,005,787; June 25.
Huntington, Victor C., Wepsco Steel Products Co., Blue Island, Ill. Cooling system. 2,005,860; June 25.
Hurlburt, Ralph W., Sheffield, Mass. Milking-machine attachment. 2,006,272; June 25.
Hurt, Frank B., La Grande, Oreg. Aggregate spreader. 2,005,896; June 25.
Hussey, Frank L., assignor to Blue Ribbon Products Company, Inc., San Francisco, Calif. Steam pop-off valve. 2,006,141; June 25.
Hutchison, Miller R., Jr., Madison, N. J., assignor to Multicycol Pump & Engine Corporation, New York, N. Y. Rotary pump, compressor, engine, and the like. 2,006,298; June 25.
Hutchman, James E., Indianapolis, Ind., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Annealing metal articles. 2,006,168; June 25.
Huyser, Hendrik W., Hilversum, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Heat transmission. 2,006,202; June 25.
Hutchinson, Thomas, Newport, Oreg. Felling and cutting felled trees. 2,006,241; June 25.
Hutchison, Miller R., Jr., New York, N. Y., assignor to Packard Motor Car Company, Detroit, Mich. Power transmission system. 2,005,974; June 25.
I. G. Farbenindustrie Aktiengesellschaft. (See Engelhardt, Rudolf, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Krauch, C., Eyer, Baetz, and Korn, assignors.)
Imai, Tomoso, Honolulu, Hawaii. Automobile lifting device. 2,006,242; June 25.
Imperial Chemical Industries Limited. (See Macarthur, A., and Hallwood, assignors.)
Industrial Patents Corporation. (See Walter, Charles T., assignor.)
International Communications Laboratories, Inc. (See Smith, Clyde, assignor.)
International Printing Ink Corporation, The. (See McLeod, Earl H., assignor.)
International Seal and Knot Protector Co., The. (See Keidel, Frank, assignor.)
Ipatieff, Vladimir, assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of hydrocarbons. 2,005,861; June 25.
Irving Trust Company, permanent trustee. (See Lamatsch, Frederick, assignor.)
Jacubson, Hirsch G., Berlin-Charlottenburg, Germany. Preparing a substance derived from an amino aliphatic acid and phenylquinoline orthocarboxylic acid which is capable of lowering the uric acid level. 2,006,020; June 25.
Jaeger Machine Company, The. (See Mandt, Obert G., assignor.)
Javery, Armon J. (See Javery, Frank B. and A. J.)
Javery, Frank B., Worcester, and A. J. Javery, Oxford, Mass., assignors to Warp Compressing Machine Company, Worcester, Mass. Thread tensioning device. 2,005,975; June 25.
Jekulaitis, Adam, Brooklyn, N. Y. Piping attachment for sewing machines. 2,006,243; June 25.
Jenks, Harold C. (See Dillon, H. G., Dreyer, and Jenks.)
Jeppsson, Ivar, assignor to Chicago Flexible Shaft Company, Chicago, Ill. Dispensing apparatus. 2,006,214; June 25.
Jessen, Theodor, Altona-Behrenfeld, Germany. Horn and howler for marine and naval use. 2,006,021; June 25.
Johnsen, Richard C., Hillside, N. J. Hedge trimming device. 2,005,862; June 25.
Johnson, Gustaf O., Elkhart, Ind., assignor to Loshbough-Jordan Tool & Machine Co. Flywheel mounting. 2,005,941; June 25.
Johnson, Sylvester A., North Providence, assignor to A and Z Chain Company, Providence, R. I. Clasp or connecter for watch bracelets and the like. 2,006,047; June 25.
Jokisch, Rudolf, Vienna, Austria. Line indicator or copy-holder for typists. 2,005,721; June 25.
Jones & Lamson Machine Company. (See Lovely, John E., assignor.)
Jones, Lester L., Oradell, N. J., and T. E. Piazze, Brooklyn, assignors to Technidyne Corporation, New York, N. Y. Phonograph. 2,006,048; June 25.
Juhlin, Gustaf A., Timperley, England, assignor to General Electric Company. Winding for the stationary members of alternating current dynamo-electric machines. 2,006,170; June 25.
Jung, Oscar H., and P. E. Heffelfinger, assignors to Trico Fuse Manufacturing Co., Milwaukee, Wis. Liquid dispensing and level maintaining device. 2,006,142; June 25.
Junkers, Hugo, Dessau, Germany. Booster brake for vehicles. 2,006,102; June 25.
K-D Manufacturing Company. (See Kulp, H. W., and Dellinger, assignors.)
K. G. M. Radio Corporation. (See Moritz, Burt E., Jr., assignor.)
Kaeser, Frank J. (See Kassekert, H., and Kaeser.)
Kaestner, E. A., Company. (See Kaestner, Robert E., assignor.)
Kaestner, Robert E., Baltimore, Md., assignor to E. A. Kaestner Company. Heat interchange apparatus. 2,006,299; June 25.
Kalhaus, Ernst, J. E. de Christmas Dirckinck de Holmfeld, and Valdemar de Christmas Dirckinck de Holmfeld, Paris, France. Lighting apparatus. 2,006,171; June 25.
Kalichevsky, Vladimir. (See Fulton, S. C., and Kalichevsky.)
Kahn, Laskar. (See Knight, R. B., and Kahn.)
Karelitz, Max, Milford, Mass. Detachable fastening means for connecting collars to shirts. 2,006,103; June 25.
Kassekert, Henry, Maple Shade, N. J., and F. J. Kaeser, assignors to E. J. Spangler Company, Philadelphia, Pa. Mechanism for making and applying transparent window patches to envelopes. 2,006,215; June 25.
Kaufer, Felix. (See Halbig, P., and Kaufer.)
Keidel, Frank, Elmhurst, assignor to The International Seal and Knot Protector Co., New York, N. Y. Seal. 2,006,051; June 25.
Kelser, Morris, assignor to Hixon-Kelser Patents Corporation, New York, N. Y. Automatic telephone message receiver and recorder. 2,005,788; June 25.
Keller, Cornelius H., San Francisco, Calif., assignor to Minerals Separation North American Corporation, New York, N. Y. Concentration of ores by flotation. 2,006,049; June 25.
Keller, Henry V., Minneapolis, Minn. Ironing table. 2,005,976; June 25.
Kellerman, Marvin. (See Price, D. W., and Kellermann.)
Kendall, Russell. (See Mitchell, Edward R., assignor.)
Kestenman Bros. Mfg. Co. (See Kestenman, Chares H., assignor.)
Kestenman, Charles H., assignor to Kestenman Bros. Mfg. Co., Providence, R. I. Extendible clasping device for watch-bracelets and the like. 2,006,050; June 25.

Ketel, Henry, Muskegon, Mich., and C. M. Harris and H. VanDerHeuvel, Netherlands, assignors, by mesne assignments, to West Michigan Steel Foundry Co., Muskegon, Mich. Fifth wheel construction. 2,005,722; June 25.
Kimmel, George P. (See Pappert, Emanuel, assignor.)
Kinatome Patents Corporation. (See Foster, W. D., and Parmelee, assignors.)
Kinatome Patents Corporation. (See Foster, Warren D., assignor.)
Kinninger, Arthur M., assignor of one-half to C. A. Kinninger, Dayton, Ohio. Anchor insert. 2,006,300; June 25.
Kinninger, Carl A. (See Kinninger, Arthur M., assignor.)
Kirkley, Clyde C., et al. (See Marshall, James H., assignor.)
Kitchen, Charles C., Toledo, Ohio, assignor to Remington Rand Inc., Buffalo, N. Y. Index and signal. 2,005,977; June 25.
Klappauf, Ali F., Chicago, Ill. Electric machine. 2,006,172; June 25.
Knapper, Irving, Ossining, N. Y. Ignition and steering lock. 2,006,104; June 25.
Knight, Robert B., and L. Kahn, assignors to The Colorado Bedding Company, Denver, Colo. Cutting table. 2,006,074; June 25.
Knowles, Dewey D., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrode for a vapor electric device and constructing the same. 2,005,897; June 25.
Knox, Granville S., assignor to W. L. Cummings, Los Angeles, Calif. Rodless pump. 2,005,995; June 25.
Knudsen, Alfred, Astra (Chubut) Argentina. Apparatus for the distillation of oil. 2,006,273; June 25.
Koch, Henry, Jamaica, assignor to Dictograph Products Company, Inc., New York, N. Y. Signal light support. 2,005,863; June 25.
Koch, Lydia B., New York, N. Y. Bottle and manufacture same. 2,006,143; June 25.
Koch, Winfield R., Camden, N. J., assignor to Radio Corporation of America. One tube radioreceiver. 2,005,780; June 25.
Kolar, Frank J. (See Price, D. W., and Kellermann, assignors.)
Kopsa, Julius F., Chicago, Ill. Liquid-separating device. 2,006,244; June 25.
Korn, Friedrich. (See Krauch, C., Eyer, Baets, and Korn.)
Kowalski, Bruno. (See Netzband, A., and Kowalski.)
Kraft, Norman, Wilmette, assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill. Apparatus for heat-treating cheese. 2,005,996; June 25.
Kraft-Phenix Cheese Corporation. (See Kraft, Norman, assignor.)
Kramar, Ernst, Berlin-Tempelhof, and E. Lüttcher, Berlin-Friedrichsfelde, assignors to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. High frequency telegraph transmitter. 2,005,790; June 25.
Krünzlein, Georg, Frankfort-on-the-Main, H. Schlichenmaier, Kelkheim in Taunus, and L. Schörnig, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Dyestuff of the quinophthalone series of good fastness to light. 2,006,022; June 25.
Krauch, Carl, C. Eyer, Ludwigshafen-on-the-Rhine, G. Baetz, Oggersheim and F. Korn, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of mixed fertilizers. 2,005,997; June 25.
Kreuzer, Barton, Rockaway Park, N. Y., assignor to Radio Corporation of America. Amplifier. 2,006,052; June 25.
Kritchevsky, Wolf, Chicago, Ill. Removal of wool from animal skins. 2,005,746; June 25.
Kritchevsky, Wolf, Chicago, Ill. Removal of wool from animal skins. 2,005,747; June 25.
Krupp, Fried., Grusonwerk Aktiengesellschaft. (See Linke, Gerhard, assignor.)
Kruse, Gustave, Newark, N. J. Hand bag. 2,005,791; June 25.
Kulp, Harry W., and M. C. Dellinger, assignors to K-D Manufacturing Company, Lancaster, Pa. Stand. 2,005,826; June 25.
Kulp, Harry W., and M. C. Dellinger, assignors to K-D Manufacturing Company, Lancaster, Pa. Clasp. 2,005,841; June 25.
Külz, Fritz. (See Rosenmund, K. W., and Külz.)
Kurrash, Chester A. (See Schlack, Herman C., assignor.)
Kushner, John, Farrell, Pa. Toy. 2,006,274; June 25.
LaGrange, Arthur, Vinton, Iowa. Label dispensing and moistening machine. 2,005,898; June 25.
Lake, St. Clair, Poughkeepsie, N. Y. Tension device for textile machines. 2,005,942; June 25.
Lamatsch, Frederick, Grantwood, N. J., assignor to R. Hoe & Co., Inc., Irving Trust Company, permanent trustee, New York, N. Y. Inking mechanism for printing machines. 2,005,916; June 25.
Lamm, Uno, Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Gaseous discharge converter. 2,006,053; June 25.
Lander, Erik, Oakland, Calif. Automatic saw filing device. 2,005,998; June 25.
Lange, Fritz and L. Taub, Wuppertal-Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Medicinal preparation. 2,006,023; June 25.
Larson, Edward S., assignor to Teletype Corporation, Chicago, Ill. Tape perforator. 2,005,748; June 25.
Larson, Lewis A., and A. Soll, Compton, Calif. Core ejector. 2,005,978; June 25.
Larson, Wallace O., assignor to Augsburg Publishing House, Minneapolis, Minn. Greeting card assembly. 2,005,999; June 25.
Lashbough-Jordan Tool & Machine Co. (See Johnson, Gustaf O., assignor.)
Layden, Thomas E., Topeka, Kans. Firebox door. 2,005,864; June 25.
Ledbetter, James C., Jackson Heights, Long Island, assignor to The Prosperity Company, Inc., Syracuse, N. Y. Press. 2,005,865; June 25.
Leeds & Northrup Company. (See Behr, Leo, assignor.)
Lehmkuhl, Henry W., Rochester, N. Y. Washing apparatus. 2,006,085; June 25.
Leins, Oscar J., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis. Bezel mounting. 2,005,792; June 25.
Leslie, Harold, assignor to Fibreboard Products Inc., San Francisco, Calif. Carton and liner for the same. 2,006,203; June 25.
Lessler, Lew W. (See Bornmann, C., Lessler, and Heyer.)
Letz Manufacturing Company, The. (See Holland-Letz, John, assignor.)
Lewis, Frank E., East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Elevator control and signaling system. 2,005,899; June 25.
Lewis, Harry L., and F. W. Seybold, Dayton, assignors to Harris Seybold Potter Company, Cleveland, Ohio. Hollow drill sharpener. 2,005,827; June 25.
Libbey-Owens-Ford Glass Company. (See Crowley, Joseph P., assignor.)
Libbey-Owens-Ford Glass Company. (See Hohmann, Frederick R., assignor.)
Libbey-Owens-Ford Glass Company. (See Ryan, Joseph D., assignor.)
Libbey-Owens-Ford Glass Company. (See Schafer, Conrad B., assignor.)
Liberty Share Corporation. (See Morgan, Porter S., assignor.)
Lifsitz, Sol, assignor of one-half to I. M. Hertz, Detroit, Mich. Stamping machine. 2,006,204; June 25.
Lind, Edward, and D. Feigenbaum, New York, N. Y. Collar. 2,005,943; June 25.
Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Oscillation generation. 2,005,793; June 25.
Linke, Gerhard, Magdeburg, assignor to the firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Production of circular or elliptical oscillations. 2,005,917; June 25.
Lionel Corporation, The. (See Bonanno, Joseph L., assignor.)
Little, George, Sacramento, Calif. Priming solution for wall paper and like pastes. 2,005,900; June 25.
Lockwood, Alvah M., Charlotte, Tex. Windmill. 2,006,024; June 25.
Lofgren, Benjamin F., Salt Lake City, Utah. Star and time finder. 2,006,075; June 25.
Long, Thomas H., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Induction sheet heater. 2,005,901; June 25.
Lorenz, C., Aktiengesellschaft. (See Kramar, E., and Lüttcher, assignors.)
Lovely, John E., assignor to Jones & Lamson Machine Company, Springfield, Vt. Feed knock-off mechanism for lathes. 2,006,144; June 25.
Lovingood, Alvin, Los Angeles, Calif. Dispensing machine. 2,005,918; June 25.
Lowe, Kenneth J., Ilion, N. Y., assignor to Remington Arms Company, Inc. Gun sight. 2,005,866; June 25.
Ludwig, Leon R. (See Slepian, J., Ludwig, and Silverman.)
Lufkin Rule Company, The. (See Witchger, Eugene J., assignor.)
Lüttcher, Erich. (See Kramar, E., and Lüttcher.)
Mang, Max, Schwamendingen, near Zurich, Switzerland. Control system and to the control of fluid operated mechanism. 2,005,867; June 25.
Macarthur, Arthur, and A. J. Hallwood, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Inhibitor. 2,006,216; June 25.
MacMullin, Robert B., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Manufacture of sodium carbonate monohydrate. 2,005,868; June 25.
Maguire, Charles L., and G. Hadley, Mount Pleasant, Mich. Bottom hole well plug. 2,006,105; June 25.
Mallshev, Boris, Berkeley, assignor to Shell Development Company, San Francisco, Calif. Stabilized form of phosphorus pentoxide. 2,005,944; June 25.
Malloy, Frank J., Cleveland Heights, Ohio, and R. B. Thomas, Salem, Mass., assignors to General Electric Company. Method of and apparatus for sealing electric lamps and similar articles. 2,006,231; June 25.
Mandt, Obert G., assignor to The Jaeger Machine Company, Columbus, Ohio. Apparatus for building roads. 2,006,316; June 25.
Marcus, Etienne, Paris, France. Toy aeroplane. 2,005,842; June 25.
Markem Machine Company. (See Robbins, Charles F., assignor.)
Markert, Walter, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Muller & Co., Dresden, Germany. Knife mounting for machines. 2,006,106; June 25.

Markert, Walter, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany. Machine for cutting thin leaves. 2,006,107; June 25.
Marshall, Clinton E., New York, N. Y. Lip stick case. 2,005,794; June 25.
Marshall, James H., Hamlet, N. C., assignor of one-half to F. E. Campbell and one-fourth to C. C. Kirkley and N. M. Gibson, Hamlet, N. C. Hat brim protector. 2,006,245; June 25.
Marti, Paul, assignor to firm Schweiz, Lokomotiv- und Maschinenfabrik, Winterthur, Switzerland. Type line composing and printing machine using circulating matrices. 2,006,246; June 25.
Martin, Richard H. (See Bush, A. O., and Martin.)
Mathewson, Wilfred B., North Weymouth, assignor to United Mattress Machinery Company, Quincy, Mass. Mattress-tufting device. 2,006,076; June 25.
Mathias, David L., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Welding electrodes. 2,005,902; June 25.
Mathieson Alkali Works, Inc., The. (See MacMullin, Robert B., assignor.)
Mathieu, Gaston A., and O. S. Puckle, London, England, assignors to Radio Corporation of America. High frequency multiplex signaling system. 2,005,795; June 25.
Maurey, Eugene E., Chicago, Ill. Pulley. 2,006,145; June 25.
May, Orville E., Chevy Chase, Md., H. T. Herrick, Washington, D. C., A. J. Moyer, Takoma Park, Md., and P. A. Wells, Ballston, Va., assignors to H. A. Wallace, Secretary of Agriculture of the United States of America. Carrying out oxidative fermentations by molds or fungi. 2,006,068; June 25.
Maynard, Arthur H., Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine. Fastener-applying implement. 2,006,054; June 25.
McCloskey, Frederick W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Motor control system. 2,005,903; June 25.
McDonald, William J. (See Wigness, Cornelius R., assignor.)
McKay Machine Company, The. (See Miller, Ralph J., assignor.)
McKean, John O., assignor to Foster Machine Company, Westfield, Mass. Lap arrester for winding machines. 2,006,035; June 25.
McKee, Garnet W. (See Olsen, Ove M., assignor.)
McLeod, Earl H., Rutherford, N. J., assignor to The International Printing Ink Corporation, New York, N. Y. Emulsion printing ink and making same. 2,005,945; June 25.
McNairy, Jacob W., and H. S. Ogden, Erie, Pa., assignors to General Electric Company. 2,006,173; June 25.
McNamara, William L., assignor to Capstan Glass Company, Connellsville, Pa. Ring holder lock. 2,006,056; June 25.
McQuaid, Howard S., Lakewood, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Blanc fixe. 2,006,219; June 25.
McWilliams, John P., and F. Ditchfield, assignors to The Youngstown Steel Door Company, Cleveland, Ohio. House car. 2,006,220; June 25.
Mechanical Mold & Machine Company, The. (See Tham, Howard A., assignor.)
Meinzinger, Jacob, assignor to G. M. Holley and E. Holley, of the Holley Carburetor Company, Detroit, Mich. Hot spot manifold. 2,005,869; June 25.
Meiwald, Franz, Vienna, Austria. Knitted yarn and fabric made therefrom. 2,006,275; June 25.
Menger, Francis B. (See Price, A. L., and Menger.)
Menzel, Friedrich, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Electric switch. 2,006,317; June 25.
Metcalfe, Percy W., assignor of one-half to Clayton Metcalfe & Company, Limited, Halifax, England. Leashing of banks of yarn. 2,006,247; June 25.
Meyer, Martinus A., The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Apparatus for examining the contents of tanks. 2,006,301; June 25.
Michalski, Martin, North Chicago, Ill. Lawn mower sharpening device. 2,006,025; June 25.
Michigan Electrotype and Stereotype Company. (See Berdan, Kenneth D., assignor.)
Michigan Tool Company. (See Drader, Joseph C., assignor.)
Micromatic Hone Corporation. (See Connor, Kirke W., assignor.)
Midthun, Gerhard J., Lander, Wyo. Universal joint. 2,006,026; June 25.
Militello, Louis J., Wood River, Ill. Sugar bowl. 2,005,919; June 25.
Miller, Alvin L. and R. H., Detroit, Mich. Brake gauging device. 2,005,870; June 25.
Miller, Charles J., Chicago, Ill. Extension table. 2,005,947; June 25.
Miller, George P., Naperville, Ill. Potato food product. 2,006,146; June 25.
Miller, Ralph J., assignor to The McKay Machine Company, Youngstown, Ohio. Apparatus for working sheet metal. 2,006,087; June 25.
Miller, Russell H. (See Miller, Alvin L. and R. H.)
Miller, Russell W., Berkeley and L. V. Steck, Oakland, assignors to Shell Development Company, San Francisco, Calif. Making acetaldehyde. 2,005,946; June 25.
Mills, B. A., Shreveport, La. Automatic liner safety. 2,005,796; June 25.
Milnes, Tom, Lachute Mills, Quebec, Canada, assignor of one-half to Ayers Limited, Lachute Mills, Quebec, Canada. Dryer felt for paper making machines. 2,005,979; June 25.
Milwaukee Gas Specialty Company. (See Leins, Oscar J., assignor.)
Minerals Separation North American Corporation. (See Keller, Cornelius H., assignor.)
Minimax A.-G. See Betzler, Martin, assignor.)
Minshall, Robert J., assignor to Boeing Airplane Company, Seattle, Wash. Retractable landing gear. 2,005,980; June 25.
Mitchell, Edward R., assignor of one-half to R. Kendall, Sarnia, Ontario, Canada. Separating oil from fuller's earth or similar material. 2,006,088; June 25.
Mitchell, Richard S. M., Detroit, Mich. Ball joint element. 2,005,948; June 25.
Monocap Limited. (See De Faveri, S., and Cimatti, assignors.)
Montourl, Felix C., Washington, D. C. Dust collector for abrading tools. 2,006,108; June 25.
Moore, Samuel, assignor of thirty-three and one-third per cent to R. Price and thirty-three and one-third per cent to W. Pierson, Cleveland, Ohio. Fuel-valve lock for motor vehicles. 2,006,027; June 25.
Moore, William, Chappaqua, assignor to American Cyanamid Company, New York, N. Y. Insecticide composition. 2,005,797; June 25.
Morey Lennie L. (See Morey, James J., assignor.)
Morey, James J., Chicago, Ill., assignor to L. L. Morey, Portland, Oreg. Optical system for photographic sound apparatus. 2,006,217; une 25.
Morgan, John D., South Orange, N. J., assignors to Doherty Research Company, New York, N. Y. Exhaust gas analyzer. 2,006,205; June 25.
Morgan, Porter S., New York, assignor to Liberty Share Corporation, Buffalo, N. Y. Vernier for meter registering mechanism. 2,005,949; June 25.
Morin, Louis H., assignor to American Flexible Shaft Manufacturing Corporation, New York, N. Y. Machine for producing flexible shafting. 2,006,174; June 25.
Moritz, Burt E., Jr., assignor to K. G. M. Radio Corporation, Denver, Colo. Centralized radio system. 2,006,077; June 25.
Moroney, Carl J., San Mateo, and W. O. Witherspoon, Burlingame, Calif. Apparatus for proportioning ingredients. 2,005,950; June 25.
Morrow, Clarence H., Shaker Heights, assignor to The Hotstream Heater Company, Cleveland, Ohio. Draft regulator. 2,005,981; June 25.
Morton, James, Carlisle, England. Manufacture of fabrics. 2,005,951; June 25.
Morse, Clark T., Detroit, Mich., assignor to American Radiator Company, New York, N. Y. Heating and ventilating apparatus. 2,006,109; June 25.
Moser, Wilhelm, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Directional apparatus. 2,005,798; June 25.
Mossberg, Harold F., assignor to O. F. Mossberg & Sons, Incorporated, New Haven, Conn. Adjustable sight for firearms. 2,005,952; June 25.
Mossberg, O. F., & Sons, incorporated. (See Mossberg, Harold F., assignor.)
Moyer, Andrew J. (See May, O. E., Herrick, Moyer, and Wells.)
Moyer, Charles L. (See Davis, J. A., and Moyer.)
Multicycol Pump & Engine Corporation. (See Hutchison, Miller R., Jr., assignor.)
Multigraph Company. (See Osborn, Henry C., assignor.)
Munn, Daniel A., Burlingame, Calif. Tool. 2,005,723; June 25.
Myers, Roy A., St. Paul, Minn. Mop head holder. 2,005,904; June 25.
N. V. Machinerieen-en Apparaten Fabrieken "Meaf". (See Holm, Waldemar, assignor.)
Nardone, Romeo M., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Transmission. 2,005,843; June 25.
National Can Company. (See Hopkins, Arthur G., assignor.)
National Postal Meter Company. (See Finfrock, John Q., assignor.)
National Superior Company, The. (See Young, Forrest J., assignor.)
Nelson, Adolph L., Indianapolis, Ind., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich. Piston. 2,006,008; June 25.
Nelson, Adolph L., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich. Piston. 2,006,009; June 25.
Nemmer, Albert W. (See Nemmer, Frank X. and A. W.)
Nemmer, Frank X. and A. W., Cheektowaga, N. Y. Spring cushion for furniture. 2,006,218; June 25.
Netzband, Alfred, and B. Kowalski, Berlin-Spandau, Germany. Sprinkler. 2,006,028; June 25.
Neugebauer, Hermann, Berlin-Spandau, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Protective scheme for transmission lines. 2,005,905; June 25.

Newforth, Frank, Jr., Temple City, Calif., assignor to American Telephone and Telegraph Company. Telephone system. 2,005,844; June 25.
New Jersey Zinc Company, The. (See Stutz, George F. A., assignor.)
New Products Corporation. (See Banker, Oscar H., assignor.)
Nichols, Henry, New York, N. Y. Vehicle washing apparatus. 2,006,029; June 25.
Nicholson, Frederick A., and W. T. Pritchard, Seattle, Wash., assignors to Stetson-Ross Machine Company. Apparatus for removing bark from logs. 2,005,799; June 25.
Nicles, Hiram W., assignor to Vento Steel Sash Company, Muskegon Heights, Mich. Window lock and handle. 2,005,953; June 25.
Nielsen, Herluf, New York, N. Y. Headlight. 2,006,248; June 25.
Nodière, Victor, St.-Etienne, France. Safety bolt. 2,006,276; June 25.
North, Oliver D., and P. G. Hugh, assignors to Scammell Lorries Limited, London, England. Motor tractor and trailer. 2,006,000; June 25.
Northam, Alfred J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vulcanization of rubber. 2,006,057; June 25.
Norton Company. (See Bush, A. O., and Martin, assignors.)
Norton Company. (See Ridgway, Raymond R., assignor.)
Nutting, Gerry B. (See Banfield, F. E., Nutting, and Wright.)
O'Boyle, Thomas, Cleveland, assignor of one-half to H. Wright, Houston, Tex. Mixing apparatus. 2,005,800; June 25.
Ogden, Harold S. (See McNairy, J. W., and Ogden.)
Ohio Steel Foundry Company, The. (See Harbison, Clarence B., assignor.)
Oilgear Company, The. (See Ferris, Walter, assignor.)
Old Colony Distributing Company. (See Hibbard, Charles L., assignor.)
Olin, John F., Dayton, Ohio, assignor to The Sharples Solvents Corporation, Philadelphia, Pa. Making amines and di-amines and products of said process. 2,006,058; June 25.
Olsen, Olaf J., Miami, Fla. Folding rocking chair. 2,006,277; June 25.
Olsen, Ove M., assignor to G. W. McKee, Rockford, Ill. Burner for various gases. 2,005,801; June 25.
Olympic Engineering Corporation. (See Renouf, Roy R., assignor.)
Ormbreck, Thomas O. (See Axelberg, Einar S., assignor.)
Osborn, Alden E., New York, N. Y. Circuit closer. 2,006,175; June 25.
Osborn, Henry C., Cleveland, Ohio, assignor to Multigraph Company, Wilmington, Del. Index tab. 2,005,749; June 25.
Oslund Brothers Machine Company, The. (See Oslund, Walter W., assignor.)
Oslund, Walter W., assignor to The Oslund Brothers Machine Company, Incorporated, Holden, Mass. Labeling machine. 2,005,802; June 25.
Packard Motor Car Company. (See Edwards, Herbert C., assignor.)
Packard Motor Car Company. (See Hutchison, Miller R., assignor.)
Palinkos, Stephen J., South Norwalk, Conn. Hinge. 2,006,110; June 25.
Palmer, De Mar A. (See Benbow, J. D., and Palmer.)
Pappert, Emanuel, Long Island City, N. Y., assignor to G. P. Kimmel, Washington, D. C. Rimless endpiece mounting. 2,006,278; June 25.
Pardee, Howard J., New York, N. Y. Meter construction. 2,005,845; June 25.
Paridon, Michael, Barberton, Ohio, assignor to The Diamond Match Company, New York, N. Y. Machine for packing flat packets and the like. 2,006,147; June 25.
Park, James G. (See Hofmann, H. E., and Park.)
Parker-Meyer-Dennis Company. (See Davis, J. A., and Moyer, assignors.)
Parker, Orrel A., Cleveland, Ohio. Wheel. 2,005,828; June 25.
Parmelee, Earle L. (See Foster, W. D., and Parmelee.)
Parsons, Philip D., Swarthmore, assignor to Scott Paper Company, Chester, Pa. Roll labeling machine. 2,005,846; June 25.
Paxton, Robert. (See Reed, G. M., and Paxton.)
Peck, Edward B., Elizabeth, N. J., assignor to Standard-I. G. Company. Obtaining valuable refined distillates from unrefined hydrocarbon oils and products obtained thereby. 2,006,177; June 25.
Pennsylvania Rubber Company. (See Humphrey, Walter E., assignor.)
Penola, Inc. (See Reswick, Maurice, assignor.)
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,005,750; June 25.
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Thermostatic valve structure for hydraulic shock absorbers. 2,005,751; June 25.
Perkins Glue Company. (See Harvey, Ellery H., assignor.)
Perma Corporation. (See Dopp, Frank B., assignor.)
Permatex Company. (See Fuchs, Heman C., assignor.)
Perry, Charles W., Dotham, Ala. Combined fireplace back and water heater structure. 2,006,279; June 25.
Perser Corporation, The. (See Draper, Ernest E., assignor.)
Petersen, Carl A., and A. L. Christy, Chicago, Ill. Foot valve. 2,005,954; June 25.
Pfanstiehl, Carl, Highland Park, Ill., assignor to Pfanstiehl Chemical Co. Preparing pen-points. 2,005,752; June 25.
Pfanstiehl Chemical Co. (See Pfanstiehl, Carl, assignor.)
Piazze, Thomas E. (See Jones, L. L., and Piazze.)
Pierce, Harold C., Anaheim, Calif., assignor to Food Machinery Corporation. Box stacker. 2,005,906; June 25.
Pierson, William, et al. (See Moore, Samuel, assignor.)
Piron, Emil H., assignor to The Detroit Edison Company, Detroit, Mich. Thermostat. 2,006,178; June 25.
Plaschka, Karl, Vienna, Austria. Muffle for use in connection with the casting of precious metals. 2,006,148; June 25.
Plausics, Alexander. (See Beardsley, B., and Plausics.)
Potigian, Armen, Davenport, Iowa. Animal trap. 2,006,111; June 25.
Potter, Albert T., Detroit, Mich., assignor to Ainsworth Manufacturing Corporation. Seat control mechanism. 2,006,149; June 25.
Price, Arthur L., and F. B. Menger, Schenectady, N. Y., assignors to General Electric Company. Voltage surge indicator. 2,006,179; June 25.
Price, Duane W., and M. Kellermann, Chicago, Ill., assignors, by mesne assignments, to F. J. Kolar, South Bend, Ind. Target game. 2,006,180; June 25.
Price, Roger, et al. (See Moore, Samuel, assignor.)
Price, Nathan H., assignor of one-half to G. Gillespie, Birmingham, Ala. Pneumatic rifle. 2,006,030; June 25.
Pritchard, Wilmot T. (See Nicholson, F. A., and Pritchard.)
Prosperity Company Inc., The. (See Davis, Ernest, assignor.)
Prosperity Company, The. (See Ledbetter, James C., assignor.)
Puckle, Owen S. (See Mathieu, G. A., and Puckle.)
Pyzel, Ewald, Pittsburg, assignor to Shell Development Company, San Francisco, Calif. Catalytic converter. 2,006,078; June 25.
Quine, Harry L., Brooklyn, N. Y. Game. 2,006,176; June 25.
Radio Corporation of America. (See Farnham, Paul O., assignor.)
Radio Corporation of America. (See Hansell, Clarence W., assignor.)
Radio Corporation of America. (See Koch, Winfield R., assignor.)
Radio Corporation of America. (See Kreuzer, Barton, assignor.)
Radio Corporation of America. (See Lindenblad, Nils E., assignor.)
Radio Corporation of America. (See Mathieu, G. A., and Puckle, assignors.)
Radio Corporation of America. (See Round, Henry J., assignor.)
Radio Corporation of America. (See Vance, Arthur W., assignor.)
Rall, Ottmar, Zurich, Switzerland. Projecting lamp for motor vehicles. 2,006,249; June 25.
Ramsey, Joseph H., Albany, N. Y. Bottle closure. 2,005,753; June 25.
Ray Burner Company. (S Vidalie, René M., assignor.)
Redro Laboratories, Inc. (See Austin, William E., assignor.)
Reed, George M., Yeadon, and R. Paxton, Drexel Hill, Pa., assignors to General Electric Company. Panel board and wiring the same. 2,006,150; June 25.
Reel, Jesse K., Cantril, assignor of one-half to J. N. Calhoun, Keosauqua, Iowa. Toy fishing outfit. 2,005,803; June 25.
Reid, George H., Kingston-on-Thames, England. Gyroscopic turn indicator. 2,006,112; June 25.
Reither, Emil A., Aitkin, Minn. Building construction. 2,005,921; June 25.
Remington Arms Company. (See Lowe, Kenneth J., assignor.)
Remington Rand Inc. (See Kitchen, Charles C., assignor.)
Remy, Frank L., Syracuse, Ind. Closure for containers. 2,005,871; June 25.
Renouf, Roy R., assignor to Olympic Engineering Corporation, Los Angeles, Calif. Well packer. 2,005,955; May 25.
Reswick, Maurice, Pittsburgh, Pa., assignor to Penola, Inc. Lubricating device. 2,006,181; June 25.
Richmond Fireproof Door Company, The. (See Bancroft, James E., assignor.)
Riddell, John T., Chicago, Ill. Leather forming machine. 2,005,804; June 25.
Ridgway, Raymond R., Niagara Falls, N. Y., assignor to Norton Company, Worcester, Mass. Making abrasive metal carbides and an apparatus therefor. 2,005,956; June 25.
Ridler, Earl S., Shaker Heights, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Regeneration of platinum contact masses. 2,006,222; June 25.
Ridler, Earl S., Shaker Heights, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Treatment of platinum contact masses. 2,006,22; June 25.

Riley, Perry, Coventry, England. Change speed mechanism. 2,006,250; June 25.
Robbins, Charles F., assignor to Markem Machine Company, Keene, N. H. Marking machine. 2,006,302; June 25.
Röber, Constantin F., assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany. Apparatus for applying a cigar wrapper to a bunch. 2,006,113; June 25.
Roberts, Robert P. (See Hibbert, H. M., and Roberts.)
Rocke, Louis, Brooklyn, N. Y. Detachable clasp. 2,005,872; June 25.
Rockhill Coal & Iron Company. (See Shiley, Elmer C.)
Rollins, Irving E., Worcester, Mass. Lighting unit for lanterns. 2,006,251; June 25.
Rolwing, Rosemary. (See Florman, I., and Rolwing.)
Rosenmund, Karl W., and F. Kiliz, Kiel, Germany. Aliphatic-aromatic amine and making same. 2,006,114; June 25.
Rosenthal, Frank, San Andreas, Calif. Blasting cap. 2,005,957; June 25.
Rothammel, Erich, Pforzheim, Germany, assignor to the firm Sulfurit S. A., Basel, Switzerland. Apparatus for the manufacture of sulphuric acid. 2,006,031; June 25.
Round, Henry J., London, England, assignor to Radio Corporation of America. Aerial. 2,005,805; June 25.
Rowe, Eugene A., San Francisco, S. H. Edwards and F. N. Fossati, Richmond, Calif., assignors to Standard Oil Company of California, San Francisco, Calif. Apparatus for annealing. 2,006,001; June 25.
Rudorff, Dagobert W., Berlin-Wannsee, Germany. 2,006,035; June 25.
Rupert, Lilburn L., Muskogee, Okla. Bridle bit. 2,006,032; June 25.
Ryan, Joseph D., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Laminated safety glass. 2,006,182; June 25.
Sandberg, Robert N., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for use in applying pressure to shoe bottoms. 2,005,754; June 25.
Sanders, Albert D., Jr. (See Weber, G. B., and Sanders.)
Sassen, Bernard. (See Ernst, H., and Sassen.)
Saurer, Curt, assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Flexible connection. 2,006,303; June 25.
Scammell Lorries Limited. (See North, O. D., and Hugh, assignors.)
Schaake, William, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Trolley wire support. 2,005,907; June 25.
Schaake, William, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Pa. Current collecting equipment. 2,005,908; June 25.
Schaefer, Josef, Dortmund, Germany. Operation of coke ovens and ovens therefor. 2,006,115; June 25.
Schafer, Conrad B., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Template. 2,006,183; June 25.
Schaffer, Stanley S., Chicago, Ill. Smoking pipe. 2,005,873; June 25.
Schemmel, R. C., et al. (See Hall, William J., assignor.)
Schering-Kahlbaum A. G. (See Schoeller, W., Allardt, and Feldt, assignors.)
Schilder, Theodore, and G. Erlemann, assignor to Fred Goat Co., Inc., New York, N. Y. Stiffproof package and making the same. 2,006,060; June 25.
Schilling, Arthur B., Rockaway, and C. Casey, Dover, N. J. Packing a round of ammunition. 2,005,756; June 25.
Schlack, Herman C., assignor of forty-nine one-hundredths to C. A. Kurrash, Detroit, Mich. Square shear gauge. 2,005,829; June 25.
Schleicher, Frederick L., St. Louis County, Mo. Fluid seal. 2,005,833; June 25.
Schlichenmaier, Hans. (See Kränzlein, G., Schlichenmaier, and Schörnig.)
Schlueter, Theodore J., New Orleans, La. Pump for hydraulic drives. 2,006,280; June 25.
Schmidt, Oscar C., assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio. Meat grinding machinery. 2,006,318; June 25.
Schmidt, Richard, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Sound film. 2,005,847; June 25.
Schmiedel, Johannes, Dresden, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany. Method and apparatus for applying paper bands and the like to cigars. 2,006,116; June 25.
Schneider, Wilhelm, Dessau-in-Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Manufacture of photographic silver halide emulsion layers. 2,006,002; June 25.
Schnell, Steve. (See Dick, B., and Schnell.)
Schnell, Steve, assignor to Wagner Electric Corporation, St. Louis, Mo. Braking apparatus. 2,005,874; June 25.
Schoeller, Walter, Berlin-Westend, H. G. Allardt, Berlin-Reinickendorf-West, and A. Feldt, Berlin-Charlottenburg, assignors to Schering-Kahlbaum A. G., Berlin, Germany. Complex compound of organic mercapto compounds. 2,006,003; June 25.
Scholtes, Albert J., Baltimore, Md. Scooter and sleigh runner. 2,006,325; June 25.
Scholtes, Albert J., Baltimore, Md. Flexible coasting sled. 2,006,326; June 25.
Scholtes, Albert J., Baltimore, Md. Hose clamp. 2,006,327; June 25.
Scholtes, Albert J., Baltimore, Md. Center bowing steering and braking sled runners. 2,006,328; June 25
Scholtes, Albert J., Baltimore, Md. Encircling band tightener. 2,006,329; June 25.
Scholtes, Albert J., Baltimore, Md. Coasting sled. 2,006,330; June 25.
Schörnig, Ludwig. (See Kränzlein, G., Schlichenmaier, and Schörnig.)
Schrader, Gerhard, Opladen, near Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Water insoluble azo dyestuff containing a benzanthrone nucleus. 2,005,848; June 25.
Schrauth, Walther, Berlin-Dahlem, Germany, assignor, by mesne assignments, to "Unichem" Chemikalien Handels A.-G., Zurich, Switzerland. Treatment of rubber. 2,006,184; June 25.
Schreiner, Carl R., Brooklyn, N. Y. Pile wire for looms. 2,006,151; June 25.
Schroeder, Adolph G. (See Toriello, Frank, A., and Schroeder.)
Schuler, Reuben. (See Brooks, B. T., and Schuler.)
Schumacher, Joseph, Peru, Ill., assignor to Carus Chemical Company. Hydroquinone manufacture. 2,006,324; June 25.
Schupp, Alfred B., Richmond Hill, N. Y. Combined case and stand for thermometers. 2,005,909; June 25.
Schwarz, Philipp, Wuppertal-Barmen, Germany. Manufacturing bobbins, particularly film bobbins. 2,006,281; June 25.
Schwarzmann, Wolfgang E., Longmeadow, assignor to United American Bosch Corporation, Springfield, Mass. Circuit breaker. 2,005,806; June 25.
Schweiz, Lokomotiv- und Maschinenfabrik. (See Martl, Paul, assignor.)
Scott, John, St. George, Staten Island, N. Y. Display sign. 2,005,757; June 25.
Scott Paper Company. (See Parsons, Philip D., assignor.)
Scovill Manufacturing Company, The. (See Bertschinger, Charles F., assignor.)
Seeburg, Justus P. (See Wilcox, Russell I., assignor.)
Segal, Ralph H., and T. I., Brooklyn, N. Y. Lighter. 2,006,061; June 25.
Segal, Theodore I. (See Segal, Ralph H. and T. I.)
Sereff, Peter H., Denver, Colo. Tile. 2,005,958; June 25.
Sharpe, Charles E., Kenmore, N. Y. Hanger. 2,006,033; June 25.
Sharples Solvents Corporation, The. (See Olin, John F., assignor.)
Shear, Frank K., Ravena, N. Y. Internal combustion motor. 2,006,117; June 25.
Shell Development Company. (See Huyser, Hendrik W., assignor.)
Shell Development Company. (See Mallshev, Boris, assignor.)
Shell Development Company. (See Meyer, Martinus A., assignor.)
Shell Development Company. (See Millar, R. W., and Steck, assignors.)
Shell Development Company. (See Pyzel, Ewald, assignor.)
Serv-A-Towel Manufacturing Company. (See Houdeville, August L., assignor.)
Seybold, Frederick W., Dayton, assignor to Harris Seybold Potter Company, Cleveland, Ohio. Back guage stop mechanism. 2,005,830; June 25.
Seybold, Frederick W. (See Lewis, H. I., and Seybold.)
Shaw, James, assignor to The Colonial Salt Company, Akron, Ohio. Pouring carton. 2,005,831; June 25.
Shell Development Company. (See Carney, Samuel C assignor.)
Sheppard, John J., Flint, Mich. Weather strip. 2,005,823; June 25.
Shiley, Elmer C., Mount Union, assignor to J. W. Wetter, Philipsburg, receiver for Rockhill Coal & Iron Company, Robertsdale, Pa. Crusher. 2,005,758; June 25.
Shunk, L. E. (See Grabler, Peter, assignor.)
Sidler, Siegfried, Zurich, Switzerland. Needle threading device. 2,006,185; June 25.
Silverman, Daniel, Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa Ignition system. 2,005,875; June 25.
Silverman, Daniel. (See Slepian, J., Ludwig, and Silverman.)
Skinner, Perry R., Amsterdam, N. Y. Angle dental handpiece. 2,005,849; June 25.
Slaughter, Charles E., Montclair, N. J. Automatic projector. 2,005,759; June 25.
Slepian, Joseph, Pittsburgh, L. R. Ludwig, Wilkinsburg, and D. Silverman, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical conversion system. 2,005,876. June 25.
Smith, Bowman S., Stockton, Calif. Gas saving deflector 2,005,982; June 25.
Smith, Clarence M. (See Craft, Walter B., assignor.)
Smith, Clyde, Hopkinsville, Ky., assignor to International Communications Laboratories, Inc., New York, N. Y Stock quotation posting and margin calculating machine. 2,005,807; June 25.
Smith, Corinne S., Walkerton, Ind. Cover for chickens. 2,006,118; June 25

Smith, Edwin F., Prospect Park, Pa., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Temperature control system. 2,006,282; June 25.
Smith, Herbert, Clinton, Mass., assignor to E. C. Bowers and C. L. Feldman, receivers for Wickwire Spencer Steel Company, New York, N. Y. Convection type radiator enclosure. 2,005,808; June 25.
Smith, John C., and G. H. Campbell, assignors to Solar Laboratories, Monaca, Pa. Stenciling method and apparatus. 2,005,809; June 25.
Smith, Lawrence C., Kenmore, assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Refrigerant compressor. 2,005,959; June 25.
Società Italiana Pirelli. See Emanuell, Luigi, assignor.
Solar Laboratories. (See Smith, J. C., and Campbell, assignors.)
Soll, Arthur. (See Larson, L. A., and Soll.)
Southwell, Raymond J., and T. H. Wickwire, Jr., New York, N. Y. Selvaged unwoven zigzag fabric. 2,005,760; June 25.
Spangler, E. J., Company. (See Kassekert, H., and Kaeser, assignors.)
Speeg, George, Hartwell, Ohio. Combination back-up and tail light. 2,005,761; June 25.
Spencer, John A., Newtonville, assignor to General Plate Company, Attleboro, Mass. Flow control. 2,006,152; June 25.
Staempfli, Joseph, New Orleans, La. Machine for making boiler cleaner nozzles. 2,006,283; June 25.
Stallmann, Otto, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Dyestuffs of the dibenzanthrone series and preparing the same. 2,005,810; June 25.
Stanco, Inc. (See Hofmann, H. E., and Park, assignors.)
Standard Alcohol Company. (See Brooks, B. T., and Schuler, assignors.)
Standard-I. G. Company. (See Fulton, S. C., and Kalichevsky, assignors.)
Standard-I. G. Company. (See Peck, Edward G., assignor.)
Standard Oil Company. (See Adams, C. E., and Voorhees, assignors.)
Standard Oil Company. (See Atwell, Harold V., assignor.)
Standard Oil Company. (See Brown, Bruce K., assignor.)
Standard Oil Company. (See Frolich, P. K., and Wiezevich, assignors.)
Standard Oil Company of California. (See Rowe, E. A., Edwards, and Fossati, assignors.)
Standard Oil Development Company. (See Anderson, Richard D., assignor.)
Standard Oil Development Company. (See Harpster, Walter C., assignor.)
Standard Oil Development Company. (See Stines, Daniel E., assignor.)
Standard Oil Development Company. (See Sydnor, Harold, assignor.)
Stark, Julian H., and H. M. Witherow, Fort Wayne, Ind., assignors to General Electric Company. Demand meter. 2,006,321; June 25.
Steck, Leo V. (See Millar, R. W., and Steck.)
Steele, James W., Kansas City, Mo. Garment finishing apparatus. 2,005,960; June 25.
Steimmig, Franz, Hermsdorf, near Kynast, Germany. Preparing and maturing alkali cellulose. 2,005,811; June 25.
Steinmetzer, Joseph N., Watermael, Belgium. Apparatus for the separation of dry materials. 2,006,119; June 25.
Stetson Ross Machine Company. (See Nicholson, F. A., and Pritchard, assignors.)
Stevens, Gray, Weymouth, Mass., assignor, by mesne assignments, to American Sales Book Company, Inc. Manifolding record book. 2,006,034; June 25.
Stewart, Alden D., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Water heater control 2,006,035; June 25.
Stines, Daniel E. Plainfield, N. J., assignor to Standard Oil Development Company. Rectifying process. 2,006,186; June 25.
Stockle, Erwin R., assignor to Central Radio Laboratories, Milwaukee, Wis. Resistance element and making same. 2,005,922; June 25.
Stone, Morris, and R. Baudry, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control means for well drilling equipment. 2,005,877; June 25.
Strauss, Jerome, Pittsburgh, assignor, by mesne assignments, to U. S. Rustless Steel & Iron Corporation, Bridgeville, Pa. Alloy steel. 2,006,304; June 25.
Strynatka, Thomas G., Mirror, Alberta, Canada. Crossing signal. 2,006,129; June 25.
Stuart, Robert. (See Hoke, Walter W., assignor.)
Stutz, George F. A., Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y. Manufacture of pigments. 2,006,187; June 25.
Sulfurit S. A. (See Rothammel, Erich, assignor.)
Sutherland Paper Company. (See Wilson, Dorian M., assignor.)
Swearingen, Garrett V., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Vessel lining. 2,006,331; June 25.
Swift, Claude E. (See Bray, U. B., and Swift.)
Sydnor, Harold, Elizabeth, N. J., assignor to Standard Oil Development Company. Cracking. 2,006,188; June 25.
Symington Company, The. (See Barrows, Donald S., assignor.)
Taub, Ludwig. (See Lange, F., and Taub.)
Taylor Freezer Corporation. (See Dennison, Forrest W., assignor.)
Technidyne Corporation. (See Jones, L. L., and Piazze, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Gothe, Albrecht, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Moser, Wilhelm, assignor.)
Telesky, Thomas, Amsterdam, N. Y. Pull and drag-saw machine. 2,005,961; June 25.
Teletype Corporation. (See Larson, Edward S., assignor.)
Television Limited. (See Baird, John L., assignor.)
Terman, Frederick E., Stanford University, Calif. Thermionic tube. 2,006,079; June 25.
Testi, Nicholas, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass. Safety razor. 2,006,062; June 25.
Texas Company, The (See Swearingen, Garrett V., assignor.)
Tham, Howard A., assignor to The Mechanical Mold & Machine Company, Akron, Ohio. Profiling attachment for planers. 2,006,121; June 25.
Thomas, Arthur L. Trenton, and L. D. Ellis, Princeton, N. J. Hair straightening device. 2,006,284; June 25.
Thomas, John G., New York, N. Y. Method and apparatus for treating slimy materials. 2,005,812; June 25.
Thomas, Ralph B. (See Malloy, F. J., and Thomas.)
Thompson, Albert C. (See Almquist, M. L., and Thompson.)
Thorsen, Thorvald L., Beloit, Wis. Pressure reducing valve. 2,005,813; June 25.
Tompkins, Claude A. (See Dixon, Cornelius W., assignor.)
Tompkins, Claude A., Jacksonville, Fla. Turpentine cup and securing means. 2,006,089; June 25.
Toriello, Angelo. (See Torellio, Frank and A., and Schroeder.)
Torlello, Frank and A., Hackensack, and A. G. Schroeder, Teaneck, N. J. Sled brake. 2,005,920; June 25.
Tornblom, Nils A., Chicago, Ill., assignor to Appleton Electric Company. Explosionproof cable connector. 2,006,090; June 25.
Trico Fuse Manufacturing Co. (See Jung, O. H., and Heffelfinger, assignors.)
Trico Products Corporation. (See Horton, Erwin C., assignor.)
Trico Products Corporation. (See Hueber, Henry, assignor.)
Trico Products Corporation. (See Horton, Erwin C., assignor.)
Trix, Herbert B., Grosse Pointe Village, assignor to American Injector Company, Detroit, Mich. Thermostatic valve. 2,006,153; June 25.
Tubus, A. G. (See Weffing, Adolf, assignor.)
Turkington, Victor H., Caldwell, N. J., assignor to Bakelite Corporation, New York, N. Y. Oil soluble resin. 2,006,189; June 25.
"Unichem" Chemikalien Handels A.-G. (See Schrauth, Walther, assignor.)
Union Oil Company of California. (See Blanchard, Benjamin F., assignor.)
Union Oil Company of California. (See Bray, Ulric B., assignor.)
Union Oil Company of California. (See Bray, U. B., and Swift, assignors.)
United American Bosch Corporation. (See Schwarzmann, Wolfgang E., assignor.)
United Engineers & Constructors Inc. (See Chewning, Walter L., assignor.)
United Mattress Machinery Company. (See Mathewson, Wilfred B., assignor.)
United Shoe Machinery Corporation. (See Better, Francis J., assignor.)
United Shoe Machinery Corporation. (See Doyle, Thomas J., assignor.)
United Shoe Machinery Corporation. (See Hooper, Fred E., assignor.)
United Shoe Machinery Corporation. (See Sandberg, Robert N., assignor.)
United States Rubber Company. (See Ewart, E. S., and Bull, assignors.)
United States Rubber Company. (See Hopkinson, Ernest assignor.)
United States Rubber Company. (See Hutchman, James E., assignor.)
U. S. Rustless Steel & Iron Corporation. (See Strauss, Jerome, assignor.)
Universal Oil Products Company. (See Ipatieff, Vladimir, assignor.)
"Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co. (See Markert, Walter, assignor.)
"Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co. (See Röber, Constantin F., assignor.)
"Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co. (See Schmiedel, Johannes, assignor.)
Upson, Charles A., assignor to The Upson Company, Lockport, N. Y. Vehicle insulation. 2,006,232; June 25
Upson Company, The. (See Upson, Charles A., assignor.)
Upton, Albert L., St. Louis, Mo. Control system for theater lighting circuits. 2,006,223; June 25.

Vance, Arthur W., Camden, N. J., assignor to Radio Corporation of America, New York, N. Y. Cathode ray apparatus. 2,006,063; June 25.

Van Der Heuvel, Hine. (See Ketal, H., Harris, and Van Der Heuvel.)

Vento Steel Sash Company. (See Nicles, Hiram W., assignor.)

Vereinigte Stahlwerke Aktiengesellschaft. (See Dörrenhaus, G., and Walter, assignors.)

Vereinigte Stahlwerke Aktiengesellschaft. (See Zimmermann, Hans, assignor.)

Vidalie, René M., assignor to Bay Burner Company, San Francisco, Calif. Oil burner. 2,005,832; June 25.

Von Zimmermann, Max K., Elkhart, Ind. Straight-edge. 2,006,285; June 25.

Voorhees, Vanderveer (See Adams, C. E., and Voorhees.)

Wacker, Dr. Alexander, Gesellschaft für Elektrochemische Industrie, G. m. b. H. (See Halbig, P., and Kaufler, assignors.)

Wagner Electric Corporation. (See Dick, B., and Schnell, assignors.)

Wagner Electric Corporation. (See Schnell, Steve, assignor.)

Wallace, Henry A., Secretary of Agriculture of The United States of America. (See May, O. E., Herrick, Moyer, and Wells, assignors.)

Waller, Arthur, Chicago, Ill. Key-container. 2,006,286; June 25.

Walsh, James F., South Orange, N. J., assignor to Celluloid Corporation. Mirror. 2,005,814; June 25.

Walter, Charles T., assignor, by mesne assignments, to Industrial Patents Corporation, Chicago, Ill. Conveyer. 2,006,091; June 25.

Walter, Simon. (See Dörrenhaus, G., and Walter.)

Ware, Herbert M., Northwood, England. Making containers. 2,006,036; June 25.

Warner & Swasey Company. (See Burrell, Edward P., assignor.)

Warp Compressing Machine Company. (See Javery, Frank B., and A. J., assignors.)

Webb, Charles H. (See Hight, G. F., and Webb.)

Weber, Grable B., Chicago, and A. D. Sanders, Jr., Evanston, Ill. Device for and method of packing and protecting objects. 2,006,224; June 25.

Weding, Adolf, Witten/Ruhr, Germany, assignor to Tubus A. G., Zurich, Switzerland. Extrusion press. 2,006,080; June 25.

Weiss, Arthur J., St. Albans, assignor to Robert Gair Company, Inc., New York, N. Y. Knockdown tilt display carton. 2,005,816; June 25.

Weissflog, Arthur R., Pittsburgh, Pa. Dispensing unit. 2,005,762; June 25.

Weller, Ben, Midwest, Wyo. Windshield defrosting device. 2,006,122; June 25.

Wells, Percy A. (See May, O. E., Herrick, Moyer, and Wells.)

Wensel, Frederick C., Stamford, Conn. Window casement. 2,006,004; June 25.

Wepeco Steel Products Co. (See Huntington, Victor C., assignor.)

Western Austin Company. (See Benbow, J. D., and Palmer, assignors.)

Western Union Telegraph Company, The. (See Beardsley, B., and Plausics, assignors.)

Western Union Telegraph Company, The. (See Wilder, H. F., and Haglund, assignors.)

Westinghouse Electric & Manufacturing Company. (See Arnold, E. E., and Fortescue, assignors.)

Westinghouse Electric & Manufacturing Company. (See Arnold, Edwin E., assignor.)

Westinghouse Electric & Manufacturing Company. (See Ashbaugh, John H., assignor.)

Westinghouse Electric & Manufacturing Company. (See Bernarde, Henry L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Brindley, William E., assignor.)

Westinghouse Electric & Manufacturing Company. (See Carson, Robert W., assignor.)

Westinghouse Electric & Manufacturing Company. (See Dillon, H. G., Dreyer, and Jenks, assignors.)

Westinghouse Electric & Manufacturing Company. (See Dunloo, James, assignor.)

Westinghouse Electric & Manufacturing Company. (See Eberly, Robert S., assignor.)

Westinghouse Electric & Manufacturing Company. (See Guilliksen, Finn H., assignor.)

Westinghouse Electric & Manufacturing Company. (See Hellmund, R. E., and Forbes, assignors.)

Westinghouse Electric & Manufacturing Company. (See Hengstenberg, Paul M., assignor.)

Westinghouse Electric & Manufacturing Company. (See Knowles, Dewey D., assignor.)

Westinghouse Electric & Manufacturing Company. (See Lewis, Frank E., assignor.)

Westinghouse Electric & Manufacturing Company. (See Long, Thomas H., assignor.)

Westinghouse Electric & Manufacturing Company. (See Mathias, David L., assignor.)

Westinghouse Electric & Manufacturing Company. (See McCloskey, Frederick W., assignor.)

Westinghouse Electric & Manufacturing Company. (See Neugebauer, Hermann, assignor.)

Westinghouse Electric & Manufacturing Company. (See Schaake, William, assignor.)

Westinghouse Electirc & Manufacturing Company. (See Silverman, Daniel, assignor.)

Westinghouse Electric & Manufacturing Company. (See Sieplan, J., Ludwig, and Silverman, assignors.)

Westinghouse Electric & Manufacturing Company. (See Stone, M., and Baudry, assignors.)

Westinghouse Electric Elevator Company. (See White, Kenneth M., assignor.)

West Michigan Steel Foundry Co. (See Ketel, H., Harris, and Van Der Heuvel, assignors.)

Wetter, J. William, receiver. (See Shiley, Elmer C., assignor.)

White, Kenneth M., Mooresville, Ind., assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Elevator control system. 2,005,878; June 25.

Whitehead, Frederick W., assignor to The Bristol Aeroplane Company Limited, Bristol, England. Milling machine. 2,006,123; June 25.

Wickwire, Theodore H., Jr. (See Southwell, R. J., and Wickwire.)

Wickwire Spencer Steel Company. (See Smith, Herbert, assignor.)

Wiezevich, Peter J. (See Frolich, P. K., and Wiezevich.)

Wigness, Cornelius R., Harlan, assignor of one-fourth to W. J. McDonald, Portsmouth, Iowa. Internal combustion engine. 2,006,225; June 25.

Wilbanks, Allen M., deceased, Amarillo, Tex., O. Wilbanks, executrix. Water softener. 2,006,287; June 25.

Wilbanks, Ophelia, executrix. (See Wilbanks, Allen M.)

Wilcox, Albert C., assignor to The Enterprise Aluminum Company, Massillon, Ohio. Automatic thermostatic switch plug. 2,005,763; June 25.

Wilcox, Albert C., assignor to The Enterprise Aluminum Company, Massillon, Ohio. Automatic electric drip coffee urn. 2,005,764; June 25.

Wilcox, Russell I., assignor of one-half to J. P. Seeburg, Chicago, Ill. Selective automatic phonograph. 2,005,923; June 25.

Wilder, Harold F., Chatham, N. J., and H. H. Haglund, assignors to The Western Union Telegraph Company, New York, N. Y. Carrier dispatch system. 2,006,305; June 25.

Wile, Daniel D., assignor to Detroit Lubricator Company, Detroit, Mich. Apparatus and method for temperature regulation. 2,006,306; June 25.

Wilhelm, Harold F., East Orange, N. J. Match box. 2,006,190; June 25.

Williams, Harry M., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigeration. 2,005,834; June 25.

Williamson, Floyd M., Detroit, Mich. Vanity case. 2,005,835; June 25.

Wilson, Dorian M., assignor to Sutherland Paper Company, Kalamazoo, Mich. Dispensing carton. 2,005,924; June 25.

Winthrop Chemical Company. (See Lange, F., and Taub, assignors.)

Wirth, Walter V., Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of meta-cresol-methyl ether. 2,005,815; June 25.

Witcher, Eugene J., assignor to The Lufkin Rule Company, Saginaw, Mich. Attachment for measuring tapes. 2,005,850; June 25.

Witherow, Harry M. (See Stark, J. H., and Witherow.)

Witherspoon, William O. (See Moroney, C. J., and Witherspoon.)

Woodruff, Alvie C., Drewsey, Oreg. Dredge and diving bell. 2,006,037; June 25.

Wright, Hugh. (See O'Boyle, Thomas, assignor.)

Wright, Wallace C., Brookfield, N. H., assignor to American Shoe Machinery Corporation, Boston, Mass. Tempering leather soles. 2,005,765; June 25.

Wright, Warren O. (See Banfield, F. E., Nutting, and Wright.)

Wright, Warren O., Freeport, N. Y., assignor to Auto Research Corporation, Wilmington, Del. Lubrication. 2,005,766; June 25.

Yamaki, Nasuji, Sanno, Omori-Ku, Tokyo-Shi, Japan. Vehicle tire. 2,006,038; June 25.

Yardley & Company Limited. (See Carter, Elsie M., assignor.)

Yaxley, Robert G., Waterford, N. Y. Pipe and protecting same. 2,006,226; June 25.

Yoder, Daniel D., Seattle, Wash. Scratching post. 2,005,817; June 25.

Young, Charles D., Haverford, Pa. Railway car truck. 2,005,983; June 25.

Young, Forrest J., Los Angeles, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio. Nut lock device. 2,006,064; June 25.

Youngstown Steel Door Company, The. (See Ditchfield, Frank, assignor.)

Youngstown Steel Door Company, The. (See McWilliams, J. B., and Ditchfield, assignors.)

Zalger, Max, Swampscott, Mass. Windshield heater. 2,006,005; June 25.

Zalger, Max, Swampscott, Mass. Windshield heater 2,006,006; June 25.

Zimmer, Josef, Nurburg, near Ahrweiler, Germany. Camera for taking instantaneous color photographs. 2,006,007; June 25.

Zimmermann, Hans, Dortmund, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Movable weir. 2,006,252; June 25.

Zimmermann, Hans, Dortmund, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Movable weir. 2,006,253; June 25.

Zimmers, Joseph B., et al. (See Hall, William J., assignor.)

Zook, Alvin D., Pueblo, Colo. Device for use in cleaning steering wheels. 2,005,925; June 25.

Zublin, John A., Bel Air, Calif. Method and apparatus for operating oil wells. 2,005,767; June 25.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Air brake. C. A. Campbell. 19,621; June 25.
Antislagging arrangement. W. H. Armacost. 19,619; June 25.
Carton, Collapsible egg. E. G. Levkoff. 19,625; June 25.
Drum weir. B. H. Kersting. 19,623; June 25.
Envelope, Shirt. L. Blumenstock. 19,620; June 25.
Fastener, fastener installation and attaching the same, Separable. A. W. Kimbell. 19,624; June 25.
Fiber, Making felted mineral. E. R. Powell. 19,627; June 25.
Multiplex receiving apparatus. R. E. Mathes. 19,626; June 25.
Valve mechanism. L. M. Goldsmith. 19,622; June 25.

LIST OF DESIGN INVENTIONS

Apparel holder and umbrella handle or similar article, Combined. S. Osterman. 96,052–3; June 25.
Base unit of a studio couch or similar article. M. Fox. 96,029; June 25.
Bottle. A. C. Meyer. 96,045; June 25.
Bottle or similar article. C. J. Chamales. 96,019; June 25.
Bowl or similar article. C. W. Oldham. 96,048; June 25.
Bowl or the like, Shaving. C. S. Gage and W. D. Canaday. 96,030; June 25.
Bridge for eyeglasses. H. W. Gram. 96,035; June 25.
Brush or similar article. A. Wewetzer. 96,072; June 25.
Buckle. L. Alterson. 96,001; June 25.
Button. C. T. Thorne. 96,063; June 25.
Cap, Military. M. Greenberg. 96,034; June 25.
Card, Display. A. Bleich. 96,010; June 25.
Carpet. P. V. Beneville. 96,004–5; June 25.
Carpet. J. S. Travis. 96,064–5; June 25.
Clock or similar article. O. Ciccarelli. 96,020–1; June 25.
Couch or the like. J. W. Bowersox. 96,013–14; June 25.
Cravat holder. J. O. Pollack. 96,054; June 25.
Dolly. E. J. and G. A. Hutt. 96,040; June 25.
Electric heater for hair waving. H. Bonat. 96,012; June 25.
Electron discharge device. T. M. Shrader. 96,061; June 25.
Electron discharge device. N. R. Smith. 96,062; June 25.
Finger ring. A. Sager. 96,056; June 25.
Flash light and umbrella handle or similar article, Combined. S. Osterman. 96,050—1; June 25.
Flatiron, Electric. G. Waage. 96,070; June 25.
Game board. G. Ellison. 96,027; June 25.
Game board or similar device. H. Schwartz. 96,060; June 25.
Hat. I. Eisenberg. 96,026; June 25.
Hat. S. Scheuer. 96,058; June 25.
Heater. A. D. Olds. 96,049; June 25.
Leather. H. Heidemann. 96,039; June 25.
Lighting unit. J. H. Blitzer. 96,011; June 25.
Mixing machine casing. E. A. Jackson. 96,041; June 25.
Nozzle for a suction machine. C. S. Morse. 96,047; June 25.
Paper, Decorated wrapping. A. Hegmann. 96,038; June 25.
Paving block. F. Belda. 96,003; June 25.
Penn, Fountain. W. R. Cuthbert. 96,023; June 25.
Pencil. W. R. Cuthbert. 96,022; June 25.
Platter. F. J. Muscuch. 96,044; June 25.
Radiocabinet. A. C. Haggstrom. 96,036; June 25.
Rug. J. J. Moll and W. C. Chapman. 96,046; June 25.
Rug. I. J. Vetter. 96,069; June 25.
Sharpener, Razor blade. A. F. Weiss. 96,071; June 25.
Shoe. V. De Liso. 96,024; June 25.
Shoe. H. Goldberg. 96,033; June 25.
Shoe. R. Rome. 96,055; June 25.
Shoe. J. Scacco. 96,057; June 25.
Shoe. A. Turlinsky. 96,066–8; June 25.
Shoe heel. F. Bernstein. 96,006–7; June 25.
Shoe heel. F. C. Lovejoy. 96,043; June 25.
Skillet or similar article. L. H. Amrine. 96,002; June 25.
Spoon or other article of flatware. F. R. Woodward. 96,074–5; June 25.
Spoon or similar article. G. N. Allen, C. A. Bennett, and L. E. Ressegger. 96,000; June 25.
Stove or similar article, Cooking. F. K. Berry and A. J. Reedy. 96,008–9; June 25.
Telephone receiver base. P. J. Cannon. 96,018; June 25.
Textile fabric. A. C. Brulne. 96,015–17; June 25.
Textile fabric. C. E. Forstmann. 96,028; June 25.
Textile fabric or similar article. A. C. Jaeger. 96,042; June 25.
Textile fabric or similar article of manufacture. J. F. Gaul, Jr. 96,031–2; June 25.
Textile fabric or similar article of manufacture. A. Schumacher. 96,059; June 25.
Tray, Ash. R. P. Harshberger. 96,037; June 25.
Vanity case. A. Wewetzer. 96,073; June 25.
Vanity case or similar article. D. H. Zell. 96,076–7; June 25.
Weighing and advertising device, Combined. G. G. Eidman. 96,025; June 25

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetaldehyde, Making. R. W. Millar and L. V. Steck. 2,005,946; June 25.
Acid and benzoates, Production of benzoic. J. E. Demant. 2,005,774; June 25.
Acid, Apparatus for the manufacture of sulphuric. E. Rothammel. 2,006,031; June 25.
Acid from sulphite waste liquor, Apparatus for separating sulphurous. K. Heinemann. 2,006,138; June 25.
Acids, Preparing substituted malonic. P. Halbig, and F. Kaufler. 2,006,314; June 25.
Aerial. H. J. Round. 2,005,805; June 25.
Aerial system, Directive. A. Gothe. 2,005,779; June 25.
Aggregate spreader. F. B. Hurt. 2,005,896; June 25.
Air circulating apparatus. F. J. Day. 2,006,069; June 25.
Air conditioning railroad cars, System for. H. R. Arf. 2,005,769; June 25.
Alcohol, Synthetic. B. T. Brooks and R. Schuler. 2,006,157; June 25.
Aliphatic-aromatic amine and making the same. K. W. Rosenmund and F. Kilz. 2,006,114; June 25.
Alternating-current regulator. F. H. Gulliksen. 2,005,892; June 25.
Amines and di-amines and products of said process, Making. J. F. Olin. 2,006,058; June 25.
Ammunition, Packing a round of. A. B. Schilling and C. Casey. 2,005,756; June 25.
Amphibian. W. K. Burgess. 2,005,728; June 25.
Amplifier. B. Kreuzer. 2,006,052; June 25.
Amplifier, Audion. P. O. Farnham. 2,006,099; June 25.
Anchor insert. A. M. Kinninger. 2,006,300; June 25.
Animal trap. A. Potigian. 2,006,111; June 25.
Annealing, Apparatus for. E. A. Rowe, S. H. Edwards and F. N. Fossati. 2,006,001; June 25.
Anti-skidding device. A. E. Bruffee. 2,006,210; June 25.
Articles, Transporting. F. Ditchfield. 2,005,823; June 25.
Assembling machine. H. E. Edwards. 2,006,071; June 25.
Automobile control device. H. E. Hull. 2,005,745; June 25.
Automobile lifting device. T. Imai. 2,006,242; June 25.
Back support. S. H. Gallop. 2,005,972; June 25.
Back-up and tail light, Combination. G. Speeg. 2,005,761; June 25.
Bag: *See*—
Hand bag.
Ball, India-rubber and like. E. J. Dobbins. 2,006,230; June 25.
Ball joint element. R. S. M. Mitchell. 2,005,948; June 25.
Band tightener, Encircling. A. J. Scholtes. 2,006,329; June 25.
Bands and the like to cigars, Apparatus for applying paper. J. Schmiedel. 2,006,116; June 25.
Bark from logs, Apparatus for removing. F. A. Nicholson and W. T. Pritchard. 2,005,799; June 25.
Battery plates and lead-bearing materials of similar composition, Treating scrap storage. J. O. Betterton and C. W. Hanson. 2,006,256; June 25.
Battery plates and the like, Smelting scrap. J. O. Betterton. 2,006,257; June 25.
Bell, Dredge and driving. A. C. Woodruff. 2,006,037; June 25.
Beverage and sirup, Stabilized citrus. R. H. Higby. 2,005,786; June 25.
Binder for record sheets or the like, Visible shift. E. F. Brown. 2,005,968; June 25.
Bit: *See*—
Bridle bit.
Blanking press. W. Ferris. 2,006,072; June 25.
Block mold. C. F. Fleming and J. L. Havins. 2,006,132; June 25.
Board: *See*—
Ironing board.
Bobbins, particularly film bobbins, Manufacturing. P. Schwarz. 2,006,281; June 25.
Boiler coupling device. J. F. Arthur. 2,006,139; June 25.
Bolt, Stay. V. Nodibre. 2,006,276; June 25.
Book, Manifolding record. G. Stevens. 2,006,034; June 25.
Bookrest for bathtubs and the like. W. E. Harris-Jones. 2,006,160; June 25.
Bottle and manufacturing same. L. B. Koch. 2,006,143; June 25.
Bottle cap remover. L. M. Harvey. 2,005,784; June 25.
Bottle closure. J. H. Ramsey. 2,005,753; June 25.
Bottle molding means, Glass. F. L. Darling. 2,006,041; June 25.
Bowl, Sugar. L. J. Militello. 2,005,919; June 25.
Box: *See*—
Match box.
Box. T. H. Gagen. 2,005,991; June 25.
Box stacker. H. C. Pierce. 2,005,906; June 25.
Blanc fixe. H. S. McQuaid. 2,006,219; June 25.
Brake: *See*—
Air brake. Sled brake.
Brake beam fulcrum. W. H. Baselt. 2,005,927; June 25.
Brake for vehicles, Booster. H. Junkers. 2,006,102; June 25.
Brake gauging device. A. L. and R. H. Miller. 2,005,870; June 25.
Braking apparatus. B. Dick and S. Schnell. 2,005,855; June 25.
Braking apparatus. S. Schnell. 2,005,874; June 25.
Bridle bit. L. L. Rupert. 2,006,032; June 25.
Broom attachment. H. A. Gardner. 2,005,739; June 25.
Brush, Construction of. E. L. H. Cosby. 2,006,234; June 25.
Building construction. J. Di Stasio. 2,006,070; June 25.
Building construction. R. L. Hohl. 2,005,994; June 25.
Building construction. E. A. Reither. 2,005,921; June 25
Burner: *See*—
Oil burner.
Burner for various gases. O. M. Olsen. 2,005,801; June 25.
Cabinet, Towel. A. I. Hondeville. 2,005,744; June 25.
Cabinet, Vertical card index. B. Aagaard. 2,006,288; June 25.
Cable clamp. J. W. Fowler and C. N. Baillio. 2,006,044; June 25.
Cable connecter, Explosionproof. N. A. Tornblom. 2,006,090; June 25.
Camera. L. R. Bell. 2,005,818; June 25.
Camera, Folding. C. Bornmann, L. W. Lessler, and E. H. Heyer. 2,005,820; June 25.
Camera for taking instantaneous color photographs. J. Zimmer. 2,006,007; June 25.
Can and rip strip therefor, Sheet metal. A. G. Hopkins. 2,006,045; June 25.
Can opener, funnel, and flexible pipe attachment, Combination. C. F. Bertschinger. 2,006,194; June 25.
Cap, Blasting. F. Rosenthal. 2,005,957; June 25.
Car, House. J. P. McWilliams and F. Ditchfield. 2,006,220; June 25.
Carbides and an apparatus therefor, Making abrasive metal. R. R. Ridgway. 2,005,956; June 25.
Card and securing articles thereto, Display. R. W. Albright. 2,005,879; June 25.
Card assembly, Greeting. W. Q. Larson. 2,005,999; June 25.
Carrier dispatch system. H. F. Wilder and H. H. Haglund. 2,006,305; June 25.
Carton and liner for the same. H. Leslie. 2,006,203; June 25.
Carton, Dispensing. D. M. Wilson. 2,005,924; June 25.
Carton, Knockdown tilt display. A. J. Weiss. 2,005,816; June 25.
Carton, Pouring. J. Shaw. 2,005,831; June 25.
Case: *See*—
Lip stick case. Vanity case.
Cases and stand for thermometers, Combined. A. B. Schupp. 2,005,909; June 25.
Casein product and process of making. H. V. Dunham. 2,005,730; June 25.
Casement, Window. F. C. Wenzel. 2,006,004; June 25.
Catalytic converter. E. Pyzel. 2,006,078; June 25.
Cathode ray apparatus. A. W. Vance. 2,006,063; June 25.
Cellulose, Preparing and maturing alkali. F. Steimmig. 2,005,811; June 25.
Chair: *See*—
Folding rocking chair.
Change speed mechanism. P. Riley. 2,006,250; June 25.
Checking fixture. J. C. Drader. 2,006,161; June 25.
Cheese, Apparatus for heat-treating. N. Kraft. 2,005,996; June 25.
Circuit, Balanced pressure hydraulic. H. Ernst and B. Sassen. 2,005,732; June 25.
Circuit breaker. W. E. Schwarzmann. 2,005,806; June 25.
Circuit breaker system, Automatic reclosing. A. E. Anderson. 2,006,254; June 25.
Circuit closer. A. E. Osborn. 2,006,175; June 25.
Clamp: *See*—
Cable clamp. Transmission line clamp.
Hose clamp.
Clasp. H. W. Kulp and M. C. Dellinger. 2,005,841; June 25.
Clasp, Detachable. L. Rocke. 2,005,872; June 25.
Clasp or connecter for watch bracelets and the like. S. A. Johnson. 2,006,047; June 25.
Clasping device for watch-bracelets and the like, Extendible. C. H. Kestenman. 2,006,050; June 25.
Clay bodies, Method of and apparatus for molding. D. Brown. 2,005,886; June 25.

Clipper. G. Haumann. 2,005,824; June 25.
Closure for containers. F. I. Remy. 2,005,871; June 25.
Closure mechanism for the discharge openings of concrete mixer drums. C. F. Ball. 2,006,206; June 25.
Coal, Method of and apparatus for sampling anthracite. A. N. Brooks. 2,006,006; June 25.
Collar. E. Lind and D. Feigenbaum. 2,005,943; June 25.
Collar support. A. P. Herrlinger. 2,006,201; June 25.
Compensating bleeder valve. H. Ernst and B. Sassen. 2,006,312; June 25.
Compression control apparatus. C. C. Hinkley. 2,005,858; June 25.
Compressor, Refrigerant. L. C. Smith. 2,005,959; June 25.
Connecter: *See*—
Cable connecter.
Connection, Flexible. C. Saurer. 2,006,303; June 25.
Container: *See*—
Key container.
Container for toilet and the like preparations. E. M. Carter. 2,005,933; June 25.
Containers, Making. H. M. Ware. 2,006,036; June 25.
Control for pipe organs, Registration. D. S. Barrows. 2,006,291; June 25.
Control means, Airfoil. G. E. Barnhart. 2,005,965; June 25.
Control means for well drilling equipments. M. Stone and R. Baudry. 2,005,877; June 25.
Control mechanism, Speed. G. Grimsley. 2,006,136; June 25.
Control system. J. W. McNairy and H. S. Ogden. 2,006,173; June 25.
Control system for theater lighting circuits. A. LeR. Upton. 2,006,223; June 25.
Control system and to the control of fluid operated mechanism. M. Maag. 2,005,867; June 25.
Controlling mechanism for vehicle dump doors. J. D. Benbow and D. A. Palmer. 2,005,727; June 25.
Conveyer. C. T. Walter. 2,006,091; June 25.
Cooling system. V. C. Huntington. 2,005,860; June 25.
Core barrel. C. E. Burt. 2,005,989; June 25.
Core drill. B. F. Blanchard. 2,005,819; June 25.
Core ejector. L. A. Larson. 2,005,978; June 25.
Cover for chickens. C. S. Smith. 2,006,118; June 25.
Cracking. H. Sydnor. 2,006,188; June 25.
Crossing signal. T. G. Strynatka. 2,006,120; June 25.
Crusher. E. C. Shiley. 2,005,758; June 25.
Cup and hanger therefor, Turpentine. C. W. Dixon. 2,006,083; June 25.
Cup and securing means, Turpentine. C. A. Tompkins 2,006,089; June 25.
Current collecting equipment. W. Schaake. 2,005,908; June 25.
Current regulating system. F. H. Gulliksen. 2,005,893; June 25.
Cushion for furniture, Spring. F. X. and A. W. Nemmer. 2,006,218; June 25.
Cutting table. R. B. Knight and L. Kahn. 2,006,074; June 25.
Cylinder machine. J. Edge. 2,005,839; June 25.
Cylinders, Machining. K. W. Connor. 2,006,158–9; June 25.
Dampener for weighing apparatus. C. Best. 2,006,255; June 25.
Deflector, Gas saving. B. S. Smith. 2,005,982; June 25.
Demand meter. J. H. Stark and H. M. Witherow. 2,006,321; June 25.
Dental handpiece, Angle. P. R. Skinner. 2,005,849; June 25.
Detachable gate. F. W. Dennison. 2,005,937; June 25.
Dewaxing with nonmiscible refrigerant. B. K. Brown. 2,005,988; June 25.
Di-alkyl or alkyl-aralkyl derivatives of resorcinol and making same, Unsymmetrical. W. E. Austin. 2,006,039; June 25.
Directional apparatus. W. Moser. 2,005,798; June 25.
Dispenser: *See*—
Measuring dispenser.
Dispensing apparatus. I. Jeppsson. 2,006,214; June 25.
Dispensing machine. A. Lovingood. 2,005,918; June 25.
Dispensing system, Self-carbonating. C. A. Geddes. 2,006,313; June 25.
Dispensing unit. A. R. Weisflog. 2,005,762; June 25.
Display sign. J. Scott. 2,005,757; June 25.
Distillates from unrefined hydrocarbon oils and products obtained thereby, Obtaining valuable refined. E. B. Peck. 2,006,177; June 25.
Door, Firebox. T. E. Layden. 2,005,864; June 25.
Doorlatch operator, Automobile. W. B. Craft. 2,006,129; June 25.
Doorlock. B. J. Coomes. 2,006,263; June 25.
Door operating mechanism. J. E. Bancroft. 2,006,082; June 25.
Door, Sliding. H. F. Collins. 2,006,228; June 25.
Draft regulator. C. H. Morrow. 2,005,981; June 25.
Draft rigging. D. S. Barrows. 2,006,290; June 25.
Draft rigging. D. S. Barrows. 2,006,292; June 25.
Drag conveyer channel. B. Beardsley and A. Plausics. 2,006,294; June 25.
Drill: *See*—
Core drill. Rotary drill.
Drilling system for rotary drilling equipment, Automatic. H. G. Dillon, W. C. Dreyer, and H. C. Jenks. 2,005,889; June 25.
Dry materials, Apparatus for the separation of. J. N. Steinmetzer. 2,006,119; June 25.
Duplicating machine. F. Chesley. 2,006,067; June 25.
Dust collector for abrading tools. F. C. Montuori. 2,006,108; June 25.
Dyestuff containing a benzanthrone nucleus, Water insoluble azo. G. Schrader. 2,005,848; June 25.
Dyestuff of the quinophthalene series of good fastness to light. G. Kränzlein, H. Schlichenmaier, and L. Schörnig. 2,006,022; June 25.
Dyestuffs of the dibenzanthrone series and preparing the same. O. Stallmann. 2,005,810; June 25.
Electric control system. E. N. Halliday. 2,006,213; June 25.
Electric machine. A. F. Klappauf. 2,006,172; June 25.
Electric switch. F. Menzel. 2,006,317; June 25.
Electrical conversion system. J. Slepian, L. R. Ludwig, and D. Silverman. 2,005,876; June 25.
Electrical measuring and regulating system. H. L. Bernarde. 2,005,884; June 25.
Electrode for a vapor electric device and constructing the same. D. D. Knowles. 2,005,897; June 25.
Electrode for vapor electric devices. W. T. Anderson, Jr., and L. F. Bird. 2,006,081; June 25.
Electrodes, Welding. D. L. Mathias. 2,005,902; June 25.
Electromotive forces comparing device. H. Antranikian. 2,005,962; June 25.
Elevator control and signaling system. F. E. Lewis. 2,005,899; June 25.
Elevator control system. K. M. White. 2,005,878; June 25.
Engine: *See*—
Hydraulic engine. Internal combustion engine.
Engine plant, Internal combustion. A. Büchi. 2,005,821; June 25.
Exhaust gas analyzer. J. D. Morgan. 2,006,205; June 25.
Extension table. C. J. Miller. 2,005,947; June 25.
Extractor: *See*—
Hop extractor.
Extrusion press. A. Weling. 2,006,080; June 25.
Fabric: *See*—
Selvaged unwoven zigzag fabric.
Fabrics, Manufacture of. J. Morton. 2,005,951; June 25.
Fabrics, Method and composition for rejuvenating. G. M. Babcock. 2,006,192; June 25.
Fastener-applying implement. A. H. Maynard. 2,006,054; June 25.
Fastener for bags. L. T. Geiger. 2,006,268; June 25.
Fastening device. P. M. Hengstenberg. 2,005,895; June 25.
Fastening means for connecting collars to shirts, Detachable. M. Karellitz. 2,006,103; June 25.
Feed for sheet metal working machines. E. V. Crane. 2,006,040; June 25.
Feed knock-off mechanism for lathes. J. E. Lovely. 2,006,144; June 25.
Feed mechanism for rolling machines. H. J. Davis. 2,005,853; June 25.
Felt for paper making machines, Drier. T. Milnes. 2,005,979; June 25.
Fertilizers, Production of mixed. C. Krauch, C. Eyer, G. Baetz, and F. Korn. 2,005,997; June 25.
Filaments, threads, yarns, and the like, Treatment of. H. M. Hibbert and R. P. Roberts. 2,005,785; June 25.
Film feeding mechanism for cinematograph apparatus. E. Elsemann. 2,006,297; June 25.
Film handling and sound reproducing apparatus. W. D. Foster and E. L. Parmelee. 2,005,737; June 25.
Film, Sound. R. Schmidt. 2,005,847; June 25.
Filter press. H. T. Durant. 2,006,131; June 25.
Fireplace back and water heater structure, Combined. C. W. Perry. 2,006,279; June 25.
Fitting for oil stills, Return bend. C. E. Ard. 2,005,768; June 25.
Flexible-rod, sewer cleaning apparatus. H. R. Crane. 2,005,936; June 25.
Flow control. J. A. Spencer. 2,006,152; June 25.
Flower holder, Adjustable. R. G. Beagle. 2,005,966; June 25.
Folding rocking chair. O. J. Olsen. 2,006,277; June 25.
Food product, Potato. G. P. Miller. 2,006,146; June 25.
Foot valve. C. A. Petersen and A. L. Christy. 2,005,954; June 25.
4-amino-1,8-naphthalene-dicarboxylic acid imides and 4-alkylamino-1,8-naphthalene-dicarboxylic acid alky'amides and preparing them. W. Eckert and W. Gmelin. 2,006,017; June 25.
Fractionating process and apparatus. S. C. Carney. 2,005,932; June 25.
Frame: *See*—
Spinning and twister frame.
Friction device for filling carriers. S. O. Dodge. 2,005,856; June 25.
Fuel supply for burners, Automatic. T. J. Garrett. 2,006,154; June 25.
Furnaces by means of cooling chambers, Cooling. G. Dörrenhaus and S. Walter. 2,006,266; June 25.
Game. H. L. Quine. 2,006,176; June 25.
Game, Target. D. W. Price and M. Kellermann. 2,006,180; June 25.
Garment finishing apparatus. J. W. Steele. 2,005,960; June 25.

Garment or ironing press. E. Davis. 2,006,068; June 25.
Gas, Apparatus for the scrubbing of. W. L. Chewning. 2,006,295; June 25.
Gas into storage bins carrying more or less fine materials, Device for blowing fire-extinguishing. M. Betzler. 2,006,258; June 25.
Gaseous discharge converter. U. Lamm. 2,006,053; June 25.
Gate: *See*—
Detachable gate.
Gate hinge. C. Foltz. 2,006,267; June 25.
Gauge: *See*—
Square shear gauge.
Gauge stop mechanism, Back. F. W. Seybold. 2,005,830; June 25.
Gear: *See*—
Retractable landing gear.
Gearing device for bicycles and the like. O. A. Hjelm. 2,006,165; June 25.
Generator: *See*—
Sound generator.
Glass forming apparatus, Sheet. F. R. Hohmann. 2,006,107; June 25.
Glass, Laminated safety. J. D. Ryan. 2,006,182; June 25.
Glue and making the same, Vegetable. E. H. Harvey. 2,006,164; June 25.
Golf club. C. H. Grelle. 2,005,915; June 25.
Golf practice device. A. D. Grisso. 2,006,137; June 25.
Grain for extermination of insect life therein, Method of and apparatus for treating. J. H. Davis. 2,006,265; June 25.
Grinder, Valve seat. F. O. Albertson. 2,005,851; June 25.
Grinding. J. Desenberg. 2,005,718; June 25.
Grinding composition. H. C. Fuchs. 2,006,162; June 25.
Grinding machinery, Meat. O. C. Schmidt. 2,006,318; June 25.
Grinding wheel. A. O. Bush and R. H. Martin. 2,006,308; June 25.
Gun sight. K. J. Lowe. 2,005,866; June 25.
Gun sights, Mechanism for angular adjustment of. G. Charvet. 2,006,262; June 25.
Gyroscopic turn indicator. G. H. Reid. 2,006,112; June 25.
Hair straightening device. A. L. Thomas and L. D. Ellis. 2,006,284; June 25.
Hammer, Portable power. J. H. Blake. 2,006,065; June 25.
Hand bag. G. Kruse. 2,005,791; June 25.
Handle for cans. L. L. Bassett. 2,006,293; June 25.
Hanger. C. E. Sharpe. 2,006,033; June 25.
Hat brim protector. J. H. Marshall. 2,006,245; June 25.
Hat ironing machine. K. Couyoumjian. 2,006,264; June 25.
Hat working machine. M. Cassé. 2,006,260; June 25.
Headlight. T. S. Barber. 2,006,125; June 25.
Headlight. H. Nielsen. 2,006,248; June 25.
Heat exchange apparatus. C. Field. 2,005,733–4; June 25.
Heat exchange, Apparatus for. W. C. Harpster. 2,006,200; June 25.
Heat interchange apparatus. R. E. Kaestner. 2,006,299; June 25.
Heat transmission. H. W. Huyser. 2,006,202; June 25.
Heater: *See*—
Induction sheet heater. Windshield heater.
Heater. D. W. Rudorff. 2,006,059; June 25.
Heater control, Water. A. D. Stewart. 2,006,035; June 25.
Heating and ventilating apparatus. C. T. Morse. 2,006,109; June 25.
Heating system. E. J. Bell. 2,006,193; June 25.
Hedge trimming device. R. C. Johnsen. 2,005,862; June 25.
Heel attaching plate. F. B. Dopp. 2,005,775; June 25.
Heterodyne receiver. H. Chireix. 2,005,772; June 25.
Hinge: *See*—
Gate hinge.
Hinge. S. J. Palinkos. 2,006,110; June 25.
Holder: *See*—
Flower holder. Mop head holder.
Holder for dental X-ray films. D. D. and R. S. Heron. 2,005,993; June 25.
Hood construction. W. J. Hall. 2,006,163; June 25.
Hook fastening for fish lures. P. S. Bear. 2,005,985; June 25.
Hop extractor. D. C. Bleser. 2,005,770; June 25.
Horn and howler for marine and naval use. T. Jessen. 2,006,021; June 25.
Hose clamp. A. J. Scholtes. 2,006,327; June 25.
Hydraulic engine. E. M. Eynard. 2,006,237; June 25.
Hydraulic machine tool. E. P. Burrell. 2,005,822; June 25.
Hydrocarbons, Manufacture of. V. Ipatieff. 2,005,861; June 25.
Hydroquinone manufacture. J. Schanmacher. 2,006,324; June 25.
Hydroxy sulphonated fatty acid esters and their production. C. C. Clark. 2,006,309; June 25.
Ice. C. Field. 2,005,735–6; June 25.
Ignition and steering lock. I. Knapper. 2,006,104; June 25.
Ignition coil construction. A. J. Gogel. 2,006,239; June 25.
Ignition system. H. C. Heaton. 2,005,992; June 25.
Ignition system. D. Silverman. 2,005,875; June 25.
Illumination. W. Honing. 2,006,140; June 25.
Impedance set. L. Behr. 2,005,986; June 25.
Index and signal. C. C. Kitchen. 2,005,977; June 25.
Index tab. H. C. Osborn. 2,005,749; June 25.
Indicator: *See*—
Gyroscopic turn indicator. Voltage surge indicator.
Induction sheet heater. T. H. Long. 2,005,901; June 25.
Ingredients, Apparatus for proportioning. C. J. Moroney and W. O. Witherspoon. 2,005,950; June 25.
Inhibitor. A. Macarthur and A. J. Hailwood. 2,006,216; June 25.
Ink and making same, Emulsion printing. E. H. McLeod. 2,005,945; June 25.
Inking mechanism for printing machines. F. Lamatsch. 2,005,916; June 25.
Insecticide composition. W. Moore. 2,005,797; June 25.
Insecticide, Contact. E. W. Bousquet. 2,006,227; June 25.
Insulating material. R. Engelhardt. 2,005,840; June 25.
Intercommunication. C. H. Colvin. 2,005,935; June 25.
Internal combustion engine. C. R. Wigness. 2,006,225; June 25.
Internal combustion motor. F. K. Shear. 2,006,117; June 25.
Ironing board. J. E. Doyle. 2,006,014; June 25.
Ironing table. H. V. Keller. 2,005,976; June 25.
Joint: *See*—
Universal joint.
Ketones, Preparing halogenated. P. K. Frolich and P. J. Wiezevich. 2,006,198; June 25.
Kettle device, Cooking. P. Beghetti. 2,005,928; June 25.
Key container. A. Waller. 2,006,286; June 25.
Label dispensing and moistening machine. A. La Grange. 2,005,898; June 25.
Labeling machine. W. W. Oslund. 2,005,802; June 25.
Lamp and the like and its mounting and electrical connection, Electric. H. D. Blake. 2,006,155; June 25.
Lamp for motor vehicles, Projecting. O. Rall. 2,006,249; June 25.
Lap arrester for winding machines. J. O. McKean. 2,006,055; June 25.
Leakage compensator for hydraulic systems. H. Ernst and Sassen. 2,006,311; June 25.
Light: *See*—
Back-up and tail light.
Leather forming machine. J. T. Riddell. 2,005,804; June 25.
Lighter. R. H. and T. I. Segal. 2,006,061; June 25.
Lighting apparatus. E. Kalhaus, J. E. de Christmas Dirckinck de Tolmfeld and V. de Christmas Dirckinck de Holmfeld. 2,006,171; June 25.
Lighting unit for lanterns. I. E. Rollins. 2,006,251; June 25.
Line indicator or copyholder for typists. R. Joksch. 2,005,721; June 25.
Liner safety, Automatic. B. A. Mills. 2,005,796; June 25.
Lining, Vessel. G. V. Swearingen. 2,006,331; June 25.
Lip stick case. C. E. Marshall. 2,005,794; June 25.

Liquid dispensing and level maintaining device. O. H. Jung and P. E. Heffelfinger. 2,006,142; June 25.
Liquid-separating device. J. F. Kopsa. 2,006,244; June 25.
Lock: *See*—
Ignition and steering Lock. Nut lock. Ring holder lock.
Lock and handle, Window. H. W. Nicles. 2,005,953; June 25.
Lock for motor vehicles, Fuel-valve. S. Moore. 2,006,027; June 25.
Lubricating device. M. Reswick. 2,006,181; June 25.
Lubricating mechanism. J. S. Baker. 2,005,724; June 25.
Lubrication. W. O. Wright. 2,005,766; June 25.
Machine for charging containers. P. E. Cate. 2,006,012; June 25.
Machine for cutting thin leaves. W. Markert. 2,006,107; June 25.
Machine for making boiler cleaning nozzles. J. Staempfli. 2,006,283; June 25.
Machine for operating upon articles assembled from adhesive materials. M. S. Cate. 2,005,888; June 25.
Machine for producing flexible shafting. L. H. Morin. 2,006,174; June 25.
Machines for packing flat packets and the like. M. Paridon. 2,006,147; June 25.
Machinery. P. N. Dubuc. 2,006,130; June 25.
Mail advertising device. W. W. Hoke. 2,005,859; June 25.
Manifold, Hot spot. J. Meinzinger. 2,005,869; June 25.
Marking machine. C. F. Robbins. 2,006,302; June 25.
Match box. H. F. Wilhelm. 2,006,190; June 25.
Material, Apparatus for feeding. W. D. Foster. 2,005,738; June 25.
Material for providing metal with a paint receptive surface. J. H. Gravell. 2,005,780; June 25.
Mattress-tufting device. W. B. Mathewson. 2,006,076; June 25.
Measurement by volume of delivered quantities of liquids, Apparatus for the. G. J. Gibbs. 2,006,135; June 25.
Mensuring dispenser. W. S. Holesworth. 2,006,019; June 25.

Mechanism for making and applying transparent window patches to envelopes. H. Kassekert and F. J. Kaeser. 2,006,218; June 25.
Medicinal preparation. F. Lange and L. Taub. 2,006,023; June 25.
Meta-cresol-methyl-ether, Manufacture of. W. V. Wirth. 2,006,515; June 25.
Metal, Apparatus for working sheet. E. J. Miller. 2,006,047; June 25.
Metal articles, Annealing. J. E. Hutchman. 2,006,168; June 25.
Meter: *See*—
Demand meter.
Meter construction. H. J. Pardee. 2,005,845; June 25.
Micrometer, Grid glow. R. W. Carson. 2,005,887; June 25.
Microniser head. W. S. Bowen. 2,005,987; June 25.
Milking machine attachment. R. W. Hurlburt. 2,006,272; June 25.
Mill: *See*—
Roughage mill.
Milling machine. F. W. Whitehead. 2,006,128; June 25.
Mirror. J. F. Walsh. 2,005,814; June 25.
Mixing apparatus. T. O'Boyle. 2,005,800; June 25.
Mold: *See*—
Block mold.
Mold jacket. J. F. Hines. 2,006,240; June 25.
Mop head holder. R. A. Myers. 2,005,904; June 25.
Motor: *See*—
Internal combustion motor.
Motor and motive system. R. A. Coffman. 2,005,913; June 25.
Motor control system. J. Dunlop. 2,005,890; June 25.
Motor control system. F. W. McCloskey. 2,005,903; June 25.
Mounting, Bezel. O. J. Leins. 2,005,792; June 25.
Mounting, Elastic cushion. A. G. Carter. 2,005,934; June 25.
Mounting, Flywheel. G. O. Johnson. 2,005,941; June 25.
Mounting for machines, Knife. W. Markert. 2,006,106; June 25.
Mounting for wind deflectors or the like. L. M. Harvey. 2,005,783; June 25.
Mounting, Rimless endpiece. E. Pappert. 2,006,278; June 25.
Mower sharpening device, Lawn. M. Michalski. 2,006,025; June 25.
Muffles for use in connection with the casting of precious metals. K. Plaschka. 2,006,148; June 25.
Multiplier for ultra high frequencies, Frequency. C. W. Hansell. 2,005,782; June 25.
Navigation instrument. V. B. Buck. 2,006,127; June 25.
Needle threading device. S. Sidler. 2,006,185; June 25.
Nut lock device. F. J. Young. 2,006,064; June 25.
Oil, Apparatus for distillation of. A. Knudsen. 2,006,273; June 25.
Oil burner. R. P. Babcock. 2,005,964; June 25.
Oil burner. R. M. Vidalie. 2,005,832; June 25.
Oil from fuller's earth or similar material, Separating. E. R. Mitchell. 2,006,088; June 25.
Oil, Producing lubricating. U. B. Bray. 2,006,098; June 25.
Oil, Production of lubricating. U. B. Bray and C. E. Swift. 2,006,092; June 25.
Oil, Production of lubricating. U. B. Bray and C. E. Swift. 2,006,095–6; June 25.
Oil, Treating. U. B. Bray and C. E. Swift. 2,006,094; June 25.
Oil, Treating. U. B. Bray and C. E. Swift. 2,006,097; June 25.
Oil wells, Method and apparatus for operating. J. A. Zublin. 2,005,767; June 25.
Oils, Dewaxing mineral. C. E. Adams and V. Voorhees. 2,005,984; June 25.
Oils, Producing lubricating. U. B. Bray and C. E. Swift. 2,006,093; June 25.
Optical system for photographic sound apparatus. J. J. Morey. 2,006,217; June 25.
Ore reducing machine. A. D. Hadsel. 2,006,269; June 25.
Ores by flotation, Concentration of. C. H. Keller. 2,006,049; June 25.
Organic mercapto compounds, Complex compound of. W. Schoeller, H. G. Allardt, and A. Feldt. 2,006,003; June 25.
Oscillat'on generation. N. E. Lindenblad. 2,005,793; June 25.
Oscillations, Production of circular or elliptical. G. Linke. 2,005,917; June 25.
Ovens and ovens therefor, operating of coke. J. Schaefer. 2,006,115; June 25.
Overflow device, Adjustable. R. D. Anderson. 2,006,191; June 25.
Oxidative fermentations by molds or fungi, Carrying out. O. E. May, H. T. Herrick, A. J. Moyer, and P. A. Wells. 2,006,006; June 25.
Package. K. D. Berdan. 2,005,967; June 25.
Package. P. Grabler. 2,006,212; June 25.
Package and making the same, Siftproof. T. Schilder and G. Erlemann. 2,006,060; June 25.
Packing and protecting objects, Device for and method of. G. B. Weber and A. D. Sanders, Jr. 2,006,224; June 25.
Paints, lacquers, and other liquids, Device for spraying. A. H. Downs. 2,005,776; June 25.
Panel board and wiring the same. G. M. Reed and B. Paxton. 2,006,150; June 25.
Paper, Coating. C. N. Cone and E. D. Brown. 2,006,229; June 25.
Paper, Delinking imprinted. P. R. Hines. 2,005,742; June 25.
Paper, Dull finish coated. D. B. Bradner. 2,006,208–9; June 25.
Paper making apparatus and process. E. E. Berry. 2,005,929; June 25.
Paper, Making pigmented. A. C. Elde and J. H. Calbeck. 2,006,016; June 25.
Parachute pack. E. L. Hoffman. 2,005,743; June 25.
Partition for refrigerators, Shutter type. N. C. Huckestein. 2,006,046; June 25.
Pen-point, Preparing. C. Pfanstiehl. 2,005,752; June 25.
Phonograph. L. L. Jones and T. E. Plazze. 2,006,048; June 25.
Phonograph, Selective automatic. R. I. Wilcox. 2,005,923; June 25.
Phosphorus pentoxide, Stabilized form of. B. Mallshey. 2,005,944; June 25.
Photographic emulsions, Manufacture of. H. Arens. 2,005,837; June 25.
Photography and objective system therefor, Stereoscopic. E. E. Draper. 2,005,777; June 25.
Photography, Color. L. M. Dieterich. 2,005,970; June 25.
Physical changes, Apparatus for indicating or controlling. L. de Flores. 2,005,773; June 25.
Picture and producing it, Embossed. S. Hayden. 2,005,719; June 25.
Picture and sound recording and reproduction in motion pictures, Combined. H. Chretien. 2,006,233; June 25.
Pigments, Manufacture of. G. F. A. Stutz. 2,006,187; June 25.
Pipe: *See*—
Smoking pipe.
Pipe and protecting same. R. G. Yaxley. 2,006,226; June 25.
Pipe fitting. E. S. Cornell, Jr. 2,005,969; June 25.
Piston. A. L. Nelson. 2,006,008–9; June 25.
Platinum catalysts, Regeneration of. E. S. Ridler. 2,006,221; June 25.
Platinum contact masses, Treatment of. E. S. Ridler. 2,006,222; June 25.
Plug: *See*—
Switch plug. Well plug.
Plug connection, Spark. H. A. Douglas. 2,005,857; June 25.
Polishing medium to polishing machines, Supplying a. J. P. Crowley. 2,006,196; June 25.
Post: *See*—
Scratching post.
Postal machine, Manual feeding and tripping mechanism for a power driven. J. Q. Finfrock. 2,005,778; June 25.
Power transmission device. A. T. Harris. 2,005,740; June 25.
Power transmission system. M. R. Hutchison, Jr. 2,005,974; June 25.
Press: *See*—
Blanking press. Filter press.
Extrusion press. Garment or ironing press.
Press. J. C. Ledbetter. 2,005,865; June 25.
Pressure reducing valve. T. L. Thorsen. 2,005,818; June 25.
Pressure to shoe bottoms, Mechanism for use in applying. F. J. Retter. 2,005,755; June 25.
Priming solution for wall paper and like pastes. G. Little. 2,005,900; June 25.
Profiling attachment for planers. H. A. Thum. 2,006,121; June 25.
Projector, Automatic. C. E. Slaughter. 2,005,759; June 25.
Propane dewaxing, Continuous. H. V. Atwell. 2,006,011; June 25.
Protective scheme for transmission lines. H. Neugebauer. 2,005,905; June 25.
Protector: *See*—
Hat brim protector.
Pull and drag-saw machine. T. Telesky. 2,005,961; June 25.
Pulley. E. E. Maurey. 2,006,145; June 25.
Pump: *See*—
Bodless pump.
Pump, compressor, engine, and the like, Rotary. M. R. Hutchison, Jr. 2,006,298; June 25.
Pump for hydraulic drives. T. J. Schlueter. 2,006,280; June 25.
Pyrotechnic display. R. C. Hiltt. 2,006,271; June 25.
Rack: *See*—
Refrigerator rack.
Rack. H. D. Graves. 2,005,938; June 25.
Radiator enclosure, Convection type. H. Smith. 2,005,808; June 25.
Radioreceiver, One tube. W. R. Koch. 2,005,789; June 25.
Radio system, Centralized. B. E. Morits, Jr. 2,006,077; June 25.
Rake, Loader and sifter, Bull. C. Christiansen. 2,005,911; June 25.
Ratchet device for preventing the rearward motion of power driven vehicles. A. Catella. 2,006,261; June 25.
Razor, Safety. N. Testi. 2,006,062; June 25.
Record, Manifolding. A. M. Bovier. 2,005,930; June 25.
Records, Apparatus for making and reproducing sound and picture. B. Freund. 2,005,914; June 25.

Rectifying process. D. E. Stines. 2,006,186; June 25.
Refinery fitting. C. B. Harbison. 2,006,084; June 25.
Refrigeration. H. M. Williams. 2,005,834; June 25.
Refrigerator rack. C. L. Hibbard, Jr. 2,005,939; June 25.
Regulating system. J. H. Ashbaugh. 2,005,883; June 25.
Regulator: *See*—
Alternating-current regulator. Draft regulator.
Reservoir for oil filled cables, Feeding. L. Emanuell. 2,006,236; June 25.
Resin and its manufacture, Oil-soluble synthetic. M. R. Bhagwat. 2,006,207; June 25.
Resin, Oil soluble. V. H. Turkington. 2,006,189; June 25.
Resins by hydrogenation, Manufacture of. S. C. Fulton 2,006,101; June 25.
Resins, Synthetic. H. B. Dykstra. 2,006,043; June 25.
Resistance element and making same. E. R. Stoekle. 2,005,922; June 25.
Retractable lauding gear. R. J. Minshall. 2,005,980; June 25.
Reversing mechanism for dry gas meters. W. Holm. 2,006,101; June 25.
Rifle, Pneumatic. N. H. Price. 2,006,030; June 25.
Ring holder lock. W. L. McNamara. 2,006,056; June 25.
Roads, Apparatus for building. O. G. Mandt. 2,006,316; June 25.
Rodless pump. G. S. Knox. 2,005,995; June 25.
Roll. W. E Brindley. 2,005,885; June 25.
Roll labeling machine. P. D. Parsons. 2,005,846; June 25.
Roofing and siding element. N. P. Harshberger. 2,006,270; June 25.
Rotary drill. C. E. Casperson. 2,005,128; June 25.
Roughage mill. J. Holland-Letz. 2,005,940; June 25.
Rubber compounding. A. B. Cowdery. 2,006,310; June 25.
Rubber products and producing them, Colored. E. Fischer. 2,006,211; June 25.
Rubber, Treatment of. W. Schrauth. 2,006,184; June 25.
Rubber vulcanization. A. J. Northam. 2,006,057; June 25.
Runner, Scooter and sleigh. A. J. Scholtes. 2,006,325; June 25.
Safety valve. W. C. Buttner. 2,005,931; June 25.
Saw filing device, Automatic. E. Lander. 2,005,998; June 25.
Scratching post. D. D. Yoder. 2,005,817; June 25.
Seal. E. Dietze. 2,006,042; June 25.
Seal. F. Keidel. 2,006,051; June 25.
Seal, Fluid. F. L. Schleicher. 2,005,833; June 25.
Sealing device for collapsible tubes and the like. S. de Faveri and R. Cimatti. 2,006,235; June 25.
Sealing electric lamps and similar articles, Method of and apparatus for. F. J. Malloy and R. B. Thomas. 2,006,231; June 25.
Seat contro lmechanism. A. T. Potter. 2,006,149; June 25.
Selvaged unwoven zigzag fabric. R. J. Southwell and T. H. Wickwire, Jr. 2,005,760; June 25.
Servo-mechanism. H. C. Edwards. 2,005,971; June 25.
Sewing machines, Piping attachment for. A. Jekulaitis. 2,006,243; June 25.
Sharpener, Hollow drill. H. I. Lewis and F. W. Seybold. 2,005,827; June 25.
Shears, Pruning. O. Fowler. 2,006,133; June 25.
Ship propulsion automatic stability control. R. E. Hellmund and A. D. Forbes. 2,005,894; June 25.
Skirt, Cocktail. I. Florman and R. Rolwing. 2,006,238; June 25.
Shock absorber for motor vehicles. L. A. Bartlett. 2,005,838; June 25.
Shock absorber, Hydraulic. R. F. Peo. 2,005,750; June 25.
Shoe bottoms, Apparatus for use in applying pressure to. R. N. Sandberg. 2,005,754; June 25.
Shoe support. F. E. Hooper. 2,005,720; June 25.
Sight for firearms, Adjustable. H. F. Mossberg. 2,005,952; June 25.
Sign: *See*—
Display sign.
Signal: *See*—
Crossing signal. Turn signal.

Type line composing and printing machine using circulating matrices. P. Martl. 2,006,246; June 25.
Universal joint. G. J. Midthun. 2,006,026; June 25.
Urn, Automatic electric drip coffee. A. C. Wilcox. 2,005,764; June 25.
Valve: *See*—
Compensating bleeder valve. Safety valve.
Steam pop-off valve.
Foot valve. Thermostatic valve.
Pressure reducing valve.
Valve for tank assemblies. Diaphragm. H. Hueber. 2,006,319; June 25.
Valve-operated mechanism. R. S. Elberty, Jr. 2,005,891; June 25.
Valve structure for hydraulic shock absorbers. Thermostatic. R. F. Peo. 2,005,751; June 25.
Vanity case. F. M. Williamson. 2,005,835; June 25.
Variable speed transmission. A. Y. Dodge. 2,006,160; June 25.
Vehicle construction, Motor. H. Hueber. 2,006,320; June 25.
Vehicle insulation. C. A. Upson. 2,006,232; June 25.
Vehicle, Push-pole. P. Andersen. 2,005,910; June 25.
Vehicle washing apparatus. H. Nichols. 2,006,029; June 25.
Vending machine. G. F. Hight and C. H. Webb. 2,006,100; June 25.
Vernier for meter registering mechanism. P. S. Morgan. 2,005,949; June 25.
Viscosity compensating system. H. Ernst and C. W. M. Goodrich. 2,005,731; June 25.
Voltage surge indicator. A. L. Price and F. B. Menger. 2,006,179; June 25.
Washing and bleaching apparatus for artificial yarns. A. Bazzocchi. 2,006,154; June 25.
Washing apparatus. H. W. Lehmkuhl. 2,006,085; June 25.
Water heating system, Hot. F. C. Broderick. 2,005,852; June 25.
Water softener. A. M. Wilbanks. 2,006,287; June 25.
Wax from oil, Separating. H. V. Atwell. 2,006,010; June 25.
Weatherstrip. J. J. Sheppard. 2,005,825; June 25.
Weir, Movable. H. Zimmermann. 2,006,252-3; June 25.
Welding apparatus. E. C. Drake. 2,005,912; June 25.
Well packer. R. R. Renouf. 2,005,955; June 25.
Well plug, Bottom hole. C. L. Maguire and G. Hadley. 2,006,105; June 25.
Wheel: *See*—
Grinding wheel.
Wheel. O. A. Parker. 2,005,828; June 25.
Wheel aligner, Automobile. V. Claywell. 2,006,013; June 25.
Wheel construction, Fifth. H. Ketel, C. M. Harris, and H. Van Der Heuvel. 2,005,722; June 25.
Wheels, Device for use in cleaning steering. A. D. Zook. 2,005,925; June 25.
Winding for the stationary members of alternating current dynamo-electric machines. G. A. Juhlin. 2,006,170; June 25.
Windmill. A. M. Lockwood. 2,006,024; June 25.
Windshield cleaner. E. C. Horton. 2,006,323; June 25.
Windshield cleaner blade. E. C. Horton. 2,006,322; June 25.
Windshield defrosting device. B. Weller. 2,006,122; June 25.
Windshield heater. M. Zaiger. 2,006,005–6; June 25.
Wire for looms, Pile. C. R. Schreiner. 2,006,151; June 25.
Wool from animal skins, Removal of. W. Kritchevsky. 2,005,746–7; June 25.
Wrapper to a bunch, Apparatus for applying a cigar. C. F. Röber. 2,006,113; June 25.
Wrench. H. W. Harrer. 2,006,073; June 25.
Yarn, and fabric made therefrom, Knitted. F. Melwald. 2,006,275; June 25.
Yarn, Leashing of hanks. P. W. Metcalfe. 2,006,247; June 25.
Zinc sulphide and making the same. J. H. Calbeck. 2,006,259; June 25

CLASSIFICATION OF PATENTS

ISSUED JUNE 25, 1935

NOTE.—First number—class, second number—subclass, third number—patent number

1— 49: 2,006,054
2— 132: 2,005,943
139: 2,006,103
4— 1: 2,006,169
5— 327: 2,005,972
8— 19: 2,005,942
2,006,154
12— 33: 2,005,754
2,005,755
51: 2,005,888
52: 2,006,071
126: 2,005,720
146: 2,005,765
15—104.30: 2,005,936
128: 2,006,280

U. S. GOVERNMENT PRINTING OFFICE 1935

Patents Nos. 2,003,279 to 2,004,087

THE OFFICIAL GAZETTE OF THE United States Patent Office

Vol. 455—No. 1 TUESDAY, JUNE 4, 1935 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices

U. S. PATENT OFFICE, *Washington, May 9, 1935.*

James H. Dalbey, his assigns or legal representatives, take notice:

An interference has been declared by this Office between an application for patent filed by James H. Dalbey, c/ Hotel McAlpin, 10th and Chestnut Streets, Philadelphia, Pennsylvania, and an application for patent filed by Charles Henderson, 19 West Plumstead Avenue, Lansdowne, Pennsylvania. The attorney for Dalbey states that he is unable to locate said Dalbey. Notice is hereby given that unless said Dalbey, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, May 22, 1935.*

Mervin A. Hunt, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of Joseph William Simoneau, Nashua, New Hampshire, for registration of a trade-mark, and trade-mark registered October 29, 1929, No. 263,099, to Allison Drug Stores, Incorporated, 109 West 64th Street, New York, N. Y. The records of this Office show that Mervin A. Hunt, New York, N. Y., is the assignee of said registrant. A notice of such proceeding sent by registered mail to said Mervin A. Hunt at the said address, having been returned by the Post Office as undeliverable, notice is hereby given that unless said Mervin A. Hunt, his assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order, the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, May 10, 1935.*

Geo. B. Clemmer, his assigns or legal representatives take notice:

A cancellation proceeding has been instituted by this Office upon the application of Ray Day Piston Corporation of Detroit, 6656 Walton Avenue, Detroit, Michigan, to effect the cancellation of trade-mark registration No. 181,877, issued March 25, 1924, to Geo. B. Clemmer, 114 Mount Royal Avenue, Baltimore, Maryland. James A. Hughes, 311 Second Highland Avenue, Baltimore, Maryland, having been joined with said Geo. B. Clemmer as respondent. The notice of such proceeding sent to said Geo. B. Clemmer by registered mail at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Geo. B. Clemmer, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, May 8, 1935.*

W. Margulis, his assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by Clover Leaf Products Co., 1848 East Vernon Avenue, Los Angeles, Calif., to effect the cancellation of trade-mark registration of W. Margulis, 671 Rio Street, Los Angeles, Calif., No. 317,803, dated October 2, 1934, and the notice of such proceeding sent by registered mail to the said W. Margulis at the said address having been returned by the post office undeliverable, notice is hereby given that unless said W. Margulis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. SPENCER,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business May 18, 1935

(Total number of applications awaiting action, excluding Trade-Mark Division, 33,997; Trade-Mark Division, 1,236. Oldest new case, January 19, 1935; oldest amended, January 18, 1935.)

Room No.	Divisions, Examiners, and Subjects of Inventions	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Appeals for the District of Columbia

METROPOLITAN ENGINEERING COMPANY *v.* CONWAY P. COE, COMMISSIONER OF PATENTS

No. 6,278. Decided April 29, 1935

1. PATENTS—OPERATIVENESS—PRIMA FACIE PRESUMPTION. The fact that a machine is patented is some evidence of its operativeness as well as of its utility. We are of the view that the prima facie presumption of operativeness attaching to the Griffith patent has not been overcome by the evidence presented by the plaintiff.

2. PATENTABILITY—WATER TUBE BOILER. Claims for a water tube boiler *Held* unpatentable over the prior art.

Mr. Melville Church, *Mr. C. B. Des Jardins*, and *Mr. D. Anthony Usina*, for the Metropolitan Engineering Company.

Mr. T. A. Hostetler, Solicitor of the Patent Office, for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB, VAN ORSDEL, HITZ, and GRONER, Associate Justices.

ROBB, *A. J.:*

Appeal from a decree in the Supreme Court of the District dismissing appellant's bill, filed under section 4915, revised statutes, as amended (35 U. S. C. A. sec. 63), seeking to authorize the issuance to appellant (assignee of applicant Murray) of a patent on a water tube boiler.

Claims 19 and 21 to 27, inclusive, were rejected by the Patent Office and by the court below. We reproduce claim 21 as representative:

"21. A steam generator including in combination approximately horizontal water tubes heated by convection and a furnace having a combustion chamber below said overhead tubes, a wall of said combustion chamber being composed of substantially upright tubes connected into the circulation of the generator, said tubes being spaced apart a distance not substantially greater than their diameter, and metal extensions from said tubes united thereto with good heat conducting joints and practically closing the spaces between them and providing an increased area exposed to the direct radiant heat of the burning fuel and conducting such heat to the tubes, each of said extensions being limited in width as to maximum to the diameter of the tubes, the tubes and extensions constituting a substantially closed wall exposed on the inner surface only to the combustion gases, the outer surface of such wall being covered with a sheathing of insulating material united to and supported by said walls."

It will be noted that these claims are not limited to any particular type of boiler—stationary, locomotive, marine, or others.

In his specification Murray, in explaining how the feed water is introduced into the boiler, stated:

"Introducing the feed water through the headers 32 and passing it through the walls of the furnace preheats the water and cools the walls. This enables me to build the walls of structural sections of thin cross-section, instead of making walls of masonry or brickwork as heretofore used for stationary boilers."

This statement falls short of limiting the scope of the application to stationary boilers, as suggested by appellant. Certainly the claims contain no such limitation.

"The scope of Letters Patent should be limited to the invention covered by the claim; and, though the claim may be illustrated, it cannot be enlarged by the language in other parts of the specification."

Railroad Co. v. *Mellon*, 104 U. S. 112, 20 O. G. 1891; *Western Electric Co.* v. *Ansonia Co.*, 114 U. S. 447, 452, 31 O. G. 1305; *Lucke* v. *Coe*, 63 App. D. C. 61, 69 F.(2d) 379, 439 O. G. 839.

In the present case the basic idea consists in providing a combustion chamber "composed of substantially upright tubes connected into the circulation of the generator." For the refractory brick walls of the combustion chambers of certain types of boilers Murray has substituted water tubes in circulation with the main boiler unit, the wall itself constituting the boundary of the combustion chamber.

"In other words (as stated by appellant's expert witness), the refractory wall was replaced by a wall of tubes with metallic fillers between the tubes to close the spaces between the tubes. An insulating material was added on the outside of the tubes to keep the heat of the combustion chamber and the heat of the tubes from being dissipated to the outside atmosphere."

The patent to Griffith, No. 743,271, discloses Murray's general combination; that is to say, it discloses a water tube boiler having inclined tubes positioned over a combustion chamber formed entirely of tubes and insulating material on the outside of the tubes. But in Griffith's construction the tubes constituting the side walls of the combustion chamber are not spaced apart, and the outer insulating material is not carried by the wall.

The patent to McClellon, No. 1,474,156, discloses the tubes of the side walls of the combustion chamber spaced apart with connecting fins and an outer covering of insulating material; it relates to a locomotive boiler.

Appellant contends that locomotive boilers and the boiler of the application relate to different arts. The same contention was made in the Patent Office, and was satisfactorily answered by the Board of Appeals as follows:

"We have given this matter careful consideration in view of the argument in the brief, but it is our opinion that the structure of the tubular side walls with their insulated coverings have substantially the same functions in the two types of boilers and therefore we regard McClellon as pertinent art."

The Board continued:

"We may take cognizance of the fact that it has been old for years to plaster asbestos and similar insulating material directly upon furnace walls and we are satisfied, therefore, that there would be no patentable distinction in supporting the insulation in this way on the wall of McClellon instead of holding it in position by an outer covering."

Evidently Murray when he wrote his specification did not regard the application of insulating material as constituting novelty, for he says:

"This insulating material can be plastered on after the metal work has been erected. This insulating material may be a magnesia mixture or plastic compounds of asbestos and like heat insulators. * * * The metal fillers or extensions of my improved boiler form a shield which protects *any* outside sheathing, the tubes with the metal fillers or extensions constituting in effect a wall of the combustion chamber *so that the plastic material* on the outside may be *a mere insulating sheathing* supported by the wall of tubes and fillers." [Italics ours.]

[1, 2] Appellant insists that the Griffith boiler is inoperative and, therefore, not a pertinent reference. This contention is based upon the opinion of appellant's expert witness; but the Primary Examiner is equally skilled in the art, and he passed upon the question originally. Moreover, the Board of Appeals must have considered the Griffith boiler operative, else it would have rejected it as a reference. As we have seen, their decision denying appellant's

claims was based largely upon the Griffith patent. The fact that a machine is patented is some evidence of its operativeness, as well as of its utility. *Dashiell v. Grosvenor*, 162 U. S. 425, 432, 75 O. G. 507.

"When the question is whether a thing can be done or not, it is always easy to find persons ready to show how not to do it."

Loom Co. v. *Higgins*, 105 U. S. 580, 586, 21 O. G. 2031. In *A. B. Dick Co.* v. *Barnett* (C. C. A. 2d) 288 F. 799, the court said:

"We are of opinion that it is advisable to remember first how very easy it is not to do a thing and how small is the step from not wanting to do a thing to declaring that it cannot be done."

See also *Hildreth* v. *Mastoras*, 257 U. S. 27, 34, 293 O. G. 215; *Scovill Mfg. Co.* v. *Satler*, 21 F.(2d) 630; *Remington Cash Register Co.* v. *National Cash Register Co.*, 6 F.(2d) 585, 618, 619. We are clearly of the view that the prima facie presumption of operativeness attaching to the Griffith patent has not been overcome. The structure of this patent is strikingly similar to the structure of Murray's application. In each case the tubes of the four walls of the boiler surround or form a combustion chamber and are subjected to direct heat from the fuel.

Decree affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE DODGE

No. 3,377. Decided January 28, 1935

[74 F.(2d) 756]

PATENTABILITY—BRAKE OPERATING MECHANISM.

Claims for a brake operating mechanism *Held* properly refused as being not inventively different from other claims of the applications which were involved in an interference and which applicant conceded were unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. McConkey & Smith, Mr. N. D. Parker, Jr., Mr. M. W. McConkey, and *Mr. Jerome R. Cox* for Dodge.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 1, 2, 5, 9, 10, and 11, in appellant's application for a patent for an alleged invention relating to improvements in brake operating mechanisms for vehicles, and particularly vehicles having the four-wheel brake system.

Claims 1, 2, and 11 are illustrative. They read:

1. A vehicle having, in combination, four-wheel brakes, a pedal arranged to apply all of the brakes, and an emergency lever arranged to apply all of the same brakes, the pedal having a limited movement and the emergency lever having a substantial brake-applying movement after the pedal reaches its limit of movement.

2. A vehicle having, in combination, four-wheel brakes, a single cross-shaft arranged to apply all the brakes, and a service pedal and an emergency lever both having lost-motion connection with the shaft, the brake-applying movement of the pedal being limited and the lever having a substantial brake-applying movement after the pedal reaches its limit of movement.

11. A vehicle having, in combination, four wheel brakes, a single cross-shaft arranged to apply all of said brakes, a service pedal having a lost motion connection with the shaft, an emergency lever having a lost motion connection with the shaft, and means for limiting the brake applying movement of the pedal prior to limitation of movement of the lever.

The claims were rejected by the Board of Appeals on two grounds; namely, first, that they were not patentable over a publication entitled Automotive Industries of June 16, 1921, p. 1269, and not patentably distinct from the subject matter of the issue in an interference hereinafter referred to; and second, on the ground of estoppel.

It appears from the record that appellant's application was in Interference No. 58,229, with a reissue application No. 257,946, of Des Rosiers' patent, No. 1,575,323 on several counts, of which counts 2 and 5 are sufficiently illustrative. They read:

2. A vehicle having, in combination, two swiveled front wheels having brakes, two rear driving wheels having brakes, a substantially rigid transverse rockshaft approximately midway between the front and rear wheels and having an upwardly-extending member and a downwardly-extending member at each end, a tension connection from each member to one of the four brakes, whereby the rockshaft operates all four brakes, *a service operating member having an overrunning connection with the shaft, and an emergency operating member having an overrunning connection with the shaft.*

5. Actuating mechanism for a vehicle having four wheel brakes, comprising a rigid controller shaft, four rods connected to said controller shaft, each adapted to be connected to one of said four wheel brakes, a foot lever, *means connecting the foot lever to the controller shaft with a lost motion connection*, a hand lever, *and means connecting the hand lever to the controller shaft with a lost motion connection*, whereby either the foot lever or the hand lever may be used to rock the controller shaft for applying all said wheel brakes, without moving the other lever. [Italics ours.]

Appellant moved to dissolve the interference on the ground that the subject matter there involved was unpatentable in view of the prior art. The motion was granted, and the interference dissolved by the tribunals of the Patent Office.

Although appealed claims 1, 2, and 5 were in appellant's application during, and subsequent to, the interference proceeding, they were not involved therein. Appealed claims 9, 10, and 11 were later added to his application.

It clearly appears that the only distinction between the claims here at issue and the counts involved in the interference, hereinbefore referred to, is that the appealed claims contain the feature—"the pedal having a limited movement and the emergency lever having a substantial brake-applying movement after the pedal reaches its limit of movement."

Although the Automotive Industries reference shows a lost-motion connection between the emergency lever and the brakes, it does not disclose such a connection between the foot pedal and the brakes, nor does it disclose a stop for the foot pedal for the purpose of preventing the locking of the wheels.

The gist of the claimed invention, as stated in appellant's specification, is to provide a limit "for the brake-applying movement of the pedal, for example by engagement with the floor board," in combination with the lost-motion connections disclosed in the counts of the interference.

The argument has been stressed in this court, and apparently in the Patent Office, that the hand lever was so constructed as to have a substantial brake-applying movement after the foot pedal had reached the floor board, and that the purpose of limiting the brake-applying movement of the pedal was to apprise the operator of the vehicle of the fact that his brakes needed relining when the pedal reached the floor board.

The fact of the matter is that there is nothing in the specification, or in the claims, of appellant to indicate that the "stop" for limiting the movement of the pedal was intended to, or would, apprise the operator that the brakes needed relining. On the contrary, appellant's specification definitely and clearly recites that the purpose and object of the alleged invention is to limit the brake-applying movement of the pedal so as "to insure against locking the wheels under any ordinary circumstances," and that the foot pedal and its connections were so formed and adjusted that the pedal reached the floor board before the wheels were locked. The only other feature stressed in the application is that of using the hand lever so as to apply additional movement of the brakes.

In its decision on appellant's application for a rehearing, the Board of Appeals in referring to its original decision in the case, among other things, said:

The decision was based upon two controlling facts: The first being that the subject-matter of the claims is not patentably distinct from the subject-matter of the issue in Interference 58,229, which latter subject-matter, in the opinion of the applicant, is devoid of patentability, as evidenced by his motion to dissolve said interference; and the second being that of estoppel, the applicant while in said interference failing to contest the question of priority with respect to equivalent subject-matter.

The main distinction between the claims on appeal and the claims which constituted the issue in said interference is that the claims on appeal include a statement to the effect that the pedal has a "limited movement", or the limitation of a "stop in the path of the foot pedal".

As has been repeatedly pointed out in this record, these limitations are immaterial from the standpoint of invention. In the operation of the invention disclosed in Automotive Industries, of June 26 [16], 1921, page 1269, and in the operation of the Des Rosiers invention in the manner contemplated the pedal necessarily has a limited movement, the floor of the vehicle functioning to limit the movement of the pedal.

We find no disclosure in the Automotive Industries' reference, nor in the patent to Des Rosiers showing that the brake-applying movement of the foot pedal is limited by the floor board, or other means, to prevent the locking of the wheels of the vehicle, and, at the same time, providing that the emergency lever shall have a "substantial brake-applying movement after the pedal reaches its limit of movement."

If it may be assumed that it is desirable, by limiting the brake-applying movement of the foot pedal, to make it impossible to lock the wheels of the vehicle, except by use of the emergency lever, we are of opinion that it would be obvious to one skilled in the art to solve the problem in accordance with appellant's arrangement, in view of the concession that the counts in the interference were unpatentable over the disclosure contained in the Automotive Industries' reference. Stating the proposition differently, the limitations contained in the appealed claims, in view of the facts of record, are, in the language of the Board, "immaterial from the standpoint of invention."

We find it unnecessary, therefore, to consider the second ground of rejection applied by the tribunals of the Patent Office; to wit, that appellant was estopped to claim the subject-matter defined in the appealed claims, because of his failure to request that those claims be placed in interference in the Des Rosiers reissue application.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE CROWLEY

No. 3,382. Decided January 28, 1935

[74 F.(2d) 753]

PATENTABILITY—VALVE STEMS.

Certain claims for a valve stem *Held* unpatentable in view of the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Kiwis, Hudson & Kent, Mr. Watts T. Estabrook, and *Mr. W. E. Williams* for Crowley.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

Four claims of an application for patent, relating to valve stems designed particularly for use with pneumatic tires of motor vehicles, are here upon appeal from a decision of the Board of Appeals of the United States Patent Office affirming their rejection by the Examiner. The claims are numbered 8, 9, 10, and 11, respectively. Of these, numbers 8 and 10 are thought to be typical:

8. A valve stem comprising two stem parts, one of said parts having an internal bore extending therethrough and being provided with a head at one end and with a reduced portion, a packing arranged on said reduced portion, the other of said parts being tubular and telescoping upon the first named part, said second named part having one end formed to interiorly receive a valve insides and the other end thereof located when the stem is assembled adjacent to the head of the first named part, said second named part also having a portion engaging the said packing with a wedging action to effect an air seal between the two parts, and means for securing the two stem parts together.

10. A valve stem comprising two stem parts, one of said parts having an internal bore extending therethrough and being provided with a head at one end, the other of said parts being tubular and telescoping upon the first named part and having one end formed to receive a valve insides, a spreader plate, and means swivelly connecting said spreader plate and said second named part for securing said stem parts together.

As is indicated by the claims, appellant discloses a two part valve stem. The part which is designed to be attached permanently to the inner tube of the tire during the process of tube manufacture, and which is referred to as the "inner" part, may be of standard construction, while the other or "outer" part may be made of such length and shape—that is straight or bent—as will adapt it to different types of wheels. It is proper to note that while the drawings disclose different forms, nothing relative to shape is contained in the claims themselves.

The disclosure relating to the first or inner part is that of a member bored internally and fitted at one end with a head designed to be placed on the inner side of the pneumatic tube, the other end being reduced in size and having packing arranged on the reduced portion.

The second or outer part is a tubular member or stem designed to telescope upon the reduced portion of the inner part, being screwed down upon same so that its lower end is located adjacent the

head element of the first or inner member. The outer end of the outer part is designed to receive a "valve insides," or core. In one figure of the drawings there is also disclosed a spreader plate so placed outside the pneumatic tube as to cooperate with the head of the first or inner part and hold the tube clamped between head and plate. This plate is provided with a swivel connection to a nut, which nut in turn is swivelly connected with the stem.

The rejection by the Examiner rested upon two grounds, first, that of aggregativeness, it being his opinion that

"The specific joint between the parts bears no patentable relation to the formation of the outer part to receive a valve insides,"

and, second, as not inventive over the prior art cited, the references being Gilbouret (French) patent No. 496,512; Schrader, 604,424, May 24, 1898; Kraft, 1,432,869, October 24, 1922; and Oakley, 1,655,104, January 3, 1928.

The Board expressly overruled the first ground, that of aggregativeness, but sustained the rejection upon the prior art after pointing out that—

• • • Gibouret discloses a two-part valve stem comprising an inner member provided with a head and externally screw threaded to receive the outer member. The outer end of the outer member is provided with a valve of specific construction. Schrader discloses a valve stem comprising a part externally screw threaded and provided at one end with a thread, and at the other end with an interior conical seat, a second part carrying the valve and provided at one end with a packing to cooperate with the seat in the other member, the two members being clamped together by means of a swiveled member threaded to the external threads of the first member. Kraft discloses a valve stem provided with an insert to receive the valve insides. Oakley discloses a valve stem comprising a part externally screw threaded and provided with a head and a spreader with a nut swiveled to the spreader.

The purport of the Board's decision, as we understand it, is that each of the features of appellant's combination, as defined in the rejected claims, is found in one or other of the cited references, and that it did not involve other than mechanical skill to make the requisite modifications of same and combine them in appellant's device.

The brief for appellant makes the following contentions, the italics being quoted as they appear in said brief:

a. The Patent Office has not cited in the record of this application any prior patent or patents disclosing a valve stem construction comparable in *purpose and function* to appellant's construction; that is, a two-part valve stem, the inner part of which is of *standard construction* and has associated therewith *an outer part for receiving the valve insides which may be varied in shape and length to adapt the valve stem to different types of automobile wheels.*

b. The Board of Appeals in rejecting the claims failed to note *this lack of identity of purpose and function between the prior art patents and appellant's construction* and, therefore, committed an error under the doctrine of this Court as exemplified in decisions hereinafter to be referred to.

c. The Board of Appeals, in relying on the disclosure of a foreign patent showing a construction *lacking in identity of purpose and function* with appellant's construction and *in suggesting certain changes in the construction shown in said foreign patent,* did not observe the rule of this Court with respect to disclosures of foreign patents as anticipations, as will be pointed out by decisions hereinafter referred to.

Upon the contention expressed in paragraph *a*, supra, to the effect that no prior patent has been cited which discloses a valve stem construction comparable in purpose and function to appellant's construction, the brief cites the decision of this court in the case of *In re Wallace R. Gillam*, 17 C. C. P. A. (Patents) 877, 37 F.(2d) 959, 395 O. G. 1135, with the insistence that it was there held that the court was justified in reversing the experts of the Patent Office in cases where there "was a lack of identity of purpose and function" between the references and the application.

We are of opinion that our decision in the *Gillam* case, supra, has not been correctly understood by counsel for appellant. We there had nothing to say relative to "identity of purpose and function". It was there said, in substance, that, in our opinion, there was a clear distinction between the "idea" embodied in the application there involved and the reference cited against it, and that this was an essential distinction, and we followed this by pointing out the particular feature of structure which embodied such essential distinction.

In the case of *In re Joseph W. Isherwood*, 17 C. C. P. A. (Patents) 1187, 40 F.(2d) 987, 400 O. G. 225, this court, citing authorities, had occasion to say:

• • • it is true, as a matter of law, that if the applicant has taken one feature from one patented device, and another feature from another patented device, and combined them, and has produced no results other than were produced by the original devices in their individual operation, then he has invented nothing.

When the foregoing rule is applied to the claims here on appeal, we are forced to the conclusion that invention is lacking.

It is true that appellant presents a structure wherein there may be combined a standard element with one which may take different shapes to meet the requirements of different types of motor vehicle wheels, but each element of both the general parts is found in some one of the references, performing substantially the same function there as it performs in the device of appellant.

It may be true, as counsel for appellant urges, that the French patent to Gibouret

does not disclose a two-part valve stem, the inner part of which is standard and the outer part of which may be angularly bent or changed as to length to suit varying conditions,

but, as has been stated, appellant's claims have nothing to say relative to bending or length, and it is not questioned that Gibouret does clearly disclose a two-part valve construction.

It may also be true, as is claimed for appellant, that Gibouret's outer part requires a special, and not the conventional form, of "valve insides" or core, but nothing is found in the claims before us which describes appellant's outer part as being designed for any particular character of "valve insides." So far as the claims are concerned, appellant's valve insides may be either conventional or of some special type.

Incidentally, it may be said that the patent to Kraft discloses a valve stem arranged to receive a valve core in one of its ends. It is true this is a one part valve stem structure, but insofar as the feature of the "valve insides" is concerned, we can see no reason for holding it not a pertinent reference.

It is urged on behalf of appellant that the principal reference, Gibouret, is a foreign patent and that the rule has been laid down by this court that (quoting from brief)—

foreign patents may not be measured as anticipatory by what may be made out of them, but only by what is clearly and definitely expressed in them.

The cases of *In re Gillam*, supra, and *In re Ernest G. Dann*, 18 C. C. P. A. (Patents) 1031, 47 F.(2d) 356, 409 O. G. 7, are cited.

It is quite true that under many authorities a certain distinction has been declared between foreign and domestic patents when used as references, but certainly there is no authority which holds that what is clearly disclosed in a foreign patent may not be combined with the disclosures of other patents to negative patentability. The rule is to the contrary. *In re Cross*, 20 C. C. P. A. (Patents) 710, 62 F.(2d) 182, 426 O. G. 57.

We think the Board of Appeals did no more than this in the instant case.

We are unable to concur in the contention that there is error in the decision of the Board of Appeals and the same is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE ARENDT

No. 3,332. Decided January 28, 1935

[74 F.(2d) 765]

PATENTABILITY—METHOD OF OPERATING A VEHICLE PROPELLING PLANT—DOUBLE PATENTING.

Claims for a method of operating a vehicle propelling plant *Held* unpatentable as for the same invention as that claimed in applicant's patent.

APPEAL from the Patent Office. Affirmed.

Mr. W. B. Morton and *Mr. C. M. Fisher* for Arendt.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner, rejecting claims 9 and 11 of appellant's application upon the ground that such claims involve only the same invention as that claimed in appellant's patent, No. 1,790,634, issued January 27, 1931, upon an application filed on August 25, 1923. Appellant's instant application was filed on December 17, 1929; it recites that:

This application is a continuation of my earlier filed application Ser. No. 508,191, filed October 17, 1921, and also of my copending application Ser. No. 659,300, filed August 25, 1923.

The Examiner also rejected said claims upon certain references, but the Board of Appeals did not affirm his rejection upon that ground.

The claims here involved are method claims and read as follows:

9. The method of operating a vehicle propelling plant consisting of an engine, a generator of an overall capacity not substantially greater than the average power requirements of the vehicle over a period of operation, a motor and a battery in circuit with the generator and motor and of a capacity insufficient to receive the full output of the generator without injury thereto, which consists in operating the generator at its full capacity output at all times except when the amount of current flowing to the battery would be sufficient to injure the same.

11. The method of operating a vehicle propelling plant consisting of an engine, a generator of an overall capacity not substantially greater than the average power requirements of the vehicle over a period of operation, a motor and a battery in circuit with the generator and motor and of a capacity insufficient to receive the full output of the generator without injury thereto, which consists in normally operating the generator at full capacity while the vehicle is under power, stopping the operation of the generator when the battery is fully charged and restarting the generator when the battery is discharged a fraction less than half its capacity.

Certain claims were allowed by the Examiner, with which claims we are not here concerned.

Appellant's application relates to a gas-electric vehicle, including a prime mover, such as a gas engine, which drives an electric generator, which generator, through an electric motor, propels the vehicle. A storage battery is arranged in parallel with the motor, so that the generator can charge the battery and the battery can supply current for driving the vehicle when the load is too heavy for the generator. The claims here involved are for a method of operating the units of apparatus enumerated in said claims.

Appellant's patent, No. 1,790,634, is not prior art for the reason that when it was issued appellant's instant application was pending in the Patent Office. Therefore, the only question before us is whether the invention here claimed is covered by any of the claims of appellant's said patent.

It is elementary that an applicant cannot receive two patents for the same invention, and if appellant has already received a patent for the invention here claimed, the decision of the Board of Appeals with respect to the claims here involved should be affirmed.

Appellant's said patent is for certain specified apparatus, and no method claims are included therein. Whether the claims here involved would have been allowable in appellant's said patent we need not here determine.

Claims 4, 5, and 16 are illustrative of the claims allowed in said patent and read as follows:

4. A propulsion system for vehicles having an electric operating motor, an engine for supplying power therefor, a generator operated by said engine, a storage battery, said storage battery having a capacity insufficient to receive the full charge of said generator, connections between the generator, the storage battery and the electric motor whereby the storage battery assists in driving the motor when the load thereon exceeds a predetermined value and is charged by the generator when the load is below such value, means for reducing the generator output when the load on the electric motor falls below a predetermined minimum to a point such that the battery may receive the entire output of the generator without injury, and means independent of said output control for stopping said engine when the battery is charged and for restarting said engine when the battery is partially discharged.

5. A propulsion system for vehicles comprising an electric operating motor, an engine for supplying power therefor, a generator operated by the engine, a storage battery, connection between the generator, the storage battery and the electric motor whereby the storage battery assists in driving the motor when the load thereon exceeds a predetermined value and is charged by the generator when the load is below such value, a throttle control for said engine comprising *automatic* means for operating said throttle to reduce the engine output when the load on the electric motor falls below a certain minimum, means for utilizing said storage battery and generator for starting said engine, said means and said throttle control being so arranged as to maintain a fully open throttle when said engine is being started. [Italics ours.]

16. In an apparatus of the class described, the combination of an electric operating motor, a prime mover

for supplying power thereto, a generator operated by the prime mover, a storage battery, connections between the generator, storage battery and the electric motor, whereby the storage battery assists in driving the motor, when the load thereon exceeds the predetermined value and is charged by the generator when the load is below such value, a watt regulator for maintaining a practically constant energy output from the generator, means to reduce the watt regulator setting, means to *electrically disconnect the generator and stop the engine at a predetermined point of battery charge*, and means to *automatically* restart engine and generator at a predetermined point of battery discharge. [Italics ours.]

The Board of Appeals in its decision stated:

Appellant particularly urges that the rejected claims are method claims while the claims of the patent are drawn to apparatus. The applications of both cases were copending and it is appellant's position that the subject matter of the method claims is broader, is capable of being carried out by manuel control and is therefore not limited to the specific apparatus of the patent.

There is no question but that under proper conditions method claims which were being asserted in an application at the time of issue of a patent, containing claims to a specific apparatus for carrying out the method, may be allowed in a second patent; but it must be clear that the apparatus claims are specific and that it would be obvious to carry out the operations of the method claims in some substantially different way than that set forth in the broadest apparatus claim in the patent.

We consider that in the patent the means for reducing the generator output and the means for stopping the engine when the battery is charged are so broad as to cover hand control means for the elements of the system referred to. It is true that this claim includes both the limitations found in the two claims on appeal but we are satisfied that this does not provide any proper line of division. Even if this claim should be construed as restricted to automatic means, we do not consider that there is any patentable distinction. We do not believe that appellant in the two cases has disclosed two independent inventions along the broad lines covered by the appealed claims and claim 4 of the patent but we consider that the claims of both cases cover substantially the same invention and that the claims differ in words merely, without even any substantial difference in the scope. We agree with the Examiner that the method claims merely set forth the function of the apparatus of the patent. We are fully satisfied, therefore, that there is no line of division between the appealed claims and those of the patent and that the Examiner was justified in rejecting them for this reason.

It is appellant's contention that the means for controlling the several units described in the involved claims might be independent, manually operated elements, whereby an operator, in pursuance of appellant's specifications, could carry out the sequence of operations therein defined and successfully operate a vehicle carrying the prescribed load; that it is this method of operation to which the claims here on appeal are directed, while appellant's said patent is directed to an independent improvement on the invention claimed in the case at bar, whereby certain of the steps of appellant's improved method of operating a gas-electric propulsion system are carried out automatically, and that therefore the invention for which appellant has received a patent is not the same invention that is here claimed.

The position of the Solicitor for the Patent Office is concisely stated in his brief as follows:

The true test of independence of the subject matter of the method claims and the apparatus claims lies not in the disclosures in the specifications, but in comparison of the things enumerated in the respective claims themselves. The method claims state the doing of certain series of steps of process or in setting forth means for doing the same acts, without reference to any specific means. The apparatus claims are intended to cover all means for doing the acts specified. That being so, there is no other apparatus for doing the acts specified, or the method can be carried out only by the apparatus claimed. The case, of course, might be different if the apparatus claims involved any particular structure of means for performing the functions indicated. As before indicated, it is conceivable that a variety of specifically different means might be used to perform the same function. But that is not this case, because here the apparatus claims are not limited to any particular structure of means. In other words, there is but a single inventive idea, with no patentable distinction, in setting forth a series of steps of process or in setting forth means for doing the same series of steps. * * *

We think the foregoing is a correct statement of facts with reference to the method claims here involved and also respecting some of the apparatus claims of appellant's patent, notably claim 4 hereinbefore quoted. There are, however, some claims of said patent which set out specific means for automatically performing some of the operations set forth in the claims. With these claims of the patent, however, we are not concerned, for they were not relied upon by the Patent Office tribunals.

The real question before us is whether claims of the patent, of which claims 4, 5, and 16 are illustrative, require automatic control of certain of the steps of operating a gas-electric propulsion system such as is described in said claims. If said claims cover hand operated, as well as automatic, control of such steps, it is clear to us that the claims here involved cover the same invention as is embodied in said patent claims, and we need not inquire whether the addition of automatic control set forth in some of the claims of the patent covers a separate invention, distinct from that which is here claimed.

Appellant contends that the use of the word "when", as in claim 4 of the patent, for example, implies automatic control and excludes hand operated control. We quote again from claim 4 as follows:

4. * * * means for reducing the generator output *when* the load on the electric motor falls below a predetermined minimum to a point such that the battery may receive the entire output of the generator without injury, and means independent of said output control for stopping said engine *when* the battery is charged and for restarting said engine *when* the battery is partially discharged. [Italics ours.]

Upon this point, it is sufficient to say that if appellant's contention with respect thereto is correct, then it would be likewise true that the claims here on appeal call for a method of operation in which the operation is controlled by automatic means, whereas appellant's position is that said involved claims include hand operated controlling means and that they are therefore distinguished from the claims of the patent. For instance, in claim 9, here involved, the following is found:

* * * which consists in operating the generator at its full capacity output at all times except *when* the amount of current flowing to the battery would be sufficient to injure the same. [Italics ours.]

Similarly, in claim 11, here involved, there is found:

* * * stopping the operation of the generator *when* the battery is fully charged and restarting the generator *when* the battery is discharged a fraction less than half its capacity. [Italics ours.]

It thus appears that in construing the claims of the patent appellant gives one significance to the word "when," and in construing the same word when similarly used in the claims on appeal he gives to it exactly the opposite significance.

We are in agreement with the view of the Board of Appeals that the language of claim 4 of the patent, and of certain other claims thereof, is broad enough to cover hand control means for operating the elements of the system set out in the claims.

Certain claims of the patent, of which claims 5 and 16 are illustrative, specifically claim automatic controls, without reciting any specific form of automatic control. Claim 4, and certain of the other claims, do not specify automatic control at all.

It is well established that, in construing a claim of an application or patent, it is proper to consider other claims in the application or patent. *Marshall and Levandesky* v. *Ledwinka*, 21 C. C. P. A. (Patents) 728, 67 F.(2d) 495, 438 O. G. 531; *Oldroyd* v. *Morgan*, 19 C. C. P. A. (Patents) 1111, 57 F.(2d) 358, 421 O. G. 858; *Andrews* v. *Nilson*, 27 App. D. C. 451, 123 O. G. 1667; *Ryder* v. *Schlichter*, 126 Fed. 487; *French* v. *Buckeye Iron & Brass Works*, 10 F.(2d) 257. (certiorari denied, 271 U. S. 673).

The case last above cited was an infringement suit, and one of the questions involved was whether certain claims of the patent there involved were limited to automatic mechanism, or included mechanism manually operated. The Circuit Court of Appeals (Sixth Circuit) in its opinion in said case stated:

The effect of the argument made by appellee against infringement is that the claims in suit must be limited to the specific structure wherein a falling float in the bottom kettle automatically trips into action the mechanism for opening and closing the successive gate doors. It is quite impossible to accept this argument. The French specification and drawing showed this construction, but we find that the specification expressly stated that, instead of this full automatic action, the starting gear might be manually operated, if desired, and then we find that the patent contains a group of narrow claims limited to this full automatic action, and a group of broader claims not so limited. Under familiar principles the limitations of the former cannot be imported into the latter.

So in the case at bar, appellant's patent clearly sets forth the invention here involved and also sets forth as an improvement of the invention certain automatic controls of the apparatus. As hereinbefore indicated, certain of the claims of the patent specifically claim such automatic features, while other claims, such as claim 4, do not. Therefore, under the rule supported by the case above cited and quoted from, we must hold that claims which do not specifically embody such automatic controls are not limited to automatic controls, for we cannot read into broad claims, such as claim 4 of the patent, limitations which are specifically set forth in other claims of the patent.

Claim 5 clearly provides for "automatic means for operating said throttle to reduce the engine output * * *." Claim 16 clearly provides for automatic means to "stop the engine at a predetermined point of battery charge, and means to automatically restart the engine and generator * * *." Claim 4, and certain other claims of the patent, contain no such limitations.

Being of the opinion that the process here claimed embodies the same invention disclosed and claimed in appellant's patent, the decision of the Board of Appeals must be affirmed.

As hereinbefore indicated, in view of the conclusion we have reached, it is unnecessary for us to decide whether claims of appellant's patent merely reciting automatic means of control of the apparatus, without specifying any particular means of automatic control, constitute any patentable distinction over the claims in the patent which do not contain such recital.

For the reasons hereinbefore stated, the decision of the Board of Appeals is affirmed.

Affirmed.

Disclaimers

Re. 17,413.—*Arthur T. Kathner*, Mount Lebanon, Pa. ANNEALING AND HEAT-TREATING FURNACE. Patent dated August 20, 1929. Disclaimer filed May 16, 1935, by the patentee, the exclusive licensee, *The Duraloy Company*, assenting.

Hereby disclaims from the aforesaid patent claims 15 and 17.

1,725,398.—*Arthur T. Kathner*, New Cumberland, W. Va. METAL-TREATING FURNACE. Patent dated August 20, 1929. Disclaimer filed May 16, 1935, by the patentee, the exclusive licensee, *The Duraloy Company*, assenting.

Hereby disclaims from the aforesaid patent claims 3, 4, 5, 7, 8, and 9.

1,813,081.—*John Homer Plunkett*, Beverly Hills, Calif. WATERPROOF CONSTRUCTION MATERIAL. Patent dated July 7, 1931. Disclaimer filed May 9, 1935, by the assignee, *The Patent and Licensing Corporation.*

Hereby enters this disclaimer to that part of the specification of the aforesaid Letters Patent which consists of claims 1, 2, 3, 4, 7 and 8 which are in the following words, to wit:

"1. A building material suitable as a backing for plaster, stucco and the like, comprising lengths of felted fibrous material saturated with a water-proofing substance and coated on its surfaces with a layer of bituminous material, one of said coated surfaces having affixed thereto throughout its entire extent, a sheet of water-absorptive, smooth, and relatively tough paper.

"2. A building material suitable as a backing for plaster, stucco and the like, comprising lengths of felted fibrous material saturated with a water-proofing substance and coated on its surfaces with a layer of bituminous material, one of said coated surfaces having affixed thereto throughout its entire extent, a sheet of kraft paper.

"3. A building material of the character described, comprising a felted fibrous foundation saturated with a water-

proofing substance and coated on its surfaces with a layer of bituminous material, one of said coated faces having affixed thereto throughout its entire extent, a sheet of water-absorptive, smooth and relatively tough paper, said sheet of paper being relatively thinner than said foundation.

"4. A building material of the character described, comprising a felted fibrous foundation saturated with a water-proofing substance and coated on its surfaces with a layer of bituminous material, one of said coated faces having affixed thereto throughout its entire extent, a sheet of kraft paper, said sheet of paper being relatively thinner than said foundation."

"7. In combination with structure of plaster, stucco, or the like, an underlining therefore, comprising partially overlapped sheets of fibrous felt, each of said sheets being impregnated with a water-proofing substance and coated on its surfaces with a layer of bituminous material, the coated surface adjacent the plaster, having affixed thereto throughout its entire extent, a sheet of water-absorptive, smooth, and relatively tough paper.

"8. In combination with a structure of plaster, stucco, or the like, an underlining therefore, comprising partially overlapped sheets of fibrous felt, each of said sheets being impregnated with a water-proofing substance and coated on its surfaces with a layer of bituminous material, the coated surface adjacent the plaster, having affixed thereto throughout its entire extent, a sheet of kraft paper."

1,863,421.—*James D. Tear*, Schenectady, N. Y. ELECTRO-MAGNETIC COMPASS. Patent dated June 14, 1932. Disclaimer filed May 16, 1935, by the assignee, *General Electric Company*.

Hereby enters the following disclaimer to claims 3, 6, 7, 8, and 9 of the said Letters Patent, which are in the following words, to wit:

"3. An electromagnetic compass comprising an armature arranged for rotation in the earth's magnetic field, a magnetic member having relatively high permeability and relatively low retentivity, and means mounting said member in cooperative relationship with said armature so that said member directs the earth's magnetic field into said armature, means for mounting said member on a craft subject to motion about an axis thereof and means for stabilising said magnetic member in a predetermined plane whereby said member is stabilized about said axis."

"6. An electromagnetic compass comprising an armature, means for rotating said armature, a magnetic member, means mounting said member in cooperative relationship with said armature so that said member directs into said armature a magnetic flux determined by the angular relationship between an axis of said member and an axis of a component of the earth's magnetic field, and said member including a magnetic structure mounted in cooperative relationship with said armature and surrounding a substantial portion thereof for shielding said armature from other components of the earth's magnetic field.

"7. An electromagnetic compass for an aircraft and the like comprising an armature means mounting said armature on said craft for rotation about a normally vertical axis, a pair of magnetic members arranged on opposite sides of said armature and extending in opposite directions therefrom, means mounting said members in a horizontal plane with an end of each adjacent said armature so that said members direct the earth's magnetic field into said armature, and manually operated means for rotating said members in said horizontal plane to a desired position with respect to a predetermined axis of said craft.

"8. An electromagnetic compass comprising an armature, means for rotating said armature, means including a pair of elongated magnetic members arranged end to end on opposite sides of said armature for controlling the effect of the earth's magnetic field on said armature, and means for stabilising said members in a predetermined plane.

"9. An electromagnetic instrument comprising an armature, a support for said armature, means for rotating said armature, means including a pair of elongated magnetic members adjustably mounted on said support in alinement for directing the earth's magnetic field into said armature, and means for maintaining said magnetic members in a horizontal plane."

1,867,281.—*Lloyd O. Runkle*, Gloucester, Mass. SIFTER TRAWL. Patent dated July 12, 1932. Disclaimer filed May 14, 1935, by the assignee, *The Linen Thread Company*.

Hereby enters this disclaimer of claims numbered 1, 2, 5, 8, 9, 10, and 11, as said claims appear in the original Letters Patent herein above referred to.

1,960,837.—*Martin J. Binkley*, East Orange, N. J. ROTARY FUEL BURNER. Patent dated May 29, 1934. Disclaimer filed May 16, 1935, by the assignee, *The Silent Glow Oil Burner Corporation*.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"10. In a burner of the character described, a rotatable distributing head provided with a peripheral rim portion having relatively small apertures spaced substantial distances apart for the centrifugal discharge of oil spray therethrough when the head is rotated, the side walls of said apertures converging toward the periphery of the head and one side wall of each aperture extending approximately radially of the head, and means for rotating the head."

Adjudicated Patents

(C. C. A. N. Y.) Hill patent, No. 1,310,698, for paper or similar cup. *Held* not infringed by cup having flat folded wedgeshaped rim. *Lily-Tulip Cup Corporation* v. *American Lace Paper Co.*, 76 F.(2d) 130.

(D. C. Md.) Rod patent, No. 1,830,768, for art of making garments, *Held* invalid. *Rokap Corporation* v. *Lamm*, 10 F. Supp. 219.

(C. C. A. N. Y.) Thornhill & Rohr patent, No. 1,867,116, for cover for handbags, claim 4, *Held* infringed. *Virginia Art Goods Studios* v. *Goldberg & Seltzer, Inc.*, 76 F.(2d) 122.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,850,047, E. P. Bachmann and W. H. Lasch, Method and apparatus for treating or moistening yarn, decided April 29, 1935, claims 2, 3, and 5.

Pat. 1,895,774, F. E. A. Smets and C. F. Hansen, Signal shaping circuit, decided May 6, 1935, claim 1.

Pat. 1,904,698, Aaron Simons, Method of making drawing die, decided March 22, 1935, claim 1.

Pat. 1,905,251, C. A. Styer, Self-compensating light control, decided April 15, 1935, claims 3 and 4.

Pat. 1,925,352, W. O. Twombly, Temperature control system for automotive engines, decided April 30, 1935, claim 1.

Pat. 1,954,785, Charles Bresson, Means for breaking electric circuits, decided April 8, 1935, claims 1, 2, and 3.

Pat. 1,958,140, G. C. Gress, Method of seasoning pyroxylin plastic, particularly sheets, decided May 10, 1935, claims 1, 2, and 3.

Pat. 1,982,566, A. G. Belford, Two-feed circular knitting machine, decided April 30, 1935, claims 3 and 5.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 4, 1935

[VOL. 455 No. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 357,394. JACOB C. SCHACHET, Denver, Colo. Filed Oct. 22, 1934.

Applicant disclaims the word "Oak" apart from the mark shown.

For Leather.

Claims use since June 4, 1931.

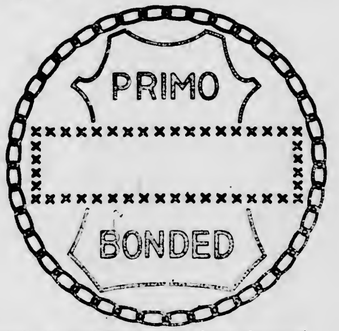
Ser. No. 360,018. WITTMAN-MORIARTY COMPANY, INC., Philadelphia, Pa., and New York, N. Y. Filed Jan. 5, 1935.

The word "Leather" is disclaimed apart from the mark shown.

For Leather Manufactured from Sheep and Calf Skins.

Claims use since July 1, 1919.

Ser. No. 363,244. UNION COAL CO., INC., Rochester, N. Y. Filed Mar. 30, 1935.



No claim is made to the word "Coke" apart from the mark shown.

For Coke.

Claims use since Mar. 13, 1935.

Ser. No. 363,348. TROPPE BROTHERS, New York, N. Y. Filed Apr. 2, 1935.

"Bonded" is disclaimed apart from the mark.

For Fur Skins.

Claims use since Mar. 19, 1935.

Ser. No. 363,479. A. HOLLANDER & SON, INC., Newark, N. J. Filed Apr. 6, 1935.

LANDER

For Fur Skins.

Claims use since Mar. 19, 1935.

Ser. No. 363,982. R. NEUMANN & COMPANY, Hoboken, N. J. Filed Apr. 19, 1935.

FRONTIER

For Leather.
Claims use since Sept. 1, 1934.

CLASS 2

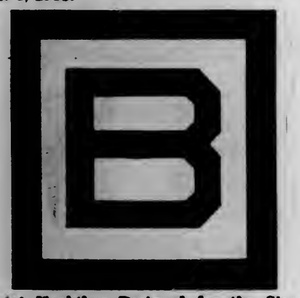
Receptacles

Ser. No. 363,349. TUBASPRAY COMPANY, Cincinnati, Ohio. Filed Apr. 2, 1935.

TUBASPRAY

For Rubber Water-Holders for the Preservation of Cut Flowers.
Claims use since Aug. 20, 1934.

CLASS 4



Abrasive, Detergent, and Polishing Materials

Ser. No. 362,213. HARRY M. FOLSOM, Jr., doing business as Melta Sales Agency, San Diego, Calif. Filed Mar. 30, 1935.

MELTA

For Artificial Teeth Cleaner.
Claims use since Nov. 15, 1934.

Ser. No. 363,261. BARNSDALL OIL COMPANY, Tulsa, Okla. Filed Apr. 1, 1935.

For Special Naphthas Designed for the Cleaning Industry, Spot Remover and Cleaning Fluid.
Claims use since Oct. 1, 1931.

CLASS 5

Adhesives

Ser. No. 357,884. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Nov. 5, 1934.

„AMCHEM"

For Adhesive Paste.
Claims use since Aug. 17, 1934.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 344,550. PIETRO VANZINI, doing business as Reale Laboratorio E Farmacia Zarri, Bologna, Italy. Filed Dec. 6, 1933.

"Calciocodile„

For Medicinal Product for Debility of All Kinds, Serosity, Pulmonary Tuberculosis, Convalescence from Infectious Diseases, and, in General, All Ailments Connected with a Lack of Calcium.
Claims use since 1930.

Ser. No. 344,553. PIETRO VANZINI, doing business as Reale Laboratorio E Farmacia Zarri, Bologna, Italy. Filed Dec. 6, 1933.

Fosforomeina

For Medicinal Product for Recovery Through Injection for Pulmonary Tuberculosis, Malaria, Debility after Infection, Convalescence from Operations, Anaemia, Neurasthenia, Stubborn Dermatosis.
Claims use since 1927.

Ser. No. 350,052. JOSEPH HAENNIG, Dubuque, Iowa Filed May 5, 1934.

LUCKY FOUR

For Preparations for Treating Lumps, Callouses and Other Foreign Growths on Animals, for Treating Colic in Animals, for Treating Heaves, and Wind-Broken Horses, for Treating Man and Beast for Excessive Appetite for Food and Drink, and for Treating Ring Bone and Bone Spavin of Horses.
Claims use since Apr. 3, 1934.

Ser. No. 353,762. MINERAL WELLS CRYSTAL PRODUCERS, Mineral Wells, Tex. Filed July 11, 1934.

The word "Certified" is disclaimed.
For Concentrated Mineral Water and Crystals for Treatment of Constipation, Indigestion, Neutralization of Gastric Hyperacidity and Similar Conditions and Disorders.
Claims use since May 1, 1933.

Ser. No. 357,081. CHARLOTTE FITZGERALD, Chicago, Ill. Filed Oct. 11, 1934.

For Cosmetics Comprising Hair and Face Lotions and Creams.
Claims use since July 1, 1924.

Ser. No. 357,620. HARRY H. CARNAHAN, doing business as Medical Arts Supply Company, Huntington, W. Va. Filed Oct. 29, 1934.

For Tablets the Ingredients of Which are Hexamethylen-Tetramine and Sodium Acid Phosphate; Hexamethylenamine Tablets; Cascara Compound Tablets; Blaud and Strychnine Compound Tablets; Calomel and Phenolphthalein Tablets; Iodized Lime Tablets; Cubeb Compound Tablets; Acetyl Salicylic Acid Tablets; Diuretic Tablets; Anti-Grippe Tablets; Sodium Bicarbonate Tablets; Mentholated Throat Tablets; Strychnine Sulphate Tablets; Phenobarbital Sodium Tablets; Triple Bromide Tablets; Acetanilid & Soda Compound Tablets; Methylene Blue Compound Tablets; Blood Pressure Compound Tablets; Sodium Salicylate Tablets; Ammonium Chloride Tablets; Calcium Carbonate Compound Tablets; Cold and Compound Tablets for Relief of Fever Resulting from Colds; Potassium Permanganate Tablets; Bile Salts Compound Tablets; Amidopyrine Tablets; Amidopyrine Compound Tablets; Benzocaine Compound Ointment; Calamine Compound Ointment; Chest Ointment; Guaiacol and Iodine Ointment; Benzoic Acid Compound Ointment; Alum Compound Ointment; Ammoniated Mercury Ointment; Antiseptic Skin Ointment; Zinc Oxide Ointment; Sulphur Ointment; Elixir Bromides Compound; Elixir Terpin Hydrate & Creosote Compound; Elixir Salicylic Acid Compound; Elixir Buchu Juniper & Potassium Acetate; Mixture Glycyrrhiza Compound; Elixir Phenobarbital and Bromide; Elixir Iron Phosphate with Quinine and Strychnine; Elixir Lactated Pepsin; Elixir Viburnum Compound; Syrup Hypophosphites Compound; Syrup Wild Cherry with Calcreose; Syrup Cannabis Compound; Elixir Saw Palmetto & Santal Compound; Elixir Rhubarb Alkaline with Pancreatin; Elixir Phenobarbital; Alkaline Aromatic Solution; Febling's Alkaline Solution; Febling's Copper Solution; Tincture Nux Vomica; Tincture Hyoscyamus; Mixture Rhubarb & Soda; Calamine Lotion; Tincture Belladonna; Tincture Digitalis; Hand Lotion; Itch Lotion; Toothache Drops; Antacid Powder; Liniment White Camphor; Glycerine C. P.; Earache Drops.
Claims use since March, 1931.

Ser. No. 357,885. AMERICAN CHEMICAL PAINT COMPANY, Ambler Pa. Filed Nov. 5, 1934.

„AMCHEM"

For Substances for Tempering and Soldering and Rust and Oil Removers and Rust Inhibitors for Metals.
Claims use since Aug. 17, 1934.

Ser. No. 360,846. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Jan. 30, 1935.

OPPANOL

For Synthetic Polymerization Products of High Molecular Weight Containing a Large Percentage of Carbon and Hydrogen in Chemical Combination and Varying in Their Physical Properties from a Solid Caoutchouc-Like Consistency to that of a Viscous Oil.
Claims use since Nov. 14, 1934.

Ser. No. 361,141. EUGENE W. HARRINGTON, Buffalo, N. Y. Filed Feb. 7, 1935.

ADHESOL

For Pharmaceutical Preparations Employed for the Purpose of Removing Adhesive Tape or the Like, From Surfaces, as Well as Cleaning Surfaces to Which the Adhesive Tape has been Applied.
Claims use since Sept. 15, 1934.

Ser. No. 361,364. HILDING P. LUNDIN, doing business as Lundin Brothers, Watford City, N. Dak. Filed Feb. 13, 1935.

Danderitch

For Medicated Ointment Usable as a Scalp Tonic and for Conditions Which Give Rise to the Promotion of Dandruff and Itching Scalp.

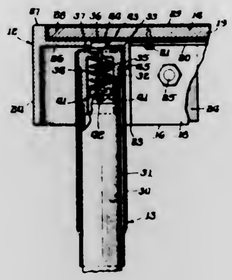
REISSUES

JUNE 4, 1935



19,596

TABLE LEG CONSTRUCTION

James E. Bales and Carl T. Christensen, Aurora, Ill., assignors to Lyon Metal Products, Incorporated, Aurora, Ill., a corporation of Illinois

Original application August 9, 1929, Serial No. 384,582. Patent No. 1,860,644, dated May 31, 1932. Divided and application June 20, 1930, Serial No. 462,607. Patent No. 1,917,916, dated July 11, 1933. Application for reissue January 9, 1935, Serial No. 1,026

29 Claims. (Cl. 311—99)

29. A table comprising a top, a support member pivotally movable with respect to the top from a position substantially in the plane of the top to a position at a substantial angle with respect thereto, a locking socket in the top, a locking projection member carried by the support member and movable axially with respect thereto, and resilient means for so moving the projection into the top locking socket as the support member is pivotally moved to said angular position, said support and locking members being mounted for pivotal movement with respect to the table top about an axis passing through both of said members.

ENGINE STARTER

Roland Chilton, Ridgewood, N. J., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York

Original No. 1,660,953, dated February 28, 1928, Serial No. 22,225, April 10, 1925. Application for reissue February 24, 1930, Serial No. 431,036

51 Claims. (Cl. 127—179)

1. In a starter, the combination with an engine to be started, of a flywheel adapted for initial high speed rotation, a gear train having connection with said flywheel and adapted to transmit energy stored in the flywheel by said rotation to the engine, a non-rotatable clutch member having frictional connection with the gear train and

adapted to relieve the gear train from an overload.

19,598

DISK HARROW

Samuel S. Furrer, Oxnard, Calif., assignor to Brenneis Manufacturing Company, Oxnard, Calif., a corporation of California

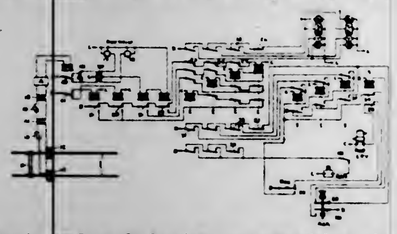
Original No. 1,861,741, dated June 7, 1932, Serial No. 356,832, April 20, 1929. Application for reissue March 19, 1935, Serial No. 11,897

15 Claims. (Cl. 55—83)

1. In an offset disk harrow, the combination of: a front frame, disks carried by said frame, a rear frame, disks carried by said frame, means pivotally connecting said frames together, and draft means adapted to be secured to a tractor; said draft means including a linkage connected to one part of the front frame and to the rear frame, and a bar of adjustable length so connecting another part of the front frame to said linkage as to be movable relative to the front frame.

19,599

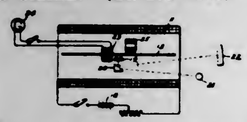
CONTINUOUS TRAIN CONTROL SYSTEM



William D. Hailes, Brighton, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

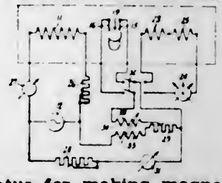
Original No. 1,852,409, dated April 5, 1932, Serial No. 228,058, October 22, 1927. Application for reissue October 19, 1932, Serial No. 638,634

20 Claims. (Cl. 246—63)



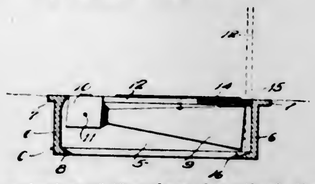
1. In a continuous train control system, means controlled in accordance with traffic conditions for placing coded current impulses on the track, car carried means responsive to the coded track current and including, decoding means selectively operable in accordance with different rates of current impulses supplied thereto, means distinctively controlled by the coded track current

for supplying energy to the decoding means in impulses applied at different rates, a plural aspect signal means having aspects varying in restrictiveness and controlled by the decoding means, and suppression means, comprising a slow release relay corresponding to each signal



aspect, and each having an energizing circuit including a back point of each slow release relay corresponding to each more restrictive signal aspect inserted between the decoding and signal means, for delaying action of the decoding means on the signal means.

19,600
APPARATUS FOR MAKING MAGNETIC TESTS AND MEASUREMENTS
Peter C. Hermann, Berlin-Zehlendorf-Mitte, Germany, assignor to General Electric Company, a corporation of New York
Original No. 1,925,872, dated September 5, 1933, Serial No. 629,269, August 18, 1932. Application for reissue February 6, 1935, Serial No. 5,276. In Germany September 1, 1931
5 Claims. (Cl. 175—183)



1. Apparatus for making magnetic measurements of magnetic samples having flat surfaces, comprising a magnetizing winding, means for supporting such a sample in testing position in magnetic relation with said winding, a flexible current conductor supported in said winding so as to be parallel with and in relatively close proximity to the surface of a sample in testing position, and means for supplying an electrical current to said conductor to cause a deflection of said conductor and an indication of the strength of the magnetic field in the sample under test.

19,601
APPARATUS FOR MAKING MAGNETIC TESTS AND MEASUREMENTS
Peter C. Hermann, Berlin-Zehlendorf-Mitte, Germany, assignor to General Electric Company, a corporation of New York
Original No. 1,957,211, dated May 1, 1934, Serial No. 662,604, March 24, 1933. Application for reissue February 6, 1935, Serial No. 5,277. In Germany April 6, 1932
7 Claims. (Cl. 175—183)

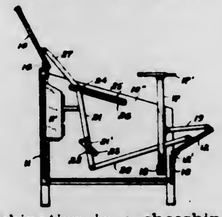
1. Apparatus for making magnetic measurements of magnetic samples having flat surfaces, comprising an alternating current magnetizing winding, means for supporting such a sample in testing position in magnetic relation with said winding, a flexible current conductor supported so as to be parallel with and in relatively close proximity to the surface of a sample in testing position, and means for supplying to said conductor an alternating current in phase with a magnetic field in said sample, thereby causing a deflection of said conductor and an indication of the strength of said magnetic field in the sample under test.

19,602
COMBINATION GRAVE MARKER AND FLOWER VASE
John M. Powell, Mount Vernon, Ill.
Original No. 1,963,804, dated June 19, 1934, Serial No. 701,367, December 7, 1933. Application for reissue December 24, 1934, Serial No. 759,118
8 Claims. (Cl. 47—41)

6. In a device of the class described, the combination with a casing, of a cover hinged thereto, and a vase hinged thereto.

PLANT PATENTS

GRANTED JUNE 4, 1935



127
CARNATION VARIETY
Richard Witterstaetter, deceased, late of Cincinnati, Ohio, by Richard C. Witterstaetter, executor, Cincinnati, Ohio, assignor to R. Witterstaetter Carnation Company, a partnership composed of Edward C. Deller, William H. Deller, and Edward A. Witterstaetter, Cincinnati, Ohio
Application March 26, 1934, Serial No. 717,364
1 Claim. (Cl. 47—60)

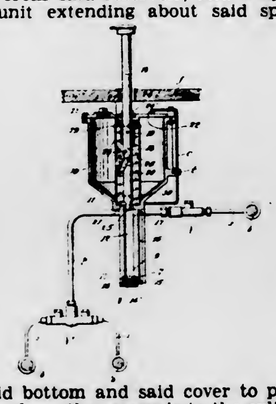
The herein-disclosed carnation variety, characterized by a large, full, highly built flower, of good keeping properties, and of an unusually pronounced clove fragrance, the plant being characterized further by its rigid stem and short, broad, heavy calyx which holds the large flower throughout the carnation season without premature splitting, substantially as shown and described.

PATENTS

GRANTED JUNE 4, 1935

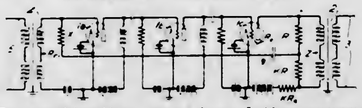
2,003,279
SHOESHINE BOX
Bert Agombar, Hanover, Ontario, Canada
Application August 1, 1934, Serial No. 737,912
4 Claims. (Cl. 15—265)

1. The combination in a shoeshine box, of a box body having an open top, a lid hinged thereto forming a closure for said open top, a footrest swingably mounted within the body and assuming a reclining position when the lid is closed, a rocker mounted in the body, mechanism connecting an end of the rocker to the lid apart from its hinge, a hinged flap forming a part of the front of the body, and link mechanism connecting the other end of the rocker and the footrest to the flap apart from its hinge.



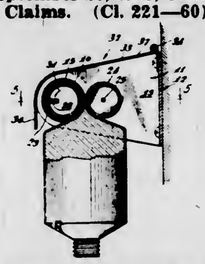
2,003,280
HAIR WINDING DEVICE
Margaret R. Bell, Great Falls, Mont.
Application May 8, 1934, Serial No. 724,561
8 Claims. (Cl. 132—33)

1. A hair winding device comprising a body adapted to be hand supported, said body being provided with contacting members between which hair may move and be gripped thereby, and adjustable means to regulate the width of the strand of hair between the members.



2,003,281
LUBRICATING SYSTEM AND THE CONSTITUENT PARTS THEREOF
Joseph Bijur, New York, N. Y., assignor to Auto Research Corporation, a corporation of Delaware
Application February 16, 1925, Serial No. 9,544
31 Claims. (Cl. 184—28)

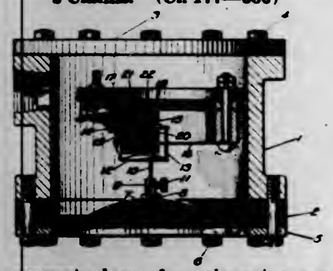
1. In a lubricator, in combination, a reservoir casting having a sloping bottom, a pump cylinder unitary therewith and extending vertically downward below said bottom, a cover for said reservoir, a pump plunger through said cover, a spring coiled about said plunger, reacting at one end against said bottom and at the other against said plunger to normally maintain the latter in uppermost position, so that said cylinder will be normally filled by lubricant draining thereinto from said reservoir, and a cylindrical filtering unit extending about said spring be-



tween said bottom and said cover to purify the oil flowing from the reservoir to the cylinder.

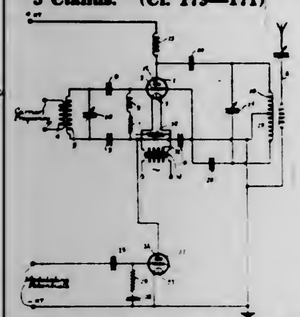
2,003,282
WAVE TRANSLATION SYSTEMS
Harold S. Black, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application August 8, 1928, Serial No. 298,155. Divided and this application December 3, 1929, Serial No. 411,224. In Canada May 21, 1929
17 Claims. (Cl. 178—44)

1. In combination, wave translating apparatus, means for deriving waves from waves produced in said apparatus, and means capable of transmitting waves of the frequency of said produced waves, for impressing the derived waves on the input side of said apparatus without thereby altering the intensity of the derived waves.



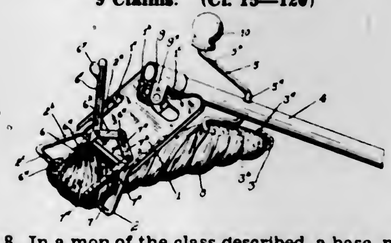
2,003,283
TUBE PASTE DISPENSER
Arthur B. Chatelain, Los Angeles, Calif., assignor of one-half to Ulrich Fischer, Los Angeles, Calif.
Application September 27, 1933, Serial No. 691,131
8 Claims. (Cl. 221—60)

1. A paste dispenser comprising a supporting bracket, a winding roller and a pressure roller



mounted parallel in said bracket, the winding roller having a longitudinal slot for insertion of the closed end of a collapsible tube, the opposite end of the tube having an opening, said rollers being positioned to suspend the tube with the opening downwardly, means to rotate the winding roller to collapse the tube between the two rollers and to wind the collapsed tube on the winding roller, the pressure roller having a flexible shaft, said shaft being adapted to bend to vary the spacing between the two rollers.

2,003,284
ACOUSTIC APPARATUS
Ivan C. Clement, Greenwood, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Maine
Application November 19, 1928, Serial No. 320,368
3 Claims. (Cl. 177—386)



1. A magnetophone for submarine sound reception comprising a watertight casing, a plate of woven textile fabric impregnated with phenol resinous condensation product covering the end of said casing forming an acoustic piston diaphragm having an annular bending section, a magnetophone unit mounted within said casing having a magnet and an armature associated therewith pivoted at a point between its ends, a lever pivoted at one end, said armature and lever being disposed parallel to said diaphragm and perpendicularly disposed means connecting one end of said lever with said armature and connecting said lever to said diaphragm, whereby substantially the entire restoring force of the system is in the diaphragm.

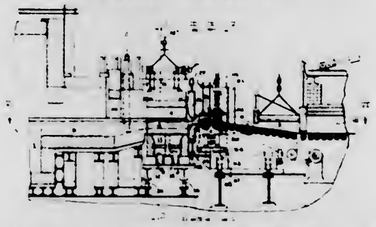
2,003,285
SIGNALING
William Theodore Ditcham, Chelmsford, Essex, England, assignor to Radio Corporation of America, a corporation of Delaware
Application February 5, 1932, Serial No. 591,089
In Great Britain February 12, 1931
5 Claims. (Cl. 179—171)

1. Signaling means comprising a thermionic triode having an input circuit connected between the control electrode and cathode thereof, an output circuit including an inductance having one terminal connected to the anode of said triode the other terminal connected by way of a neutralizing capacity to the control electrode, a point on said inductance being connected by way of an audible frequency blocking capacity to the cathode of said triode and means for modulating the signals in said triode including a second triode having its anode electrode connected to the cathode of said first named tube and its cathode connected to said point on said inductance, whereby the impedance of said last named condenser is in parallel with the anode to cathode impedance of said second named triode, and a source of modulating signals connected with the input electrodes of said second named triode.

2,003,286
MOP
Will Evans, Hawthorne, Calif.
Application January 2, 1930, Serial No. 417,961
Renewed September 5, 1934
9 Claims. (Cl. 15—120)

8. In a mop of the class described, a base, mop-cloth holding elements at the forward end and adjacent the rear end thereof, a mop-cloth looped around both of the elements, and arm means in association with the forward element, said arm means being shiftable toward each other for contracting the mop-cloth towards the central portion of the latter element.

2,003,287
DEMOUNTABLE TRUCK BODY
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, Wilmington, Del., a corporation of Delaware
Application December 5, 1930, Serial No. 500,160
2 Claims. (Cl. 105—366)



1. A demountable body having a wall with a doorway, said doorway having an inwardly recessed lintel, a pair of doors secured at their outer edges by lift-off hinges adjacent the vertical sides of the doorway, said doors being adapted to swing into the recess provided by the lintel, a weather shield secured to the body wall above the doorway extending downwardly and outwardly from the body wall, said shield terminating at its ends short of the vertical plane along the inner faces of the door jamb whereby the doors may be lifted off vertically when standing at right angles to the wall, and a weather strip lying within the recessed lintel and contacting the top of the door when closed whereby rain is diverted at the points not protected by the shield.

2,003,288
LAMINATED GLASS AND PROCESS OF MAKING THE SAME
Earl L. Fix, New Kensington, and Brook J. Dennison, Tarentum, Pa., assignors to Duplate Corporation, a corporation of Delaware
Application June 28, 1934, Serial No. 732,808
6 Claims. (Cl. 49—81)

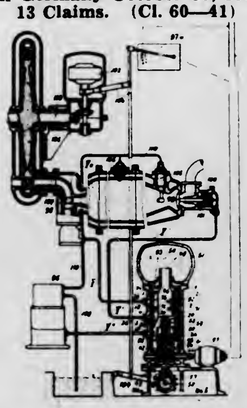
1. A method of compositing a sheet of cellulose plastic and a glass sheet which comprises the step of coating the face of the glass sheet with a solution of a boron compound and one of the weak acids of the group consisting of silicic acid, stannic acid, chromic acid and arsenic acid, assembling the sheets and applying heat and pressure.

2,003,289
PROCESS FOR MAKING PLATE GLASS
Frederick Geilstharp and Walter G. Koupal, Tarentum, Pa., assignors to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application June 30, 1933, Serial No. 678,430
6 Claims. (Cl. 49—33)

1. A process of making plate glass, which consists in continuously supplying a layer of molten glass of substantially uniform thickness over a supply or feed roll which chills the glass as it passes thereover, conducting the sheet thus formed laterally between a pair of sizing rolls without support intermediate the supply roll and sizing rolls so that the sheet sags and stretches, and regulating the relative speed of rotation of the feed and sizing rolls so that a bulb of plastic glass is constantly maintained at the entrance of the pass between the sizing rolls.

4. A process of making plate glass which consists in continuously supplying a layer of molten glass from a tank over an outlet lip member to a feeding roll member which chills the glass as it passes thereover, conducting the sheet thus formed laterally between a pair of sizing rolls, and during the rolling operation tilting one of said members in such manner as to maintain the layer of glass passing thereover at substantially the same thickness from side to side.

2,003,290
GUN
Dayton A. Gurney, Caro, Mich., and Thomas A. Conlon, Silver Spring, Md.
Application May 2, 1933, Serial No. 669,000
1 Claim. (Cl. 42—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

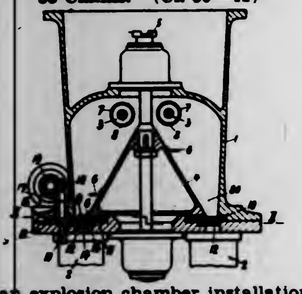


A unit for training an artillery gun crew embodying a stock, a lock, a barrel mounted on the stock, an adapter mounted for adjustment on the muzzle of the barrel, means for securing the adapter in adjusted positions, and means associated with the adapter whereby the range may be varied to predetermined fractions of the ranges of pieces of standard artillery.

2,003,291
RESINOUS COMPOSITION
Rowland Hill, Cheadle Hulme, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 17, 1933, Serial No. 666,627. In Great Britain April 23, 1932
9 Claims. (Cl. 260—3)

1. A process for the manufacture of new oil-soluble artificial resinous compositions which comprises condensing in an acid medium, a compound selected from the group consisting of the methyl, ethyl, and β-hydroxyethyl ethers of 1:3:5-xylenol and a compound containing a reactive methylene group.

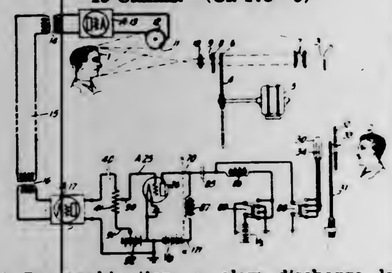
2,003,292
METHOD OF AND APPARATUS FOR REGULATING CONSTANT VOLUME EXPLOSION CHAMBERS
Hans Holzwarth, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a corporation of Delaware
Application October 21, 1931, Serial No. 570,106
In Germany October 30, 1930
13 Claims. (Cl. 60—41)



1. The combination with a constant volume explosion chamber having pressure fluid-controlled inlet and outlet members, of a rotary distributor for controlling said members periodically.

said distributor comprising a rotary element provided with a spiral enlargement along whose edges the effective control points of a controlled member lie, and means for displacing said rotary element axially whereby the advance or retardation of the controlling edges relatively to the rotation of the distributor may be varied.

2,003,293
EXPLOSION CHAMBER



Hans Holzwarth, Duesseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a corporation of Delaware
Application August 17, 1932, Serial No. 629,218
In Germany August 19, 1931
35 Claims. (Cl. 60—41)

1. In an explosion chamber installation of the kind herein referred to, means for controlling the delivery of primary mixtures of pulverulent fuel and air to the inlet of the explosion chamber proper, said controlling means comprising a primary chamber, means for the continuous delivery of pulverulent fuel to said primary chamber, a secondary chamber, a duct between said primary and secondary chambers, means for intermittently admitting fuel from said duct to said secondary chamber, means associated with said primary chamber for controlling the rate of flow of the pulverulent fuel from said primary chamber into said duct, means for the admixture of air with the charges of pulverulent fuel intermittently admitted to said secondary chamber, means for releasing the mixture of fuel and air from the secondary chamber and means for transferring the primary mixture so released to the point of its admission into the explosion chamber.

2,003,294
TELEVISION SYSTEM

Joseph W. Horton, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 2, 1927, Serial No. 230,418
Renewed June 22, 1931
19 Claims. (Cl. 178—6)

1. In combination, a glow discharge lamp, means for applying varying voltage to said lamp, a circuit across said lamp, a source of unidirectional voltage in said circuit, and means in said circuit, substantially free from inductance, for passing direct current and suppressing current variations.

2,003,295
CELLULOSE DERIVATIVE COMPOSITION

Emmette F. Izard, Elsmere, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 9, 1932, Serial No. 646,498
12 Claims. (Cl. 106—40)

1. A composition comprising a cellulose derivative and a bis-aryl ether of a polyglycol, the aryl radical being taken from the group consisting of phenyl and naphthyl radicals containing a substituent of the class consisting of methyl, ethyl, phenyl, cyclohexyl, fluorine, chlorine, bromine, methoxy, ethoxy, butoxy, and carbomethoxy.

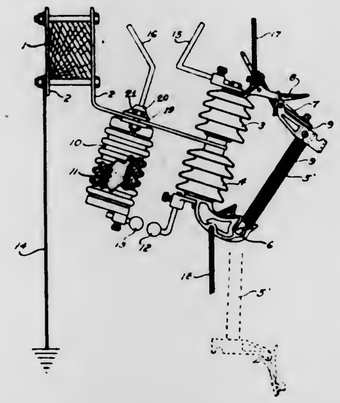
2,003,296
METHOD OF MAKING DEOXIDIZED COPPER

Herbert C. Jennison, Bridgeport, and Richard B. Montgomery, Seymour, Conn., assignors to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application September 9, 1933, Serial No. 688,826
10 Claims. (Cl. 75—62)

1. A method of making deoxidized copper comprising melting a plurality of succeeding charges of copper of approximately the same weight and composition under reducing conditions, exposing the succeeding melts to oxidizing conditions for the same definite period of time to permit escape of gases, stirring carbonaceous material similar in composition to partly burned or calcined charcoal into the copper and for the same definite period of time for each melt, and adding to each melt deoxidizer which does not form a reaction product which is gaseous at room temperature upon combining with the oxygen of the copper and sufficient in amount to deoxidize the copper.

2,003,297
ALUMINUM ALLOY

Fred Keller and Richard S. Merritt, New Kensington, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application August 29, 1934, Serial No. 742,006
5 Claims. (Cl. 75—1)

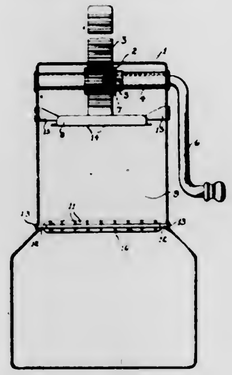


1. An aluminum base alloy comprising from about 0.1 to 3.5 per cent magnesium, 0.1 to 0.45 per cent copper, 0.1 to 1 per cent manganese and 0.1 to 0.5 per cent chromium, the balance being aluminum.

2,003,298
ELECTRICAL PROTECTIVE APPARATUS

George N. Lemmon, Homewood, Ala., assignor to Southern States Equipment Company, Birmingham, Ala.
Application December 19, 1931, Serial No. 582,047
7 Claims. (Cl. 175—30)

5. Electrical protective equipment which includes a metal base supporting two spaced terminals each insulated from the base, a container and a fuse within it connecting the said terminals, a discharge arc-gap between each of the



said terminals and the said base, and a resistance

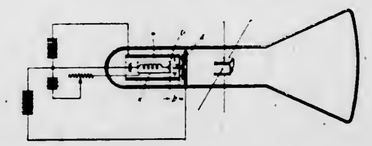
forming part of the discharge path from one the terminals across the gap to the base.

2,003,299
DEVICE FOR CUTTING AND PRESSING VEGETABLES AND THE LIKE

Harold J. Marlowe, Brooklyn, N. Y., assignor to Marlowe Devices, Inc., a corporation of Delaware
Application March 24, 1932, Serial No. 600,854
1 Claims. (Cl. 100—42)

A device for pressing fruit and vegetables or the like comprising a single sheet of metal bent in the form of an open frame, having a base, side walls and a top portion, a pair of horizontally arranged pressing members, one positioned above the base and sustained in position by means formed integrally with the side walls of the frame, and the other movably mounted above the first and having projections slidably engaging in guide slots likewise formed in the side walls of the frame, and means for operating the movable member to exert pressure upon an object positioned between the pressing members, said means including a shaft journalled in the side walls below the top portion, a pinion carried by the shaft, a rack associated with the movable pressing member and cooperating with the pinion, and a handle for turning the pinion.

2,003,300
FIRE EXTINGUISHING DEVICE

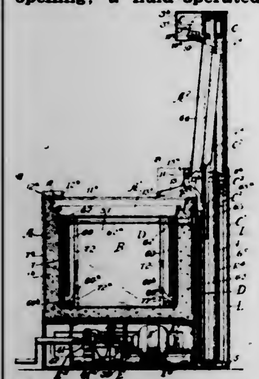


Charles H. Meigs, New York, N. Y., assignor to Du-Gas Fire Extinguisher Corporation, New York, N. Y., a corporation of Delaware
Application April 11, 1932, Serial No. 604,406
1 Claim. (Cl. 169—36)

A fire extinguisher comprising a fragile, one-piece, hermetically-sealed glass container containing powder adapted to extinguish fires, and a gas under pressure.

2,003,301
ELECTRON TUBE

Fritz Michelssen and Johann Richter, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application September 17, 1932, Serial No. 633,556
In Germany November 30, 1931
2 Claims. (Cl. 250—27.5)



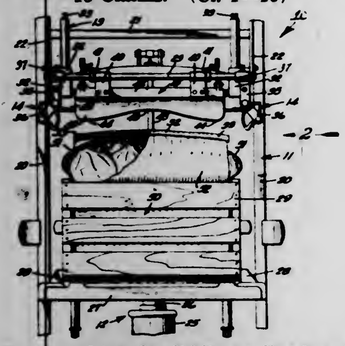
1. A cathode ray tube having means to produce a concentrated electron ray pencil comprising an envelope including a source of cathode rays, an anode electrode, a concentrating electrode surrounding the source of cathode rays and protruding beyond the source in the direction of the anode, said concentrating electrode member having its edge portion nearest the anode protruding beyond the source of cathode rays for a distance which is greater than the dimension obtained from the square root of the surface area of the cross-section of the cathode source taken at right angles to its axis and less than half the aperture diameter of said concentrating electrode.

2,003,302
SAFE STRUCTURE

William C. Miller and Albert L. Abbott, Canton, Ohio, assignors to Diebold Safe & Lock Co., Canton, Ohio, a corporation of Ohio
Application August 2, 1933, Serial No. 683,384
30 Claims. (Cl. 109—1)

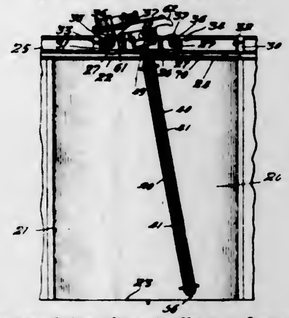
1. In a safe: a safe-body having a door-opening in its top; an upwardly opening door seated in

said door opening; a fluid-operated door-lift;



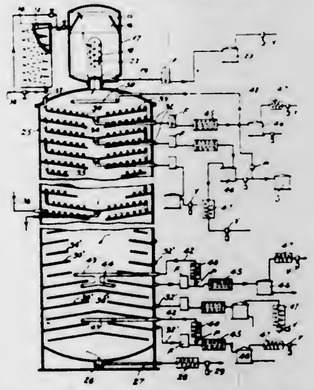
and means for forcing fluid into and exhausting the same from said door-lift.

2,003,303
A PROCESS FOR THE CATALYTIC CONVERSION OF HYDROCARBONS
Waldemar O. Mitscherling, Bridgeport, Conn., assignor to Neon Research of Connecticut, Inc., Bridgeport, Conn., a corporation of Connecticut
No Drawing. Application November 27, 1931, Serial No. 577,561
18 Claims. (Cl. 260—156)



1. A process for the conversion of liquid hydrocarbons into oxygenated compounds which comprises subjecting said hydrocarbons in the presence of a catalytic material containing an oxidizing agent and of a metal compound which increases the electrical conductivity of the hydrocarbon undergoing treatment to the action of radiations from a rare gas lamp.

2,003,304
LIDDING MACHINE
Hale Paxton, Redlands, Calif., assignor to Paxton Credit Corporation, Sanger, Calif., a corporation of California
Application September 6, 1932, Serial No. 631,790
16 Claims. (Cl. 1—10)

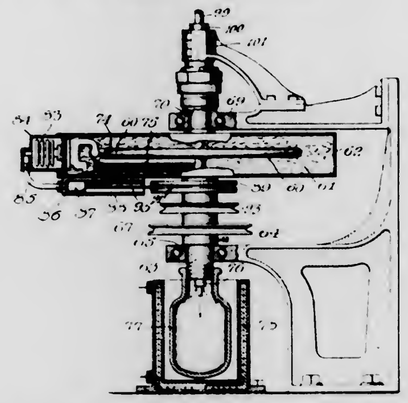


1. In a machine for lidding a lined and overfilled shipping crate with portion of said liner folded over the top of the contents of said crate and with excess top portions of said liner disposed over end portions of said contents, the combination of: means for pressing a lid onto said crate so as to bow the ends of the lid downwardly against the ends of the crate permitting the middle of the lid to be bowed upwardly by said contents; and means for tucking slack occurring in said liner along the sides of said crate, as said lid is pressed onto said crate, downwardly a given distance inside the upper side slats of said crate at the middle of said slats and greater distances at the ends of said slats.

2,003,305
REVOLVING DOOR
Edmund Peremi, Manhasset, and Charles Kish, Elmhurst, N. Y., assignors to General Bronze Corporation, Long Island City, N. Y., a corporation of New York
Application September 17, 1932, Serial No. 633,584
9 Claims. (Cl. 20—18)

9. In a revolving door trolley, a frame, wheels mounted on the frame, latches movably mounted on the frame, a door column carrier member mounted on the frame in such a way as to have tilting movement with respect thereto, and means carried by said carrier member and operated by tilting movement of the carrier member to actuate said latches.

2,003,306
METHOD AND APPARATUS FOR DISTILLATION
John Perl, Los Angeles, Calif.
Application October 26, 1929, Serial No. 402,651
12 Claims. (Cl. 196—94)

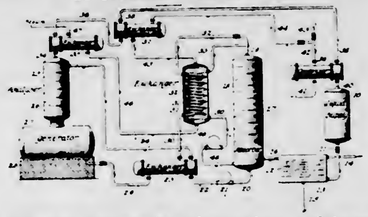


1. A method for the fractional separation of petroleum by distillation with elimination of vapor head, comprising providing a distilling body of the petroleum stock, withdrawing vapors from the distilling liquid at a point at least as low as approximately the surface thereof to eliminate substantially all vapor head from the distilling surface, continuing the vapors in a path at least as low as said point to maintain said elimination of vapor head, and removing the products of vaporization from the system at points at least as low as said point of withdrawal.

2,003,307
CONTAINER COVER
Albert F. Pityo, Clifton, and Joseph Frank Mitchell, Parsippany, N. J.
Application April 3, 1933, Serial No. 664,114
5 Claims. (Cl. 215—38)

1. A container cover comprising a container mouth covering portion, a skirt portion depending therefrom having flaps ending in interlapped tabs, alternate tabs being primarily the longer and brought to equal length with the intermediate tabs by the folding of their end parts for assisting in holding the cover on the container, and fastening members having portions lying on and spanning the outer middle parts of said intermediate tabs and portions passed through the adjacent interlapped tabs.

2,003,308
CENTRIFUGAL FRACTIONATING METHOD AND APPARATUS
Walter J. Podbielniak, Chicago, Ill.
Application August 10, 1932, Serial No. 628,152. Renewed August 23, 1934. In Canada August 12, 1931
23 Claims. (Cl. 202—198)

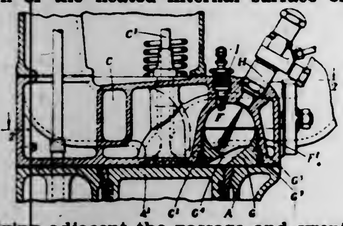


1. In apparatus of the character described, a spirally coiled, laterally closed conduit, means for rotating the conduit around the axis of the spiral, each end of the conduit having a portion extending to the axis of the spiral, and means for supplying a fluid to the conduit extension for the outer end of the spiral, and means for withdrawing fluid from the conduit extension of the inner end of the spiral.

2,003,309
LIGHTWEIGHT ARTICLE AND METHOD OF MANUFACTURING THE SAME
Edward R. Powell, Alexandria, Ind., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application December 13, 1932, Serial No. 646,961
19 Claims. (Cl. 25—156)

10. In making an article comprising ceramically bonded fibers, the method which includes forming an aqueous mixture of heat-resistant fibers with a binder containing clay, shaping the mixture, removing water therefrom, and then firing the product at a temperature adapted to cause vitrification of the binder but below the temperature of slagging of the fibers.

2,003,310
REFRIGERATION
Fred D. Rexwinkle, Whiting, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 4, 1932, Serial No. 615,396
11 Claims. (Cl. 62—179)

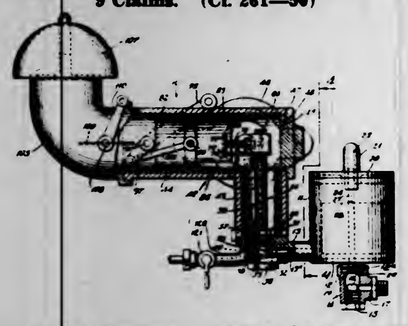


1. In an ammonia absorption refrigeration process, the step comprising absorbing ammonia vapors at sub-atmospheric pressures in a fused metal salt consisting of calcium nitrate.

2,003,311
INTERNAL COMBUSTION ENGINE OF THE LIQUID FUEL INJECTION COMPRESSION IGNITION TYPE
Harry Ralph Ricardo, London, England
Application November 13, 1931, Serial No. 574,885
In Great Britain January 13, 1931
7 Claims. (Cl. 123—32)

1. In an internal combustion engine of the liquid fuel injection type, the combination with a cylinder, of means defining a combustion chamber communicating with said cylinder and forming the major portion of the compression space at the end of the compression stroke, said means comprising a structure providing a pocket having a mouth and a heat retaining plug disposed within the mouth, said plug being provided with a passage therein of substantial length through which the entire volume of burning gas flows during the working stroke from the combustion chamber into the cylinder bore and through which substantially the entire air charge is delivered and during the compression stroke caused to sweep about the internal surfaces only of said pocket and plug, and a fuel injection device delivering a jet of fuel so directed as to project substantially the whole of the fuel charge toward

and with sufficient velocity to cause particles of fuel which may be unburned to impinge on a portion of the heated internal surface of said

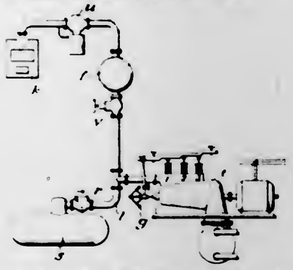


plug lying adjacent the passage and swept over by the circulating charge as it approaches the passage.

2,003,312
SUCTION CLEANER FLOOR TOOL
Frederick Riebel, Jr., Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application April 3, 1934, Serial No. 718,828
11 Claims. (Cl. 15—155)

1. In a suction cleaner, a floor tool having an end socket, a supporting roller, a mounting bracket for said roller comprising a leaf spring on one end of which said roller is journalled, said bracket projecting longitudinally into said socket, and means for attaching its opposite end to the floor tool, for carrying the weight of the floor tool to the roller through said bracket, and for adjusting the height at which said floor tool is supported by the roller, said means being located at the inner end of the socket so that the bracket may swing vertically the full height of the mouth of said socket, in any of its several positions of adjustment, under pressure applied to the floor tool.

2,003,313
CARBURETOR
Charles A. Rosier, New York, N. Y.
Application June 14, 1933, Serial No. 675,653
9 Claims. (Cl. 261—50)

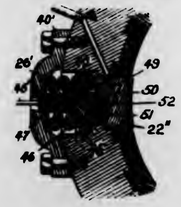


1. In a carburetor, a member having a cylindrical portion, a second cylindrical portion extending at right angles to said first cylindrical portion and having an outlet adapted to communicate with the manifold of an engine, a tubular fuel supply member extending within said first cylindrical portion and projecting into said second cylindrical portion, means for supplying fuel to said tubular member, said tubular member having an axial opening, a valve stem slidably mounted on said tubular member and disposed at right angles to and crossing said axial opening, a sleeve slidably mounted within and engaging the inner surface of said second cylindrical portion and adapted to control said outlet, and means for causing sliding movement of said sleeve and said valve stem.

2,003,314
WATER PURIFICATION
Brinton Russell and Cecil B. Russell, Norristown, Pa., assignors to Attapulgus Clay Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 26, 1933, Serial No. 653,750
4 Claims. (Cl. 210—9)

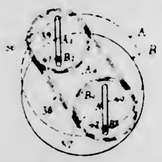
1. In the art of water purification, the step which consists in bringing into contact with a flowing stream of the water to be purified, substances consisting of burned clay and carbonized material.

2,003,315
STEAM POWER INSTALLATION FOR MOMENTARY RESERVE
Johannes Ruths, Djursholm, Sweden, assignor to Ruthsaccumulator Aktiebolag, Berlin, Germany, a corporation of Sweden
Application April 6, 1931, Serial No. 528,067
In Germany April 5, 1930
4 Claims. (Cl. 60—94)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)



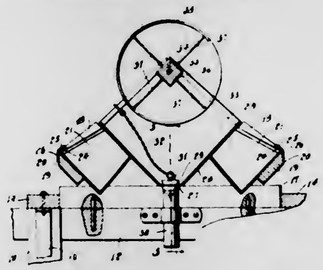
1. In a power plant having a boiler, an accumulator, a turbine, means to conduct steam to the turbine from the boiler and from the accumulator, said turbine having a plurality of steam inlets at points of different pressure, valves for controlling supply of steam to said inlets, and means responsive to the speed of the turbine for successively opening and closing the valves, the last mentioned means operating on decrease of speed to open the valves in the order of decreasing pressure, the combination therewith of means operable when the boiler starts to supply steam to the turbine to cause this steam to produce an increase in turbine speed for closing one or more of the valves in the low pressure inlets of said turbine.

2,003,316
HIGH SPEED BEARING
Alexander E. Schein, New York, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application January 13, 1932, Serial No. 586,256
In Great Britain December 19, 1931
9 Claims. (Cl. 308—73)



1. As a means for preventing vibration of high speed vertical shaft rotors, the combination with

the main rotor bearings, of auxiliary bearing blocks positioned symmetrically around said shaft, each block having a clearance between said block and said shaft which is less than permissible in

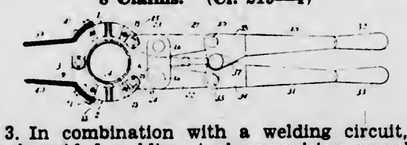


the main bearings, and yielding means for permitting said blocks to retreat to the surface of the main bearing under more than a predetermined load.

2,003,317
POWER TRANSMISSION
Carl Bruno Strandgren, Versailles, France
Application October 25, 1933, Serial No. 695,188
In France November 26, 1932
5 Claims. (Cl. 74—68)

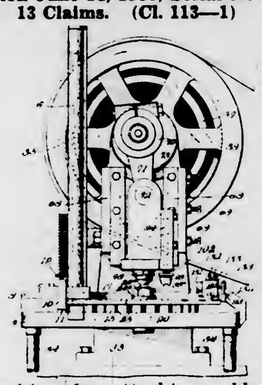
1. In a power transmission device, a driving member and a driven member adapted to rotate about respective axes, at least two rotary discs loosely mounted upon one of said members and each provided with a diametral slot, said slots being parallel, a coupling connection between said discs and at least two rollers loosely mounted upon the other of said members, each roller engaging the slot of one of said discs.

2,003,318
POULTRY FEEDING AND WATERING DEVICE
Carl L. Thomsen, Milwaukee, Wis.
Application February 2, 1934, Serial No. 709,513
5 Claims. (Cl. 119—61)



1. In a poultry feeding and watering device, an elevated supporting frame including spaced substantially parallel bars, troughs, means to support said troughs on said bars, and another trough supported by and between said first mentioned troughs.

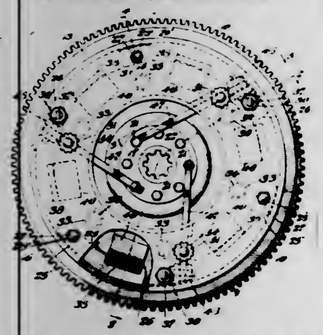
2,003,319
LIGHTWEIGHT CERAMIC ARTICLE AND METHOD OF MAKING THE SAME
Bailey Townshend, Westfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application December 13, 1932, Serial No. 646,962
20 Claims. (Cl. 25—156)



8. In making a ceramic product provided with voids partly filled with fibrous material, the method which comprises treating heat-resistant fibers with a water-repellent material to render the fibers water-resistant, making a plastic mixture of the treated fibers, clay and water, and shaping, drying, and firing the mixture to develop a ceramic bond, with preservation of the shape of approximately the original fibers.

2,003,320
WELDING DEVICE
James E. Trainer, Fairlawn, and Crawford Ziegler, Barberton, Ohio, assignors to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application December 9, 1931, Serial No. 579,848
8 Claims. (Cl. 219—4)

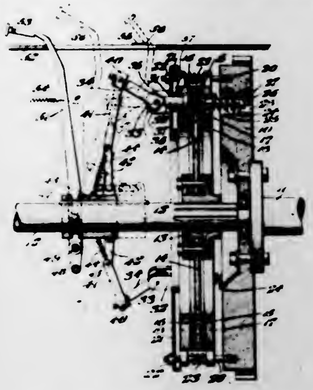
3. In combination with a welding circuit, a work guided welding tool comprising movable electrode means carrying a part to be welded to the tool guiding portion of the work, means for performing welding engagement between the work parts, and means for closing the welding circuit.



2,003,321
MACHINE FOR ATTACHING KEYS TO CONTAINERS
Alexander A. Trombly, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application June 14, 1933, Serial No. 675,839
13 Claims. (Cl. 113—1)

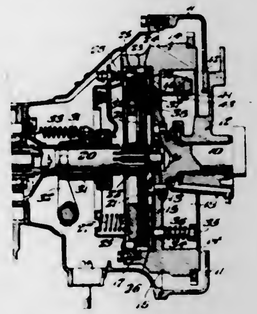
1. A machine for attaching solder to keys comprising means for forming a pocket in the

key, means for forcing solder into said pocket in sufficient quantity to fill the pocket, and cause the solder therein to be frictionally held in the pocket, means for severing the surplus solder projecting from the pocket, and an intermittently rotated turret for supporting the keys and for presenting the same in succession to the pocket forming means, the solder applying means and the severing means.



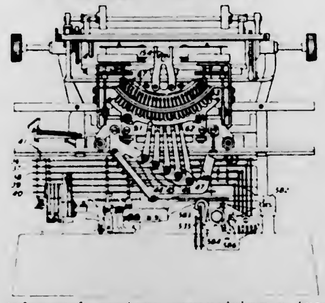
2,003,322
AUTOMATIC CLUTCH
Henry H. Vail, Camden, N. J., assignor to Automatic Drive and Transmission Company, Gloucester City, N. J., a corporation of New Jersey
Application November 29, 1927, Serial No. 236,419
Renewed May 12, 1932
18 Claims. (Cl. 192—105)

1. A clutch mechanism comprising a driving shaft, a fly-wheel connected to said driving shaft, a driven shaft, a clutch disc arranged to rotate said driven shaft, a clutch plate mounted to rotate with said fly-wheel but movable into and out of face contact with said disc, a backing plate on the opposite side of said disc from said clutch plate and mounted to rotate with said fly-wheel but movable towards and away from said disc, a housing connected to said fly-wheel and enclosing said plate and disc parts, abutment means in the path of movement of said backing plate to limit the movement of said backing plate towards said disc, a plurality of springs holding said backing plate against said limit means, centrifugal devices for controlling the movement of said clutch plate whereby the frictional engagement of said plates with said disc varies with the speed of rotation, and manually operable means for shifting said backing plate to declutched position.



2,003,323
AUTOMATIC CLUTCH
Henry H. Vail, Camden, N. J., assignor to Automatic Drive and Transmission Company, Gloucester City, N. J., a corporation of New Jersey
Application December 28, 1928, Serial No. 329,007
23 Claims. (Cl. 192—105)

15. In a clutch mechanism, driving and driven members providing radial frictional surfaces cooperating with each other for engagement and disengagement; a reaction member mounted for synchronous rotation with said driving member; means for causing separation of said driving and reaction members and engagement of said driving and driven members when said driving member attains a predetermined speed, said means comprising a plurality of levers carried by said reaction member and having portions acting upon said driving member and reacting against surface portions of said reaction member, said levers projecting away from, and being wholly



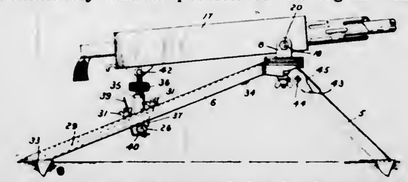
disposed to that side of said driving member against which they act, and having centrifugally operable weights carried thereby, and means for establishing a yielding contact pressure between said driving and driven members when the latter are engaged under the influence of said levers.

2,003,324
AUTOMATIC CLUTCH DEVICE
Henry H. Vail, Camden, N. J., assignor to Automatic Drive and Transmission Company, Gloucester City, N. J., a corporation of New Jersey
Application October 15, 1930, Serial No 488,757
7 Claims. (Cl. 192—105)

1. A clutch mechanism comprising a fly-wheel provided with a web; a pair of clutch plates carried by said fly-wheel; a clutch member disposed between said plates; a driven member non-rotatively secured to said clutch member; means to resiliently urge both of said plates and said member toward said web; manually operable means to withdraw one of said plates against the action of said resilient means; and centrifugally operated mechanism comprising a plurality of weight levers extending through and fulcrumed in recesses in said web to force the other of said plates and said member against said first plate and said resilient means.

2,003,325
TELEGRAPH SYSTEM
Edward F. Watson, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application January 4, 1933, Serial No. 650,197
Renewed August 4, 1934
6 Claims. (Cl. 178—4)

1. A telegraph system comprising a transmitter for transmitting permutation telegraph signals, a conductive transmission line connected thereto, a receiving printing mechanism connected to said conductive transmission line, a group of selector vanes controlling said printing mechanism in accordance with the received telegraph signals, a second transmitter mechanism associated with said receiving printer, means for connecting said second transmitter to said group of selector vanes in said printer mechanism, a second conductive transmission line connected to said second transmitter and a second receiving printer connected to said second conductive transmission line, said second receiving printer being located near said first transmitter.



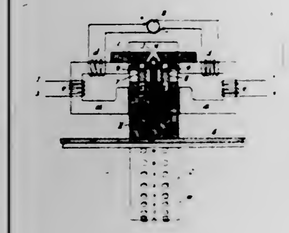
2,003,326
CONTAINER
Charles P. Wellman, Medford, Mass.
Application January 14, 1933, Serial No. 651,698
10 Claims. (Cl. 229—23)

1. A knockdown container of the character described comprising telescoping tubular body and end closure portions, said end closure portion including an end wall and surrounding side walls, tab projections arranged in wedge formation fixed to certain of said side walls, and free end tongues projecting from said body adapted to interlock with said tab projections and retain said body and closure portions in assembled set up relationship.

2,003,327
SUPPORT
John H. Woodberry, United States Army, Fort Bliss, Tex.
Application June 23, 1933, Serial No. 677,287
3 Claims. (Cl. 89—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

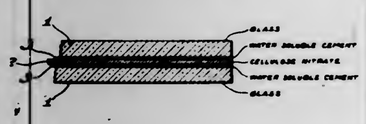
1. In a gun mount, a pair of legs foldable in a substantially common plane, a rod housed in the front part of one leg, a similar rod housed in the rear part of the other leg, said rods each having an angled end inserted through an approximately central portion of the leg in which

it is housed, means on each leg freely supporting the other end of the rod, a nut on each angled end, a sleeve on each rod, and a cross-bar pivotally carried by the sleeves.



2,003,328
APPARATUS FOR TRAFFIC CONTROL
Robert H. Worrall, Washington, D. C.
Application January 30, 1933, Serial No. 654,201
1 Claim. (Cl. 177—337)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

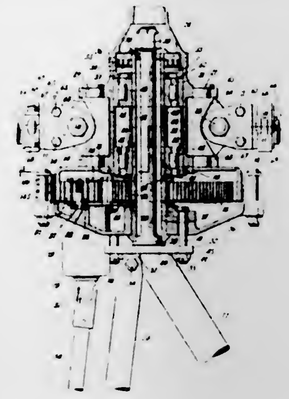
In a traffic control system for intersecting streets, a "go" signal and a "stop" signal for each street, a switch arm individual to each street, a contact arc with an insulating segment at one end over which said switch arm is adapted to pass, spring means for moving said arm in one direction, electromagnet means for moving said arm in the other direction toward the insulating segment, means associated with said arm opposing said electromagnetic means for controlling the passing of said arm over said arc with respect to a predetermined interval of time, means comprising traffic actuated devices for deenergizing said electromagnetic means permitting said spring means to move said switch arm, a signal and control shifting circuit associated with each street comprising a signal shifting relay, a time delay relay and an interlocking relay in series with said switch arm, contact arc and a source of potential, said interlocking relay in the said signal and control shifting circuit of one street having a front contact and a back contact each of which energizes the said switch arm electromagnetic means associated with the other street and another back contact which closes the control circuit associated with the said other street, said time delay relay and said insulating segment operating to open said signal and control shifting circuit and said in-



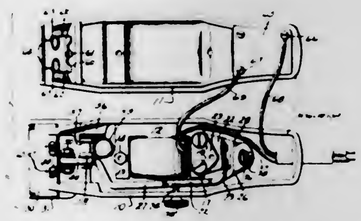
terlocking relay, in moving from its front to its back contacts, operating to shift control to the other control circuit.

2,003,329
HIGH SPEED KEYING
Lloyd L. Young, Patchogue, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 5, 1931, Serial No. 573,057
9 Claims. (Cl. 250—17)

1. The combination of a transmitter tape having signal perforations therein and an electromagnetic circuit, of plungers or pins in said circuit cooperating with said perforations in said tape to change the reluctance or reactance in said electromagnetic circuit.



2,003,330
LAMINATED GLASS
John C. Zola, Tarentum, Pa., assignor to Duplate Corporation, a corporation of Delaware
Application February 17, 1934, Serial No. 711,701
4 Claims. (Cl. 49—81)

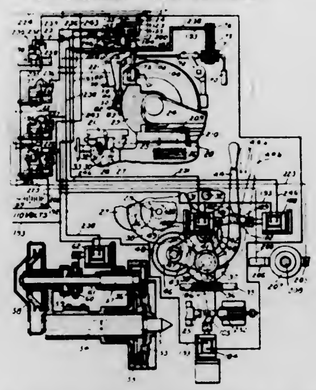


1. A plate of laminated glass comprising a pair of glass sheets with an interposed sheet of plasticized cellulose nitrate which is water repellent and has high strength at low temperatures, and a layer of cement between the opposing faces of the glass and plastic sheets comprising a water soluble cement and a high boiling solvent from the group consisting of monoacetyl diglyceryl ether, and diglyceryl ether.

2,003,331
AIRCRAFT HAVING SUSTAINING ROTORS
Heraclio Alfaro, Abington, Pa., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware
Application December 9, 1931, Serial No. 579,853
13 Claims. (Cl. 244—19)

1. In an aircraft having a sustaining rotor and a prime mover, a mechanism for driving the rotor including a driving connection extended between the prime mover and the rotor, a clutch in said connection, and means for limiting the torque transmittible through the clutch to a predetermined value including a clutch back-off device associated therewith.

2,003,332
POWER DRIVEN VIBRATOR
Mathew Andis, Racine, Wis.
Application July 23, 1932, Serial No. 624,191
13 Claims. (Cl. 30—1)

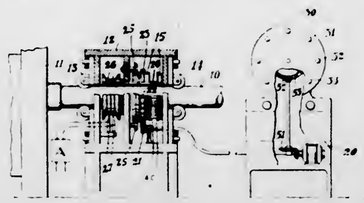


1. A hair clipper having a vibratory cutter blade in combination with a rigidly connected actuating arm movable in a plane to which the cutter blade is oblique, and a pivotal support for said arm perpendicular to the plane in which the cutter blade vibrates, the actuating arm having spherically rounded members, the cutter blade having brackets provided with concave sockets to receive said members, and means for clamping the brackets and rounded members together in a predetermined position.

2,003,333
METHOD AND MATERIAL FOR PREVENTING THE TARNISHING OF SILVERWARE
Kenneth H. Barnard, West Newton, and Henry F. Kane, Lawrence, Mass., assignors to Pacific Mills, Lawrence, Mass., a corporation of Massachusetts
No Drawing. Application May 17, 1933, Serial No. 671,596
6 Claims. (Cl. 23—241)

1. A fabric for protecting silverware from tarnish comprising a material suitable for wrapping, impregnated with silver ferrocyanide.

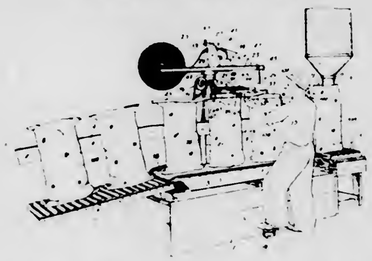
2,003,334
CALIPER CONTROLLED GRINDING MACHINE
Albert G. Belden and Raymond A. Cole, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application July 25, 1931, Serial No. 553,066
41 Claims. (Cl. 51—165)



25. A grinding machine comprising a rotatable grinding wheel and a work support which are relatively movable to feed the wheel into the work, a power driven, automatically actuated wheel feeding mechanism connected to move the wheel either toward or away from the work at a continuous and uniform rate for an indefinite time, a gaging device having a feeler which contacts with the work and moves in response to a reduction in size of the work, mechanism responsive to the movement of said feeler to a predetermined position which causes said feeding mechanism to stop the infeed of the wheel into the work, means including a time delay device cooperating therewith which permits the wheel to remain in grinding contact with the work for a predetermined time after the grinding feed has been stopped, positively actuated means to actuate the feeding mechanism, and means responsive to said time delay device to positively control said positively actuated means and separate the wheel and work.

2,003,335
THERMO-NONCONDUCTING WATER REPELLENT PACKING MATERIAL
Carl A. Black, Cleveland Heights, Ohio, assignor to The Ric-Wil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application August 12, 1927, Serial No. 212,604
2 Claims. (Cl. 106—18)

1. A thermo-non-conducting packing material, comprising a mass of non-adhering, loosely associated asbestos fibers which have been treated with a soap of a bivalent metal to render them water repellent.

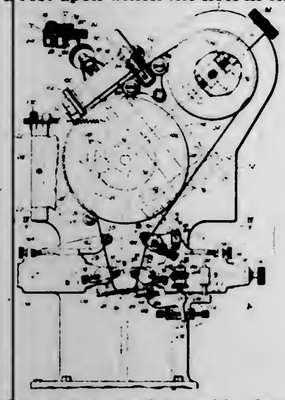


2,003,336
INDICATING DEVICE FOR FLAW DETECTOR MECHANISM
Fred D. Braddon, Eltingville, and Alfred N. Lawrence, Lawrence, N. Y., assignors to Sperry Products, Inc., Brooklyn, N. Y., a corporation of New York
Application November 11, 1933, Serial No. 697,566
9 Claims. (Cl. 175—183)

1. In a flaw detector mechanism for tubular conductors, flaw responsive means, means for causing said responsive means to travel around the periphery of the conductor under test, a plurality of indicators arranged to correspond to the periphery of the conductor under test, and means whereby said

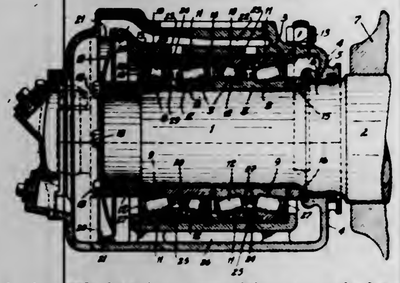
responsive means actuates the respective indicator, said means comprising a two-part controller and means whereby one of said parts is operated in synchronism with said responsive means.

2,003,337
BAG CLOSING MACHINE
Charles V. Brady, Webster Groves, and Frank R. Linda, St. Louis, Mo., assignors to Bemis Bro. Bag Co., St. Louis, Mo., a corporation of Missouri
Application February 17, 1934, Serial No. 711,702
12 Claims. (Cl. 216—20)



1. A bag closing machine comprising a supporting conveyor adapted to receive and support filled bags having open mouths, means adapted to fold a closure strip and cause the same to cover juxtaposed edges of the bag mouth, means for applying adhesive to the strip prior to application of the same to the bag mouth, and travelling means adapted to receive the bag mouths with the strip thereon to compress the strip over the mouth and to assist the movement of the bag on said supporting conveyor.

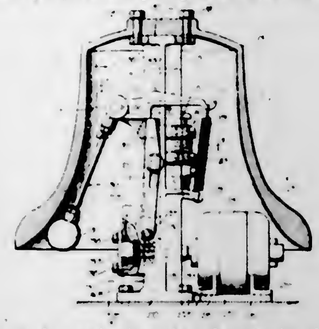
2,003,338
COVER TRIMMING MACHINE
Charles G. Brostrom, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 15, 1932, Serial No. 593,053
34 Claims. (Cl. 12—42)



1. A trimming machine having, in combination, a band knife, means constructed and arranged to engage the knife at spaced points to form between said points of engagement an intermediate curved trimming portion which is substantially free from lengthwise tension and is constructed and arranged to trim a portion of a cover laid upon a heel, a gage for positioning the heel lengthwise of the trimming portion of the knife, and a support having a heel-engaging face beyond which said trimming portion projects, the support being constructed and arranged to limit movement of

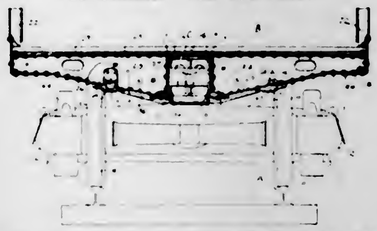
the heel toward said trimming portion and to serve as a rest upon which the heel in engagement

with said gage is moved to guide the cover laid upon the heel past said trimming portion.



2,003,339
AXLE BEARING
Tracy V. Buckwalter, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application February 7, 1934, Serial No. 710,051
6 Claims. (Cl. 308—180)

1. An axle bearing comprising an axle having a reduced journal portion, bearing cones on said journal portion whose largest diameter is less than the diameter of the body of said axle, bearing rollers and bearing cups cooperating with said bearing cones, cages for said rollers permitting removal thereof without removing said cones from said axle a split journal box extending over the journal portion of said axle and receiving said bearing cups and a wheel on the body of said axle.

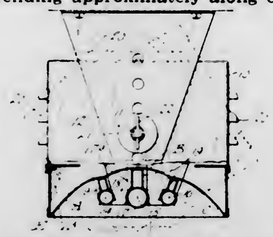


2,003,340
BELL RINGER
Robert J. Burrows and Alfred O. Williams, Battle Creek, Mich., assignors to Clark Tructractor Company, Battle Creek, Mich., a corporation of Michigan
Application February 15, 1933, Serial No. 656,908
19 Claims. (Cl. 116—167)

8. A signaling device comprising a bell, a vertically disposed standard supporting said bell, a clapper pivotally mounted on said standard and having an arm rigidly connected therewith, a projection carried by said arm, a generally vertically shiftable push rod movably mounted on said standard and shiftable vertically to engage the projection on said arm to swing the clapper in one direction, the projection engaging portion of said push rod being movable laterally to disengage said projection, spring means associated with

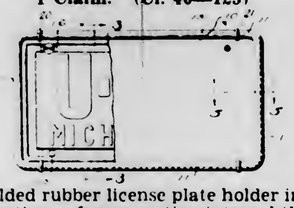
said arm for swinging the clapper in the other direction when said arm is released to strike the bell, and continuously operating means for shifting said push rod.

2,003,341
UNDERFRAME CONSTRUCTION FOR RAILWAY CARS
Argyle Campbell, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application April 13, 1933, Serial No. 665,935
11 Claims. (Cl. 105—228)



1. In an underframe for railway cars, having a centersill including spaced vertical walls each provided adjacent the lower margin with an outstanding marginal flange and adjacent the upper margin with inwardly directed flanges; a foundation bolster casting positioned between the said vertical walls of the center sill and having integral portions bearing on both the upper and lower flanges of the centersill and united therewith and with the vertical walls of the centersill, said casting including in an integral unit a center plate section and a draft abutment.

2,003,342
LIGHTING APPARATUS
Howard M. Cavanaugh, Buffalo, N. Y., assignor to Claude Neon Displays, Inc., Buffalo, N. Y., a corporation
Application July 30, 1932, Serial No. 626,611
5 Claims. (Cl. 240—11.4)

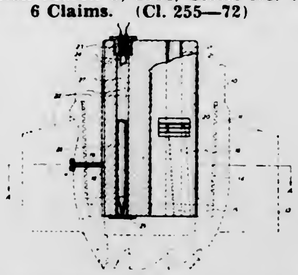


4. An illuminating device comprising a reflector having a trough like, concave, single curved, focusing reflecting surface, divided longitudinally of the trough into a plurality of sections having different foci that lie side by side in proximity to one another and approximately in the same plane but sufficiently away from said surface to enable light rays from any focus to strike a plurality of

said sections directly, and an elongated source of light extending approximately along each focus,

said sources of light emitting light rays of complementary colors, which mix immediately to create an approximately white light.

2,003,343
AUTOMOBILE LICENSE PLATE HOLDER
Clarence R. Davis, Detroit, Mich., assignor to Davis Tool & Engineering Company, Detroit, Mich., a corporation of Michigan
Application February 3, 1933, Serial No. 654,986
1 Claim. (Cl. 40—125)



A moulded rubber license plate holder including a body portion, a frame portion integral therewith extending around the sides thereof and adapted to engage the opposite sides of the edges of a license plate held therein, said frame portion being substantially circular in cross section and provided with a continuous groove extending on the inner face thereof and secured to said body portion in such a manner as to conform to the outline of a license plate of predetermined contour to be held therein and to be maintained in intimate contact with the sides and back thereof, and a plurality of spaced apart resilient reenforcing ribs formed integrally in said body and frame portions and extending across said body portion and said frame portion.

2,003,344
PHOTO-ELECTRIC TUBE
Jan Hendrik de Boer and Marten Cornelis Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware
Application May 15, 1930, Serial No. 452,785
In the Netherlands May 16, 1929
11 Claims. (Cl. 250—27.5)

1. A photoelectric cathode having a supporting surface, an intermediate layer comprising a chemical compound and electrically conducting particles on the supporting surface, and a photoactive substance coated upon said intermediate layer.

2,003,345
DEVICE FOR ORIENTING TEST CORES
Elmer L. De Maris, Los Angeles, Calif.
Application March 5, 1934, Serial No. 714,175
6 Claims. (Cl. 255—72)

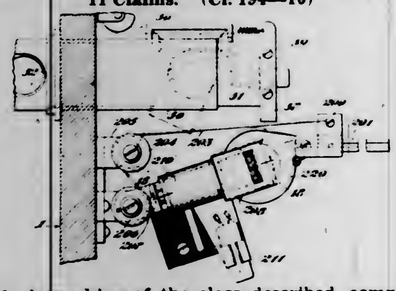
1. The method of orienting a test core which comprises: impressing a permanent marking on the upper surface of an underground formation by firing an explosive charge and thereby impelling a projectile into said surface, and thereafter forming said core including said marking in a position eccentric to the axis of said core and in a known direction from said axis.

2,003,346
REVERSIBLE RATCHET WRENCH
John S. Dodge, Paxton, Mass., assignor to Harry Sinclair, John H. Dodge, both of Worcester, Mass., and Louis C. Smith, Newton Center, Mass., as trustees
Application March 30, 1934, Serial No. 718,180
2 Claims. (Cl. 81—62)

1. A reversible ratchet tool having a handle portion, a socket-receiving portion provided with a slot in its side face, a socket member rotatable in the socket-receiving portion, two oppositely-disposed pawls pivotally carried by the socket-receiving portion and co-operating with the socket member, each pawl having a flat face, a spring acting on each pawl, a rock shaft extending lengthwise of the handle portion and at right angles to the pawl axes, a pawl-reversing member fast on said rock shaft and having two flat pawl-engaging faces spaced less than 180° apart, there being one face for each pawl, an arm fast to the rock shaft and extending through said slot for

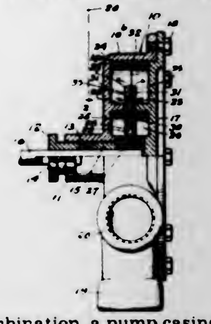
turning the shaft to bring each flat face of the pawl-reversing member into engagement with the flat face of the corresponding pawl, whereby said pawl is held in inoperative position, the pressure of the flat face of the pawl against the flat face of the pawl-reversing member due to the action of the spring serving to yieldingly hold the shaft and pawl-engaging member in its adjusted position.

2,003,347
MANUFACTURE OF CELLULOSE OR CELLULOSIC MATERIALS
Henry Dreyfus, London, England
No Drawing. Application January 25, 1933, Serial No. 653,474. In Great Britain February 16, 1932
2 Claims. (Cl. 92—9)



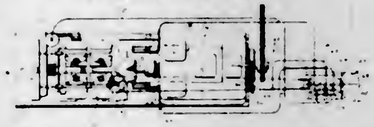
1. Process for the separation of non-cellulosic constituents from lignified cellulose materials which comprises digesting the materials with an aqueous solution of a di-olefine glycol at a temperature between 120° and 180° C.

2,003,348
MACHINE FOR CUTTING AND RESHARPENING THE REEDS OF WIND INSTRUMENTS
Pierre Duisc, Paris, France, assignor to Société Charles Chedeville, Albert Lelandais et Cie, Eure, France, a corporation of France
Application December 26, 1934, Serial No. 759,158
In France November 28, 1934
11 Claims. (Cl. 164—73)



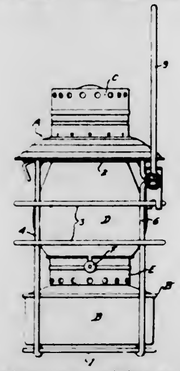
1. A machine for cutting reeds for wind instruments, which comprises, in combination, a frame adapted to support the reed to be cut, a pattern rigid with said frame, a member movable in said frame so as to be able both to slide with respect thereto along a given line and to pivot about said line, means for cutting said reed, and a support for said cutting means pivotally connected with said member and arranged to cooperate with said pattern.

2,003,349
DISPENSING AND GAME PLAYING MACHINE
Clifford R. Dumble, Arlington, Mass., assignor to William B. Spieler, Brookline, Mass.
Application November 25, 1933, Serial No. 699,675
11 Claims. (Cl. 194—10)



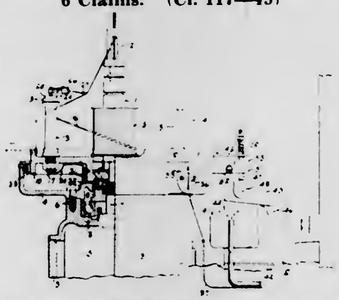
1. A machine of the class described, comprising a casing, a game playing assembly in the casing, a common slide movable to insert a playing disk or coin into the casing and to release the playing assembly for operation when it inserts either a disk or coin, and selector means to direct a disk thus inserted to one part of the machine and a coin to another part of the machine, said selector means including a swinging assembly movable on insertion of a coin or disk to receive the coin and direct it in one direction and being arranged to retain a disk until it swings to another position whereupon it automatically releases the disk.

2,003,350
PUMP
Augustus C. Durdin, 3d, Chicago, Ill., assignor to Chicago Pump Company, Chicago, Ill., a corporation of Illinois
Application October 13, 1933, Serial No. 693,439
3 Claims. (Cl. 103—96)



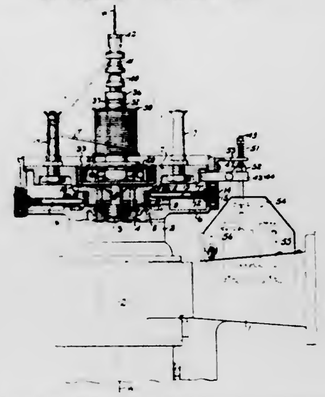
1. In combination, a pump casing having a suction inlet, a discharge outlet and a single raceway therebetween having side and inner and outer end walls, an impeller disc mounted to rotate in said casing with its peripheral portion extending into said race-way, and circumferentially disposed buckets in the side faces of the peripheral portion of the impeller disc having concave bottoms, in the form of arcs of circles struck from centres disposed between the side walls of the race-way and the sides of the impeller disc, whereby liquid is discharged from the outer ends of said pockets in lateral directions against the liquid in the outer portion of the race-way and is directed back into the pockets by the side and inner end walls.

2,003,351
POWER CONTROL
Paul W. Eells, West Allis, Wis., assignor to Le Roi Company, West Allis, Wis., a corporation of Wisconsin
Application February 28, 1931, Serial No. 519,090
5 Claims. (Cl. 60—97)



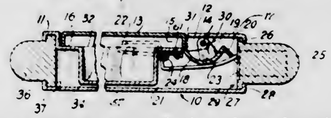
1. The combination with a plurality of power and transmission units having individual shaft controls and power delivery shafts coupled together, of an independently portable remote control station, and means at said station provided with power transmitting connections for the synchronous operation of the controls of the several units.

2,003,352
LANTERN
Roland D. Evans, Granite City, Ill., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application June 9, 1934, Serial No. 729,788
3 Claims. (Cl. 240—38)



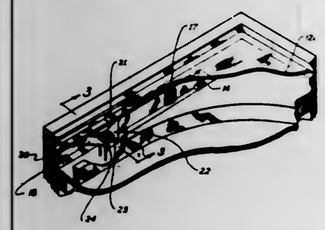
1. A hand lantern comprising a font, a hood, a chimney interposed between said font and said hood, a guard frame arranged to surround said chimney, and a bail for carrying the lantern or suspending same from a support, said bail being connected to said guard frame so that it is disposed adjacent to one side of the lantern, whereby the lantern may be suspended in a substantially vertical position in contact with a vertically disposed support, said guard frame comprising substantially straight, vertically extended guard elements to certain of which said bail is attached and horizontal guard rings secured to said vertically extended guard elements, said vertically extended guard elements being secured to said font, and said horizontal guard rings being of no greater diameter than the greatest diameter of said hood.

2,003,353
AUTOMATIC STOP DEVICE
Charles B. Fantone, Lyndhurst, and Reuben M. Jameson, Teaneck, N. J., assignors to Syncro Machine Company, Newark, N. J., a corporation of New Jersey
Application December 15, 1933, Serial No. 702,520
6 Claims. (Cl. 117—45)



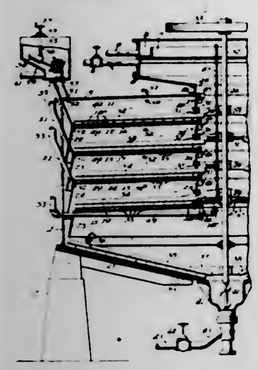
1. A web feeding combination comprising a motor, a generator connected thereto, circuits for energizing said motor, a main contactor in said circuits for controlling said motor, a serving head motor, circuits for energizing the serving head motor from said generator, circuits for controlling the main contactor including start and stop switches, a holding circuit for the main contactor, an electro-magnetically operated switch in said holding circuit, a web serving head operated by the serving head motor and a centrifugally operated switch for controlling the electromagnetically operated switch, said centrifugally operated switch being held against operation by the web.

2,003,354
MACHINE FOR APPLYING A WEB TO A STRAND
Charles B. Fantone, Lyndhurst, and Edward G. Parvin, Roselle, N. J., assignors to Syncro Machine Company, Newark, N. J., a corporation of New Jersey
Application August 23, 1934, Serial No. 741,046
19 Claims. (Cl. 117—42)



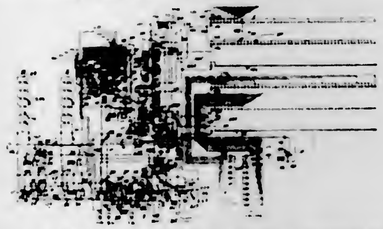
1. A serving head as described comprising a motor, a rotatable support driven by said motor, a cop spindle rotatably journaled on said support, a magnetic brake acting upon the cop spindle to prevent rotation thereof on the support when energized, an energizing circuit for said brake including a control switch, means for biasing said switch to closed position, and means acting to oppose said biasing means to prevent closing of said switch when a web is being fed from a cop on the cop spindle.

2,003,355
VANITY BOX
Eugene Farkas, New York, N. Y.
Application May 22, 1934, Serial No. 726,915
5 Claims. (Cl. 220—35)



1. In a vanity box of the class described, a hollow body having a recess in its upper face, an opening and a removable closure in its lower face and an opening at one end, a door having an offset hinge member and being pivotally mounted below said upper face, said hinge being concealed from view from outside said box, a push button slidably mounted in said end opening for actuating said door, and contacting means in said button and in engagement with the offset hinge member of said door to open said door into abutment with a limit stop, said hollow body having unperforated and powder-proof containing means between said upper and lower closures.

2,003,356
GAME APPARATUS
Myer Gensburg, Chicago, Ill.
Application May 23, 1934, Serial No. 727,033
3 Claims. (Cl. 273—119)

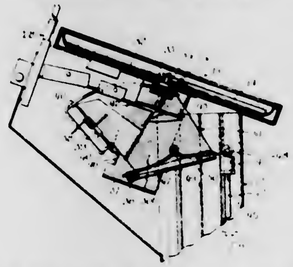


3. A device of the character described, comprising: a member adapted to be mounted in a ball runway of a game apparatus or the like and including portions extending angularly relative to and from each other; means normally urging said member, when in position of use, into a position to dispose one of the said portions of said member in a position out of the path of a ball traveling along said runway while at the same time positioning the other of the said portions of said member in said runway so that the latter may be engaged by a ball traveling thereal ong; said member, when engaged by a ball traveling along said runway in one direction, being pivoted, against the action of said urging means, in a direction to dispose the said first-named one portion of said member in said runway so that the same may be engaged by a ball traveling therealong.

2,003,357
APPARATUS FOR CLARIFICATION
William A. Gilchrist, Chicago, Ill.
Application September 9, 1929, Serial No. 391,427
12 Claims. (Cl. 210—55)

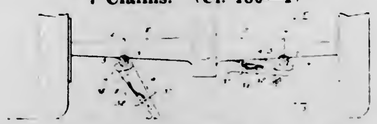
1. In a tank having a plurality of superimposed compartments adapted to contain liquid, means for discharging gas trapped above a body of liquid in each compartment comprising passages upwardly bent intermediate their ends communicating respectively with the interior of each compartment and extending outwardly therefrom, and means for regulating the escape of gas through each passage to retain a gas pocket in the upwardly bent portion of each passage.

2,003,358
SYSTEM FOR INDICATING THE PRESENCE AND LOCATION OF FIRE
Harry Campbell Grant, Jr., New York, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a corporation of New York
Application November 21, 1929, Serial No. 408,740
12 Claims. (Cl. 177—355)



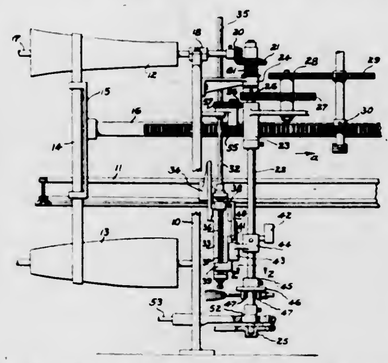
1. An electro-responsive system comprising a plural ty of external circuits each having two circuit wires adapted to be mounted in areas to be protected, a plurality of resistances in each said circuit connected in series therein, a plurality of circuit controlling means bridged across the circuit wires of each said circuit between successive resistances of said series of resistances and adapted to be located within different areas to be protected whereby each circuit controlling means serves to short circuit the resistances in the respective circuit more remote from the circuit responsive means, circuit indicating means for each circuit, area indicating means for each circuit controlling means including a plurality of resistance elements corresponding to the first named resistances, a Wheatstone bridge including the last named indicating means and one of the external circuits with certain of its resistances, means operable upon actuation of a circuit controlling means in an external circuit to connect said circuit as an element of the Wheatstone bridge and to actuate the respective circuit indicating means, and means actuated by the Wheatstone bridge to vary the area indicating means and to balance the second named resistances against the first named resistances included in the Wheatstone bridge for effecting a proper area indication.

2,003,359
ADJUSTABLE NECKTIE
Max Halpern and William Mayer, New York, N. Y.
Application November 28, 1934, Serial No. 755,080
1 Claim. (Cl. 2—155)



In an adjustable necktie, a neckband tie portion comprising inner and outer plies of tie material stitched to each other along their edges, said portion being doubled back upon itself and being provided with a hook at its end, and a perforated additional strip of material stitched along its edges to the inside surface of said tie portion so that said hook may be engaged with any selected perforation, said strip comprising a length of ribbon selvaged along its longitudinal edges, a reinforcement band stitched to the underside of said ribbon along a medial longitudinal area, and said perforations extending through said ribbon and reinforcement band and being arranged in predetermined longitudinally spaced relation.

2,003,360
WEIGHING SCALE
Marius H. Hansen, Chicago, Ill., assignor to Hanson Scale Company, Chicago, Ill., a corporation of Illinois
Application November 30, 1931, Serial No. 577,953
5 Claims. (Cl. 265—68)

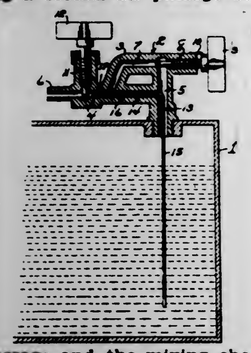


2. In a weighing scale, the combination of weighing mechanism, an indicator having a rotatable element, a pinion for operating said element, a carrier governed in its movement by said mechanism and pivoted on an axis perpendicular to and in the plane of the axis of said pinion, a pivot pin on said carrier extending radially with respect to the pivotal axis of said carrier, a rack pivoted at one end on said pivot pin and formed arcuately and centered on the axis of said carrier, the teeth of said rack facing toward and being engageable with said pinion, and a spring acting between the carrier and the rack to maintain said rack firmly in engagement with said pinion.

2,003,361
PARKING DEVICE FOR AUTOMOBILES
William H. Harless, Patchogue, N. Y.
Application January 19, 1932, Serial No. 587,521
Renewed October 27, 1934
7 Claims. (Cl. 180—1)

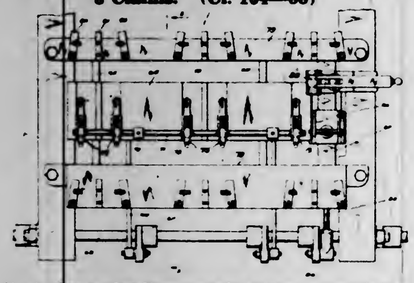
1. An automobile parking device comprising a pair of walking bars at each side of the center of the rear axle; means for supporting said walking bars on the axle housing for thrusting against the pavement; shafts extending longitudally of the car and provided with radial arms for the respective walking bars; means for rocking said shafts for alternately thrusting the bars of one pair against the pavement; means connected with the emergency brake lever for connecting and disconnecting said rocking means for operation by the engine of the automobile; and means under manual control of the operator for placing one or the other of said pairs of walking bars in position for thrust against the pavement.

2,003,362
ROVING FRAME BUILDER MOTION
Fred K. Hendrickson, Worcester, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application May 17, 1933, Serial No. 671,549
1 Claim. (Cl. 118—33)



In a roving frame builder motion, a driving shaft, a driven shaft, reversing cone pulleys and a belt constituting a variable speed drive between said shafts, a belt-shifting device, a tumbler shaft geared to actuate said belt-shifting device, a bevel pinion on said driving shaft, an interrupted bevel gear slidable on said tumbler shaft and intermittently engaged by said bevel pinion, means to stop said tumbler shaft after each half revolution and with said bevel pinion and interrupted bevel gear disengaged, yielding means to turn said bevel gear to position for engagement by said bevel pinion on release of said tumbler shaft from said stopping means, a collar fixed on said tumbler shaft and determining the operative axial position of said bevel gear, a second collar fixed on said tumbler shaft, and a spring on said tumbler shaft positioned between said bevel gear and said second collar and forcing said gear yieldingly against said first collar, said spring thereby maintaining said gear yieldingly in position for engagement by said bevel pinion when said tumbler shaft is released, and said collars taking the entire end thrust of said spring in both directions.

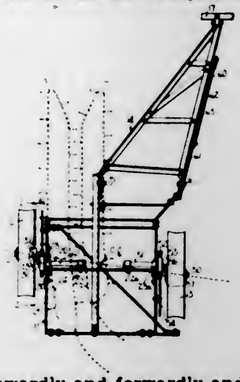
2,003,363
CARBURETOR
George F. Hodges and Fernando B. Cota, San Diego, Calif.
Application February 23, 1932, Serial No. 594,755
Renewed April 12, 1934
4 Claims. (Cl. 261—76)



1. A carburetor comprising a body having reduced screw threaded ends arranged at right angles to each other with one end threaded into a tank provided with liquid fuel under air pressure and the other end of said body arranged to be threaded to a burner, said body having a mixing chamber extending through the last-named end, a valve for controlling delivery of combustible mixture from the mixing chamber to the burner, said body having an air passage communicating with the tank to receive air under pressure therefrom, an L-shaped tube arranged in the air passage and the mixing chamber with one end extending into the fuel of the tank and having its other end flared to provide a nozzle spaced from the walls of the mixing chamber and located adjacent the valve, a sleeve mounted on

the tube and engaging the walls of the mixing chamber to close the latter to the air passage, said body having a second air passage between the

first air passage and the mixing chamber, and a valve controlling the flow of air between the air passages.

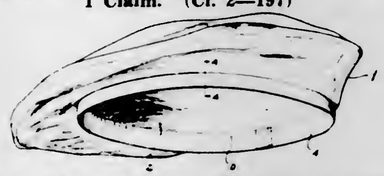


2,003,364
FEEDING MECHANISM FOR PRINTING PRESSES
Hans Irmscher, New York, N. Y., assignor to Millie Patent Holding Co. Inc., New York, N. Y., a corporation of New York
Original application September 23, 1931, Serial No. 564,615. Divided and this application June 28, 1932, Serial No. 619,685
8 Claims. (Cl. 164—88)

7. A tape feeding mechanism comprising a frame, slidable means on the frame, means to reciprocate the slidable means, means on the slidable means to engage a tape frictionally, perforating means on the frame, means actuated by the reciprocating means to actuate the perforating means to perforate tape fed from the friction means, a table, a dog on the table to engage successive perforations made by said perforating means in the tape, said dog normally being urged against the tape by gravity, and means actuated by the reciprocating means to reciprocate the table.

2,003,365
AGRICULTURE IMPLEMENT
Ellsworth T. Johnson, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application August 18, 1934, Serial No. 740,378
5 Claims. (Cl. 56—215)

1. An implement comprising a main supporting frame on which the operating parts of the implement are mounted, a pair of supporting wheels on opposite sides of said main frame, means cooperating with said supporting wheels for supporting said main frame with the center of gravity of the implement disposed in a generally transverse vertical plane which passes through the points of contact of said wheels with the ground, and means for swinging one of said



wheels downwardly and forwardly and the other of said wheels downwardly and rearwardly to raise the frame relative to the ground while keeping the center of gravity of the implement in said plane.

2,003,366
FISHING LURE
William M. Jordan, Birmingham, Ala., assignor to South Bend Bait Company, South Bend, Ind.
Application June 24, 1931, Serial No. 546,582
12 Claims. (Cl. 43—42)

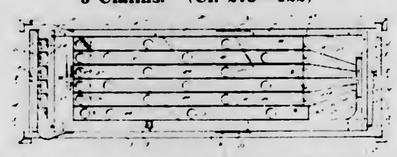
1. A lure comprising an elongated relatively thin plate, a hook having its shank extending longitudinally of said plate, and means securing said hook shank to said plate, said plate having a portion thereof at its forward end bent into face contacting relation therewith to form a weighted head end preventing spinning of said plate as it is drawn through the water.

2,003,367
HEADGEAR
Herman Julich, New Rochelle, N. Y.
Application December 15, 1933, Serial No. 702,517
1 Claim. (Cl. 2—197)

A cap of the beret type, the crown of which is composed of relatively inelastic fabric and has a head-receiving aperture therein, a lining covering the inner surface of said crown and extending to the margin of said aperture and an annulus formed of tape secured along one longitudinal margin thereof to the margins of said fabric and to said lining by a row of stitching extending around the margin of said aperture, a head band, comprising an annulus formed of elastic webbing capable of limited extension, whose normal outer periphery substantially

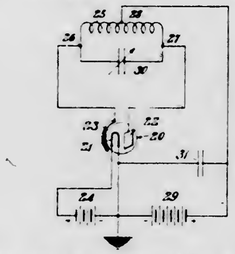
equals the inner periphery of said aperture and said head band also being secured by a separate row of stitching to the fabric of the crown, said lining and to the other longitudinal margin of said tape, which row is below the first mentioned row of stitching.

2,003,368
LUBRICANT
Alfred H. Kelling, Chicago, Ill., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 10, 1934, Serial No. 706,098
11 Claims. (Cl. 205—19)



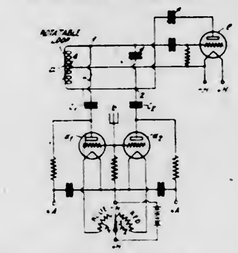
1. A metal drawing lubricant consisting of a viscous, non-crystallizing water solution of a soluble carbohydrate substance, and a sufficient amount of a hygroscopic substance, non-reactive with the carbohydrate and with the metal to be treated, to inhibit drying on exposure of the lubricant to the atmosphere.

2,003,369
SKIVING MACHINE
August Kick, St. Louis, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application July 12, 1934, Serial No. 734,794
4 Claims. (Cl. 69—9.5)



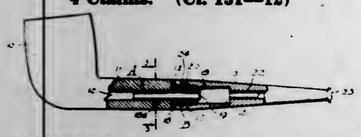
1. A skiving machine having, in combination, a table, a cylindrical knife a portion of which projects through an opening in the table, a feed roll, a presser for cooperating with the roll, and a guard, said guard comprising a base and a member adjustable on said base toward and from the presser.

2,003,370
GAME APPARATUS
John A. Kimball, Taylorville, Ill.
Application January 5, 1933, Serial No. 650,277
5 Claims. (Cl. 273—122)



2. In a game apparatus employing a spherical play element, supports, a number of rigid shifter slats extended flat-wise side by side thereon and adapted each for independent longitudinal sliding movement and lateral tilting movement as means for manipulating and directing the play element positioned thereupon means for positioning the play element at one end of the slat assembly for transference to an adjacent slat through the longitudinal movement thereof, and fence strips arranged lengthwise between the slats for directing the course of the play element, there being ports thru the fence strips for permitting the play element to roll laterally from one slat to another.

2,003,371
CONSTANT FREQUENCY OSCILLATOR
Earl L. Koch, Chicago, Ill., assignor, by mesne assignments, to Earl L. Koch Holding Corporation, New York, N. Y., a corporation of New York
Application April 16, 1932, Serial No. 605,644
6 Claims. (Cl. 250—36)

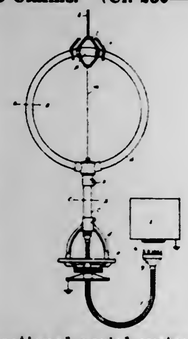


1. In an oscillator, an electronic device including an evacuated envelope having contained therein an anode and a cathode, an electro-static control element or grid located external to said envelope, a resonating circuit comprising a tapped inductance with capacity in parallel connected directly between said anode and grid, and means including a power source for supplying a positive potential to said grid and anode with respect to said cathode through said inductance tap, also means for heating said cathode for the purpose of establishing an electron stream between said cathode and anode.

2,003,372
DIRECTIONAL RECEIVER
Walter Kühlewind, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application February 16, 1933, Serial No. 657,069
In Germany April 1, 1932
8 Claims. (Cl. 250—11)

1. A direction determining receiver including a non-symmetrical signal absorption member, a thermionic tube connected therewith by way of tuning means, and means for determining the sense of direction of received signals comprising a pair of thermionic tubes having their anodes connected to different sides of said absorption member, their control grids connected to a non-direction aerial, and means for alternately rendering said last named tubes operative and inoperative.

2,003,373
TOBACCO PIPE
David P. Lavietes, Brooklyn, N. Y.
Application January 24, 1934, Serial No. 708,026
4 Claims. (Cl. 131—12)

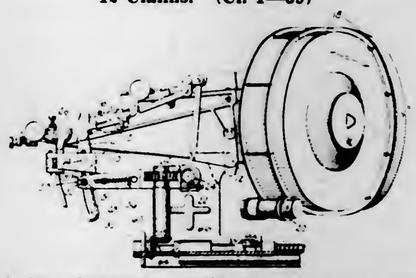


3. In a tobacco pipe of the character described, the combination of a bowl member and a bit therefor, a screw plug to unite the bowl and bit, said plug having a preformed groove in the outer wall thereof, and means inserted in the bowl member to bite into the screw plug and prevent relative movement thereof with respect to the bowl member.

2,003,374
PREPARATION OF CALCIUM ACETYL-SALICYLATE
William H. Lawrence, Jr., Marblehead, Mass., assignor to Lee Laboratories, Incorporated, Cambridge, Mass., a corporation of Delaware
No Drawing. Application July 21, 1932, Serial No. 623,813
6 Claims. (Cl. 260—107)

1. A process of reparing calcium acetylsalicylate which comprises intimately mixing precipitated chalk and finely powdered aspirin, adding water and stirring to complete the reaction at a temperature of not more that 20° C., filtering the supernatant liquor obtained on permitting the mass to settle, digesting the filtrate with a methanol-containing liquid, filtering off the precipitated calcium acetylsalicylate and digesting the residue with an agent which is a non-solvent for calcium acetylsalicylate but which is adapted to reduce the iron content to below 10 parts per million and to have a sufficient avidity for water to reduce the total water content to that of not more than three and one-half molecules when calculated as water of crystallization.

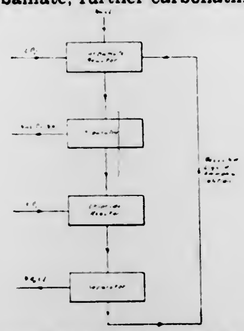
2,003,375
DIRECTION FINDING COIL ANTENNA
August Löb, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application April 23, 1930, Serial No. 446,477
In Germany June 8, 1929
3 Claims. (Cl. 250—11)



1. In a directional aerial system the combination, of a frame aerial, a conducting closure member therefor, a vertical aerial supported by said closure member symmetrically with respect to said frame aerial, electrical disturbance protective means cooperating with said vertical aerial and said closure member to protect said vertical aerial from electrical disturbances and a receiver adapted to be connected to said aerial system.

2,003,376
RING, BROOCH PIN, BRACELET, AND THE LIKE
Anthony B. Lesmeister, Portland, Oreg.
Application June 9, 1933, Serial No. 675,057
1 Claim. (Cl. 63—15)

An ornamental finger ring comprising a ring having an enlarged and flattened portion on its periphery, a plurality of panels of contrasting colors mounted upon said flattened portion and arranged one above the other, a photograph mounted upon the outermost one of said panels, and a transparent preservative covering applied to said photograph and to said outermost panel.



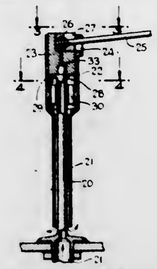
2,003,377
FASTENING-SUPPLYING APPARATUS
Fred L. MacKenzie, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application October 9, 1933, Serial No. 692,715
12 Claims. (Cl. 1—39)

1. In a fastening-supplying apparatus, a movable raceway, a pivoted supporting member upon which the raceway rests at its opposite sides, a rotatable member for moving the raceway, a connecting member joining the rotatable member to the supporting member, and means arranged to secure the connecting member to the supporting member at different distances from the pivot thereof.

2,003,378
PRODUCTION AND RECOVERY OF SODIUM CARBAMATE AND AMMONIUM CHLORIDE
Robert Burns MacMullin, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application March 24, 1932, Serial No. 600,925
4 Claims. (Cl. 23—100)

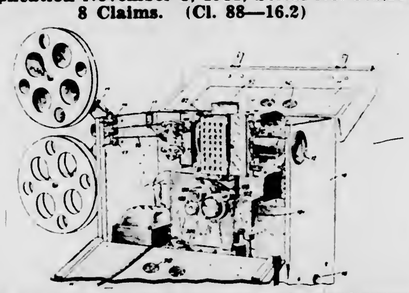
1. A method of producing sodium carbamate and ammonium chloride, comprising carbonating sodium chloride in liquid ammonia until the solution is approximately saturated with respect to ammonium chloride, separating precipitated sodium carbamate, further carbonating the solu-

tion from which sodium carbamate has been separated, and separating precipitated ammonium chloride.



2,003,379
RETAINING CUP FOR LENSES AND THE LIKE
Robert Malcom, Chicago, Ill.
Application December 29, 1932, Serial No. 649,304
1 Claim. (Cl. 2—14)

A retaining cup of the character described comprising a single piece cylindrical shell composed of deformable metal provided at one end with an inturned flange adapted to form a lens-seat, the diameter of the shell adjacent to said flange and rearward of the lens seat being reduced to provide an inwardly bowed portion whereby movement of the lens off its seat is prevented, the cylindrical wall of the shell rearward of said bowed portion being expanded outwardly beyond the normal diameter of the shell and said portion collapsed inwardly upon itself in a reentrant manner and thence bent outwardly to provide an outwardly opening material receiving groove disposed in a forwardly sloping manner while the perimeter of said end is flared outwardly and partially across the open end of said groove to provide an annular material gripping portion.

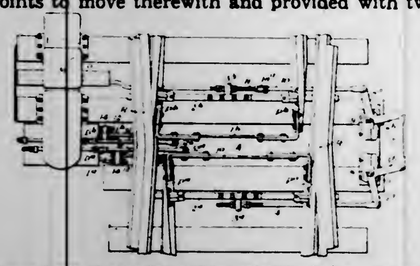


2,003,380
FLOAT OPERATED VALVE
Frank J. Masterson, Brooklyn, N. Y.
Application June 25, 1931, Serial No. 546,764
9 Claims. (Cl. 137—104)

1. In a ball cock of the class described comprising a liquid controlling member, a float, and a connecting member to stop the flow of liquid when the float reaches a definite position, and a pinless, multiple point fulcrum for said connecting member, said connecting member operating on one point of said fulcrum to close off liquid flow and on a different point to open the liquid controlling member, said connecting member being free to rotate about the longitudinal axis, said connecting member being unsecured

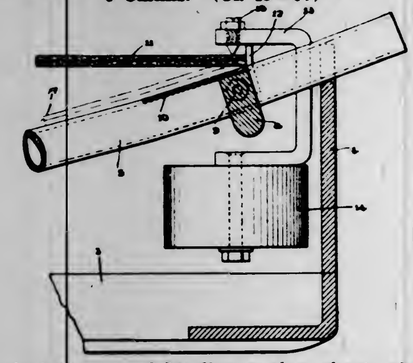
at the fulcrum point, said connecting member being attached to and pivoted in said valve member.

2,003,381
PORTABLE TALKING MOTION PICTURE APPARATUS
Russell P. May, Woodbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 3, 1931, Serial No. 572,804
8 Claims. (Cl. 88—16.2)



6. Combined motion picture and sound reproducing apparatus comprising a main drive shaft having a momentum member thereon, an irreversible worm upon said drive shaft and separate means driven independently by said worm for driving the motion picture apparatus and sound reproducer, whereby irregularities in the motion of the motion picture apparatus are prevented from affecting the motion of the sound reproducer apparatus.

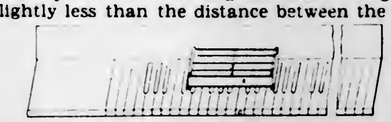
2,003,382
RAILWAY SWITCH OPERATING APPARATUS
William C. McWhirter, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application March 23, 1932, Serial No. 600,601, now Patent No. 1,972,663, dated September 4, 1934. Divided and this application April 3, 1934, Serial No. 718,764
10 Claims. (Cl. 246—240)



1. In railway switch operating apparatus of the type in which a slide bar is moved to an intermediate position prior to the movement of the operating rod which reverses the switch points and to one or the other of two extreme positions after the completion of the movement of the operating rod depending upon the extreme position to which the switch points have been moved, the combination of two spaced locking dogs secured to the slide bar and located in the same horizon-

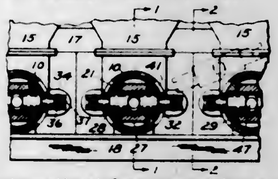
tal plane, and a lock rod connected to the switch points to move therewith and provided with two

spaced notches adapted to selectively receive said locking dogs to lock the switch points in their two extreme positions.



2,003,383
PROCESS AND APPARATUS FOR BENDING GLASS SHEETS
Robert A. Miller, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application December 18, 1933, Serial No. 702,843
9 Claims. (Cl. 49—67)

1. A process of bending a glass sheet, which consists in supporting it above a skeleton form comprising spaced side members of the desired curvature adapted to engage the sheet along its longitudinal side edges, carrying the form and sheet through a heated area where the temperature of the sheet is raised to a point where it will bend and follow the outline of the side member but without sagging between such members, and then carrying them through an area of gradually decreasing temperature.



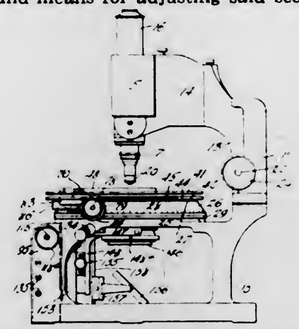
2,003,384
PIANO CHORD PLAYER
Daniel McFarlan Moore, East Orange, N. J.
Application April 5, 1934, Serial No. 719,184
1 Claim. (Cl. 84—443)

A keyboard player comprising a rectangular framework, having vertical sides and channel shaped ends, the channels of which are inwardly disposed, a plurality of rectangular chordbars, each having on its bottom side projections corresponding with selected keys of a keyboard, said chordbars being loosely disposed side by side, inside said frame with their sides directly in contact with one another, and their ends in loose contact with the channel shaped ends of said framework, whereby the ends of the chordbars are limited in their vertical movements, and collectively the width of said chordbars being only slightly less than the distance between the sides

of said framework, whereby side displacement of said bars is prevented solely by said bars and the sides of said framework.

2,003,385
AUTOMATIC STOKER
James P. Norton, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application October 21, 1931, Serial No. 570,164
5 Claims. (Cl. 110—109)

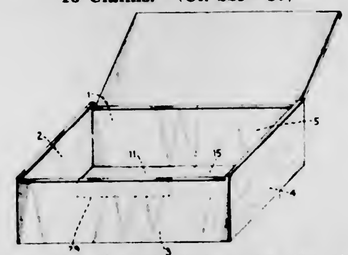
2. An automatic stoker comprising a plurality of parallel ram casings, fuel feeding rams reciprocable therein, driving connecting rods, and wrist pins pivotally joining the connecting rods to the rams, the wrist pin for each ram being formed in a single piece and extending through openings in the sides of the ram casings, and these openings being of sufficient size to allow the ram to be turned about its axis and the wrist pin withdrawn longitudinally without interference with the adjacent ram casing.



2,003,386
PROCESS FOR THE PRODUCTION OF HYDROXYALKYLATED AMINO COMPOUNDS
Henry Charles Olpin and Sydney Hubert Bannister, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 19, 1930, Serial No. 476,442. In Great Britain September 26, 1929
6 Claims. (Cl. 260—128)

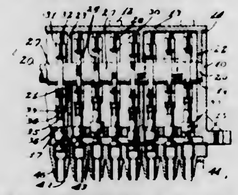
1. Process for the production of hydroxyalkylated derivatives of aliphatic and isocyclic aromatic amino compounds containing replaceable hydrogen attached to nitrogen, which comprises acting on an amino compound selected from the group consisting of isoamylamine and primary aromatic amines of the benzene and naphthalene series with an alkylene oxide in the presence of an inert hydrocarbon medium which is liquid under reaction conditions.

2,003,387
MICROSCOPE
Harvey N. Ott, Buffalo, N. Y., assignor to Spencer Lens Company, Buffalo, N. Y.
Application May 1, 1931, Serial No. 534,228
14 Claims. (Cl. 88—39)



2. In a microscope, an objective, a stage for supporting a specimen in operative relation to said objective, a primary support, a secondary support for said stage means for resiliently

mounting said secondary support on said primary support for yielding movement relative thereto, and means for adjusting said secondary

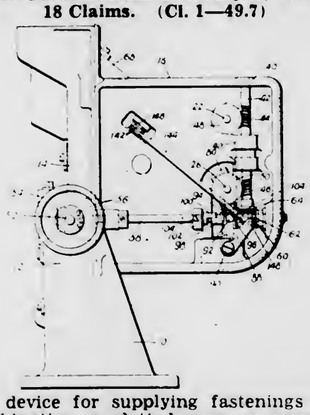


support relative to said primary support and controlling the yielding movement thereof to shift said stage towards and from said objective by translational movement of said stage.

2,003,388
BOX CONSTRUCTION
Donald R. Palmer, Little Neck, N. Y.
Application April 15, 1933, Serial No. 666,270
13 Claims. (Cl. 229—37)

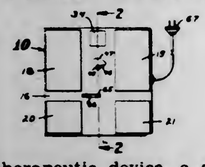
1. In a box of cardboard or the like, the improvements which comprise a stiff main supporting body portion of which all sides are in the form of a rectangular strip that is integral on all lines forming corners thereof, and a secondary supporting layer of fibrous material permanently attached to said main body to form continuous sides and the discontinuous parts of the bottom of the box shell.

2,003,389
LUBRICATING SYSTEM AND METHOD OF INSTALLING THE SAME
Robert E. Petrie, Chicago, Ill.
Application March 14, 1931, Serial No. 522,664
17 Claims. (Cl. 184—27)



1. In a lubricating device, a casing for containing a supply of lubricant and having outlet openings therein, said openings having larger inner portions than outer portions, a delivery tube leading from each of said openings, said tubes being each of a size to substantially fit in the smaller part of the respective opening and having an expanded inner end fitting the inner portion of the opening, and means to force lubricant through said openings into said tubes.

2,003,390
PLANTING MACHINE
Louis Poll, Hamilton, and Benjamin Poll, Holland, Mich.
Application February 19, 1934, Serial No. 711,872
3 Claims. (Cl. 111—3)



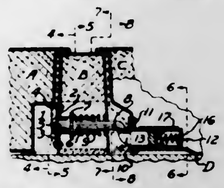
1. In a planting machine: a carrier having a circuitous movement; a plurality of plant holders mounted in spaced relation on the carrier each plant holder comprising a pair of parallelly disposed arms extending at right angles to the carrier's direction of movement, one of said arms being an elongated leaf spring and the other arm having an open pocket adapted to receive a plant; a flexible member secured at its ends to said arms respectively and adapted to span and close the mouth of the pocket in one relative position of the arms to retain a plant placed in the pocket; and means in the path of the carrier's movement for springing the first-mentioned arm toward the pocket for closing the same and yieldingly holding said plant therein.

2,003,391
TACK SUPPLYING DEVICE
William Thomas Buckingham Roberts, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 27, 1932, Serial No. 589,251
In Great Britain February 6, 1931
18 Claims. (Cl. 1—49.7)

1. A device for supplying fastenings having, in combination, a slotted raceway arranged to support a line of fastenings, a separator arranged to control the passage of fastenings toward the end of the raceway and to permit the fastenings to pass one by one, and means arranged to engage the points of the separated fastenings in the raceway and to move the fastenings to a position where they may conveniently be removed therefrom.

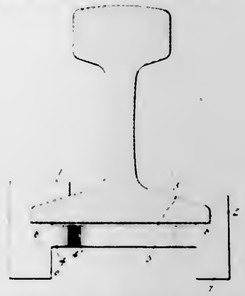
2,003,392
FOOT THERAPY DEVICE
Leonard F. Rucker, Hollywood, Calif.
Application January 18, 1932, Serial No. 587,200
Renewed July 28, 1934
2 Claims. (Cl. 174—89)

2. In a therapeutic device, a source of electrical energy, a base of insulating material, a pair of toe contact plates, a pair of heel contact plates, said pairs of contact plates being mounted in fixed spaced relation on said base, a switch mounted on said base, said switch including a plurality of fixed terminals and a movable member cooperating with said terminals, and leads from said switch terminals to said plates, whereby in one position of said movable switch member the plates will be energized to cause a potential difference between each toe plate and its adjacent heel plate, and in another position of said movable switch member the plates will be energized to cause a potential difference between the toe plates and between the heel plates.



2,003,393
METHOD OF FORMING PILES
Hilmar E. Satre, Chicago, Ill., assignor, by mesne assignments, to Spencer, White & Prentis, Incorporated, New York, N. Y., a corporation of Connecticut
Application February 29, 1932, Serial No. 595,755
6 Claims. (Cl. 61—57)

1. The process of boring holes in the ground and lining the same, which comprises digging the hole and inserting casing sections in the hole as the hole is deepened in superposed unattached relation and with the insertion of each section lowering previously inserted sections, and controlling from above the ground the downward movement of said sections by operation upon the lowermost only of mid sections.



2,003,394
AUTOMATIC REAR DOOR LOCK FOR VEHICLE BODIES
Joseph C. Sell, Detroit, Mich.
Application May 8, 1934, Serial No. 724,555
2 Claims. (Cl. 292—182)

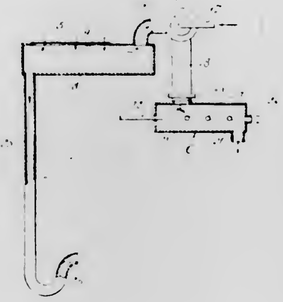
1. A safety latch for automobile doors wherein there is provided a pillar between the swinging front and rear doors comprising, a sliding bolt mounted in the pillar, the ends of the bolt projecting beyond the respective sides of the pillar, a sliding spring projected keeper mounted in the edge of the rear door adjacent the pillar, the rear end of the bolt being held in locking engagement

with the keeper by the front door when both of said doors are in a closed position, and means for automatically moving the bolt forwardly out of the path of movement of the keeper when the front door is moved outwardly, permitting the rear door to be moved outwardly.

2,003,395
RAIL ANCHOR
Charles B. Shepherd, New York, N. Y., assignor to The P & M Company, Chicago, Ill., a corporation of Illinois
Application February 3, 1928, Serial No. 251,571
3 Claims. (Cl. 238—330)

1. A sheet metal rail anchor for application edgewise on the base of a rail comprising a body extending under the rail base, a jaw member on one end of the body to extend around and engage said rail base at one side of the rail, a tie abutting element at the same end of the body extending below said body, an upward extension on the other end of the body recessed to provide a small jaw arranged to automatically snap over and engage the upper corner portion of the rail base when the first mentioned jaw member is driven upon the other side of the rail base, and a tie abutting element at the small jaw end of the body extending below said body; said body being formed with lateral bends providing a bowed portion extending outwardly away from the tie.

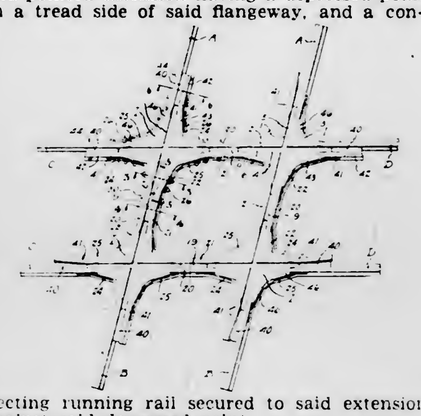
2,003,396
BODY TRIM STRUCTURE
Alfred J. Smith, Detroit, Mich., assignor to Woodall Industries Incorporated, a corporation of Michigan
Application November 15, 1930, Serial No. 495,940
4 Claims. (Cl. 45—138)



1. A vehicle body interior comprising, in combination, a door frame having a plurality of

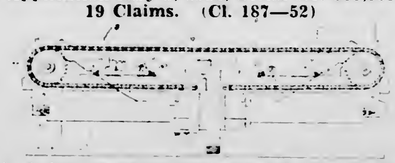
spaced apart apertures around its margin, each aperture having a horizontal supporting edge, a panel having a plurality of strips secured to the rear thereof along its margin, and substan-

tially L-shaped securing means integral with said strips projecting rearwardly and downwardly of said panel and seated upon the horizontal supporting edges of in said frame apertures.



2,003,397
MOISTURE EXTRACTION
Horace L. Smith, Jr., Richmond, Va., assignor to Thermal Engineering Corporation, Richmond, Va., a corporation of Virginia
Application July 17, 1934, Serial No. 735,718
3 Claims. (Cl. 34—48)

1. Apparatus for extracting moisture from permeable material comprising a vacuum chamber having a restricted inlet opening therein, means for continuously moving moist air permeable material over said opening, a steam jet ejector having an inlet duct connected to said chamber adjacent its upper surface, means for condensing steam from said ejector and a downwardly extending water outlet duct having its upper end in communication with said chamber adjacent the lower surface of said chamber and having a reverse bend adjacent its lower end.

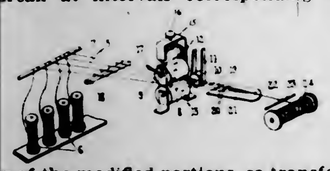


2,003,398
RAILROAD CROSS-OVER
James B. Strong, New York, N. Y., and Albert F. Huber, St. Louis, Mo., assignors to Ramapo Ajax Corporation, New York, N. Y., a corporation of New York
Application September 19, 1933, Serial No. 690,044
14 Claims. (Cl. 246—465)

1. In a rail intersection, a corner insert having a pointed extension, a flangeway passing through said extension and the point thereof, said pointed extension having a depressed point on a tread side of said flangeway, and a con-

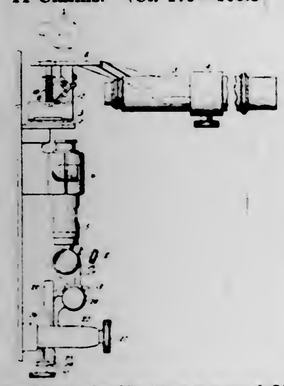
necting running rail secured to said extension against said depressed point.

2,003,399
DOOR OPERATOR
Joseph C. Tamsitt, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a corporation of Illinois
Application May 2, 1932, Serial No. 608,661
19 Claims. (Cl. 187—52)



1. A door operator mechanism for opening and closing the hatchway doors of an elevator comprising, a carriage mounted on the elevator, means on the elevator for moving said carriage, a latch on each door in the hatchway, a keeper plate mounted in the hatchway and engaged by said latch to lock the door closed, an operator bar carried by said carriage including a lever pivoted thereon intermediate its ends, means associated with the opposite ends of said lever and operated by a movement of said carriage for moving said bar outwardly from the carriage into engagement with the latch of one of said doors to operate the same first to unlock and then to open said door, means associated with said lever for disengaging the same from said latch when the movement of the door is obstructed, and a pair of interlocking circuit contacts opened by the movement of said latch in unlocking the door to prevent movement of the elevator until the door is again locked closed.

2,003,400
MANUFACTURE OF STAPLE FIBER YARNS
William Ivan Taylor and Leslie Brisbane Gibbins, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application June 23, 1933, Serial No. 677,218
In Great Britain July 4, 1932
15 Claims. (Cl. 118—69)



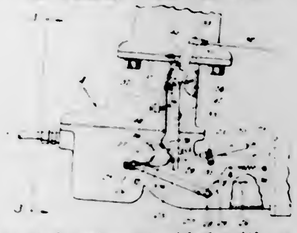
1. Process for the production of spun yarns from continuous filaments, said process comprising modifying the strength of a plurality of associated continuous filaments at intervals, dif-

ferent filaments being so treated at different points along their length, applying tension continuously along a bundle of such filaments until they break at intervals corresponding to the

spacing of the modified portions, so transforming the filaments into a continuous bundle of staple fibers, and spinning the staple fibers so produced into a spun yarn.

2,003,401
INSPECTION DEVICE
Roy V. Terry, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 27, 1929, Serial No. 388,674
11 Claims. (Cl. 179—100.3)

1. The method of adjusting a sound film reproducer which comprises threading a flexible, uniformly striated screen through said reproducer, focussing an image of a rectangular, illuminated slit on said screen, deflecting the image transmitted through said screen, magnifying said deflected image, visually comparing said magnified image with the magnified image of said striated screen, and adjusting the position of said slit until the image of said slit is parallel to the striations on said screen.



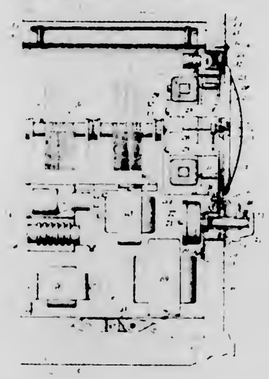
2,003,402
BORING TOOL
Albert Thomas, Homestead Park, Pa.
Application January 24, 1933, Serial No. 653,323
7 Claims. (Cl. 77—58)

7. A boring bar comprising a head with a plurality of sockets therein, three or more cutter bars mounted in said sockets and arranged to intersect, means for adjusting said cutter bars comprising means associated with one of said cutter bars for varying the effective length of said bar, means in the corresponding socket for engaging said latter means to effect an adjustment of said cutter bar relative to said boring bar, said cutter bar being formed with a plurality of plane surfaces adjacent its intersection with the remaining cutters to engage a plurality of parallel plane surfaces on said remaining cutters, said plane surfaces being diagonally interrupted by shoulders arranged to transmit movement of said first cutter to said remaining cutters, a shoulder on one of said cutter bars arranged to engage an adjacent cutter bar to limit

the outer limit of adjustment of said cutter bars, and means to lock said cutter bars in any position of adjustment, said latter means comprising a pressure member arranged to force one of said cutter bars against the remaining cutter bars under relatively high pressure.

2,003,403
CARBURETOR
Harold H. Timian, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application October 26, 1932, Serial No. 639,731
22 Claims. (Cl. 261—52)

1. In a carburetor provided with a throttle valve, a choke valve for the carburetor, and means for actuating said valves including an actuating member positively connected to said throttle valve, a hand device, a lost motion connection for connecting the hand device with said choke valve, said means constructed for operative connection with said actuating member for operating said throttle valve, said lost motion connection acting to permit actuation of the throttle valve prior to actuation of the choke valve, and throttle valve actuating means acting on said actuating member for operating said throttle valve independently of said hand device operation.



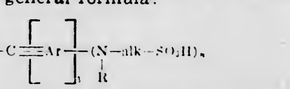
2,003,404
SLITTING MECHANISM FOR PAPER MAKING MACHINES
Charles W. Valentine, Watertown, N. Y., assignor to The Bagley and Sewall Company, Watertown N. Y., a corporation of New York
Application September 16, 1931, Serial No. 563,017
13 Claims. (Cl. 164—65)

13. In a web slitting mechanism, the combination of rotary slitters, a stationary support over

which the web travels, said support including a casing of resilient metal having a horizontal groove in which are seated a plurality of complementary slot forming blocks, two adjacent blocks forming a slot between them, means for adjusting the walls of the casing toward and from each other to facilitate the positioning and removal of the blocks, and means for moving the slitters into and out of the slots.

2,003,405
COMBINATION CLOCK AND RADIO-RECEIVER
Harry R. Van Deventer, New York, N. Y., assignor to Patent Engineering Corporation, a corporation of Delaware
Application April 7, 1932, Serial No. 603,789
11 Claims. (Cl. 250—14)

1. A radio receiver including a cabinet, a framework having side walls supported in said cabinet, a diaphragm adapted to be vibrated by a driving member, said diaphragm surrounding the side walls of said framework, a driving member for vibrating said diaphragm mounted on said framework and radio means for causing said driving member to vibrate said diaphragm, said means including a variable condenser mounted on said framework above said driving member.



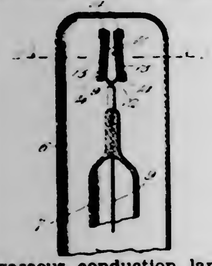
2,003,406
WIRE SPIRAL SPRING
Washington Vinar, Cicero, Ill., assignor to Burton-Dixie Corporation, Chicago, Ill., a corporation of Delaware
Application March 6, 1933, Serial No. 659,693
1 Claim. (Cl. 5—256)

A wire spiral-spring having a flat top composed of a plurality of convolutions in a plane substantially at a right-angle to the axis of the spring, said spring immediately below said head having a neck of a reduced diameter less than that of the spring immediately below said neck, said head immediately above said neck being open in the uncompressed condition of the spring whereby upon compression of the spring said neck portion may occupy the otherwise unoccupied center part of said head, said neck portion comprising solely a part of the wire of which the spring is formed of substantial pitch with its convolutions well separated from one another.

2,003,407
DYESTUFFS OF THE TRIARYLMETHANE SERIES
Ottmar Wahl, Leverkusen-I. G.-Werk, Werner Müller, Cologne-on-the-Rhine, and Rudolf Fingado, Leverkusen-Wiesdorf, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application December 14, 1933, Serial No. 702,418. In Germany December 22, 1932
4 Claims. (Cl. 260—67)

1. Triarylmethane dyestuffs having in the carbinol form the general formula:

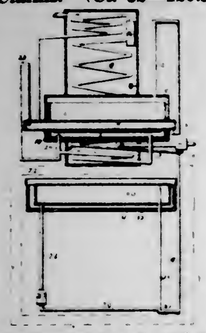
wherein Ar stands for a radical of the benzene or naphthalene series, R stands for hydrogen, alkyl, aryl or aralkyl, alk stands for an alkylene group containing at least one subsequent selected from the group consisting of the hydroxy group, an etherified hydroxy group, halogen and the sulfonic acid group, and n stands for one of the numbers one to three, being in form of their alkali metal salts dark metallic lustrous powders, dyeing animal fibres generally reddish-violet to blue to green shades.



2,003,408
CELLULOSE ESTERS OF PARTLY ESTERIFIED POLYBASIC ACIDS
Adolf Weihe, Eilenburg in Sachsen, Germany, assignor to Deutsche Celluloid-Fabrik, Eilenburg in Sachsen, Germany, a corporation of Germany
No Drawing. Application February 19, 1931, Serial No. 517,111. In Germany February 24, 1930
9 Claims. (Cl. 260—101)

2. The process which comprises acting upon a cellulose ester containing still esterifiable OH groups with a chloride of an acid ester of a polybasic acid selected from the group consisting of aliphatic acids and phosphoric acid.

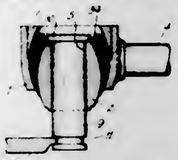
2,003,409
SIZING AND DYEING OF TEXTILES
William Whitehead, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application October 3, 1933, Serial No. 692,031
12 Claims. (Cl. 8—5)



1. In a process for the production of textile materials of improved properties, the step which comprises treating textile materials comprising an organic derivative of cellulose and having a size thereon in a bath containing a dyestuff and an organic solvent for the size, whereby the textile materials are simultaneously de-sized and dyed.

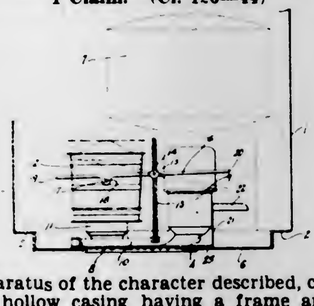
2,003,410
HIGH FREQUENCY GASEOUS CONDUCTION LAMP
Stewart C. Whitman, Jackson Heights, N. Y.
Application April 18, 1932, Serial No. 605,990
25 Claims. (Cl. 176—122)

1. In a gaseous conduction lamp, a pair of rectangular electrodes of equal areas formed of a metal surfaced with beryllium, the ratio of whose length to height is approximately two to one.



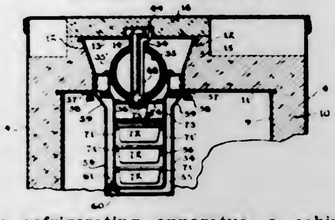
2,003,411
REFRIGERATION APPARATUS AND METHOD
Henry Elmer Willsie, New York, N. Y.
Application September 28, 1927, Serial No. 222,515
30 Claims. (Cl. 62—120.5)

13. A refrigerating apparatus of the type that includes a still-absorber comprising a conduit leading to said still-absorber and means for controlling the flow of liquid through said conduit toward said still-absorber, said means being arranged to automatically operate to shut off the flow of liquor through said conduit when the specific gravity of the liquid in said conduit reaches a predetermined value.



2,003,412
PROCESS OF ASSEMBLING RESILIENT JOINTS
Herbert W. Alden and Laurence R. Buckendale, Detroit, Mich., assignors to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application October 29, 1932, Serial No. 640,236
7 Claims. (Cl. 29—84)

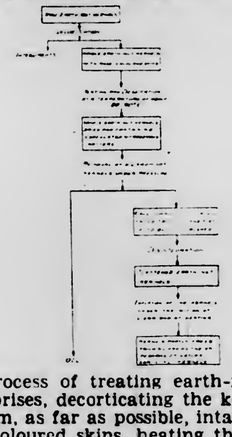
1. The process of assembling resilient joints comprising metallic inner and outer joint members having resilient material interposed therebetween, which comprises inserting said material between said inner and outer joint members, crowding said material endwise toward one end of said outer joint member by forcing said inner member longitudinally, mounting a retaining ring in the other end of said outer joint member while holding the material so crowded, and then releasing the pressure endwise on said ma-



terial to permit the same to fill the space between said inner joint member and said retaining ring.

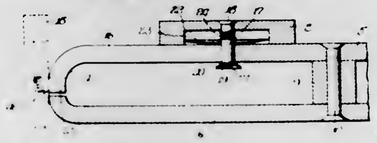
2,003,413
OIL BURNER MANIPULATING MECHANISM
Edmund E. Allyne, Cleveland, Ohio
Application August 13, 1931, Serial No. 556,745
1 Claim. (Cl. 126—44)

Apparatus of the character described, comprising a hollow casing having a frame and provided with an opening, a burner unit supported on said frame within said opening, said unit including vertically extending reservoir and burner members located side by side, a unit frame supporting the same, standards extending upwardly from said unit frame, and a two-armed lever supported on said standards and comprising arms embracing and extending endwise beyond the reservoir and burner members and connected to the latter for operation thereof from either end of the unit frame.



2,003,414
EVAPORATOR FOR REFRIGERATING SYSTEMS
Edmund E. Allyne, Cleveland, Ohio
Original application December 24, 1931, Serial No. 583,061. Divided and this application September 30, 1933, Serial No. 691,716
3 Claims. (Cl. 62—99)

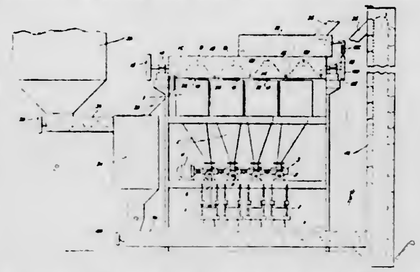
1. In refrigerating apparatus, a cabinet, a heat insulated refrigerating chamber within said cabinet and having a heat dome extending upwardly from the ceiling thereof, an evaporator in said cabinet and arranged in said dome, a heat insulated housing having an open front, means



for removably securing said housing to the ceiling of the refrigerating chamber about the margin of said dome, and a removable freezing unit in heat transfer relation with said evaporator and arranged in said housing.

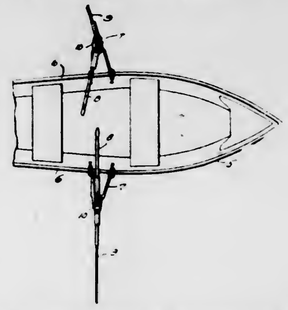
2,003,415
PROCESS OF TREATING EARTH-NUT KERNELS
Paul Ammann, Paris, France
Application October 14, 1933, Serial No. 693,646
In France October 21, 1932
6 Claims. (Cl. 99—11)

1. The process of treating earth-nut kernels which comprises, decorticating the kernels so as to keep them, as far as possible, intact and with their rose-coloured skins, heating these kernels, then pressing these kernels without crushing them, collecting the oil thus obtained, disintegrating the cake obtained after pressing, which consists of kernels flattened but not crushed, humidifying, and heating said kernels in order to restore them to their initial shape.



2,003,416
PIPE TAMPER
James C. Anderson, Highland Park, Ill.
Application November 12, 1934, Serial No. 752,570
18 Claims. (Cl. 131—59)

1. A pipe tamper having a holder, a tamping head, and means for mounting the head on the holder to slide from a position at the side of the holder to a position at the end thereof.

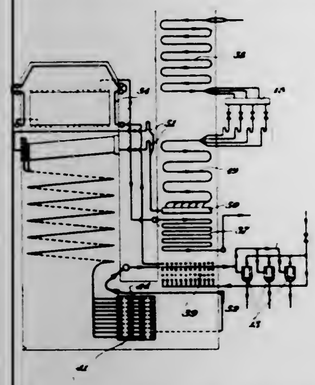


2,003,417
FEEDING MECHANISM FOR FILLING MACHINES
Arno Andreas, Munster, Germany
Application November 18, 1931, Serial No. 575,700
11 Claims. (Cl. 226—48)

1. In a bag filling machine including weighing mechanism and means to convey weighed material to a bag, a substantially horizontal bin for material, said bin having an opening in its under side adapted to discharge material into the weighing mechanism, means to supply material to the bin at one side of the opening, means to convey it along the bin, a dam on the other

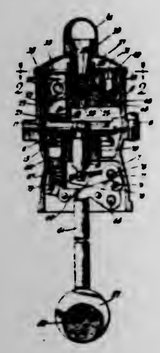
side of the opening for regulating the depth of material in the bin, and an overflow beyond the dam.

2,003,418
OAR
Victor Ankarlo, Milwaukee, Wis., assignor of three per cent to R. C. Peterson, Duluth, Minn., and ninety-seven per cent to Hannah C. Ankarlo, Milwaukee, Wis.
Application March 2, 1933, Serial No. 659,262
3 Claims. (Cl. 9—25)



1. An oar comprising a supporting member having a head and an arm rigid therewith, a second arm pivotally connected with the head portion for movement toward and away from the first arm, means carried at the extremities of the arms to readily detachably secure the same to the gunwale of a boat while permitting vertical tilting movement of the entire supporting member about an axis adjacent the gunwale, a handle section pivotally mounted on said head of the supporting member, a paddle section pivotally mounted on said head of the supporting member, and means carried by said sections to transmit motion from one to the other.

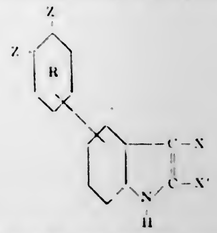
2,003,419
BOILER
Nicholas Artsay, New York, N. Y.
Application December 16, 1931, Serial No. 581,347
8 Claims. (Cl. 122—235)



3. The method of generating steam comprising forcing the water to be evaporated through a tubular structure in a continuous stream from inlet to outlet, heating the water first in a zone of low heating effect to a point where a substantial part of the water has been evaporated thereby accelerating the rate of flow, thereafter heating the mixture in zones of most intense heating effect

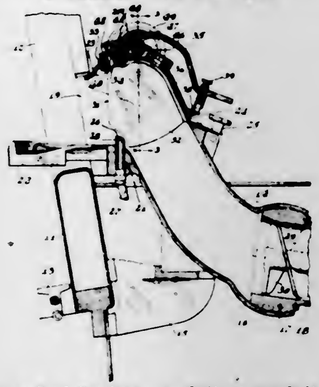
until all but a relatively small part of the water has been evaporated, withdrawing said small part

of unevaporated water from the boiler and replacing it by a similar amount of fresh feed water.



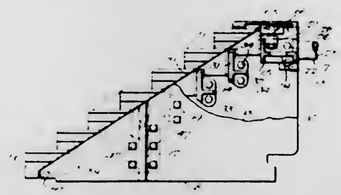
2,003,420
FUEL PUMP
Abraham M. Babitch and Gordon W. Harry, Flint, Mich., assignors to A C Spark Plug Company, Flint, Mich., a corporation of Michigan
Application October 26, 1933, Serial No. 695,314
13 Claims. (Cl. 103—150)

1. In a pump, a casing member provided with a recess, a movable pumping member cooperating with said recess to form a variable volume pumping chamber, said casing member also recessed to form a receiving chamber, said casing wall having an opening to said receiving chamber, a filter dividing said chamber into first and second parts, an axially extending boss in the first part of said receiving chamber, a radial wall extending from said boss to the peripheral wall of said casing, said boss and wall breaking the circular continuity of said first part of said receiving chamber, inlet and outlet valves in said casing member and communicating with said pumping chamber, said outlet valve being in said boss, said boss above said outlet valve constituting an air dome, said radial wall having an axial passage communicating with the second part of the receiving chamber and with the pumping chamber by way of said inlet valve, said casing having radial conduit means extending to the wall thereof from a part of the boss above the valve.



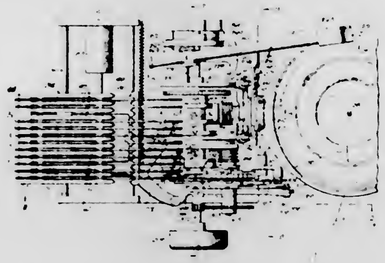
2,003,421
INDOL COMPOUND
Fritz Ballauf and Albert Schmelzer, Cologne-Mulheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 24, 1932, Serial No. 601,050. In Germany April 2, 1931
7 Claims. (Cl. 260—48)

1. The indol compounds of the general formula:



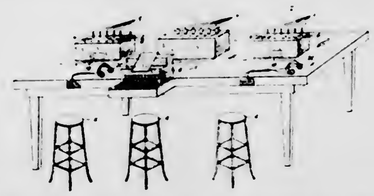
wherein "R" stands for a benzene nucleus attached in the para-position to the Z's to the benzene nucleus of the indol in the 4,5- or 6,7-positions, wherein one "Z" stands for the hydroxy group, the other "Z" stands for the carboxylic acid group, "X" stands for hydrogen or alkyl, and "X'" stands for methyl or a phenyl nucleus, being generally yellowish, water insoluble substances, soluble in aqueous alkalies and being valuable intermediate products in the manufacture of dyestuffs.

2,003,422
STOKER FUEL DEFLECTOR
Andrew Bayreuther, Albany, N. Y., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application June 13, 1930, Serial No. 460,835
9 Claims. (Cl. 110—101)



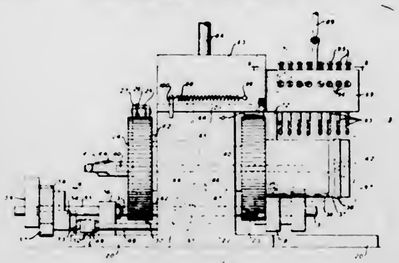
7. In a fuel feeding conduit, a conduit section extending upwardly and forwardly and terminating in a mouth portion, said section adjacent its mouth portion having therein a deflector vane pivotally mounted on an approximately vertical axis movable in a straight line in a horizontal direction transversely of the conduit, means for so moving said axis, and means for adjusting said deflector vane angularly about its axis.

2,003,423
FURNACE GRATE STRUCTURE
Joseph S. Bennett, Merion, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 28, 1931, Serial No. 553,622
10 Claims. (Cl. 110—44)



1. A stoker grate structure comprising a frame including a plurality of transverse bars arranged in an inclined series, and a plurality of facing elements mounted on said bars and forming the effective fuel-supporting surface of the grate, each of said elements having a face abutting an opposed face of one of the bars and having also a depending portion normally disposed in substantially abutting relation with the next lower bar of the series whereby accidental displacement of the elements from the frame is prevented.

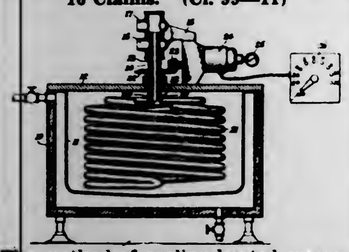
2,003,424
AUTOMATIC PHONOGRAPH
Folke A. Brandstrom, Chicago, Ill., assignor to The John Gabel Mfg. Co., Chicago, Ill., a corporation of Illinois
Application February 1, 1932, Serial No. 590,047
14 Claims. (Cl. 274—10)



4. In an automatic phonograph, the combination of a record magazine, a turntable, and means for transferring a record from said magazine to said turntable comprising record clamping jaws adapted to engage a marginal portion of a record, a cam shaft, a jaw carrier mounted on said cam shaft for swinging movement thereabout, a jaw mount mounted in said carrier for movement in a substantially radial direction relative to said cam shaft, said clamping jaws being mounted in said mount for movement towards and from each other, cam means on said cam shaft for effecting radial movement of said mount and movement of said jaws towards and from each other, and cam means carried by said cam shaft and operating in timed relation with said jaw actuating cam means to lock said jaw carrier against swinging movement about said shaft during the radial and clamping movements of said mount and jaws respectively.

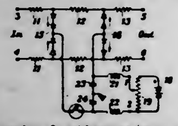
2,003,425
RADIO TELEGRAPH CONCENTRATOR
Vincent H. Brown, Ozone Park, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 15, 1933, Serial No. 656,874
1 Claim. (Cl. 178—75)

The combination with a radio telegraph switchboard having an incoming line and a glow lamp individual to said line and arranged to light up on the receipt of signals at said switchboard from over said line, a key and a busy lamp also individual to said line, said busy lamp functioning to light up only during the actuation of said key, and a translating device in circuit with said key arranged to bridge said line at said switchboard upon the actuation of said key, of an automatic recorder, and switching mechanism intermediate said line and said switchboard, said mechanism functioning in one position to connect said line to said switchboard and in another position to connect said line to said recorder.



2,003,426
METHOD OF AND APPARATUS FOR WORKING MATERIALS
Theophile Corbeels, Garwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 11, 1933, Serial No. 697,563
13 Claims. (Cl. 41—1)

1. In a material working machine, a carriage to hold a piece of work, a second carriage to hold a tool, means to move the work relatively to the tool in one direction, means to move the work in a second direction relatively to the tool, means to move the tool relatively to the work, and means to engage the tool operatively with the work and to disengage it therefrom.

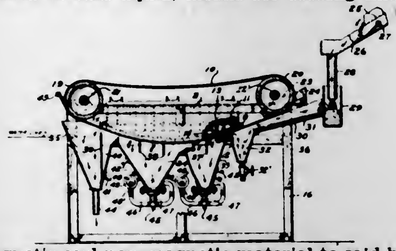


12. A method of surface ornamenting materials which includes the step of impressing a predetermined pattern of markings upon a surface of an article a predetermined number of times and displacing the pattern upon the surface at successive impressions through a predetermined complexly regular cycle of relative positions, whereby the complexity of the compound pattern of markings produced is such as to appear irregularly haphazard.

2,003,427
TREATMENT OF CREAM
Frits G. Cornell, Jr., Mountain Lakes, N. J.
Application January 10, 1934, Serial No. 706,029
16 Claims. (Cl. 99—11)

1. The method of cooling heated cream which comprises passing cooling medium in heat exchange therewith, agitating the cream and controlling the degree of agitation in accordance with temperature decrease to minimize agglomeration of butter-fat globules.

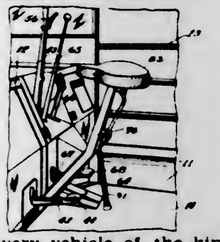
2,003,428
VOLUME CONTROL FOR TRANSMISSION CIRCUITS
Frank A. Cowan, East Orange, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application September 29, 1932, Serial No. 634,083
7 Claims. (Cl. 178—44)



1. A four-terminal attenuator comprising two balanced I sections in series, the series elements being pure resistance and the shunt elements being rectifiers of non-linear characteristic, the first shunt element consisting of two rectifiers in series and opposed to each other, the second shunt element consisting of an identical pair but poled in the opposite direction, and means associated with the rectifiers to change their effective resistance.

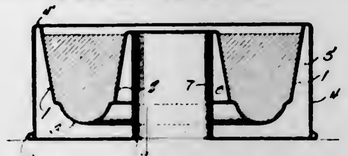
2,003,429
LIQUID COMPOSITION
Henry L. Cox, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application October 17, 1931, Serial No. 569,541
5 Claims. (Cl. 252—5)

1. Medium for transferring heat or pressure consisting of a substantially anhydrous mixture of at least two polyhydric alcohols which freezes at a temperature below about −50° C., the boiling points of the individual alcohols being separated by less than about 20° C.



2,003,430
APPARATUS FOR REMOVING MAGNETIC FROM NONMAGNETIC MATERIAL
Robert E. Crockett, Pompton Lakes, N. J., assignor to Dings Magnetic Separator Co., Milwaukee, Wis., a corporation of Wisconsin
Application August 24, 1932, Serial No. 630,174
12 Claims. (Cl. 209—232)

1. In a separator, means forming a liquid basin, means for producing a magnetic field of substantially catenary shape having successive sections of reversed polarity and disposed beneath the liquid level in said basin, a belt having a lower stretch transportable along said field while immersed in said liquid, means for feeding mixed

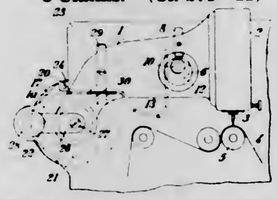


magnetic and non-magnetic material to said belt stretch, a series of baffles disposed in said basin in close proximity to said belt stretch, and means for discharging separated material from said basin together with some of the liquid.

2,003,431
MOTOR VEHICLE CONTROL
William B. Fageol, Kent, Ohio
Application August 21, 1931, Serial No. 558,616
7 Claims. (Cl. 180—77)

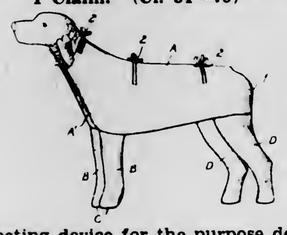
1. In a delivery vehicle of the kind that includes a passageway extending across the body, vehicle control elements in the form of a foot pedal controlling the clutch and brake mechanism of the vehicle, and a fuel feed control disposed at one side of said passageway, and a narrow seat disposed so as to be foldable toward the same side of said passageway, said seat being mounted between said pedal and said fuel feed control.

2,003,432
MOLD
Arnold R. Finch, West Bend, Wis., assignor to West Bend Aluminum Co., West Bend, Wis., a corporation of Wisconsin
Application April 4, 1934, Serial No. 718,898
4 Claims. (Cl. 107—19)



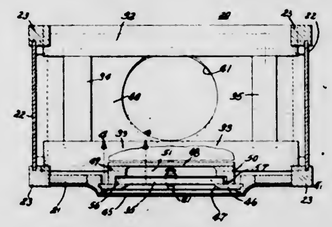
1. A mold comprising a bottom, and inner and outer mold side walls connected to the bottom, and inner and outer peripheral walls connected to said side walls and cooperable therewith when the mold is inverted to provide chambers adapted to contain a heated fluid, said chambers in heat exchanging relation with the interior of the mold.

2,003,433
AIRCRAFT BODY
James B. Ford, Tulsa, Okla.
Application July 1, 1932, Serial No. 620,500
7 Claims. (Cl. 244—30)



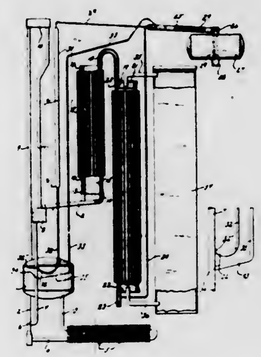
1. An aircraft fuselage comprising a body having a shell of longitudinally extending panels having inturned side flanges secured against each other, heads for ends of said body having marginal flanges secured against the panels, and front and rear sections for the fuselage aligned with the body and secured against said heads, the front section being open at its front end to admit air and walls of the front section having discharge openings formed therein for escape of air, and an annular deflector in said front section bearing against its walls back of the discharge openings and serving to direct air towards the same.

2,003,434
PHONOGRAPH
Leo Goldhammer, Munich, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application June 9, 1933, Serial No. 675,126
In Germany June 16, 1932
8 Claims. (Cl. 274—11)



1. In a phonograph apparatus, in combination, a sound arm comprising a first and a second part, means for movably connecting said two parts of said sound arm, a sound box connected with the first part of said sound arm, a base plate, an axle fixedly mounted on said base plate, the second part of said sound arm being rotatable about this axle, and means cooperating with said base plate and said second part for displacing said second part in the direction of said axle.

2,003,435
PROTECTING DEVICE FOR AUTOMOBILE UPHOLSTERY
William C. Groff and Walter C. Siebens, St. Louis, Mo.
Application December 18, 1933, Serial No. 702,874
1 Claim. (Cl. 54—79)



A protecting device for the purpose described, composed of a fabric body portion that conforms approximately to the general shape or outline of a dog's body, and leg and feet casings attached to said body portion, said body portion comprising two side pieces attached to a substantially wedge-shaped belly piece, and each of said leg and feet casings being composed of two side pieces whose lower ends are attached to a substantially disk-shaped end piece, and whose upper ends are attached respectively to the belly piece and to one of the side pieces of said body portion.

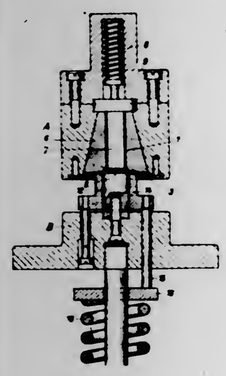
2,003,436
RADIOCABINET
John E. Grimm, Dayton, Ohio, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application April 20, 1931, Serial No. 531,354
4 Claims. (Cl. 312—7)

1. In a radio cabinet having a compartment to house a receiver, the combination comprising, a front wall for said cabinet providing a windowway, guide rails affixed to the cabinet wall in parallel arrangement on either side of said windowway, an instrument panel secured to said rails and being spaced from said front cabinet wall, a slidable closure running in said rails and adaptable to open and close said window-way, whereby access may be had to controls protruding through the instrument panel, or the same may be covered.

2,003,437
ABSORPTION REFRIGERATING APPARATUS
Edward Gruber, Cleveland, Ohio, assignor to Edmund E. Allyne, Shaker Heights, Ohio
Application January 21, 1932, Serial No. 588,036
7 Claims. (Cl. 62—120.5)

1. In absorption refrigerating apparatus, a still-absorber, condenser and evaporator connect-

ed in operative cycle in the order mentioned, a pressure drain conduit having a liquid seal connection with the evaporator and communicating with the still-absorber, said drain conduit being enlarged intermediate its ends, and a by-pass gas return connection leading from the gas space of the evaporator and provided with sealing means effective to prevent flow toward the evaporator and arranged to permit free flow of returning gas from the evaporator toward the still around the condenser.



2,003,438

TOOL FOR MAKING CARTRIDGE SHELLS

Léon Auguste Guignet, La Varenne Ste. Hilaire, France, assignor to The Compagnie Royale Asturienne des Mines, Paris, France, a corporation of Belgium

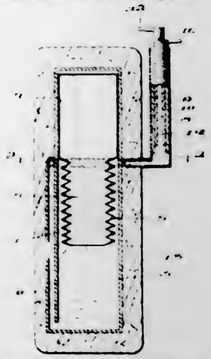
Original application March 1, 1933, Serial No. 659,115, now Patent No. 1,974,270, dated September 18, 1934. Divided and this application September 9, 1933, Serial No. 688,760. In Germany January 17, 1933

3 Claims. (Cl. 153—48)

1. A tool for the production of a double fold between the bottom and the side of a unitary cartridge shell, comprising an upper part, said upper part comprising a mandril for said shell, having a beveled lower end adapted to produce the inner convolution of said fold upon application of an axial thrust upon said shell, a divided liner shaped and adapted to move radially to grip said shell and having a recess adapted to produce the outer convolution of said fold upon application of said thrust, and a lower part, the latter comprising a fixed plunger, a relatively movable flange surrounding said plunger, and adapted to engage said liner to cause it to move laterally and a biasing spring tending to oppose movement of said flange.

2,003,439

GAUGE



James Harris Hardy, Columbus, Miss.

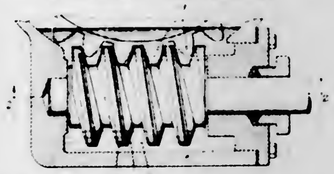
Application February 19, 1931, Serial No. 517,031

Renewed October 30, 1934

3 Claims. (Cl. 73—4)

2. An altimeter comprising a casing, a smooth cylindrical air chamber therein terminating in a communicating bellows at an end thereof, and a fluid chamber enclosing a fluid acting on said bellows, said bellows being disposed in the top

of said fluid chamber and in contact with the upper portion of the fluid in said chamber.



2,003,440

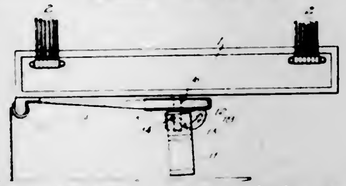
VIBRATION ABSORBING WORM

Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 19, 1931, Serial No. 575,983

4 Claims. (Cl. 74—458)

1. In a rotatable positive drive device engaging means on the device having separate yieldable contact surfaces, rigid supporting members therefor, and a felt damping medium interposed between said surfaces and the supporting members.



2,003,441

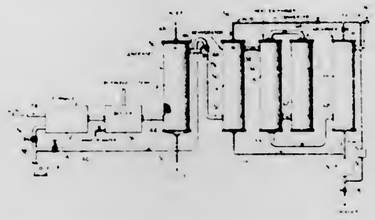
DRIVING MECHANISM FOR PRODUCING GYRATORY MOVEMENT

George H. Hebebrand, St. Louis, Mo.

Application May 19, 1934, Serial No. 726,597

7 Claims. (Cl. 74—86)

1. Driving mechanism for producing gyratory movement of a suspended body, comprising a suspended weight rotatably supported on the body and capable of free bodily movement in an outward and upward direction independent thereof under power of centrifugal force, and the center of gravity of the weight when at rest substantially coinciding with the center of gravity of the suspended body, and means for rotating said weight.



2,003,442

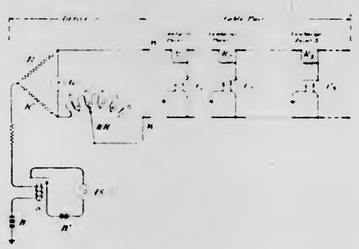
MANUFACTURE OF SULPHURIC ACID FROM HYDROGEN SULPHIDE GAS

Ingenuin Hechenbleikner, Charlotte, N. C., and Thomas C. Oliver, Great Neck, and Samuel F. Spangler, Flushing, N. Y., assignors to Chemical Construction Corporation, Charlotte, N. C., a corporation of Delaware

Application March 7, 1932, Serial No. 597,180

16 Claims. (Cl. 23—175)

1. In the manufacture of sulphuric acid by the contact process, the method which includes burning highly concentrated H_2S gas in a limited air supply, subjecting the combustion gas to cold purification, adding oxygen thereto, and producing sulphuric anhydride by catalytic conversion of the resulting gas mixture.



2,003,443

CONTACTOR INDICATOR

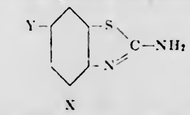
Thomas C. Henneberger, Caldwell, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Application June 9, 1931, Serial No. 543,233

5 Claims. (Cl. 177—311)

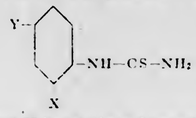
1. In association with a pair of conductors extending over substantially the same path and having an office at one end thereof and a plurality of short-circuiting devices located therealong and designed to operate thereon, a plurality of fixed resistances each associated locally with one of said short-circuiting devices, circuit connections whereby any one of said fixed resistances is connected effectively in series with the first conductor of said pair when its associated device or any device more distant from said office is operated, a resistance at said office, circuit connections whereby said office resistance is connected effectively in series with the second conductor of said pair upon the operation of any one of said short-circuiting devices, and means at said office responsive to the operation of any one of said short-circuiting devices for indicating the difference between the resistance of the two conductors and the respective elements effectively in series therewith, the effective lengths of the two conductors being equal.

2,003,444



PROCESS OF PRODUCING AMINO-ARYL-THIAZOLE-COMPOUNDS

Richard Herz, Frankfort-on-the-Main, and Max Schubert, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware



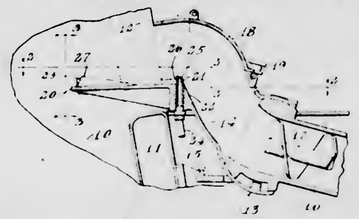
No Drawing. Application June 1, 1931, Serial No. 541,534. In Germany January 26, 1929

5 Claims. (Cl. 260—44)

1. A process for producing amino-thiazole-compounds of the general formula:

wherein X means hydrogen or methyl, Y means hydrogen, methyl or alkoxy or Y is halogen when X represents methyl, which process comprises acting with disulfurdichloride (S_2Cl_2) on thio-urea-derivatives of the general formula:

wherein X and Y have the aforesaid signification.



2,003,445

FUEL DISTRIBUTOR

John H. Ichter, Ashley, Pa., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware

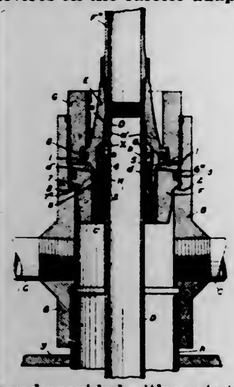
Application September 12, 1930, Serial No. 481,370

6 Claims. (Cl. 110—101)

4. The method of distributing fuel over a fire, consisting in subjecting the coarse fuel to the center or zone of higher intensity of forwardly directed blasts issuing from a single approximately horizontal row of jet openings and the fine fuel to the lower portion or zone of lower intensity of the blasts, separating the coarse from the fine fuel, imparting an upward inclination to the coarse fuel and a downward inclination to the fine fuel and directing a portion of the forwardly projected fuel laterally.

2,003,446

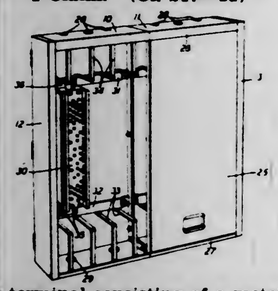
WELL TUBING HANGER



Grover C. Imler and Daniel M. Hause, Seminole, Okla., assignors of one-third to Robert L. Imler, Tulsa, Okla.

Application November 15, 1934, Serial No. 753,135

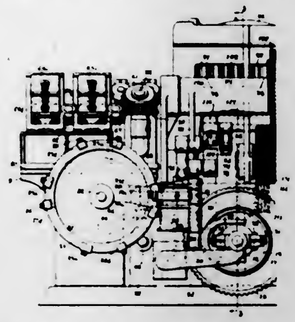
5 Claims. (Cl. 285—22)



1. A supporting structure for well tubing, comprising a hanger provided with internal screw threads that are adapted to co-act with external screw threads on the tubing, a ring-shaped carrier

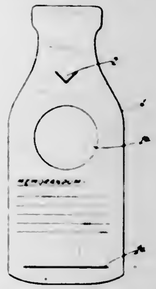
adapted to be screwed upwardly into the lower end of the hanger and of such diameter as to pass freely over the tubing prior to connecting the tubing to the hanger, and a plurality of frictional gripping devices on the carrier adapted to engage

the tubing and provided with parts that are interlocked with the carrier in such a way as to permit slight relative movement between said gripping devices during the operation of screwing the carrier up into the hanger.



2,003,447
CABLE TERMINAL
Le Roy W. Kelsay, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 7, 1933, Serial No. 664,890
1 Claim. (Cl. 247—11)

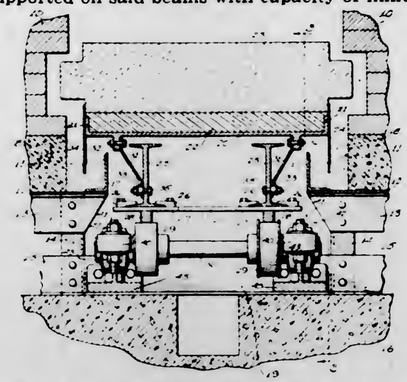
A cable terminal consisting of a metallic housing comprising similar U-shaped sections, said sections being secured together by inturned flanges on the edges of said sections, doors hinged to the outer flanges of each end section, pairs of transverse bars secured to the rear of each section, binding post panels mounted thereon, and distributing racks at the top and bottom of each section, said racks comprising spaced apart strips secured at one end to the section ends and at their other ends to said bars.



2,003,448
APPARATUS FOR MAKING METAL BINDING STRIPS
Hermann Hans Johannes Kruse, Hemelingen, near Bremen, Germany, assignor to No-Nail Cases Proprietary Limited, London, England, a company of Victoria, Australia
Application May 12, 1933, Serial No. 670,807
In Great Britain June 30, 1932
16 Claims. (Cl. 153—2)

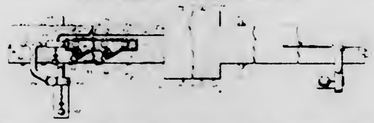
1. Apparatus for producing toothed metal binding strip, comprising a row of punches adapted to perforate and thereby shear teeth out of a strip, a movable strip-support member having apertures with which said punches co-operate to set the teeth to a predetermined position relative to the perforated portion of the strip, means for feeding the strip longitudinally of the row of

punches, and control mechanism which serves automatically, upon the completion of a punching operation, to withdraw said support member, to actuate said strip-feeding means so as to advance the strip through a predetermined distance, and thereafter to return said support member to its operative position.



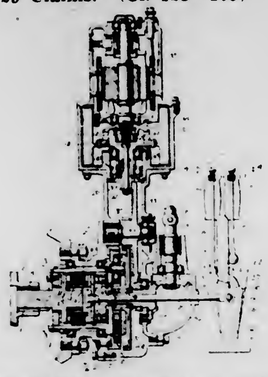
2,003,449
MEMORANDUM CARD
Lee B. Kuhn, Brooklyn, N. Y.
Application March 29, 1933, Serial No. 663,311
4 Claims. (Cl. 40—4)

2. A memorandum card consisting of an oblong piece of stiff paper having one end larger than the other end, a slot in the larger end adapted to receive the smaller end and a relatively large opening through the card in the larger end intermediate the slot and the smaller end of the card, the opening being adapted to receive a member to support the card, and means for locking the smaller end of the card in the slot.



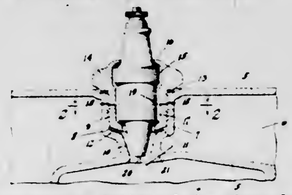
2,003,450
CONVEYER FOR KILNS
Lester L. Ladd, Lockport, Ill.
Application January 15, 1934, Serial No. 706,607
3 Claims. (Cl. 25—142)

1. A conveyer for kilns, comprising a table movable along a horizontal path, rollers journaled beneath said table, a carriage including twin rails supported on said rollers and twin annular beams mounted on said rails, and depending struts on the under side of said table supported on said beams with capacity of limited



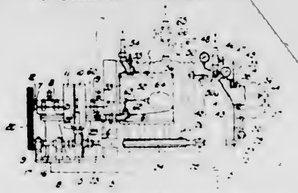
lateral shift relatively to said beams under expanding and contracting movements of said table.

2,003,451
KILN
Lester L. Ladd, Lockport, Ill.
Application January 26, 1934, Serial No. 708,366
11 Claims. (Cl. 25—142)



1. A tunnel kiln comprising a tunnel having a ware passage through which the ware travels, and a pair of nozzles in the upper portion of said passage directed toward respectively opposite sides of said passage, and means for forcing air through said nozzles into said passage.

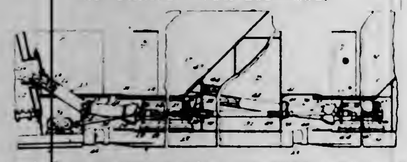
2,003,452
ENGINE STARTER
Raymond P. Lansing, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a corporation of New York
Application September 30, 1926, Serial No. 138,792
29 Claims. (Cl. 123—179)



1. An engine starter apparatus including, in a unitary construction for association with an internal combustion engine, a driving member adapted and arranged for permanent engagement with a member of the engine to be started, means surrounding and engaging said driving member for actuating the same but normally restrained from driving relation with it, controlling means for such actuating means operable to establish driving relation of such actuating means with said driving member, and means for transmitting a starting impulse to said actuating means.

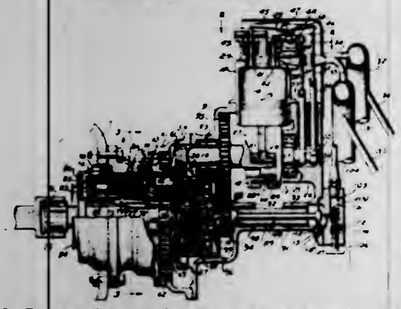
2,003,453
IGNITING DEVICE FOR INTERNAL COMBUSTION ENGINES
Taine G. McDougal, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 30, 1933, Serial No. 678,339
6 Claims. (Cl. 123—169)

1. In an igniting device of the class described and in combination with a cylinder head having spaced walls whereby a cooling medium space is formed; a hollow shell arranged to be cooled by a cooling medium within said cooling liquid space; an insulating member secured within and spaced apart from the interior of said hollow shell to thereby provide a cooling liquid jacket between the two, said hollow shell having a hole whereby said jacket is placed in communication with the cooling liquid space within said head; an insulated electrode carried by said insulating member; and a grounded electrode arranged in sparking relation with the inner end of said insulated electrode.



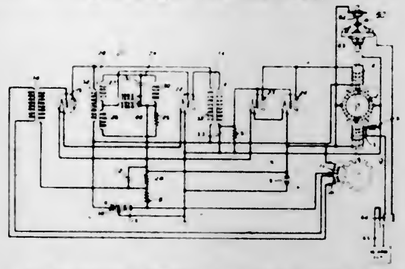
2,003,454
METHOD OF DEODORIZING, PASTEURIZING, AND CONCENTRATING FLUIDS
Henry Lamont Murray, Auckland, New Zealand, assignor to The Te Aroha Dairy Company Limited, Te Aroha, New Zealand
Application June 14, 1929, Serial No. 370,980. Renewed October 12, 1932. In New Zealand June 21, 1928
3 Claims. (Cl. 99—11)

3. The method of deodorizing cream, milk or other similar liquid by evaporating volatile essences and entraining non-volatile odorous substances, said method consisting in continuously introducing heated liquid into a container, injecting steam into the previously heated liquid prior to its introduction into the container, utilizing centrifugal force to produce a revolving wall of liquid within said container, thereby continuously expelling vapors and fixed gases from



the liquid, continuously condensing said vapors and exhausting said fixed gases thereby maintaining high vacuum in said container, continuously withdrawing liquid from said container and preventing increase in vacuum above a predetermined value thereby controlling the boiling point of the liquid.

2,003,455
LOCOMOTIVE AND TENDER
John W. Myers, Roanoke, Va., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application October 28, 1932, Serial No. 639,958
Renewed November 3, 1934
25 Claims. (Cl. 105—234)



1. A locomotive tender provided with a fuel bunker and a stoker compartment constituting a fuel compartment and including a water compartment separated from the fuel compartment and a water tight conveyor conduit disposed in said water compartment at one end opening into the fuel compartment and at the other opening through the rear wall of the tender.

2,003,456
ENGINE STARTING APPARATUS
Romeo M. Nardone, East Orange, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application September 5, 1930, Serial No. 480,014
4 Claims. (Cl. 60—18)

1. In starting mechanism of the class described, the combination of a shaft operatively connected with a member of the engine to be started and adapted to be driven by the engine after the latter is operating under its own power, a fluid pressure motor, a source of fluid under pressure for actuating said motor, transmission means including a limited torque clutch for operatively connecting said shaft with said fluid pressure motor during starting of the engine, a friction clutch operatively connected to said shaft, and a pair of clutch members, one of which is operatively connected with said friction clutch and the other of which is drivably connected with the fluid pressure motor, fluid pressure actuated means normally holding said clutch members out of engagement when the pressure at the source is above a predetermined value, and resilient means for urging one of said clutch members into engagement with the other upon a decrease in pressure below said predetermined value.

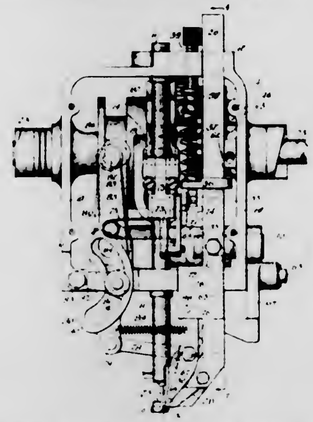
2,003,457
REGULATOR CIRCUIT
Edmund R. Morton, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 20, 1933, Serial No. 694,372
6 Claims. (Cl. 171—312)

1. In a control system, a motor having a regulating field winding and a shunt field winding, a resistance element in series circuit with said shunt field winding, means for controlling said regulating field to maintain the motor speed constant with close precision, a relay controlling an auxiliary circuit, and auxiliary control means more powerful than the precision control means, normally inactive when the motor is held at constant speed by said control means and operative in case of failure of said first mentioned means to hold the motor speed constant for connecting the coil of said relay in shunt to the shunt field winding when the motor operates below normal speed and for connecting the coil of said relay in shunt to said resistance element when the motor operates above normal speed.

2,003,458
METHOD OF DEHYDRATING PINE OIL
Sereno G. Norton, Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 19, 1931, Serial No. 545,499
13 Claims. (Cl. 260—167)

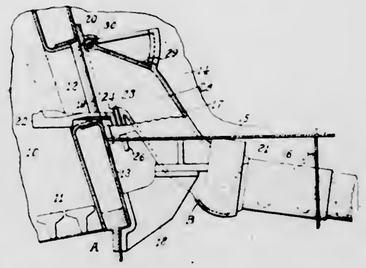
1. The method of dehydrating pine oil which includes heating pine oil in the presence of silica gel and an organic dibasic acid.

2,003,459
PISTON
Frank N. Nutt, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 25, 1929, Serial No. 409,599
1 Claim. (Cl. 309—11)



A piston which includes a head, a skirt which is joined to the head throughout a part of its circumference and is disconnected from the head throughout the remainder of its circumference, openings in the skirt intermediate the portion which is connected to the head and the portion which is disconnected therefrom, and wrist pin bosses carried by the head and located in said openings out of contact with the skirt—the first mentioned portion of the skirt being of greater thickness than the portion on the opposite side of the wrist pin bosses and of less thickness than the portions of the skirt under the openings.

2,003,460
REMOVABLE CAP FOR CANS OR THE LIKE
Samuel O. Pauli, Wellsburg, W. Va., assignor to Eagle Manufacturing Company, Wellsburg, W. Va., a corporation of West Virginia
Application November 14, 1933, Serial No. 697,974
10 Claims. (Cl. 220—94)



1. A can cap formed with spaced slots, a handle including a bail portion, inturned lips at the bottom of the bail portion to overlie and rest upon the top of the cap, projections at the inner end of the lips to pass through the slots, said projections being designed to be bent to underlie the lips and clamp the material of the can between such portions and the lips.

2,003,461
SEWING MACHINE
Walter Pearson, Whitman, Mass.
Application September 9, 1933, Serial No. 688,806
11 Claims. (Cl. 112—34)

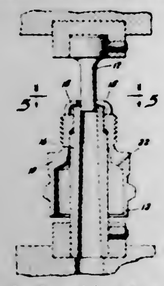
1. A sewing machine of the class described having, in combination, a work-support; a needle-bar movable toward and from said work support; a power transmitting lever whereof one end is connected with said needle-bar; a cam cooperatively associated with the opposite end of said lever for vibrating the latter thereby to cause the same to reciprocate said needle-bar toward and from said work-support so that it dwells for a period of time at each end of its stroke; a driven shaft on which said cam is mounted, and a shiftable fulcrum for said power-transmitting lever that is adjustable relatively to said lever toward and from said cam so as to vary the length of the stroke of the needle-bar without changing the position occupied by the latter when it is at the limit of its movement toward said work-support and without variation in the length of time said needle-bar dwells at said limit.

2,003,462
STOKER
Morris W. Pool, Brooklyn, and Edwin Archer Turner, New York, N. Y., assignors to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application April 1, 1932, Serial No. 602,428
6 Claims. (Cl. 110—101)

1. In combination with a firebox having a wall with an opening therein, a stoker discharge conduit on said wall embracing said opening, a distributor plate positioned in the opening adjacent the lower margin thereof, means for projecting fuel across said plate, and a firedoor forming a movable wall portion of said conduit, said firedoor being mounted to swing about a substantially horizontal transverse axis into said opening to a position above said distributor plate and over the projected fuel.

2,003,463
HOE SHANK AND METHOD OF MAKING THE SAME
Carl H. Poythress, Laurel, Miss.
Application March 8, 1934, Serial No. 714,681
4 Claims. (Cl. 76—109)

1. A method of constructing the shank portion of a hoe or like implement, consisting in providing a handle-receiving ferrule with a sharply conical end, providing a bar section, forming on the bar section an enlarged head to wedge within the sharply tapered section of the ferrule, with the bar section projecting beyond the ferrule, welding the bar section and ferrule at their juncture, and forming the free end of the bar section with a tapered portion for cooperation with the blade of the implement.



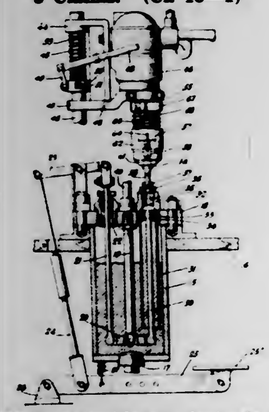
3. A shank for a hoe including a bar section of appropriate length, a ferrule formed with a slightly conical hollow handle-receiving portion and a sharply tapered hollow part in advance of the handle-receiving portion, one end of the bar section being enlarged and shaped to correspond with the interior of the sharply tapered portion of the ferrule, said bar section fitting within the sharply tapered portion of the ferrule to reinforce and brace the same and extending beyond the ferrule and terminating in a formed end for connection with the blade, the juncture of the bar section and ferrule at the forward end of the latter being permanently secured and presenting a practically unbroken exterior surface.

2,003,464

METHOD OF MAKING SPARK PLUGS

Hector Rabezzana, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application April 26, 1933, Serial No. 668,012
8 Claims. (Cl. 29—155.51)



1. The method of making a spark plug which consists in providing a hollow spark plug shell with an electrode which is longer than is required in the finished plug; removing surplus material from the end of said electrode; assembling an insulating member having a central electrode within said hollow shell; definitely and exactly locating the inner end of said central electrode relative to said shell electrode so that a proper spark gap will be present in the finished plug; and securing said insulating member in place within said shell while said central electrode is kept in the position aforesaid requisite to secure a proper spark gap in the finished plug.

2,003,465

MACHINE FOR ASSEMBLING SPARK PLUGS

Hector Rabezzana, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Original application January 4, 1930, Serial No. 418,572. Divided and this application September 25, 1933, Serial No. 690,838
5 Claims. (Cl. 18—1)

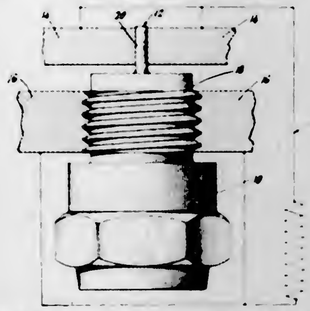
1. Means to assemble an electrode in a spark plug insulator core, including means to move an electrode in the bore of the core, first to an intermediate part way home position and later to its proper operative position, and means to inject sealing material in the bore while the electrode is held in its first mentioned position for subsequent compression when the electrode is moved to its operative position.

2,003,466

SPARK GENERATING SYSTEM

Donald W. Randolph and Hector Rabezzana, Flint, Mich., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application April 22, 1933, Serial No. 667,333
Renewed July 12, 1934
11 Claims. (Cl. 123—148)



1. In an impulse spark generating system the combination of a condenser, means for charging the condenser comprising an auxiliary circuit including a source of electrical energy, an inductance and an interrupter arranged in series, means for connecting the condenser to the auxiliary circuit so as to receive a charge when the circuit is broken at the interrupter, said last named means including means for preventing discharge of the condenser therethrough.

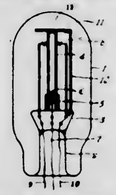
2,003,467

SPARK PLUG ELECTRODE

Donald W. Randolph and Jay T. Ford, Flint, Mich., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application June 30, 1933, Serial No. 678,342
2 Claims. (Cl. 219—10)

1. The method of welding metal parts one of which contains chromium, a portion of the chromium appearing on the surface as a constituent of an oxide film of high electrical resistance which consists in cleaning said part to remove the oxide film, coating the clean metal with a material which is not readily oxidized, assembling the parts, and passing electrical current through the parts to produce the weld.



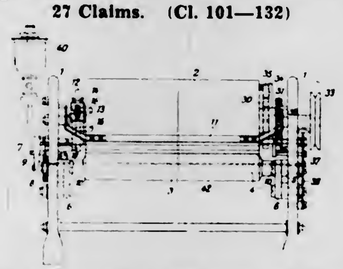
2,003,468

ELECTRIC GAS FILLED DISCHARGE TUBE

Herre Rinia and Hendrik Johannes Meerkamp van Embden, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware

Application October 28, 1931, Serial No. 571,488
In the Netherlands October 30, 1930
3 Claims. (Cl. 176—122)

1. A gaseous conduction luminous discharge device comprising a sealed envelope, a re-entrant stem, a spout mounted coaxial with and extending from said stem, an anode mounted on said stem within said spout and at that end remote from the mouth of the spout, and an electron



emitting cathode mounted on said stem outside said spout and intermediate the stem and the mouth of said spout.

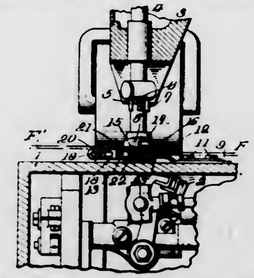
2,003,469

DUPLICATING APPARATUS

Wilhelm Ritzerfeld, Berlin, Germany

Application April 29, 1929, Serial No. 359,088. Renewed July 13, 1933. In Germany May 9, 1928
27 Claims. (Cl. 101—132)

1. In a duplicating apparatus printing onto sheets previously moistened with a rapidly volatilizing liquid, the combination of a printing roller bearing copyable mirror-script original, a pressure roller pressing copy sheets against the said printing roller, a damping device furnishing the copy sheets with a coating of said rapidly volatilizing liquid, means for actuating the printing roller, the pressure roller and the damping device in mutually dependent fashion, means for moving the said damping device into permanent contact with the copy sheets, and means for allowing the said printing roller to perform a desired number of revolutions in succession.



2,003,470

EDGE GUIDE FOR SEWING MACHINES

Charles F. Rubel, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois

Application December 5, 1933, Serial No. 701,032
4 Claims. (Cl. 112—153)

1. In a sewing machine, a stitch forming mechanism, a work support, a guide for directing overlapped fabric sections to the stitching mechanism, including a base member having a section adapted to be attached to the work support and a fabric supporting section offset therefrom and extending parallel with the work support so as to provide a space therebeneath for the guiding of a fabric section, said fabric supporting section at its outer end having an upwardly extending portion forming at its inner side an edge guide for a fabric section, a fabric supporting member contacting with the upper face of said extension and extending beyond said edge guide so as to overhang the fabric supporting section of the base member and form a fabric guiding means for the fabric section contacting with said edge guide, said fabric supporting member having an upturned and backwardly extending section forming an edge guide for the fabric section resting thereon, a plate formed integral with said fabric engaging member and disposed beneath said fabric engaging section of the base member,

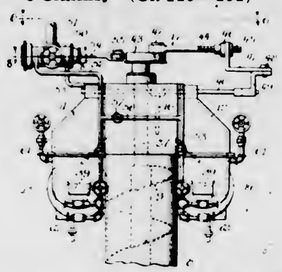
said plate having a depending member at its inner end adapted to serve as an edge guide for a fabric section when directed beneath said fabric supporting section of the base member, and means whereby said fabric supporting member and said plate may be simultaneously adjusted on said base supporting member to different set positions for varying the extent of overlap in the fabric sections.

2,003,471

SULPHONATED TERPENE PRODUCT AND METHOD OF PRODUCING SAME

Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 28, 1932, Serial No. 614,281
22 Claims. (Cl. 260—99.10)

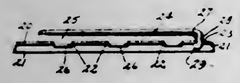


1. The process of preparing a sulphonated product which includes reacting a mixture of a polymerized terpene and another organic compound which is capable of sulphonation in conjunction with the polymerized terpene, with a sulphonating acid.

2,003,472

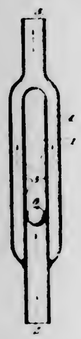
STOKING MECHANISM

Edward Ryan, Knox, Ind., and Ernest R. Funk, Galesburg, Ill., assignors to The Standard Stoker Company, Incorporated, New York, N. Y., a corporation of Delaware



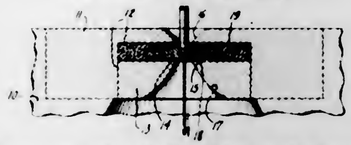
Application November 24, 1928, Serial No. 321,541
Renewed November 3, 1934
6 Claims. (Cl. 110—101)

1. In a stoker, in combination with a firebox, a screw conveyor casing arranged to extend up-



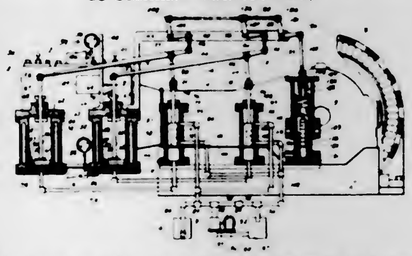
wardly outside the rear wall of the fire box, a feed screw therein, a pair of discharge conduits connected to said casing and communicating with the firebox through the rear wall thereof, means cooperating with said feed screw to distribute the fuel as it is discharged from the upper end of the casing adjustable to vary the distribution to the opposite sides of the casing, and means imparting reciprocating movement to said first named means for alternately delivering fuel to one and then to the other of said discharge conduits.

2,003,473
CHAIN TYPE DOOR FASTENER
Alfred J. Schulz and Herbert H. Schulz, Milwaukee, Wis.
Application January 22, 1934, Serial No. 707,744
7 Claims. (Cl. 292—264)



1. A door fastening chain device comprising the combination with a chain and a shoe, of an apertured anchorage plate and a rail mounted on said plate to receive said shoe and comprising a piece of sheet metal folded to provide rectilinearly disposed laterally overhanging flanges, and a centrally located mounting portion beneath said flanges and connected with said plate through said apertures.

2,003,474
FLUID FLOW METER
Eugen Schweitzer, Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application April 29, 1932, Serial No. 608,331
In Germany May 8, 1931
2 Claims. (Cl. 73—167)



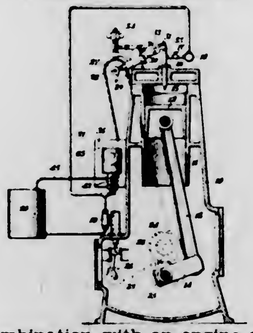
1. A device for measuring the rate of flow of gases and liquids comprising the combination of a vertical cylindrical inner tube, provided with an inlet at its lower end and with tangentially directed openings spaced longitudinally of said inner tube, a jacket tube surrounding said perforated tube and provided with an outlet and a movable ball in said inner tube, the diameter of said ball being but a little smaller than the inner diameter of the tube, so that, when the current flows through the inner tube, the ball rises, its altitude depending on the intensity of the current.

2,003,475
WIRE-DRAWING DIE
Robert C. Shipp, East Orange, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application July 21, 1932, Serial No. 623,690
7 Claims. (Cl. 205—29)

1. A mount for a wire-drawing die comprising a cup, a wire-drawing die disposed on the bottom of the cup and embedded in a mass of sodium silicate.

2,003,476
COMPRESSOR
Everett W. Swartwout, Scarsdale, N. Y.
Application May 17, 1933, Serial No. 671,480
15 Claims. (Cl. 230—21)

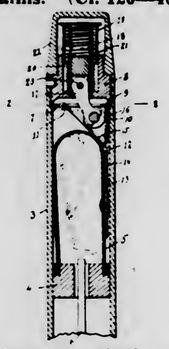
1. In a variable capacity compressor, the combination of a cylinder comprising a compression compartment, a piston reciprocable therein, power operated means for operating the said piston, inlet and discharge valves and openings, and means for varying the clearance volume in indefinite extent by increments or decrements supplemental to the normal clearance volume in response to variation of output of the compressor.



2,003,477
PROCESS FOR EFFECTING ORGANIC VAPOR PHASE REACTIONS
John C. Woodhouse, Wilmington, Del., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 28, 1931, Serial No. 519,276
17 Claims. (Cl. 260—116)

1. In a process for the synthesis of organic compounds in the vapor phase in which carbon monoxide is one of the reacting constituents the step which comprises synthesizing the organic compounds in the presence of carbon monoxide and a gaseous exciter selected from the group of gaseous exciters comprising the halogens, the hydro-halides, the alkyl halides, and the oxides of nitrogen.

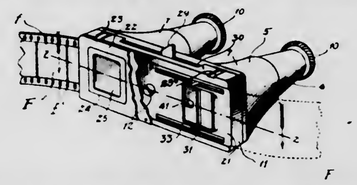
7. A process for the synthesis of acetic acid in the vapor phase which comprises diffusing carbon monoxide with hydrogen chloride, and subsequently allowing the resulting gas to react with vaporized methanol.



8. A process for the synthesis of hydrocyanic acid which comprises diffusing carbon monoxide with nitric oxide, and subsequently allowing the resulting gas to react with ammonia in the presence of a thoria catalyst.

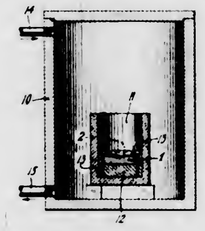
2,003,478
OVERSPEED DEVICE
Charles M. Bovard, Grove City, Pa., assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio, a corporation of Ohio
Application August 12, 1931, Serial No. 556,471
4 Claims. (Cl. 123—32)

4. In combination with an engine of the class described, of a fuel manifold connected to the engine cylinders to supply fuel thereto, means for supplying fuel under pressure to said manifold, means for regulating the amounts of fuel so supplied to the cylinders, a valve connected between said manifold and a point at lower pressure, and means responsive to speed conditions for opening and closing said valve respectively to relieve the pressure in said manifold under abnormally high speed conditions and to restore normal pressure under normal speed conditions.



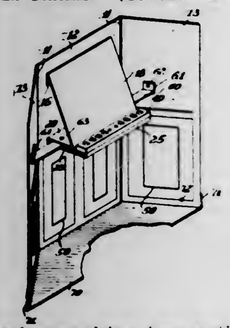
2,003,479
FOUNTAIN PEN
Herbert L. Carman, Arlington, N. J.
Application July 28, 1934, Serial No. 737,377
2 Claims. (Cl. 120—46)

1. In a fountain pen, a nipple, means for collapsing said nipple comprising a fixed member, a lever for collapsing the nipple pivotally mounted on said member and forming therewith a V, a plunger, an arm pivotally connected in the plunger, and a roller on said arm engaging the V.



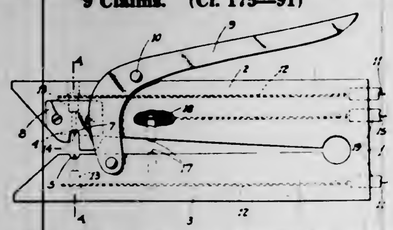
2,003,480
STEREOSCOPE
Herman A. de Vry, Chicago, Ill.
Application July 10, 1933, Serial No. 679,596
3 Claims. (Cl. 88—31)

1. As a new article of manufacture, a stereoscope adapted for use with a motion picture type film having a longitudinal series of pairs of stereoscopic pictures thereon and a longitudinal series of perforations along one of the margins thereof, and comprising a hollow body with an open front end and its rear end shaped to form a pair of side by side eye pieces; lenses in the eye pieces; a member connected to and closing the front end of the body and having a channel for holding the film across said front end of the body and in front of the eye pieces and a pair of apertures intersecting the channel and in alinement with the eye pieces, said member also having an elongated marginal notch adjacent the front end of the body and a slot adjacent the apertures; and a device for feeding the film through the channel comprising a plate mounted slidably be-



tween the member and the front end of the body and provided with an integral finger piece extending outwardly through the notch whereby it may be shifted back and forth from outside the body, and a forwardly extending spring pressed tooth carried by the plate so that it extends through and slides in the slot and is adapted for insertion in the perforations in the film, and having one side thereof substantially straight so that during shift of the plate in one direction it operates to feed the film through the channel so as to bring the pairs of pictures successively into registry with the apertures for view through the eye pieces, and having its other side cam-shaped so that upon the return stroke of the plate it automatically releases the film.

2,003,481
CLAD METAL AND PROCESS FOR PRODUCING THE SAME
Louis F. Ehrke, Newark, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application February 6, 1932, Serial No. 591,353
2 Claims. (Cl. 91—70.2)



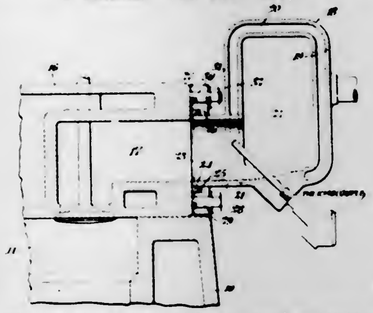
1. The process of making clad metals consisting of tungsten and copper comprising, in the presence of hydrogen, coating said tungsten with a relatively thin layer of molten copper, solidifying said molten layer, mechanically treating said copper layer and thereafter elevating the temperature of said thin layer and coating said thin layer with a second molten layer of copper whose mass is great as compared to that of said thin layer and solidifying said second layer.

2,003,482
EASEL CONSTRUCTION
Howard M. Fancher, Rochester, N. Y., assignor to The Rochester Folding Box Co., Rochester, N. Y., a corporation of New York
Application June 23, 1934, Serial No. 732,133
12 Claims. (Cl. 248—198)

1. An easel comprising two sections of sheet material hingedly connected to each other and adapted to be placed at an angle to each other to form a structure capable of standing upright on a supporting surface, and an inclined member secured to one of said sections to form a support for a sheet of paper, said inclined member being of less width than said section to which it is secured and being supported wholly by said section independently of the other section.

2,003,483
FUSE IGNITER
Jason S. Frye, Sacramento, Calif., assignor of one-third to C. E. Baker, one-third to A. I. Richards, and one-third to H. M. Rich, all of Sacramento, Calif.
Application February 21, 1933, Serial No. 657,830
9 Claims. (Cl. 175—91)

1. A fuse igniting tool comprising separate axially alined spark points, means to move the points toward each other and through the jacket of a fuse so that the adjacent ends of the points are in contact with the powder, a circuit for the points and means closing the circuit only when said points are moved in contact with the powder and also limiting the approach of the points toward each other.

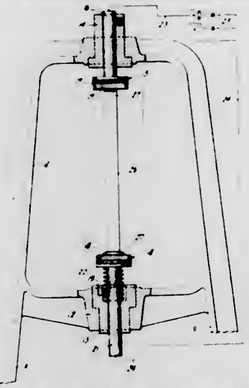


2,003,484
DOOR OPERATING APPARATUS
Edouard Gauthier, Timmins, Ontario, Canada
Application September 12, 1932, Serial No. 632,760
3 Claims. (Cl. 268—35)

1. In apparatus of the character described the combination with a pair of doors, of a longitudinally slidable operating rod, means connecting the doors with one end of the rod for swinging the doors to open and closed positions upon operation of the rod, a ledge having a recess extending beneath the operating rod, a pair of angular brackets pivotally connected to the operating rod and adapted to swing vertically, and a roller rotatably attached to the end portion of one leg

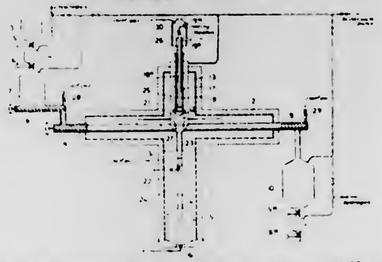
of each bracket, the said brackets being arranged so that one leg thereof will project upwardly to engage a vehicle for sliding the rod and to automatically swing to a downward vehicle disengaging position at a predetermined position of the rod.

2,003,485
EXHAUST MANIFOLD AND CONNECTION
Hewitt A. Gehres, Mount Vernon, Ohio, assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio, a corporation of Ohio
Application July 11, 1931, Serial No. 550,067
4 Claims. (Cl. 123—195)



1. The combination with an engine casting, a plurality of engine cylinders, a head for each cylinder, means for individually removably securing each head to its cylinder for vertical removal and replacement, each head being provided with an exhaust port opening on one of its lateral sides, a common exhaust manifold, short hollow extensions on said manifold extending toward said heads with a clearance fit and connecting said exhaust ports to the chamber of the manifold, packing means for the joint between the extensions and exhaust ports including a gland ring, tap bolts for drawing the lower section of each ring to the corresponding cylinder head, studs on each cylinder head projecting through upwardly opening slots in the upper section of said rings and threaded at their free ends, and nuts threaded on said studs for drawing the upper section of said rings toward the cylinder heads.

2,003,486
HEAT TREATMENT OF METALS
Thomas J. Hankins, Jr., Springfield, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application November 1, 1932, Serial No. 640,621
2 Claims. (Cl. 219—11)



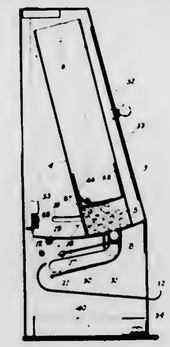
1. The method of treating a partially sintered bar which comprises locating said bar between a pair of contacts, placing a quantity of powdered tungsten between the outer ends of said bar and said contacts with said powder being contiguous with substantially only the faces of said contact

and the faces of said bar immediately adjacent each other, applying an electric potential between said contacts to elevate the temperature of said

bar to further sinter the particles of said bar, maintaining said bar in position wholly by pressure exterted in the direction of the longitudinal axis of the bar.

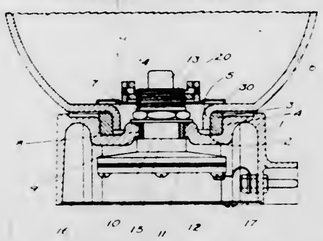
2,003,487
PROCESS OF PRODUCING SUBSTANTIALLY PURE MAGNESIUM
Fritz Hansgirg, Radenthein, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa., a corporation of Delaware
Application February 3, 1933, Serial No. 655,067
In Austria February 11, 1932
13 Claims. (Cl. 75—17)

1. The process for producing substantially pure magnesium which comprises heating material containing metallic magnesium, to liberate magnesium vapor therefrom, removing the resulting vapor by a non-oxidizing gas from the heated zone, separating out dust from said vapor, and thereafter passing it into a condensation zone, and cooling it to condensation point.



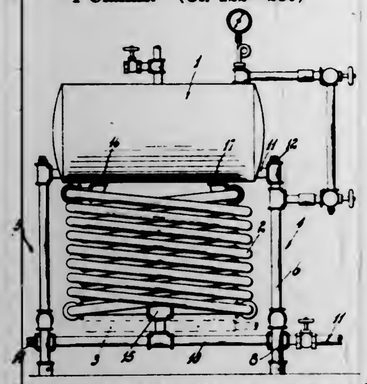
2,003,488
THREADLESS PIPE CONNECTION AND METHOD OF MAKING SAME
Ira T. Hook, New Haven, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
Application June 6, 1932, Serial No. 615,661
6 Claims. (Cl. 29—148.2)

1. A threadless pipe connection comprising a pipe of substantially uniform wall thickness having an end portion flared outwardly to provide an internal taper of an included angle in the neighborhood of approximately 21°, a fitting having an end portion within the tapered end of the pipe and externally tapered on substantially the same angle to fit the taper of the pipe, and a soldering material between said tapered sur-



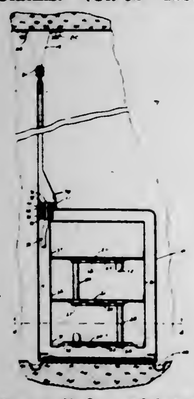
faces and bonding the inner tapered surface of the pipe to the outer tapered surfaces of the fitting.

2,003,489
CIGARETTE VENDING MACHINE
Webb Jay, Miami Beach, Fla., and Lewis Pengilly, San Francisco, Calif.; said Pengilly assignor to said Jay
Application February 8, 1932, Serial No. 591,478
12 Claims. (Cl. 194—88)



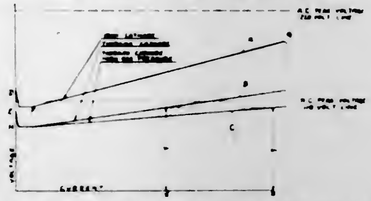
1. A coin controlled vending machine comprising a cigarette dispensing means, operating means therefor, an igniter positioned to light a dispensed cigarette, a coin passage, means actuated in conjunction with the operation of the dispensing means to advance a coin through the passage, and means actuated by the coin to set the igniter in operation.

2,003,490
BEVERAGE MAKER
Ambrose D. Olds, Wichita, Kans.
Application October 20, 1934, Serial No. 749,240
9 Claims. (Cl. 219—43)



1. In combination a heater base, a receptacle for the base having a central opening in its bottom, a packing ring between the receptacle and the base, an upstanding projection on the base extending through the opening in the bottom of the receptacle, a detachable ring on the upstanding projection, a cam carried thereby and a clamping disc against which the cam operates to force the receptacle down upon the packing.

2,003,491
BOILER CONSTRUCTION
Sidney E. Parker, Los Angeles, Calif., assignor to Charles J. Mund, Los Angeles, Calif.
Application May 28, 1934, Serial No. 727,920
4 Claims. (Cl. 122—250)



1. In a boiler construction comprising a boiler drum, a tubular frame comprising a pair of end members, each of said end members comprising a vertical pipe, a pair of pipe legs attached to the bottom of said vertical pipe, said vertical pipe extending into the boiler drum at the upper end thereof, a horizontal pipe connecting said end members, and a water intake extending into said horizontal pipe, screw plugs in the top and bottom of said vertical pipes and a screw plug in the end of said horizontal pipe.

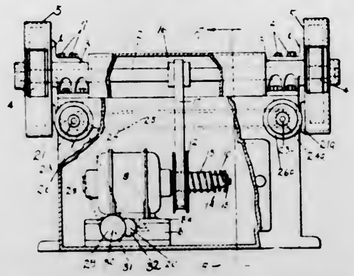
2,003,492
REFRIGERATING APPARATUS
Donald H. Reeves, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application July 31, 1930, Serial No. 471,927
Renewed May 18, 1934
6 Claims. (Cl. 62—126)

4. In a cooling unit for refrigerating apparatus, the combination of a sheet metal freezing chamber, refrigerant passages within said freezing chamber, a box cooling member extending above the freezing chamber and separate therefrom, said cooling member having refrigerant passages therein, means for connecting the refrigerant passages in the freezing chamber and the box cooling member, and means for insulating said connecting means from the freezing chamber.

2,003,493
NEGATIVE GLOWLAMP
Harvey C. Rentschler, East Orange, and Donald E. Henry, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a corporation of Pennsylvania
Application March 20, 1929, Serial No. 348,409
7 Claims. (Cl. 176—122)

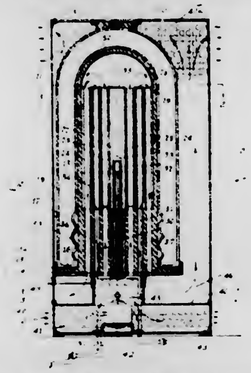
1. A glow discharge lamp operable on an approximately 110 to 220 volt alternating current lighting circuit with a stable discharge without a current limiting means therewith, comprising an envelope containing a monatomic gas selected according to its starting and arcing voltage with respect to the peak voltage of the circuit in which it is designed to operate, a pair of electrodes therein, at least one of said electrodes being composed of thorium, the discharge initiating and operating potentials of said lamp being no greater than the peak voltage of the alternating current lighting circuit and the arcing potential of said lamp being greater than the peak voltage of said A. C. lighting circuit.

2,003,494
LAMINATED MATERIAL
Richard S. Reynolds, Glen Cove, N. Y., assignor to Reynolds Research Corporation, New York, N. Y., a corporation of Delaware
Application May 21, 1934, Serial No. 726,701
9 Claims. (Cl. 154—2)



1. A laminated sheet comprising a first lamination of porous metal foil, and a second lamination of tenacious flexible substantially transparent material extending into the pores of the metal foil.

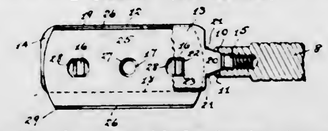
8. That process of making a laminated material which comprises the steps of preparing metal foil with minute perforations therethrough, applying thereto a sheet of material which is plastic upon being heated, and pressing the foil and material together while applying heat sufficient to render such material plastic.



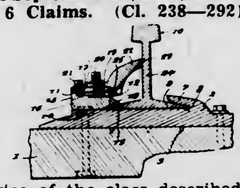
2,003,495
GRINDING MACHINE
Emil Ritz, Jr., Mount Healthy, Ohio, assignor to The Hisey-Wolf Machine Company, Cincinnati, Ohio, a partnership composed of Walter J. Friedlander and John W. Friedlander
Application April 11, 1930, Serial No. 443,400
15 Claims. (Cl. 51—166)

1. In a grinding mechanism or the like, a driven shaft, a motor, a variable speed transmission interconnecting said motor and said driven shaft, effective upon a variation of the distance between

said motor and said shaft, a grinding wheel on said driven shaft, a guard surrounding said grinding wheel, and means simultaneously to move said guard and said motor.



2,003,496
HEAT STORAGE DEVICE
Ralph C. Roe, Englewood, N. J., assignor of one-half to Stephen W. Borden, Summit, N. J.
Application July 19, 1933, Serial No. 681,080
16 Claims. (Cl. 219—39)

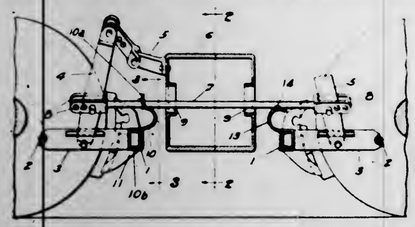


1. A heat storage device which includes: a block of heat storage material; a heat insulating member surrounding the block; vertical airways through the block; a partition at the bottom of the airways dividing the airways into two groups; an air space within the insulating member connecting together the tops of the two groups of airways; an enclosure for the whole, spaced apart from the insulating member to form vertical air flues extending from the bottom to the top of the insulating member, the enclosure extending above and below the insulating member, that portion below the insulating member being divided, by the before mentioned partition, into two chambers one of which is an air chamber in communication with one set of airways and having air inlet apertures in the sides of the enclosure and the other of which is an air passage connecting the lower end of the other group of airways with the lower end of the vertical air flues; an air chamber in the upper portion of the enclosure and in which the air flues terminate, said chamber having air outlet apertures in the casing wall; the whole forming a closed air passageway from the air inlet apertures through the heat storage block to the air outlet apertures; means located in the air passageway for producing a flow of air therethrough; and means for heating the block.

2,003,497
CUTTER BLADE HOLDER
Bernard Tewelow, Wilmington, Del., and Solomon Tewelow, Philadelphia, Pa.
Application July 26, 1932, Serial No. 624,728
1 Claim. (Cl. 30—25)

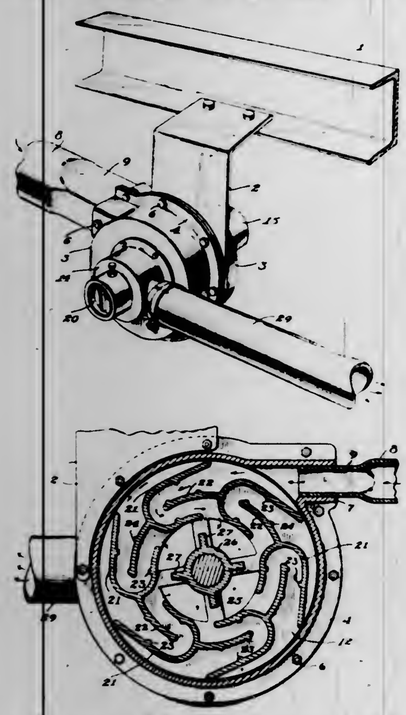
A holder for razor blades having in combination a handle provided at one end with a longitudinally-extending internally-threaded socket with a tapered annular clamping wall and at the opposite end having a projecting threaded stem, two disconnected and separable clamping-plates,—one having two spaced-apart inclined lugs punched therefrom so as to project at the inner side thereof and also having an intermediate opening while the other of said disconnected plates is provided with spaced slots each with an inclined wall to receive said punched-out inclined lugs and an intermediate screw-threaded opening, one of said disconnected plates also having a threaded stem at one end to enter the longitudinally-extending internally-threaded handle-socket and the other of said two plates having an end lug with inclined edges to engage the annular clamping wall of the handle-socket whereby the two plates with a blade between them may be drawn toward each other to clamp the blade when the plate having the lug with the inclined edges engages the clamping wall of the handle-socket, or, said plates with a blade between them may be attached to the handle by passing the stem of the handle through the intermediate opening of the lug-plate then through the blade and screwing said stem into the intermediate threaded opening of said other plate.

2,003,498
RAILROAD BASE PLATE AND FASTENER
Wesley E. Wenner, Allentown, Pa.
Application September 27, 1932, Serial No. 635,111
6 Claims. (Cl. 238—292)



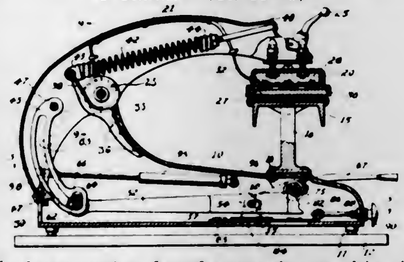
1. A device of the class described comprising a base plate adapted to support a rail, a housing carried by said base plate, a wedge block slidably mounted within said housing adapted to engage the base of a rail; said wedge block being provided with an upper inclined rear end, and a clamping screw carried by said housing and engaging said inclined face of said wedge block for permitting the longitudinal wedging adjustment of said wedge block within said housing for forcing the same into locking position with the base of a rail.

2,003,499
BRAKE BEAM SAFETY DEVICE
Edwin G. Busse, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application December 30, 1931, Serial No. 583,998
11 Claims. (Cl. 188—210)



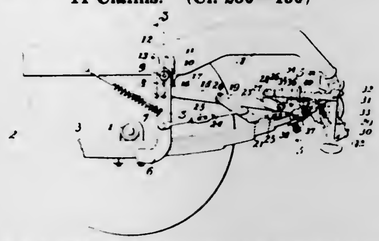
1. In combination in railway brake rigging, a brake lever, a brake beam and a brake lever

connection pivoted to an end and the middle portion, respectively, of said lever, and a brake beam guard, guide or support member operatively asso-



ciated with said connection and a part of said beam spaced substantially vertically from said connection.

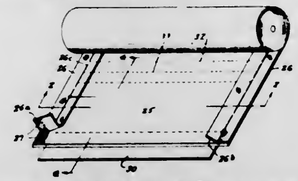
2,003,500
MUFFLER
Thomas K. Corless, Long Island City, N. Y.
Application December 29, 1931, Serial No. 583,723
5 Claims. (Cl. 137—160)



1. A muffler for internal combustion engines, including a substantially cylindrical casing provided with a tangential inlet port and an axial exhaust port, a wheel rotatably mounted within said casing, a plurality of pockets arranged circumferentially about said wheel and adapted to be brought successively into communication with said inlet port, said pockets shaped to reverse the direction of the gases while in the pockets, and a plurality of fins carried by the hub of the wheel and revolving therewith, said fins being in the path of the gases flowing from the pockets to the axial exhaust port.

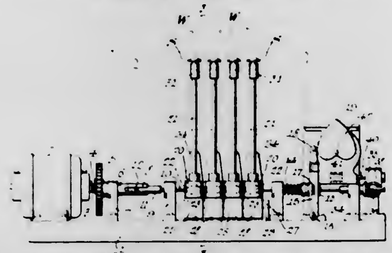
2,003,501
TABLE MODEL PRESSING MACHINE
Ernest Davis and Albert Kagi, Syracuse, N. Y., assignors to The Prosperity Company, Inc., Syracuse, N. Y., a corporation of New York
Application September 23, 1930, Serial No. 483,877
4 Claims. (Cl. 68—9)

1. A garment or laundry pressing machine including a frame, a lever pivotally mounted on the frame, cooperative pressing elements one of which is carried by the lever for movement therewith to open and close the press, a link connected to the lever by a lost motion connection for permitting closing of the press relatively to the link, an operating lever mounted in the frame, connections between the operating lever and the link to move it on its pivot and to thrust it endwise, said lost motion connection and the link having cooperating parts operable to lock the two parts together without lost motion, when the press is closed, upon the pivotal movement of the link, whereby the endwise thrust movement of the link transmits motion to the lever to finally close the press.



2,003,502
JACKING ATTACHMENT
Max Dwork, Brooklyn, N. Y.
Original application November 25, 1933, Serial No. 699,783. Divided and this application April 11, 1934, Serial No. 720,118
11 Claims. (Cl. 280—150)

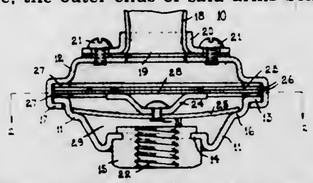
5. In a jacking attachment including a pivoted hook, a spring normally tending to draw the hook toward the axle of a vehicle, means for normally resisting the tendency of the spring and for keeping the hook disengaged from the axle, said means including a lever and means by which it is pivoted at the front of the vehicle, a rack and dog arrangement for holding the lever, and a link connecting the lever with the hook.



6. A jacking attachment comprising a hook, means including a bracket having at least one integral offset pin insertible in a hole in a chassis, means for pivotally mounting the hook on said bracket, said chassis having a spring supported axle, linkage connected at one point with the hook for swinging the hook with respect to the axle, and means by which the linkage is connected at another point to the chassis.

2,003,503
ROOFING OR SURFACING MATERIAL
Sidney Lanier Eason, Charleston, S. C.
Application August 1, 1933, Serial No. 683,130
11 Claims. (Cl. 108—7)

1. In roofing, adjacent roofing courses, a flexible strip extending along the adjacent edge of each course, the outer marginal portion of each strip being fastened to its related course, the inner marginal portion of each strip being free and constituting a flap, the flap of the strip of one course being turned outwardly into overlying relationship to the outer marginal portion of the strip of the other course, the flap of the strip of the other course being turned outwardly into overlying relationship to the flap of the strip of the first metioned course, and means fastening the flaps together.

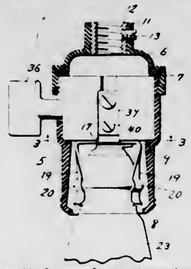


2,003,504
GRINDING AND POLISHING MACHINE
Charles B. Garwood, Linthicum Heights, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application June 25, 1932, Serial No. 619,325
4 Claims. (Cl. 51—95)

4. In a machine of the class described a rotatable wheel, means for supporting an article for rotation in a plane extending substantially radially of the wheel and about an axis in the plane of rotation of the wheel, means for moving said supporting means toward and from the wheel to move the periphery of the rotating supported article against and from the periphery of the rotating wheel, and means for reciprocating the supporting means and the article thereon across the periphery of the wheel.

2,003,505
WARNING SIGNAL
Alexis F. Gillet, Omaha, Nebr., assignor to Jubilee Manufacturing Co., Omaha, Nebr., a corporation of Nebraska
Application January 20, 1934, Serial No. 707,607
4 Claims. (Cl. 116—142)

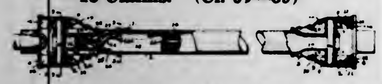
1. A sounding device comprising a housing arranged to provide a chamber having an outlet port for a communication with a source of suction, said chamber having a wall provided with an air intake aperture, a detent-shelf within the housing, a reciprocable closure-member for the aperture having a surface disposed in parallelism with said wall, and a member provided with not less than three similar integral radially disposed resilient arms carrying the closure-member for maintaining the latter in an initial yieldable position normally sealing the aperture, the outer ends of said arms being sub-



stantially equi-distant with respect to each other and resting upon the shelf for providing a spider bearing, whereby when the closure member reciprocates during a sounding of the device incident to suction applied to the chamber the spider bearing maintains the said parallelism of the closure-member constant with respect to the wall.

2,003,506
COLLAPSIBLE TUBE CAP
Albert Goss, Dunedin, Fla.
Application April 26, 1934, Serial No. 722,559
6 Claims. (Cl. 221—60)

1. In combination with a discharge nozzle having a discharge opening therethrough, a cap having a discharge opening therethrough rotatably mounted on the nozzle, a pair of substantially segmental plates disposed between the cap and nozzle and adapted to move relatively to one another to collectively close and expose said opening, and means to simultaneously move said plates through the turning movement of the cap to control the discharge through said opening and between the plates.

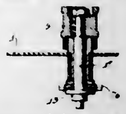


2,003,507
QUICK-DETACHABLE LAMP AND SOCKET
Nicholas Louis Guljas, Jr., South Bend, Ind.
Application March 6, 1934, Serial No. 714,342
1 Claim. (Cl. 173—350)

An electric switch socket structure comprising a hollow dielectric body divided into a pair of sections, a switch in the body including a pair of spring contacts and a rotary contactor operative against said contacts, a knob for actuating the contactor, said body provided with a depending boss, a frame provided with a pair

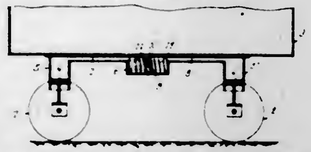
of upstanding leg members having openings in their end portions, said frame having an opening therein through which the frame snugly receives the boss, a pair of lamp base engaging and retaining arms depending from the frame, a conductor extending from one of the switch contacts, a U shaped spring contact on the lower end of the conductor with one leg portion thereof extending through the bottom of the boss to engage with the contact of a lamp held between the spring arms, said upstanding leg members being disposed along opposite sides of the body, said body having a bore therethrough through which the openings of the leg members are alignable, a bolt for disposition through the openings of the legs and the bore of the body, for holding the sections of the dielectric body and retaining arms frame together.

2,003,508
PROPELLER SHAFT
Stephen Jencick, Chagrin Falls, Ohio
Application August 4, 1930, Serial No. 473,091
15 Claims. (Cl. 64—89)



1. An automobile propeller shaft comprising a one-piece continuous, hollow tubular member, universal couplings provided directly upon the two ends thereof, and means for automatically lubricating said couplings only upon starting and stopping of the shaft rotation.

2,003,509
TAPPET
Stephen Jencick, Chagrin Falls, Ohio
Application November 25, 1931, Serial No. 577,354
5 Claims. (Cl. 123—90)

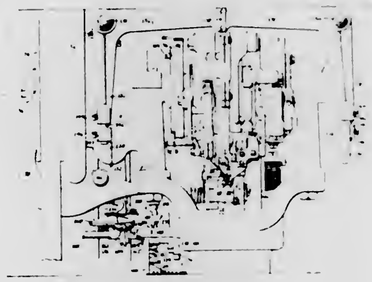


1. In a tappet assembly, the combination of a valve adapted to normally occupy closed position, a tappet comprising a plurality of longitudinally extensible, frictionally engaging parts with resilient means operatively associated therewith so as to permit contraction and effect automatic extension of the same respectively, means having a surface of regular curvature operatable as an eccentric about a center and having operative engagement with said parts for increasing the degree of friction therebetween, and means for actuating the tappet so as to open the valve and permit closing thereof, whereby there is obtained automatic adjustment of the tappet so as to maintain normal operative engagement of the tappet with the valve stem.

2,003,510
FILM REEL
Walter G. King and Max E. Krause, Chicago, Ill.
Application April 8, 1932, Serial No. 604,090
3 Claims. (Cl. 88—18.7)

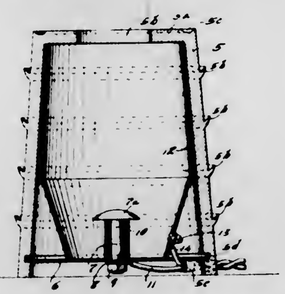
1. A film reel comprising a circular stationary plate, a shaft fixedly secured to and extending beneath said plate, a gear wheel rotatably mounted on said shaft, a plurality of pinion means disposed around and geared with said gear wheel, a plurality of spool means positioned above said plate and being fixedly connected to said pinions, a plurality of radially extending rollers for carrying a film reel on the outside of said plurality of spool means, one of said pinions being provided with a transmission unit whereby said gear wheel and said plurality of pinions may be moved, a second pinion fixedly secured to one of said pinions, an idler pinion operatively connected to said second pinion, a geared feed sprocket means extending through said plate and in meshed relation with said idler, and a plurality of rotatably mounted guard means for guarding the film in operative proximity to said feed sprocket means.

2,003,511
COMPENSATING DEVICE ACTING BETWEEN THE DIFFERENT PNEUMATIC MOUNTINGS OF A VEHICLE
Jean Mercier, Neuilly-sur-Seine, France
Application November 23, 1933, Serial No. 699,475
3 Claims. (Cl. 267—65)



1. In a vehicle provided with a body and a supporting gear, at least two chambers of variable volume adapted to contain a fluid under pressure and located at two distant points of said body between the supporting gear and the vehicle body, said chambers being subjected to different static pressures, means affording communication between said two chambers of variable volume, a partition which is movable in said means of communication and is in non-leaking contact with the walls of said means of communication, and elastic means adapted to balance the difference in the static pressures of said two chambers and to urge said movable partition towards the chamber in which the static pressure is the higher.

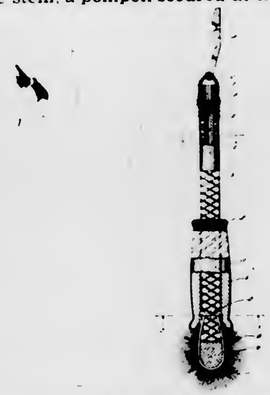
2,003,512
MACHINE FOR USE IN THE MANUFACTURE OF SHOES
Alfred R. Morrill, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application November 30, 1932, Serial No. 645,019
21 Claims. (Cl. 112—219)



1. A machine adapted for use in the manufacture of shoes having, in combination, shoe feeding and operating devices for performing an operation progressively about the bottom margin of a shoe, an auxiliary mechanism arranged to

operate upon completion of the operation upon the shoe, and a shoe contact member extending into a position to be engaged by the shoe at the

end of the operation and during the continued operation of said feeding and operating devices to throw said auxiliary mechanism into operation.

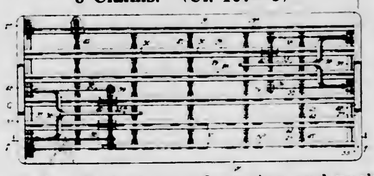


2,003,513
ANIMAL TRAP
Lloyd D. Myers, Minneapolis, Minn.
Application November 2, 1932, Serial No. 640,739
9 Claims. (Cl. 43—98)

1. An animal trap having in combination, a casing adapted to rest upon a supporting surface and having a chamber therein having a bottom, the same having an opening adjacent its upper end and having substantially vertical walls whereby an animal entering said opening will jump or drop to said bottom, a member upstanding from said bottom forming one electrode of an electric circuit, a second annular member surrounding said member adjacent the wall of said chamber and sloping toward said member to be adjacent the same, said latter member forming the opposite electrode of said circuit, whereby an animal entering said opening and dropping or jumping to said bottom will engage said electrodes, complete the circuit and be electrocuted.

2,003,514
GRIP STRAP
Herman H. Rubin, New York, N. Y.
Application September 30, 1931, Serial No. 565,991
3 Claims. (Cl. 105—354)

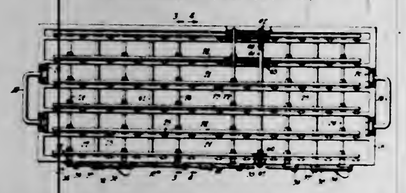
1. A hand hold comprising a composite stem including a laterally compressible rubber core and a rubberized fabric enclosing said core and having substantial resistance to longitudinal stretching, an attaching device at one end of the stem, a pompon secured at the other end, and



a grip mounted on the stem between the pompon and the attaching device.

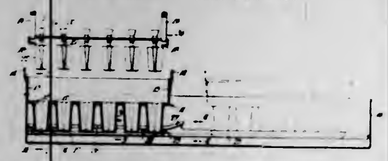
2,003,515
GRIP STRAP
Herman H. Rubin and Maurice M. Balsam, New York, N. Y.; said Balsam assignor to said Rubin
Application January 6, 1932, Serial No. 584,978
2 Claims. (Cl. 105—354)

1. An assist grip comprising a stem, a pompon and a pompon fastening member co-operating with the stem and having interlocking clamp portions at its ends compressibly engaging the stem and a strap portion integral with and connecting said clamps and embracing a portion of the pompon.



2,003,516
ART OF MANUFACTURING AND PACKAGING ARTICLES
Milton Schnaier, New York, N. Y.
Application May 20, 1930, Serial No. 453,896
8 Claims. (Cl. 107—8)

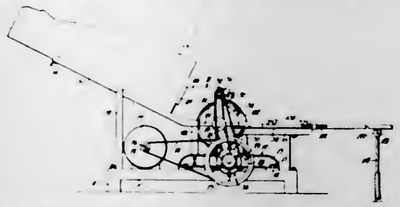
1. The method of manufacturing and packaging molded handled articles, which consists in aligning a multiplicity of handle members in parallel relation, locking said handles in fixed



position relative to each other, co-ordinating said locked handles with respect to corresponding relatively fixed mold cavities, completing the molding operation, removing the relatively fixed handles with the molded product bonded thereto from said molding cavities and disposing said gripped handles with the molded bodies in downwardly extending relation and in alignment with respect to a corresponding multiplicity of open wrappers and thereupon releasing said handled bodies to drop with their molded ends into said open wrappers.

2,003,517
STICK HANDLING MECHANISM
Milton Schnaier, New York, N. Y.
Application December 6, 1930, Serial No. 500,457
13 Claims. (Cl. 107—8)

2. A stick handling apparatus including a frame, a plurality of fixed transversely spaced rails extending lengthwise of the frame, a plurality of transversely movable rails extending lengthwise of said frame, means for positively moving them in both directions, stick engaging members carried by the movable rails, whereby transverse movement of the movable rails toward the fixed rails will move the members to engage sticks between said rails.



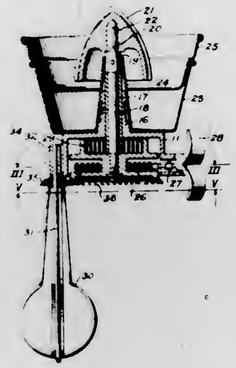
2,003,518
APPARATUS FOR AND METHOD OF PROCESSING FROZEN CONFECTIONS
Milton Schnaier, New York, N. Y.
Application March 18, 1931, Serial No. 523,479
8 Claims. (Cl. 107—8)

2. As a new article of manufacture, a defrosting tank having parallel sides, a pair of rails fixed to the inner face of said sides and extending substantially to the end of the tank and adapted to support a freezing mold deposited thereon, a second pair of rails arranged at one portion of the tank only and above and parallel to said first mentioned rails, said second mentioned rails being adapted to block upward movement of the freezing mold when the latter is slid along the first mentioned rails to a predetermined position.

2,003,519
APPARATUS FOR ARRANGING ARTICLES
Milton Schnaier, New York, N. Y.
Application March 24, 1931, Serial No. 524,841
19 Claims. (Cl. 214—7)

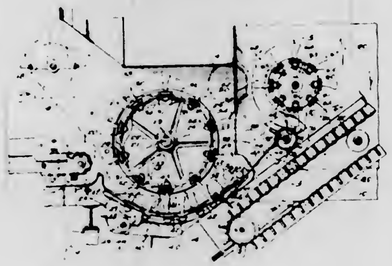
1. In a machine of the class described, a hopper, adapted to receive a plurality of flat splints or the like, an intermittently actuated transfer wheel, a portion of the periphery of which constitutes part of the hopper, said wheel having a plurality of stick receiving grooves in its periphery parallel to its axis of rotation, a receiving apparatus upon which the sticks are emplaced on edge, one after the other, to form a

row, ejector fingers for moving the sticks from the wheel onto the receiver, said fingers being disposed approximately tangentially of the wheel and said wheel having circumferential grooves therein receiving the working ends of the fingers, and cam means operating the ejector fingers, the cam means being operative to actuate the ejector fingers while the wheel is at rest.



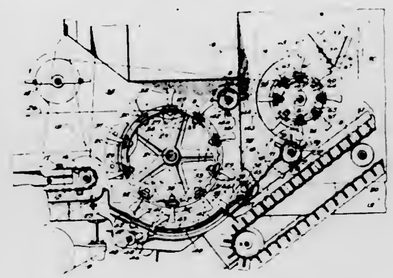
2,003,520
ORCHARD OR FIELD HEATING AND IRRIGATING APPARATUS
Myron E. Seeber, San Diego, Calif.
Application September 9, 1931, Serial No. 561,835
4 Claims. (Cl. 126—59.5)

1. In an orchard or field heating apparatus, the combination with a fluid distributing system, of a heater including a closed casing with an outlet opening at its upper side connecting with said distributing system, a plurality of superposed angularly positioned soot collecting screens near one side of said casing with their lower edges spaced from the side wall of said casing, and a fuel burner positioned under the lowermost screen.



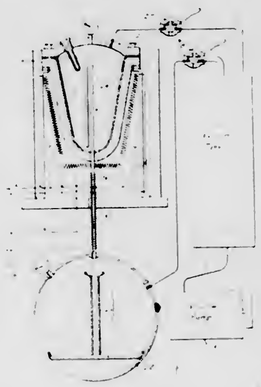
2,003,521
COMBINED ORANGE REAMER AND BEATER
Ralston R. Smith, Oakland, Calif.
Application June 7, 1933, Serial No. 674,643
1 Claim. (Cl. 259—131)

A device of the character described comprising a vertically arranged cylindrical housing open at its lower end, a vertically disposed shaft disposed concentrically of the housing and rotatable therein, a sheave secured to the shaft within the housing, a pull member wound on the sheave and extending through the side of the housing to rotate the shaft in one direction, spring means associated with the sheave and housing to rotate the shaft in the opposite direction upon release of the pull member, a fruit reamer secured to the upper end of the shaft above the housing, a socket for the reception of a geared beater device on the side of the housing, and a gear secured to the bottom of said sheave and positioned to mesh with a gear on the beater



device to operate the same upon rotation of the said shaft.

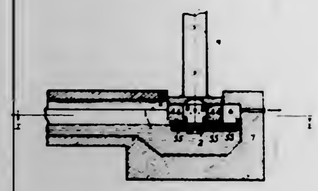
2,003,522
THRESHING
Lowell H. Thoen, San Leandro, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application December 27, 1930, Serial No. 505,076
11 Claims. (Cl. 130—27)



11. In a threshing machine, a thresher housing, a separator housing, a thresher including a rotatable toothed cylinder and a stationary toothed concave mounted in said thresher housing, a feeder for feeding material to the thresher in the thresher housing, a second thresher adapting said machine for the threshing of beans and mounted in said separator housing, said second thresher including a pair of cylinders having interengaging teeth and rotatable in opposite directions, one of said second cylinders serving to feed material from the first-mentioned thresher between it and the other of said secondary thresher cylinders, a grate between the concave of the first-mentioned thresher and the feed cylinder of the second thresher, an interrelated driving connection for rotating all of said cylinders at a constant speed relationship and for rotating the second thresher cylinders at different tooth speeds, and a cell belt positioned below said grate and below the second thresher to receive kernels threshed by the primary thresher which fall through said grate and also to receive kernels threshed by said second thresher.

2,003,523
THRESHING
Lowell H. Thoen, San Leandro, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application January 23, 1931, Serial No. 510,716
8 Claims. (Cl. 130—27)

1. In a threshing machine, a primary thresher comprising a pair of cooperating toothed cylinders, and a series of stationary teeth cooperating with one of said cylinders, a secondary thresher comprising a pair of cooperating toothed cylinders, and a series of stationary teeth cooperating with one of said cylinders, and means to rotate the cylinders in said primary thresher in the same direction, and to rotate said cylinders in said secondary thresher in opposite directions.

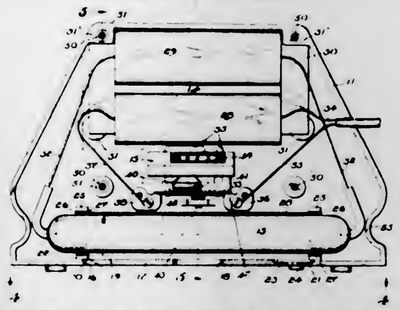


2,003,524
ALLOY
Thomas H. Warner, Union City, N. J., assignor to Metal Alloys, Inc., Wilmington, Del., a corporation of Delaware
Application August 27, 1931, Serial No. 559,696
Renewed November 1, 1934
2 Claims. (Cl. 75—1)

1. An alloy of aluminum, magnesium, boron, vanadium and zinc (aluminum being the base) within the following ranges:

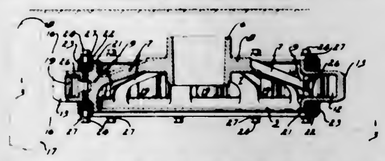
	Percent
Boron	.25 to 1.5
Magnesium	.5 to 1.5
Vanadium	.25 to 1.
Zinc	1. to 4.
Aluminum	98. to 92.

2,003,525
APPARATUS FOR DRAWING GLASS
Walter O. Amsler, Toledo, Ohio, assignor to Simplex Engineering Company, Washington, Pa., a corporation of Delaware
Application November 1, 1933, Serial No. 696,192
2 Claims. (Cl. 49—17)



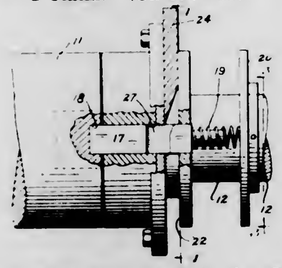
2. In a furnace for sheet-glass drawing, a drawing chamber defined by bridge walls and by a structure including a draw-block, the said structure floating upon the surface of the molten glass within the chamber free of contact with the bridge walls and constituting a continuous screen upon the surface of the glass and between the bridge walls, and means for adjusting such floating structure and the draw-block as part thereof in its position beneath the bridge walls.

2,003,526
OUTSOLE SHOE SEWING MACHINE
Fred Ashworth, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 27, 1934, Serial No. 713,083
4 Claims. (Cl. 112—51)



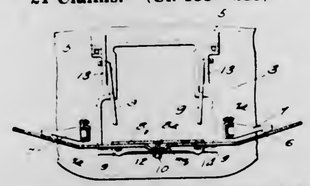
1. An outsole shoe sewing machine having, in combination, a work support, a curved needle, a curved awl, forwardly and upwardly extending frame arms at the rear of the work support in which the needle and awl are mounted, an edge gage, a carrier therefor pivotally mounted below the work support to move transversely of the direction of feed, an adjusting device engaging the carrier adjacent its upper end arranged to resist the backward thrust of the work on the edge gage, and a bracket in which said device is mounted provided with a bracing projection engaging one of said frame arms.

2,003,527
THERAPEUTIC DEVICE
John W. Bacon and Thomas S. Warren, Hermosa Beach, Calif., assignors to Thomas S. Warren, Hermosa Beach, Calif.
Application October 1, 1932, Serial No. 635,774
3 Claims. (Cl. 174—177)



1. In a unitary self-contained therapeutic device adapted to be handled bodily and moved over the body to be treated, in combination, a housing consisting of two cooperating shell members and having an open side with finger gripping grooves formed in its outer face at opposite sides for the convenient handling thereof, a transformer supported within said housing so that the primary and secondary coils thereof are disposed one above the other, said housing being formed closely around said transformer coils for defining the handle of the device, an ultra violet light emitting tube supported horizontally beneath said transformer and adjacent the open side of said housing for emitting light therefrom, said tube being operatively connected with the high voltage circuit of said transformer, means connecting the low voltage circuit of said transformer to a source of electricity, and a time switch mechanism supported within said housing and connected in the low voltage circuit of the transformer for controlling current thereto, said mechanism comprising a time indicator and an operating lever for setting said mechanism for a predetermined period, said housing having an opening therein through which the time indicator is discernible and a further opening through which the operating lever extends whereby to permit its convenient manipulation from the outside of the housing.

2,003,528
WEAR COMPENSATING MEANS
Clarence L. Best, Mission San Jose, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application August 15, 1932, Serial No. 628,838
11 Claims. (Cl. 74—243)

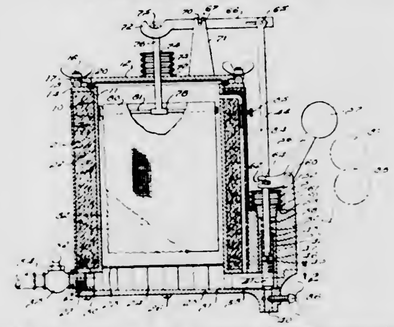


11. A wheel having a rim over which an endless chain is adapted to travel, compressible material mounted around said wheel adjacent said rim for engaging said chain, a clamping member engaging a side of said material, and fastening means engaging said clamping member and adjustably secured to said wheel to move said clamping member laterally with respect to said wheel and expand said material radially.

2,003,529
CLUTCH FOR PUNCH PRESSES
Edward J. Dreis, San Francisco, Calif.
Application June 22, 1931, Serial No. 545,985
1 Claim. (Cl. 192—25)

In combination with the hub of a flywheel, a clutch mechanism for association with said hub, said mechanism including a driven shaft arranged coaxially of the hub and adjacent thereto and concentric therewith and extending from one face of the hub, a sleeve of an external diameter substantially agreeing with the diameter of the hub and concentrically mounted on said shaft and keyed thereto, one face of said sleeve being closely contiguous to said face of the hub, a guide formed coaxially of the hub between the exterior of the shaft and the exterior of the sleeve, a locking dog reciprocably mounted in said guide, the face of said hub being formed with a socket in which said locking dog is adapted to project when the same come in register to lock the sleeve to the hub, said sleeve having a peripheral channel formed therein, a two-part ring loosely mounted in said channel, a trip cam secured to said ring and projecting in said channel, said locking dog having a recess formed therein registering with said channel when the locking dog is disengaged from said socket, said trip cam being operative to engage the recess in said clutch dog when the latter is engaged with said socket and to move said clutch dog endwise away from said hub and disengage it from said socket, said cam acting automatically after a revolution of said sleeve subsequent to the release of the clutch dog by the cam to disengage the dog from the hub.

2,003,530
BRAKE BEAM SUPPORT
Herbert W. Ekholm and Edwin G. Busse, Chicago, Ill., assignors to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application July 18, 1932, Serial No. 623,147
21 Claims. (Cl. 188—213)

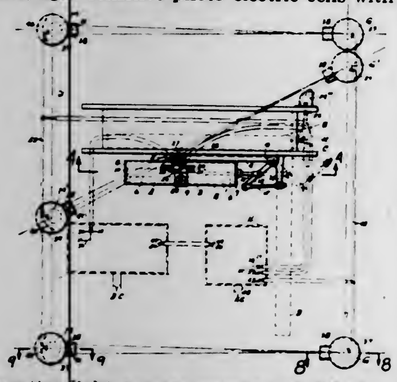


17. In combination, a railway truck side frame, a brake beam guard, guide or support member spaced therefrom and suspended from the upper portion of said side frame and braced from the lower portion thereof.

2,003,531
METAL CONNECTION FOR FRAME MEMBERS
Ermanno Galante, Woburn, Mass.
Application October 15, 1932, Serial No. 637,983
6 Claims. (Cl. 20—94)

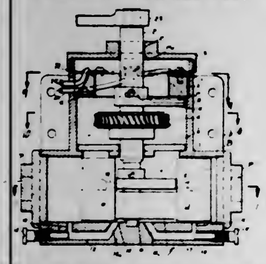
1. A metal connection for angularly arranged frame bars, said connection comprising a metal sheet bent to form a sheath having separate housings for receiving and defining the angular position of said respective bars and attachable thereto for connecting said bars, said sheath including an end portion, opposing face portions extending respectively from the top and bottom edges of said end portion, and opposing side portions extending from the side edges of at least one of said face portions, at least one of said side portions being spaced from said end portion.

2,003,532
BEVERAGE COOLING AND DISPENSING DEVICE
George A. Gloor, Dearborn, Mich.
Application June 18, 1934, Serial No. 731,039
8 Claims. (Cl. 225—40)



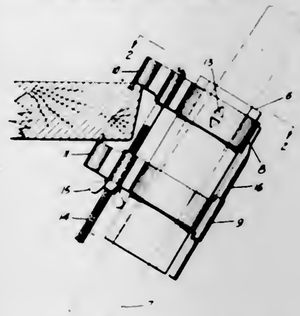
1. A dispensing and cooling device comprising a housing including a liquid container and a refrigerant chamber, a heat conducting wall separating said container and chamber, a refrigerant holder arranged in said chamber, dispensing means for delivering liquid from said container, means normally maintaining said holder in spaced relation with respect to said heat conducting wall and means operable by said dispensing means for adjusting said holder relative to said heat conducting walls to regulate the transmission of heat from the liquid container to the refrigerant chamber.

2,003,533
ELECTRIC DOOR OPENING DEVICE
Mason V. Green, Lansing, Mich., assignor to Frank D. Hayes, Lansing, Mich., as trustee for F. D. Hayes Electric Company
Application March 7, 1932, Serial No. 597,100
4 Claims. (Cl. 268—65)



1. An electric device adapted for opening and closing a connected door panel and used in combination therewith, comprising right and left solenoid coils concentric about the same axis and mounted within a rigid frame by a pivoted hinge

connector, said coils being connected within separate electric circuits, a single straight armature plunger slidably mounted through the double solenoid coils, lever mechanism connected to the solenoid frame and also attached to the armature plunger and actuated thereby in a manner for operating a connected door panel, an operating contactor having magnetic operating coils mounted within each of the solenoid circuits, light sensitive photo-electric cells with co-

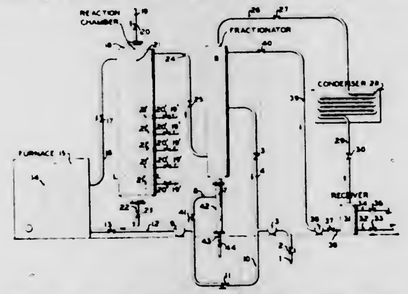


operative light sources mounted at different positions across the passage way leading through the door, said photo-electric cells being connected in parallel to a sensitive cell-relay instrument with a sensitive circuit contactor installed within a separate electric circuit leading through the magnetic coils of the operating contactors for operating same and the connected door opening solenoid as a person or object approaches the door.

2,003,534
MOTOR OPERATED DOOR CONTROL
Mason V. Green, Lansing, Mich., assignor to Frank D. Hayes, trustee for F. D. Hayes Electric Company, Lansing, Mich., a firm
Application May 25, 1932, Serial No. 613,537
4 Claims. (Cl. 268—65)

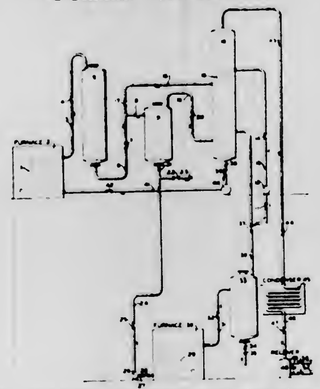
1. A light sensitive door operating device adapted for opening and closing a door panel within a door casing and used in combination therewith, comprising a hollow tubular casing member suitable for attaching to one of the said door members, a single operating shaft rotatably mounted eximetrically therethrough and projected from one end thereof, jointed door operating lever mechanism fixedly mounted on the projected shaft end and having its opposite end operatively connected to the other door member, a power gear fixedly mounted on said operating shaft within the casing, a reversible electric motor having an extended drive shaft with drive gear attached, mounted thereon and positioned to mesh said drive gear operatively with the power gear of the operating shaft, a circular, reversing switch mounted within said casing, positioned concentric with the shaft and operated thereby, said reversible electric motor being connected in two separated electric power circuits each leading through said reversing double current switch, shaft rotation retarding means mounted within said casing and connected to the operating shaft in a manner capable of retarding its rotation in either direction, a series of electric circuit contactor instruments mounted within the separated motor power circuits and provided with a sensitive electric relay instrument connected within one of the contactor instrument circuits, a series of photo-electric cells mounted along one side of the door passageway at predetermined locations, all of said cells being electrically connected with the sensitive relay instrument, and a corresponding series of co-operative light source units connected in any electric light circuit positioned along the opposite side of the door passageway and each adjusted to reflect light rays on their respective photo-electric cell, one set of cell and light source units being positioned diagonally through the door way.

2,003,535
FISH POLE HOLDERS
Joseph J. Haskin, Oakland, Calif.
Application September 23, 1933, Serial No. 690,697
7 Claims. (Cl. 248—41)



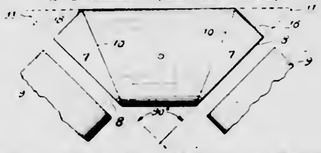
1. In a device of the character described, a tubular member of resilient material and construction, clamp means secured to said member adjacent an end thereof, other clamp means movable relative to said first mentioned clamp means, a threaded guide rod extending from said first mentioned clamp means and through said other clamp means, and a nut on said rod for drawing said clamp means together to engage a support.

2,003,536
CRACKING HYDROCARBON OILS
Jacob Benjamin Heid, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application November 26, 1930, Serial No. 498,236
1 Claim. (Cl. 196—58)



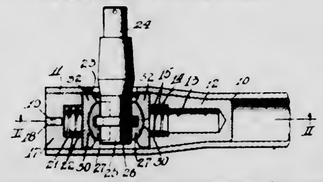
In a hydrocarbon oil cracking process of the character wherein the oil is heated to cracking temperature under pressure while flowing in a restricted stream through a heating zone and thence discharged into the upper portion of an enlarged reaction zone maintained under cracking conditions of temperature and pressure and

wherein the heated oil is separated into vapors and unvaporized oil, the improvement which comprises continuously supplying water in liquid state directly to the surface of the unvaporized oil in the lower portion of the reaction zone, removing admixed oil vapors and steam from the



reaction zone and dephlegmating the same to condense insufficiently cracked fractions of the vapors as reflux condensate, separating entrained water from the reflux condensate, and then returning the reflux condensate to the heating zone for retreatment therein.

2,003,537
PROCESS OF CRACKING HYDROCARBON OIL
Jacob Benjamin Heid, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application December 18, 1931, Serial No. 581,965
4 Claims. (Cl. 196—49)



1. A combined cracking and topping process which comprises subjecting hydrocarbon distillate to cracking conditions of temperature and pressure in a conversion zone, removing the cracked oil from said zone and introducing the same to a flashing and separating zone maintained under lower pressure than the conversion zone, introducing crude oil containing natural gasoline into the separating zone and partially distilling the same therein, separating the commingled oils in the separating zone into vapors and a mixture of topped crude and cracked residual oil, subjecting said mixture in a second conversion zone to milder conversion conditions than are maintained in the first-mentioned conversion zone thereby forming additional vapors, combining the latter with the vapors formed in the separating zone and fractionating the commingled vapors to condense heavier fractions thereof, supplying resultant reflux condensate to the first-mentioned conversion zone as said hydrocarbon distillate, and finally condensing the fractionated vapors.

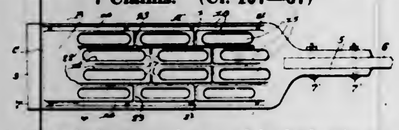
2,003,538
PIPE ELBOW
Daniel W. Hickey, St. Paul, Minn.
Application October 6, 1932, Serial No. 636,463
2 Claims. (Cl. 285—204)

1. A pipe elbow formed from malleable sheet metal comprising a straight, cylindrical, central portion and two similar end portions adjoining the opposite ends respectively of said central portion and having seamless connections therewith, said central portion being without seams and said end portions each having a longitudinal seam at its outer periphery.

2,003,539
UNIVERSAL JOINT
George H. Hufferd, Detroit, Mich., assignor to Thompson Products, Incorporated, Detroit, Mich., a corporation of Ohio
Application November 27, 1933, Serial No. 699,817
9 Claims. (Cl. 287—93)

1. A universal joint comprising, in combination, a housing, circular disc members rotatable in said housing, concave inner surfaces on said disc members, seating members having outside convex surfaces for fitting in said disc members and having inside cylindrical surfaces and a stud member having a cylindrical surface rotatable in said seating members.

2,003,540
CONTAINER LID
Ellison S. Irelan, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application January 26, 1934, Serial No. 708,354
2 Claims. (Cl. 132—83)



1. A container cover formed with marginal walls and a hinged connection between the con-

tainer and cover walls, a bezel fitted to the cover and retained in assembly therewith by engagement with the hinged connection and by a snap connection with the marginal walls of the cover at a point opposite the hinged connection, the cover and bezel being each formed with a relatively large central opening, a plaque fitted within the cover opening having means to remain in centered relation therewith, a mirror fitted within the bezel opening having means to remain in centered relation therewith, and compressible means interposed between the plaque and mirror exerting opposite thrusts when the bezel is in snap connection with the walls of the cover to retain each in a fixed position of assembly therewith.

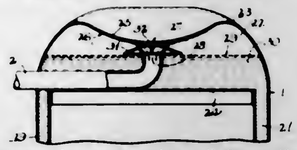
2,003,541
BAKER'S PEEL

Frank A. Jawort, Spokane, Wash., assignor of one-half to J. A. Westland, Spokane, Wash.
Application October 16, 1934, Serial No. 748,494
7 Claims. (Cl. 107—67)

1. In a baker's peel, a peel body having a flat top and a front scooping edge and the bottom having runner end abutment pockets, and runner strips secured to the bottom of said body and the front ends of said strips being bent to project into and endwise engage said abutment pockets, whereby the bent portions of said runner ends will form wearing fulcrums on which the peel body may be tilted to cause said scooping edge to engage the deck of the oven.

2,003,542
GAS PRICE SIGN

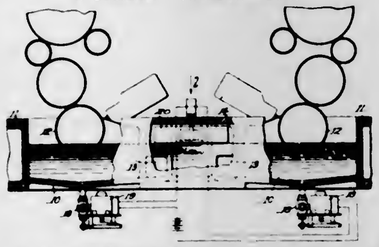
Eugene E. Johnston, Buffalo, N. Y.
Application January 17, 1934, Serial No. 707,033
7 Claims (Cl. 40—64)



1. A sign structure comprising a supporting back, a front cover demountably carried by the supporting back and co-operating therewith to form a container, said back having an inverted trough-like upper portion and having an upwardly turned lower flange to form a recess, upright guide members formed along opposite edge portions of the back, rearwardly turned side flanges on the cover, a guide strip secured to each rearwardly turned flange, said guide strips and rearwardly turned flanges having spaced portions to form cover guides for receiving said upright guide members of the back, said guide strips being formed to provide opposed panel guides facing at angles to the cover guides, portions of the guide strips forming guides with the front portion of the cover to receive a transparent window section, and a unitary price tag supporting panel slidably mounted in the panel guides.

4. In a sign structure, a sheet of material having flanges stamped from the intermediate body portion thereof, the portion of the material from which the flanges are stamped defining window-like openings, said flanges facing the openings, each of said flanges being formed with bent portions providing a substantially horizontal support along one side of the adjacent opening, each flange having an outwardly turned guiding portion for guiding a card into position to be exposed through an opening, a card mounted upon the horizontal support of each flange and facing the adjacent window opening for exposure therethrough, each flange normally bearing yieldably against the respective card to hold the latter in place, said sheet of material having outer flanged edges providing an overall depth of structure greater than the thickness represented by the distance from the back of the flanges to the body of the sheet material.

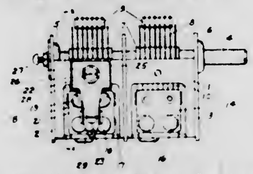
2,003,543
MEANS FOR SEPARATING SOLUTION COMPONENTS AND PROCESS OF EFFECTING SEPARATION THEREOF



James D. Jordan, Elmhurst, Ill., assignor, by mesne assignments, to General Household Utilities Company, Chicago, Ill., a corporation of Delaware
Application March 27, 1933, Serial No. 662,990
14 Claims. (Cl. 62—126)

1. A device for separating oil from the refrigerant of a refrigerating system having an evaporator, comprising a downwardly inclined wall portion in the upper part of the evaporator and above the normal level of the liquid therein, a duct leading from above said level and to the exterior of said evaporator, the inlet of the duct being beneath the lower part of said inclined wall portion for receiving oil that may drop therefrom.

2,003,544
INK FOUNTAIN REGULATOR



Hans C. Jordhoy, North Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application June 30, 1932, Serial No. 620,124
2 Claims. (Cl. 101—364)

1. In an ink supply device for a printing press, the combination of an ink fountain and a chamber freely communicating with said fountain, a float located in said chamber, a lever having an arm to which the float is fixed pivoted at the side of said chamber, a mercury circuit closing device located on said lever, a valve for supplying the fountain with ink, an electromagnetic closing and opening device for said valve in a circuit including said mercury closing device, whereby said valve will be opened by energy independent of the float when the float descends materially below its normal level.

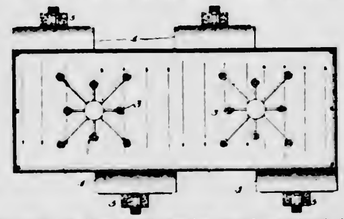
2,003,545
MEANS FOR APPLYING A TRIMMING CONDENSER TO A MAIN CONDENSER

Emil Dudley Koepping, Haddon Heights, N. J., assignor to Radio Condenser Company, Camden, N. J.
Application May 7, 1931, Serial No. 535,592
7 Claims. (Cl. 175—41.5)

1. In an electrical condenser having a frame and relatively fixed and movable sets of elements carried thereby, one set being fastened to at least two insulators carried by the frame, a bracket permanently attached to at least one of the insulators by said one set fastening means, a trimmer condenser plate adapted to be mounted on said bracket, and means for adjusting the capacity position of said plate with respect to the frame.

2,003,546
RAIL CAR TRUCK

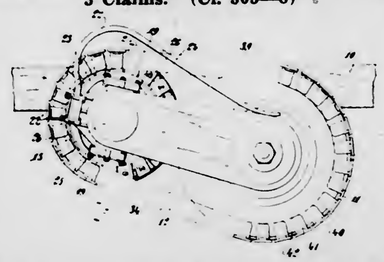
Joseph Ledwinka, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 5, 1932, Serial No. 603,243
8 Claims. (Cl. 105—196)



1. In a rail car truck, a side beam extending over all the axles and comprised of a main body web of sheet metal continuous from end to end and a marginal reinforce for said web of hollow box section form.

2,003,547
FORCED DRAFT MULTIPLE FAN COOLING TOWER

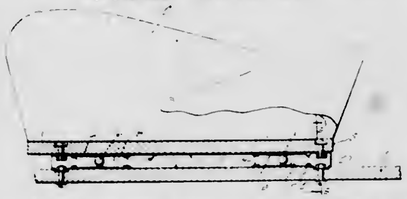
Leon T. Mart, Mission Township, Johnson County, Kans.
Application October 21, 1933, Serial No. 694,600
1 Claim. (Cl. 261—109)



A forced draft cooling tower comprising a vertical casing having a discharge opening at its upper end, liquid distributing devices within and adjacent the upper end of said tower, a series of spaced fans along one side of the tower and discharging in parallel planes transversely across the tower against its opposite side wall, and a second series of spaced fans on the opposite side of the tower from said first-named series of fans, said second fans discharging in planes parallel to the

discharge of the first series and against the opposite side wall, the two series of fans being arranged so that no part of a fan blast will intercept the blast from an oppositely discharging fan.

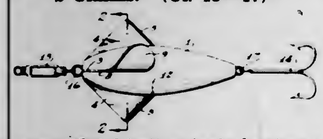
2,003,548
INDEPENDENTLY MOUNTED TRACTION UNIT



Alfred F. Masury, New York, N. Y., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application January 29, 1932, Serial No. 589,620
5 Claims. (Cl. 305—8)

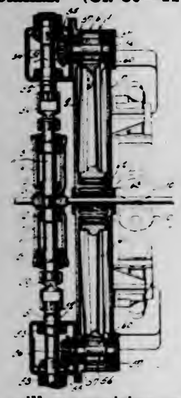
5. In combination, a vehicle frame, a wheel mounting arm, means to journal one end of the arm on the frame, a wheel journaled at the other end of the arm, the arm and wheel being mounted as an independent wheel unit on the frame, an idler rim at the first end of the arm journaled concentric with the mounting of the arm upon the frame, means to hold the wheel in operative position, and an endless track mounted over the wheel and the idler rim.

2,003,549
SEAT ADJUSTER



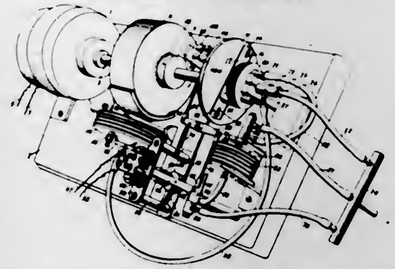
Swift Miller, Wauwatosa, Wis., assignor to E. R. Wagner Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 1, 1932, Serial No. 631,335
6 Claims. (Cl. 155—14)

3. A vehicle seat mounting including interengaged track and slide members, said members being of similar construction and having a body portion of angular cross section with a straight



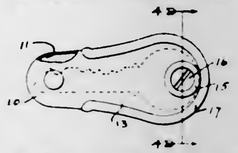
flange along one edge of the body portion and a reversely bent flange along the other edge thereof, the reversely bent flange of each member being slidably interfitted with the straight flange of the other, opposed spring strips positioned adjacent the inner faces of the tops and bottoms of said members, lugs struck from said members and engaging said strips, at least one of said strips being bowed toward the other intermediate its ends, and ball bearings engaged with said strips.

2,003,550
FISH BAIT
Peter Muller, Detroit, Mich.
Application April 28, 1934, Serial No. 722,873
2 Claims. (Cl. 43—47)



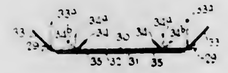
1. In an artificial bait, a body having an axial bore extending from end to end thereof and intersecting diametric slots entering the forward end thereof, intersecting metal members tightly received in said slots and having portions bent to form blades, said metal members being frictionally retained in said slots, a wire member loosely extending through said bore and formed with loops at opposite ends of the body, the free ends of said wire re-entering said bore and extending throughout a substantial portion of the length thereof whereby said ends overlap, a swivel attached to one of said loops, and hooks attached to the other of said loops.

2,003,551
TUBE ROLLING MILL
Karl A. Nygren and Johannes A. Zschiesche, Milwaukee, Wis., assignors to Globe Steel Tubes Co., Milwaukee, Wis., a corporation of Delaware
Application April 10, 1933, Serial No. 665,358
4 Claims. (Cl. 80—11)



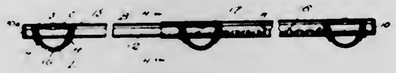
1. A rolling mill comprising a single main housing having gear boxes extending laterally therefrom adjacent its periphery, a passage-way extending centrally through said housing for accommodation of material to be rolled, drive shafts carried by the gear boxes and extending toward the longitudinal axis of said passage-way and radially thereof, gearing within said housing and gear boxes for driving said shafts, a plurality of radial disposed rolls adapted for conjoint rolling action on material passing through said passage-way, means slidably interconnecting said rolls and the outside of said housing, said means rotatably supporting said rolls and providing for individual transverse and axial adjustment thereof while maintaining said rolls with their rotational axis lying in a common plane and flexible driving connections between said rolls and said driving shafts, said means, rolls and flexible driving connections being positioned within the confines defined by the face of the housing and the common plane of the outer faces of said gear boxes.

2,003,552
AIR CONTROLLED SPEED REGULATOR
Richard Howland Ranger, Newark, N. J., and Verne T. Braman and Carl Eric Nelson, Brooklyn, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application May 2, 1927, Serial No. 188,377
36 Claims. (Cl. 188—180)



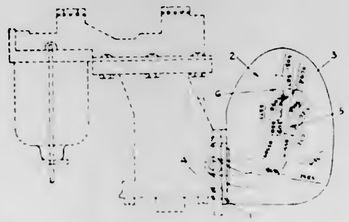
2. A speed responsive device including a governor and a mechanically driven air system for modifying the action of said governor at periods when the speed of the prime mover is less than the normal speed.

2,003,553
KEY HOLDER
Ralph C. Root, Indianapolis, Ind.
Application April 18, 1934, Serial No. 721,097
8 Claims. (Cl. 150—40)



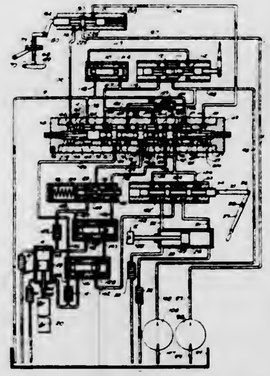
1. A key holder comprising a body having a pocket, a wall extending from each of opposite sides of the pocket, and a transversely disposed member carried by the walls adapted to pass through eyes of keys placed between the walls, said member being spaced in relation to said pocket to have the other ends of the keys disposed within the pocket whereby the keys are retained against rocking about the member, and said walls having at least a portion thereof sufficiently elastic to permit elongation thereof so that the keys may be released from said pocket by pulling said member away from said pocket and said pocket being enclosed on all sides requiring end movement of the keys and the transverse member passing through the eyes of the keys for release of the keys from the pocket.

2,003,554
PAPER FASTENER
Oscar A. Ross, New York, N. Y.
Application July 13, 1933, Serial No. 680,165
20 Claims. (Cl. 24—153)



1. In a paper fastener, a clamping member having fingers arranged to pass through perforated sheets of paper for the binding thereof, a keeper including a keeper plate having end portions connected by spaced rail portions forming a frame including a central opening therethrough having a width wider than the width of the fingers, perforations in the end portions for receiving the fingers of the clamping member therethrough, the fingers being bent down into the central opening of the keeper plate for binding the sheets, and locks slidable upon the rail portions arranged to be slid over the downwardly bent fingers for the locking thereof.

2,003,555
OVEN PROTECTOR
Emmett A. Rowe, Oakland, Calif.
Application October 23, 1933, Serial No. 694,827
5 Claims. (Cl. 65—61)

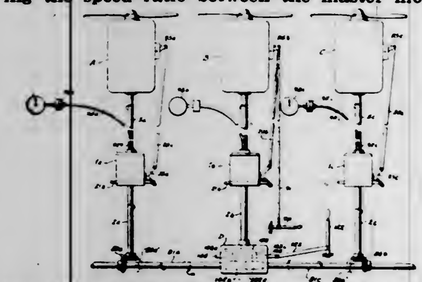


1. A protector of the character described comprising two members, one of which is provided with tubular edge guides and the other with complemental edge rails telescoping said guides, transversely disposed elongated leg-attaching elements depending from said members, and legs of approximate U-shape in cross section retained in position by said leg-attaching elements.

2,003,556
GAUGE FOR FUEL PUMP ROCKER ARMS
Erwin Saballus, Chicago, Ill., assignor to Joseph Weidenhoff, Inc., Chicago, Ill., a corporation of Illinois
Application October 2, 1933, Serial No. 691,782
2 Claims. (Cl. 33—180)

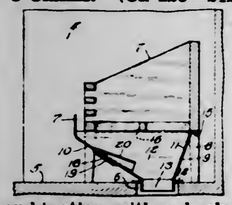
1. A gauge for indicating the location of a rocker arm for an automobile fuel pump comprising a base member having an aperture through which the rocker arm may pass, spaced lugs integral with the base member for positioning said member with respect to a fuel pump flange, and a vertically disposed member on the opposite side of said base member provided with a graduation whereby the position of the rocker arm may be noted.

2,003,557
HYDRAULICALLY CONTROLLED AUTOMATIC DIE SINKING MACHINE
Bernard Sassen, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application August 17, 1932, Serial No. 629,197
35 Claims. (Cl. 90—13.5)



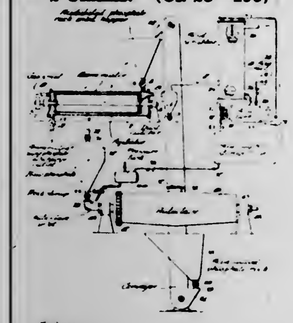
16. In a mechanism of the class described the combination with a tracer, a pattern and a tool adapted to have certain movements imparted thereto, of hydraulic motors for effecting said movements at desired rates, an hydraulic medium for actuating said motors, a distributor valve for determining the distribution of the flow of the hydraulic medium to said motors, a primary valve for directing the medium to the distributor valve for effecting its relative positions, means including the tracer for shifting said primary valve in accordance with the variations in the pattern to thereby shift and position the distributor valve, and means between the distributor valve and primary valve whereby any movement or adjustment of the primary valve simultaneously moves and adjusts the position of the distributor valve so that for any given position of the primary valve the distributor valve takes up a definite position, said means comprising fluid resistances associated with the primary valve and secondary valve in serial relation to one another, the ratio of the resistances of the primary valve being equal to the ratio of the resistances of the secondary valve so that any variation in pressure controlling the movement of the distributor valve will immediately effect a re-adjustment thereof to its proper position.

2,003,558
METHOD AND MECHANISM FOR GOVERNING ROTATING BODIES
Grayson Schmidt, Fort Monroe, Va., assignor of one-half to Harry F. Townsend, Fort Mills, P. I.
Application June 5, 1930, Serial No. 459,408
Renewed August 30, 1934
12 Claims. (Cl. 60—97)



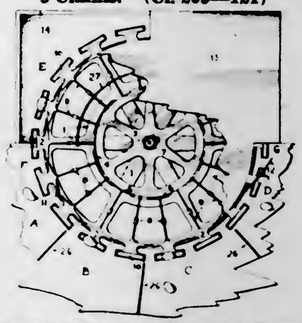
1. A mechanism for synchronous motor control including in combination a master motor, a governed motor, means for maintaining the governed motor rotating at the same or a multiple of the

speed of the master motor, and means for varying the speed ratio between the master motor



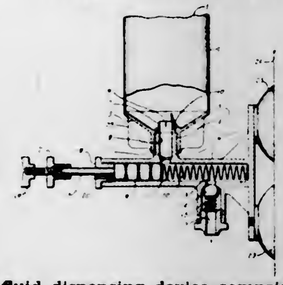
and governed motor while maintaining the governing action between them.

2,003,559
ASH HOPPER FOR FIREPLACES
Eric A. Scott, Indianapolis, Ind.
Application March 12, 1932, Serial No. 598,393
5 Claims. (Cl. 126—242)



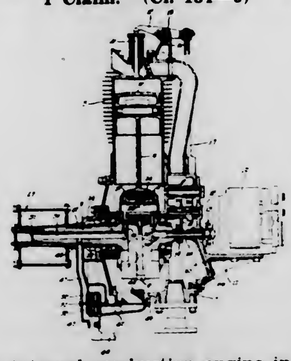
1. The combination with a basket grate, of a hopper having a flange around the back and ends thereof engaging with the lower edge of the back and ends of the grate and having converging side, back and front portions connected with a discharge pipe, the front portion having an upwardly projecting flange spaced from the front of the grate.

2,003,560
TREATMENT OF FUEL GAS TO REMOVE AMMONIA
Mark Shoeld, Mount Lebanon Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware
Application May 3, 1932, Serial No. 608,976
2 Claims. (Cl. 23—196)



1. A process of purifying fuel gas of ammonia, which comprises: scrubbing the gas, after it has been pre-treated with partly ammoniated acidulated phosphate rock to partially remove the ammonia from the gas, with a solution of an excess of acid to remove last traces of ammonia from the gas and form an acid ammonium compound solution; acidulating phosphate rock with the acid ammonium compound solution formed thereby forming partly ammoniated solid acidulated phosphate rock; and effecting the pre-treatment of the fuel gas to partially remove the ammonia of the gas by direct contact thereof with the partly ammoniated solid acidulated phosphate rock so formed, thereby completing the purification of the gas of its ammonia with the production of a single end product of solid ammoniated calcium phosphate containing all of the ammonia removed from the gas.

2,003,561
EGG GRADING MACHINE
Oscar A. Studley and Kennon R. Gilbert, Sonoma, Calif.
Application May 6, 1932, Serial No. 609,686
9 Claims. (Cl. 209—121)

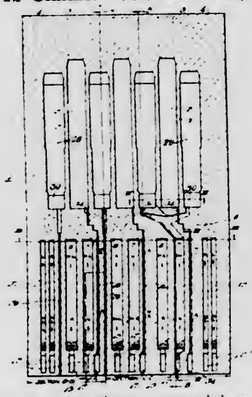


1. In a centrally pivoted egg grading machine the combination of an egg carrying element balanced to rest in a horizontal plane with an egg thereon whereby tilting of said element will result in a shifting of the leverage and its resultant forces and the discharge of the egg, said element having a frame to support an egg with its longest axis parallel to the pivotal axis of the element, and means for tilting said element from its balanced horizontal position into a plurality of selected angular positions whereby the egg will overbalance the element at a selected angular position corresponding to the weight of the egg.

2,003,562
FLUID DISPENSING DEVICE
Charles H. Stuart, Newark, N. Y.
Application January 7, 1933, Serial No. 650,651
17 Claims. (Cl. 221—103)

1. A fluid dispensing device comprising a collapsible container, a fixed support for the same and means for evacuating said container comprising a barrel communicating through a port with the interior of said container, a piston moving in said barrel to close said port, a spring in said barrel normally forcing said piston outward to the limit of its travel to uncover and open said port, a bushing in the end of said barrel limiting the travel of said piston, a stem passing through and guided by said bushing to operate said piston, a vent in said bushing and a discharge port from said barrel normally closed by a check valve.

2,003,563
INTERNAL COMBUSTION ENGINE
Otto E. Szekely, Holland, Mich.
Application February 14, 1931, Serial No. 515,682
1 Claim. (Cl. 184—6)

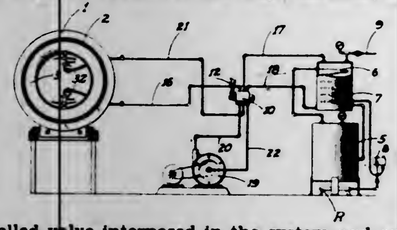


In an internal combustion engine including a crank shaft having a lubricant passage therein, a crank case having an opening in the lower wall thereof and operating parts having lubricant distributing passages therein communicating with the lubricant distributing passage in the crank shaft to receive lubricant therefrom, a housing mounted at one end of the crank case and including a casting secured to the bottom of the crank case and having an opening therein aligned with the opening in the bottom of the crank case, said casting having a pump chamber therein and a passage leading from the opening to said pump chamber, a gear pump in said pump chamber, said housing including a second casting having a pump chamber therein, said housing also including a partition separating said pump chambers, a gear pump in the pump chamber in the second casting, said second casting including a part providing an outlet passage leading from the pump chamber in said casting to a port disposed at the periphery of said crank shaft, means providing a groove about the periphery of the crank shaft and aligned with said port, said crank shaft having an opening therein extending between said groove and the lubricant distributing passage therein, said second named casting also including a part providing a shaft bearing, a shaft journaled in said shaft bearing and having a movement receiving gear thereon, a gear of each of said gear pumps being mounted on said shaft, and a gear on said crank shaft and meshed with said movement receiving gear whereby rotation of said crank shaft is transmitted through said shaft to said gear pumps, said gear pumps being connected in serial relation and in the operation thereof withdrawing lubricant from said crank case and forcing the lubricant through said outlet passage and said groove, opening, and lubricant distributing passage in said crank shaft for distribution through the lubricant distributing passages in said operating parts.

2,003,564
GRAPHITE LUBRICANT
William Cowling Thorpe, Toronto, Ontario, Canada, assignor to Robert Elroy Wark, Toronto, Canada, as trustee
No Drawing. Application June 2, 1932, Serial No. 615,037
3 Claims. (Cl. 87—9)

1. A liquid lubricant comprising in combination the following ingredients in substantially the following proportionate parts by weight: an emulsion of 20 parts degras from which the fatty acids have been removed, 16 parts kerosene, 75 parts water, 8.7 parts turpentine, and 4.4 parts aqueous solution of ammonia, with 30 parts graphite in suspension in said emulsion.

2,003,565
COKING RETORT OVEN
Joseph van Ackeren, O'Hara Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware
Application March 10, 1931, Serial No. 521,406
12 Claims. (Cl. 202—143)



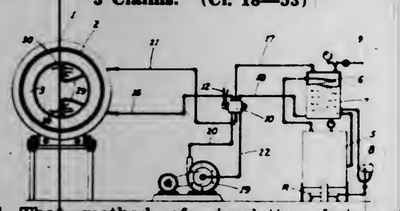
1. Coke-oven structure comprising a series of combustion heating flues therefor and regenerators communicating therewith, said regenerators being arranged side-by-side in a horizontal row and in side-by-side groups adapted to operate for inflow of combustion media and concurrent outflow of waste gas in alternation with each other, each group comprising two regenerators side-by-side communicably connected to the same flue for simultaneous delivery of a gas to the same flame flue and a passageway on one side of the group and substantially co-extensive with the regenerator contiguous thereto in the group in length and in height and communicating in series with the other regenerator of the group in the order, passageway, regenerator, combustion flue, the passageways of each of said groups being interposed between adjacent regenerators of contiguous groups of regenerators.

2,003,566
CIRCULATING SYSTEM FOR RETREADING MOLD PRESSURE BAGS
Herbert J. Woock, Lodi, Calif., assignor to Super Mold Corporation, Lodi, Calif., a corporation
Application April 21, 1931, Serial No. 531,729
5 Claims. (Cl. 18—18)

1. An apparatus for vulcanizing rubber on a tire casing comprising a system to circulate liquid

through the casing, such system including a liquid supply tank, means to admit a gas under pressure into the tank, means affording communication between opposite ends of the tank and diametrically opposed inlets into the casing, a circulating instrumentality interposed at a point in the system, and a single manually con-

trolled valve interposed in the system and operable to selectively permit the circulation of liquid from the tank through the casing in a continuing cycle, the interruption of such cycle and the return of the liquid to the tank, and the replacement for the liquid in the casing of gas under pressure.



2,003,567

METHOD OF CIRCULATING HOT WATER THROUGH THE PRESSURE BAGS OF TIRE RETREADING MOLDS

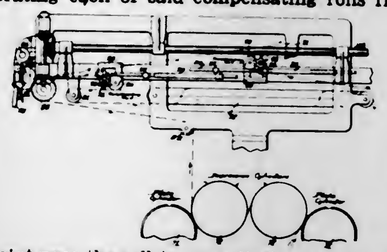
Herbert J. Woock, Lodi, Calif., assignor to Super Mold Corporation, Lodi, Calif., a corporation of Nevada

Original application April 21, 1931, Serial No. 531,729. Divided and this application December 11, 1934, Serial No. 756,947

3 Claims. (Cl. 18—53)

1. That method of circulating hot water through a pressure bag comprising the steps of establishing a source of hot water, maintaining a gas pressure on the water to keep it liquid, circulating the water through the bag while maintaining the gas pressure, continuing such circulation for a desired length of time, discontinuing the circulation of the water through the bag, and returning the water to its source while still maintaining it under such gas pressure.

2,003,568



FOLDER

Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia

Original application April 28, 1927, Serial No. 187,375. Divided and this application July 15, 1931, Serial No. 550,837

2 Claims. (Cl. 270—18)

1. In a printing press, the combination with a pair of web perfecting couples, of a roll over which the web therefrom is directed, a slitter adapted to slit the web in cooperation with said roll, means for turning one of the half width webs into a position in vertical alignment with the other, compensating rolls, each located in a loop in one of said webs and adjustable transversely to its axis to register the web, means for operating each of said compensating rolls from

a point near the roll to move it along, and means in stationary position near the folder for moving each of the compensating rolls.

2,003,569

TENSION CONTROLLING MEANS

Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia

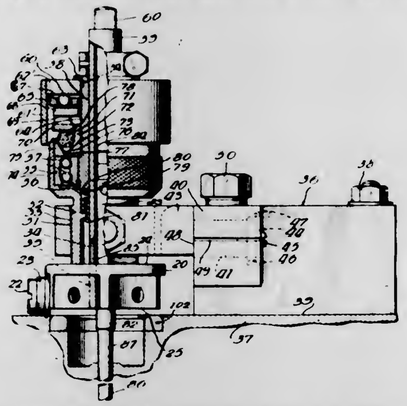
Application December 8, 1931, Serial No. 579,760

Renewed March 12, 1934

4 Claims. (Cl. 242—75)

1. In a device for controlling the operation of a tension belt, the combination of a pulley around which the belt passes, a brake shoe adapted to engage the belt passing around the pulley, and means for holding the brake shoe against the belt on the pulley.

2,003,570



METHOD OF MAKING VALVE SEAT TOOLS

Frans O. Albertson, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a corporation of Iowa

Original application March 5, 1932, Serial No. 597,082. Divided and this application July 29, 1932, Serial No. 625,864

1 Claim. (Cl. 90—11)

In the manufacture of a rotatable body adapted to hold a tool at any one of six different distances from the center of rotation of such body by means of plane surfaces at such different distances, the method of forming such a body comprising forming a blank having means for securing the blank for rotation about its true center, supporting the blank upon an eccentric axis, said axis being parallel to and at a predetermined distance from the true center of the blank, forming a pair of opposed surfaces on the periphery of said blank by means of a pair of opposed cutting tools fixed at predetermined different radii from the true center of the blank and at right angles to a line joining the true center and eccentric axis, rotating the blank through an angle of 60° on the eccentric axis, forming a second pair of opposed plane surfaces on the periphery of the blank without altering the distance between the eccentric axis and the cutting tools whereby said second pair of surfaces will each be at a distance from said true center varying

by one-half the eccentricity from the distance of said first pair of surfaces from the true center, again further rotating the blank through an angle of 60° on the eccentric axis and forming a third pair of opposed plane surfaces on the periphery of the blank without altering the distance between the eccentric axis and the cutting tools, whereby said third pair of surfaces will each be at a distance from said true center varying by one and one-half times the eccentricity from the distance of said first pair of surfaces from the true center.

2,003,571

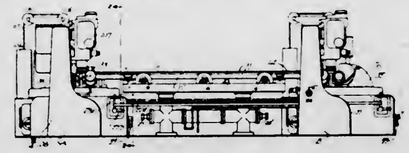
CYLINDER HEAD FOR INTERNAL COMBUSTION ENGINES

David E. Anderson, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich., a corporation of Michigan

Application August 15, 1932, Serial No. 628,919

3 Claims. (Cl. 123—173)

1. An internal combustion engine cylinder head formed with a combustion chamber therein and having a wall spaced above the top wall of the combustion chamber to form with said top wall a space for a cooling medium, said combustion chamber having a portion for receiving a charge of fuel and having another portion of relatively large surface to volume ratio adapted to register with a cylinder of an engine, and cooperating registering projections extending into the space aforesaid from the top wall of the second named portion of the combustion chamber and the above mentioned wall of the head to prevent the flow of the cooling medium in said space over a portion of the top wall of the second named portion of the combustion chamber.



2,003,572

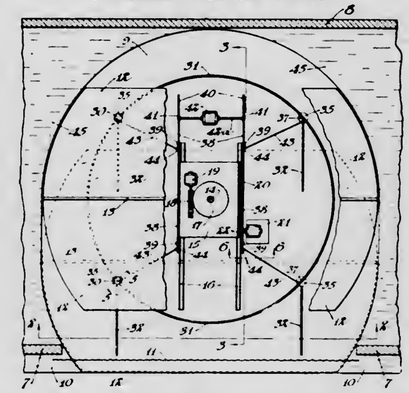
MILLING MACHINE

Walter D. Archea and Millard Romaine, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio

Application October 21, 1930, Serial No. 490,248

57 Claims. (Cl. 90—15)

1. A metal working machine having a plurality of units, each unit comprising a work support, a plurality of translatable spindle carriers, a common rate and direction determinator for said carriers, and a plurality of controls for said determinator, there being one for each carrier, and means to selectively couple any carrier and its control with said determinator.



2,003,573

DOUBLE SET STAGE

William C. Barnard, Good Tbunder, Minn.

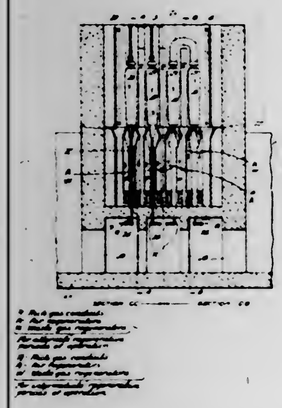
Application May 4, 1934, Serial No. 723,921

6 Claims. (Cl. 20—1.123)

1. A movable theater stage comprising a platform, wheeled supporting means for said platform, guides for said supporting means, said guides being arranged to guide the wheels of said supporting means rectilinearly for forward and rearward movement of said platform and in a circular path for rotary movement of said platform in a horizontal plane when said platform is in its rearward position, means for moving said platform forwardly and rearwardly and means for rotating said platform when the same is in its rearward position.

2,003,574

COKING RETORT OVEN

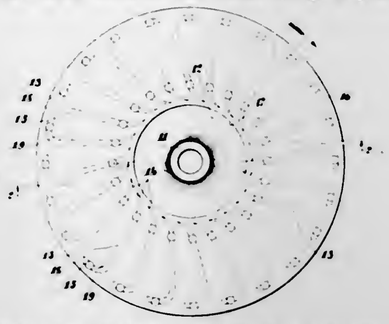


Joseph Becker, O'Hara Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware

Application January 26, 1931, Serial No. 511,143

2 Claims. (Cl. 202—142)

1. In a coking retort oven battery, a series of alternate horizontal coking chambers and heating



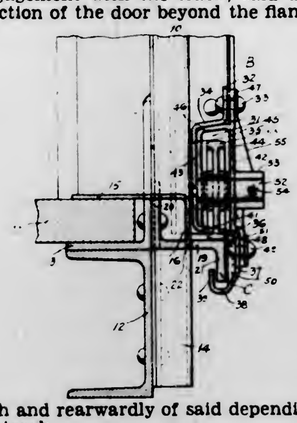
walls therefor arranged side-by-side in a row, each of said heating walls comprising a series of vertical flame flues; cross-over flues communicably connecting the flame flues of each of said heating walls in series with the flame flues of an adjacent heating wall so as to connect alternate and intermediate heating walls into independently regulable heating flue systems; a supporting wall beneath each of said oven chambers and heating walls; and combustion media supplying means for said flame flues comprising regenerators side-by-side between the supporting walls and rich gas ducts extending vertically through certain supporting walls between the regenerators, the regenerators and rich gas ducts being operatively disposed in two sets operable in alternation with each other for concurrent inflow to the flame flues of one heating wall and outflow from the flame flues of the other heating wall of the respective heating flue systems, each of the

flame flues being communicably connected with two regenerators that are contiguous to each other along the battery and adapted to preheat air and fuel gas separately and simultaneously, respectively, and each rich gas duct communicating with a flame flue and being located between two regenerators that are contiguous to each other along the battery and that communicate with the same flame flue with which the rich gas duct communicates, and the supplying means for the battery including the two sets of regenerators and rich gas ducts for the battery being so arranged and connected with the flame flues of the several heating flue systems as to provide combustion immediately adjacent to both sides of the middle oven chamber within each group of three oven chambers which alternate with four consecutive heating walls on one regenerative period and waste gas flow on both sides of said middle oven chamber on a next succeeding regenerative reversal period.

2,003,575
SPRAY WHEEL
William Spencer Bowen, Westfield, N. J.
Application November 7, 1933, Serial No. 697,086
7 Claims. (Cl. 299—63)

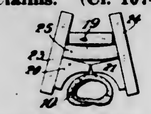
1. A spray wheel formed with a plurality of vanes extending outwardly and leading backwardly with respect to the direction of rotation of the wheel, said wheel being adapted to receive a fluid adjacent the center thereof, and portions on the outer ends of the vanes lying in planes

substantially parallel to tangents to the periphery of the wheel at the ends of the vanes.



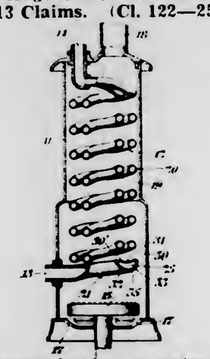
2,003,576
OBOE MOUTHPIECE
Alfred O. Buhren, Sacramento, Calif.
Application March 3, 1931, Serial No. 519,736
2 Claims. (Cl. 84—383)

1. A mouth piece for wind instruments of the oboe type comprising a lead-off conduit adapted to removably fit into the body of the instrument, a body projecting from one end of the conduit, a chamber formed in the body ahead of and communicating with the conduit, said chamber at its junction with the conduit being of substantially the same cross sectional area as the conduit, the top and bottom of the chamber converging toward each other to the outer end of the chamber from such junction point and the side walls of the chamber diverging from such junction point to the outer end of the chamber; the bottom wall of the chamber at its outer end being substantially flat and being disposed in a plane substantially in longitudinal alinement with the bottom of the conduit, and a single reed forming the top wall of the chamber and mounted on the body rearwardly of the chamber.



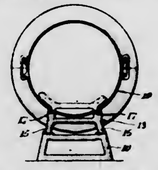
2,003,577
CAR DOOR
Argyle Campbell, Chicago, and George B. Willard, Western Springs, Ill., assignors to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application June 9, 1933, Serial No. 675,078
7 Claims. (Cl. 189—46)

1. The combination with a car body having a door opening and a sliding door for said opening; of a track located at the lower margin of said opening, said track presenting a substantially horizontal runway and a depending flange; said door at its lower edge being formed with an angularly bent plate portion presenting horizontal and vertical wall sections lying above the runway and outwardly of the depending wall of the track respectively; said horizontal wall section of the door having openings therein; anti-friction door supporting means disposed outwardly of the plate and extending through the openings for supporting engagement with the track; said depending wall section of the door beyond the flange, being



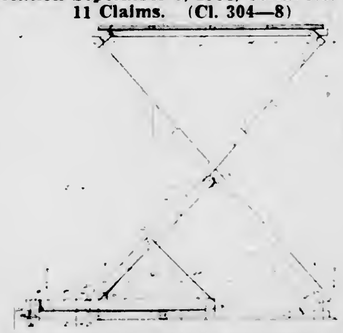
beneath and rearwardly of said depending flange of the track.

2,003,578
PASTRY CAKE AND METHOD AND MOLD FOR MAKING THE SAME
Victor A. Clement, Bayside, N. Y.
Application August 9, 1933, Serial No. 684,433
5 Claims. (Cl. 107—1)



4. A mold for making pastry articles comprising two members disposed in edge abutting relation and each having complementary pastry forming surfaces, and means engaging the members outwardly of their abutting edge to mount the members for swinging movement relative to each other, the inner edges of the members constituting an ejecting means when the members are rocked relative to each other.

2,003,579
HEATER
John H. Conant, Holyoke, Mass., assignor to Holyoke Heater Company, Holyoke, Mass., a corporation of Massachusetts
Application August 15, 1932, Serial No. 628,850
13 Claims. (Cl. 122—250)



1. In a water heater, a water coil of thin-walled tubing, an annular member of relatively thick walls to which said tubing is connected positioned beneath said coil with its opening in alinement with the opening through said coil, a burner positioned so that the flame therefrom strikes directly on said member, and means associated with said member for preventing the flame from striking the connection between said tubing and said member.

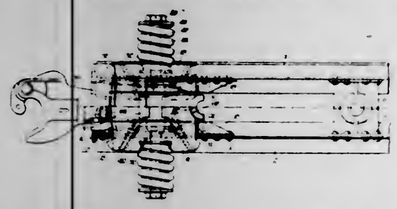
2,003,580
UNDERGROUND CONDUIT CONSTRUCTION
Magruder Craighead, Greenburgh, N. Y.
Application March 30, 1933, Serial No. 663,569
4 Claims. (Cl. 137—75)

2. In a conduit construction, a series of underdrain sections, a series of support members separable from and resting on said underdrain sections, a conduit comprising top sections, and a series of approximately semi-circular lower sections carried by said support members and so connected with said support members that said conduit sections are located in predetermined angular relation to said underdrain sections, a series of roll frames fitting within said conduit sections, and means whereby said roll frames are held in predetermined angular relation relative to said conduit sections and thereby are held in predetermined angular relation relative to said underdrain sections.

2,003,581
ADJUSTABLE SCAFFOLD
Charles Daly, Jr., St. Louis, Mo.
Application September 6, 1934, Serial No. 742,884
11 Claims. (Cl. 304—8)

1. An adjustable scaffold comprising a base frame, a pair of crossed frames having their lower ends pivoted to said base frame, an extension frame supported by each of said pair of frames, a shaft rotatively supported by said base frame, and mechanism operative by said shaft to raise and to lower said pair of frames when said shaft is rotated.

2,003,582
COUPLER
Alfred H. Oelkers, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application February 19, 1931, Serial No. 516,890
13 Claims. (Cl. 213—38)

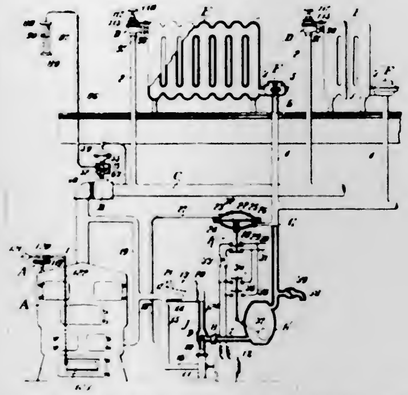


7. In a draft rigging, the combination of slotted draft sills, a striking casting comprising a strik-

ing plate and coupler carrier spaced below said plate, a one-piece coupler member comprising a yoke portion of less height than the distance between said plate and carrier whereby said member is insertable through the space between said plate and carrier, and a draft gear including ele-

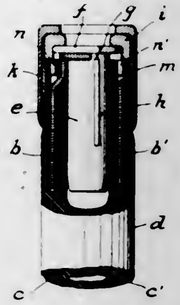
ments insertable into position through said slots from the side of said sills, certain of said elements being embraced by said yoke portion, said elements serving as a key for attaching said coupler member to said sills and supporting said yoke portion.

2,003,583
DRAFT GEAR
Alfred H. Oelkers, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application February 4, 1932, Serial No. 590,811
8 Claims. (Cl. 213—38)



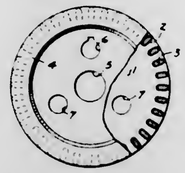
1. In a draft rigging, the combination of slotted draft sills, a draft gear extending between said sills and through said slots, said draft gear comprising two longitudinal friction wedges centrally spaced between said sills and projecting through and beyond said slots, a pair of transverse friction wedges engaging said longitudinal wedges and extending through and beyond said slots, each of said longitudinal friction wedges having means adapted to cooperate with said sills to prevent lateral displacement of said gear in either of two directions in said slots.

2,003,584
DESULPHURIZATION AND OXIDATION OF HYDROCARBONS
Wilhelm Dietrich and Max Harder, Oppau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application February 28, 1931, Serial No. 519,253. In Germany March 27, 1930
3 Claims. (Cl. 260—116)



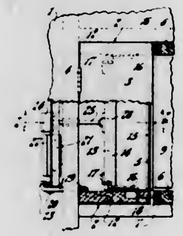
1. In the production of organic products containing oxygen from aliphatic hydrocarbon oils containing unsaturated compounds, the steps which comprise desulphurizing the said materials while precluding the removal of said unsaturated compounds and then subjecting the desulphurized materials to incomplete non-destructive oxidation in the liquid phase.

2,003,585
METHOD AND APPARATUS FOR HEATING WITH STEAM
Clayton A. Dunham, Glencoe, Ill., assignor to C. A. Dunham Company, Marshalltown, Iowa, a corporation of Iowa
Original application October 18, 1923, Serial No. 669,363. Divided and this application May 14, 1934, Serial No. 725,476
24 Claims. (Cl. 237—12)



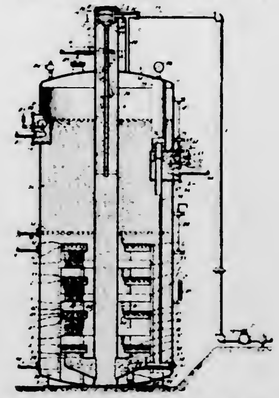
1. The method of heating with steam which comprises supplying steam under pressure to a distributing main, introducing a restricted flow of steam from the main into a condensing and heat radiating space so as to maintain a pressure in the space lower by a predetermined amount than the pressure in the main, and withdrawing condensate and non-condensable gases from said space without permitting the escape of steam.

2,003,586
MILKING MACHINE CONNECTER AND PNEUMATIC AND ELECTRIC CONDUCTOR THEREFOR
Sven Johan Erling, Nockeby, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application November 22, 1932, Serial No. 643,838
In Sweden December 28, 1931
9 Claims. (Cl. 173—326)



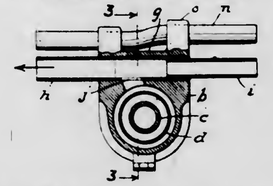
1. A pneumatic-electric connecter for milking machines comprising a tube of elastic material provided in its wall with a longitudinally extending channel, and an electric conductor extending therethrough, said conductor comprising a closely wound helix of wire.

2,003,587
ROTOR FOR ELECTRIC MOTORS
Everett G. Fahlman, Cleveland, Ohio, assignor to The Permold Company, Cleveland, Ohio, a corporation of Ohio
Application July 7, 1932, Serial No. 621,186
1 Claim. (Cl. 172—120)



A rotor comprising a laminated core formed of ferrous material having a plurality of circumferentially arranged conductor bar passages extending through said laminations, an integral casting selected from a group comprising cast aluminum and a cast aluminum alloy disposed in and substantially filling said passages and a relatively thin coating of chain clay adherently secured to the walls of said passages with silicate of soda.

2,003,588
PROTECTIVE DEVICE FOR ELEVATORS AND ELEVATOR SHAFTWAYS
Louis A. Gaudry, Greenfield, Mass.
Application May 16, 1934, Serial No. 725,935
5 Claims. (Cl. 187—98)

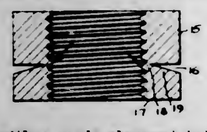


1. An elevator safety device having in combination with an elevator shaft and frame, a movable car therein, and floor landing, the floor landing having a movable section adjacent the elevator shaft, a socket member in said frame, a rod on the movable section normally engaged in said socket member for retaining the said section against movement, means on the movable section for withdrawing said retaining rod from said socket member when engaged by an object on the movable car which projects beyond the edge of the car platform when the car is in motion, said means comprising a bar pivotally secured on said movable section, a plate on said bar, a shoe secured on said bar and located close to the elevator shaft, said retaining rod being pivotally secured on said plate, a counterweight for holding said retaining rod in its platform-locking position, a slidable member between the plate and the counterweight for moving the counterweight when the shoe is moved, the counterweight serving to tilt the movable section upwardly after the retaining rod is released by engagement of an object on the car platform with the shoe.

2,003,589
APPARATUS FOR TREATING LIQUIDS
Joseph C. Gordon, Oklahoma City, Okla., assignor to Black, Sivalls & Bryson, Inc., Oklahoma City, Okla., a corporation of Delaware
Application July 15, 1933, Serial No. 680,522
6 Claims. (Cl. 210—48)

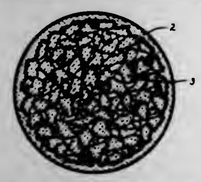
1. In an apparatus for separating liquids in a closely associated state including a tank containing a body of treating liquid, means for delivering the associated liquids to the treating liquid for gravitational flow therethrough, and a superimposed series of inverted and elongated pan members supported in the tank, each including a top plate having depending sides to form downwardly opening channels in the path of the gravitational flow to detain and confine a definite body of the liquids for movement longitudinally through the respective channels in one direction and having a series of outlets in the lower edges of one of the sides near the ends of said channels to allow flow of the liquids from a lower channel to a superimposed upper channel and along said upper channel for escape through said outlets in the side of the pan member forming said upper channel.

2,003,590
MILKING MACHINE CHECK VALVE CHAMBER
Cyrus Howard Hapgood, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application March 2, 1933, Serial No. 659,298
4 Claims. (Cl. 31—62)



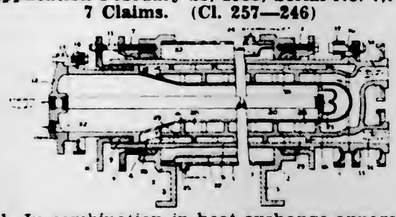
1. In a milking machine, the combination with the milk pail, a tube communicating with the interior of the pail and extending above the top thereof, a casing over the milk pail top and enclosing and spaced from the tube and forming a valve chamber, and a check valve resting on the top of the tube and having a skirt depending therefrom spaced both from the tube and the wall of the casing, of means providing a vacuum

passage extending alongside said valve chamber, there being through the wall of the casing an opening through which said passage communicates with the valve chamber, said passage being contracted adjacent said opening to produce an ejector effect substantially as described.



3. In a milking machine, the combination with the milk pail, a tube communicating with the interior of the pail and extending above the top thereof, a casing over the milk pail top and enclosing and spaced from the tube and forming a valve chamber, and a check valve resting on the top of the tube and having a skirt depending therefrom spaced both from the tube and the wall of the casing, of means providing a continuous vacuum passage extending uninterruptedly alongside the casing, there being a port opening laterally from said passage to said valve chamber and establishing communication between the side wall of the vacuum passage and the interior of the casing at a level below the top of the tube.

2,003,591
SELF LOCKING NUT
Howard A. Hayden, Detroit, Mich.
Application June 8, 1934, Serial No. 729,598
2 Claims. (Cl. 151—21)



1. For use with a male element initially having a substantially uniform exterior thread in order to form a locked thread assembly, a hollow female element initially having a substantially uniform interior thread designed for cooperation with the thread of the male element, the female element having a buttressed exterior peripheral groove, the relative proportions of the parts of the female element being such that the threads thereof near the base of the groove are automatically deformed inwardly, towards the axes of the threads by and in response to the action of threading the female element on the male element to lock the threads relatively, without causing relative movement of the parts of the female element on opposite sides of the groove in any but an axial direction.

2,003,592
GLAZE FOR NONMETALLIC RESISTORS
Ernst Hediger, Niagara Falls, N. Y., assignor to Globar Corporation, Niagara Falls, N. Y., a corporation of New York
Application January 3, 1933, Serial No. 649,968
4 Claims. (Cl. 201—76)

2. A silicon carbide heating element having a body portion substantially devoid of materials other than silicon carbide, the major portion of said silicon carbide being relatively coarse, and having a surface coating of more finely divided silicon carbide which is bonded with a vitrifiable bonding agent.

2,003,593
HEAT EXCHANGER
Oystein Jacobsen, Dayton, Ohio, assignor to The Duriron Company, Inc., a corporation of New York
Application February 23, 1935, Serial No. 7,744
7 Claims. (Cl. 257—246)

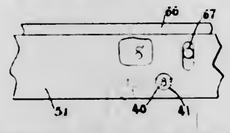
1. In combination in heat exchange apparatus a pair of spaced concentric tubes, means for heating such tubes, a division tube between the concentric tubes dividing the space therebetween into two passageways which communicate with each other at one end, the other end of one passageway having an inlet for the fluid to be heated while the other end of the other passageway has an outlet for said fluid, and a series of spaced circumferential ribs on the inner and outer faces of said division tube bridging the passageways, each of which extends around only a part of the circumference of the tube so that a passage is provided between the ends of each rib with each of said passages offset circumferentially with respect to the passage between the ends of the rib next adjacent on each side thereof.

2,003,594
BOTTLE ATTACHMENT
Gunnar R. Johnson, Milton, Mass.
Application February 16, 1934, Serial No. 711,509
3 Claims. (Cl. 40—4)

1. In combination with a bottle having an annular bead formed around its mouth, and a cap for the top of the bottle having a rim extending over and tightly engaging said bead, a resilient hook shaped clip having a shank positioned against the bottle and an upper end extending laterally substantially at a right angle to the shank of the clip and bearing upon the top of said cap, a lip formed upon said shank and engaging the edge of the rim of said cap, said cap being gripped between said upper end of the clip and said lip, and the said shank of the clip being thereby yieldingly held in contact with the bottle to hold a card thereagainst.

2,003,595
HEADED PIN
Walter L. Kauffman, 2d, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application September 15, 1932, Serial No. 633,316
1 Claim. (Cl. 85—9)

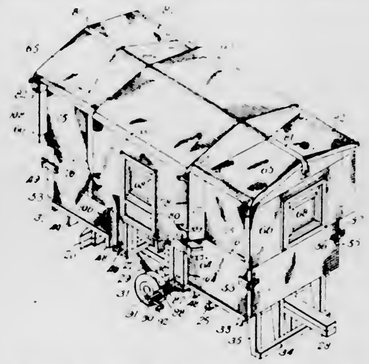
A headed pin comprising a pin; a base plate secured to the pin; and a sheet metal cap having a peripheral flange telescoping the periphery of the base plate, the edge of the cap flange



extending under the base plate, the cap flange being corrugated on its outer periphery, the corrugations extending under the base plate.

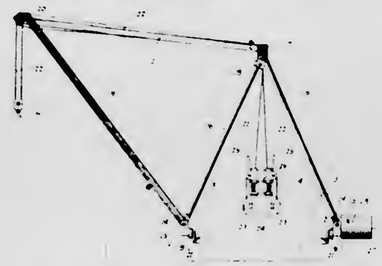
2,003,596
PRODUCING AZANTHRACENE DERIVATIVES
Karl Koeberle and Ernst Ploetz, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 24, 1934, Serial No. 736,777. In Germany August 5, 1933
11 Claims. (Cl. 260—40)

7. 9-chloroazanthracenes.



2,003,597
PRINTER'S QUOIN
James Edgar Lee, Olaf T. Gylleck, and Freeman Barney, Grand Haven, Mich., assignors to The Challenge Machinery Company, Grand Haven, Mich., a corporation of Michigan
Application August 2, 1934, Serial No. 738,094
7 Claims. (Cl. 254—42)

1. In combination, a channel shaped member, an outer wedge member slidable between the flanges thereof, an inner wedge member located between the web of the channel shaped member and the outer wedge member, means for moving the wedge members relatively to each other, one of said wedge members being cut away to form a recess between the same and the channel shaped member and locking means located in said recess, said locking means engaging the channel shaped member and one of the wedge members for preventing undesired movement therebetween.

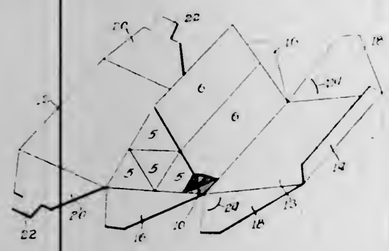


2,003,598
CAMPING TRAILER
Oscar J. Lehrer and John B. Blankenship, Norman, Okla.
Application May 2, 1934, Serial No. 723,529
7 Claims. (Cl. 296—23)

1. In a device of the character set forth, the combination with a chassis having a tug, of convertible props therefor, a lower unit fixed centrally upon the chassis, an upper extensible unit adapted to telescope the lower unit when lowered over said lower unit, guides formed on the inside and outside of said upper and lower units, means to raise the unit uppermost to a dwelling forming position, means to hold the same in that position, extensible floor sections on the lower unit to elongate the structure, side sections hinged to the lower unit, and adapted to be swung to dwelling forming positions, end walls carried by the extensible floor sections, and co-operating with the side walls, extension roofs carried by the upper extension unit extensible directionally with the floor extensions, side walls depending therefrom and meeting the aforesaid lower side walls, end walls carried by the roof sections and adapted to register with

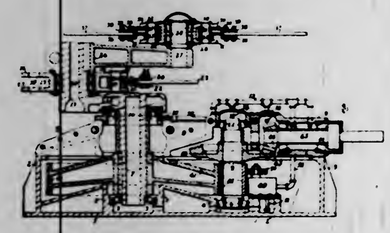
the lower end walls, means to latch the side walls and end walls together, and the end walls of the upper and lower sections and the side walls thereof being adapted to be folded together, while the upper section telescopes the lower section, and means to hold the telescoped sections together.

2,003,599
TRACTOR DERRICK
Robert G. Le Tourneau, Stockton, Calif.
Application June 10, 1933, Serial No. 675,256
8 Claims. (Cl. 212—8)



1. In combination with a tractor, a derrick mast upstanding from the tractor, a boom projecting laterally from the tractor on one side thereof, a frame extending along the sides of the tractor and across one end of the same, means connecting the frame to the tractor, the mast including a pair of legs diverging from their upper ends to terminations above one of the side members of the frame, and a common means to connect said legs to the frame and to also swivelly connect the lower end of the boom to the frame.

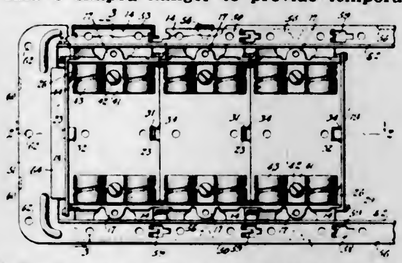
2,003,600
BUTTER PACKAGE AND METHOD OF MAKING SAME
Albert Lowenfels, White Plains, N. Y.
Application November 17, 1933, Serial No. 698,480
4 Claims. (Cl. 206—46)



1. A butter package including a plurality of identical blocks of butter, each in the form of

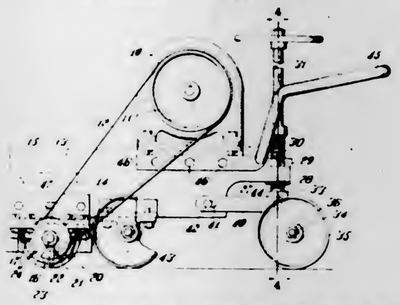
an equilateral triangular prism, the blocks being arranged with at least one facet of each

contiguous to and co-extensive with a facet of another block.



2,003,601
GEARED PUMPING POWER
Joseph R. Mahan and John B. Picard, Toledo, Ohio, assignors to The National-Superior Company, Toledo, Ohio, a corporation of Delaware
Application December 14, 1932, Serial No. 647,104
7 Claims. (Cl. 74—51)

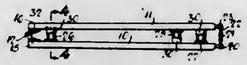
1. In a pumping power of the character described, the combination of a base having a floor and side walls and forming a lubricant chamber, a pair of bearings mounted on the floor of the base, a pair of parallel vertical shafts having their lower ends journaled in said bearings, a partible cover detachably secured to said base, antifriction bearings held between the parts of said cover and in which said shafts are journaled, a crank on the upper end of one of said shafts above the base, a gear mounted on said shaft within the base, a pinion mounted on the second vertical shaft within the base and meshing with said gear, a beveled gear mounted on said second shaft within the base, a horizontal driving shaft extending into the base, and a beveled pinion mounted on said driving shaft and meshing with said beveled gear.



2,003,602
OUTLET BOX
Morris Marians, New York, N. Y., assignor, by mesne assignments, to Roach Appleton Manufacturing Company, South Bend, Ind., a corporation of Delaware
Application June 22, 1928, Serial No. 287,489
8 Claims. (Cl. 247—22)

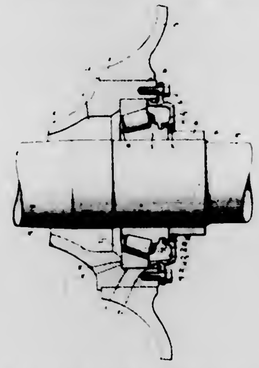
1. A device of the character described comprising a U-shaped hanger, the legs thereof having folded over portions providing slots opening toward one another, parts of said legs projecting substantially at right angles to the plane of said U-shaped hanger to provide temporary

attaching means for temporarily attaching said hanger to an adjacent stud or the like.



2,003,603
FLOOR RESURFACING DEVICE
Edward J. McKernan, Topeka, Kans.
Application December 15, 1933, Serial No. 702,528
3 Claims. (Cl. 144—117)

1. A floor resurfacing device comprising a main frame provided with supporting wheels; an arbor revolubly mounted at the forward end of the frame and disposed transversely beyond both sides of the frame; interchangeable blade carrying members adapted to be removably secured on one of the extended ends of the arbor beyond the side of the frame and to rotate therewith; a guard member removably secured to the side of the frame and adapted, when certain of said blade carrying members is used, to support the free end of the arbor and to expose said end of the arbor when the guard is removed; a sleeve slidable on the arbor when the guard member is removed whereby a blade carrying member is held at the outer end of the arbor; an electric motor mounted on the frame and having operative relation with the arbor so as to rotate the latter; a caster wheel carrying fork provided with an upstanding spindle, a bored screw adapted to rotatably receive the spindle, an internally threaded bushing for receiving said screw to permit the latter to screw upwardly or downwardly and thereby vertically adjust the rear part of the frame; means whereby said bushing is removably secured to the frame, and means whereby the device may be guided.

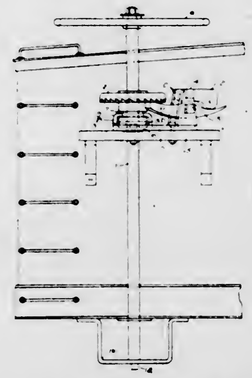


2,003,604
IRONING BOARD
Archie K. McLeod, Charlotte, N. C.
Application September 15, 1934, Serial No. 744,125
1 Claim. (Cl. 68—10)

An ironing board comprising a pair of sections, hinges for securing said sections, end to end, to each other, means associated with said

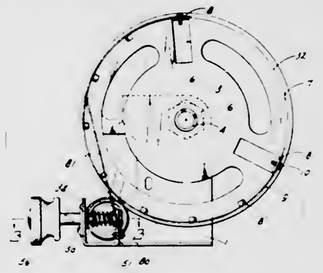
hinges normally forcing said sections to unfolded position.

2,003,605
ROLLER BEARING ASSEMBLY
Alfred H. Oelkers, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application November 25, 1929, Serial No. 409,494
17 Claims. (Cl. 295—36)



15. In a wheel and axle assembly, the combination of an axle, a wheel, anti-friction bearings disposed between said wheel and axle, said bearings having a racering, means for securing said racering in operative position, means for retaining bearing lubricant including baffle means substantially completely encircling said axle, and a cover plate disposed between said wheel and axle and having a portion substantially encircling said axle and interposed between a portion of said racering and said baffle means.

2,003,606
BALLAST EXCAVATING AND CLEANING APPARATUS
Harry W. Protzeller, Fairmont, Minn., assignor to Fairmont Railway Motors, Inc., Fairmont, Minn., a corporation of Minnesota
Application October 5, 1933, Serial No. 692,249
19 Claims. (Cl. 262—2)

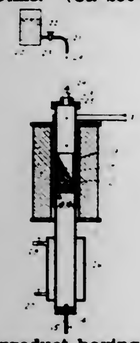


1. In an apparatus of the class described, a car, ballast excavating and cleaning mechanism carried by the car, and means for moving said mechanism from its non-working position, outwardly and downwardly to its working position, said means also being operable to tilt said mechanism in any direction when in said working position to meet different working conditions.

2,003,607
HAND BRAKE MECHANISM
Michael A. Prud'homme, Outremont, Quebec, Canada
Application March 14, 1934, Serial No. 715,411
In Canada December 30, 1933
1 Claim. (Cl. 188—81.1)

In a hand brake mechanism of the character described the combination of a brake mast, a hub in operative engagement with the mast and having adjacent its upper end a ratchet with downwardly projecting teeth and adjacent its lower end a circular recess, a bearing plate having bearing means for the hub, said plate having a part in engagement with the hub recess to retain the parts in place and a pawl in position to engage the ratchet teeth between said teeth and said hub recess.

2,003,608
TUNING CONTROL
George Roethel, Jr., Chicago, Ill., assignor to E. H. Scott
Application October 26, 1932, Serial No. 639,729
2 Claims. (Cl. 74—10)



1. In a radio control mechanism, means for actuating a variable tuning control comprising a driving hub adapted to be secured to a condenser shaft, a flange extending radially from the hub, means to rotate the hub by frictional engagement with the edge of said flange comprising a plurality of friction discs disposed in overlapping engagement with the flange, one of said discs being of thin flexible material and held into engagement with the flange by one of the other discs.

2,003,609

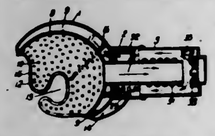
PREPARATION OF COMPOSITE SUBSTANCES

Alger S. Riggs, New York, N. Y., assignor, by mesne assignments, to Electrons, Inc. of Delaware, a corporation of Delaware

Application August 26, 1932, Serial No. 630,559
14 Claims. (Cl. 250—27.5)

1. A metallic product having the ductility required for working into filamentary form and consisting of a base metal and an alkaline-earth oxide in a state of molecular miscibility.

6. The process of combining a metal and a substance having a metallic component which consists in dissolving a mixture of salts which upon heating yield said metal and substance respectively and then precipitating the same from the solution by flashing the solvent into vapor at a temperature well above its boiling point and at least equal to the decomposition temperature of said salts.



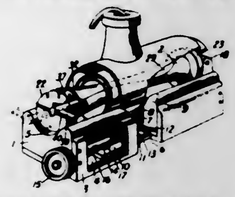
14. In a process of converting a billet containing an intimate mixture of metalliferous components into a ductile wire, the steps of subjecting the billet to impact pressure of the order of 1400 tons per square inch, and annealing the billet in a reducing atmosphere.

2,003,610

HAIR DRIER

Peter Santurello, Columbus, Ohio

Application January 24, 1931, Serial No. 511,050
3 Claims. (Cl. 34—26)



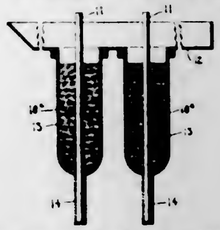
3. A hair drier comprising a substantially continuous hood adapted to encompass the head in close proximity to the scalp and the hair to be treated, said hood consisting of an outer imperforate wall and an inner perforated wall suitably spaced from said wall so as to form a chamber for the circulation of a drying medium therethrough, said chamber being closed at all of its edges, a casing secured to said hood and in communication with said chamber, a duct adjacent the lower rear portion of said hood and in communication with said casing for introducing drying medium onto the hair disposed upon the neck, means for creating a flow of drying medium from said casing through said chamber, means for controlling the flow of the drying medium from said casing into said chamber, valve means disposed within said chamber and dividing said chamber into an upper portion corresponding to the top of the scalp and a lower portion corresponding to the back of the scalp, said valve means regulating the flow of the drying medium through both of said portions or through only said lower portion, and means for regulating the flow of the drying medium from said casing through said duct.

2,003,611

HAIR WAVING APPARATUS

Peter Santurello, Columbus, Ohio

Application January 29, 1934, Serial No. 708,903
14 Claims. (Cl. 132—36)



14. In apparatus for waving hair, a protecting member having a trough formed in its upper surface with the bottom of said trough continuous so as to prevent escape of liquid or vapor therethrough, said protecting member having an open-ended slot formed in one edge thereof which is adapted to receive a strand of hair and a member adjustable into a position where it will retain the hair in said slot or into a position where it will permit removal thereof.

2,003,612

FROZEN CONFECTION

Milton Schnaier, New York, N. Y., assignor to The Popsicle Corporation of the United States, a corporation of Delaware

Original application March 26, 1930, Serial No. 438,937. Divided and this application November 10, 1933, Serial No. 697,448
5 Claims. (Cl. 107—19)

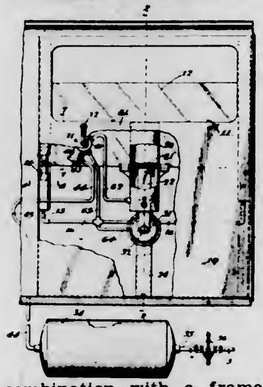
1. A freezing mold of the class described including a pan and individual mold units pendant from the pan, said mold units comprising elongated receptacles having their open mouths affixed at corresponding openings in the pan and closed bottom wells of reduced cross-section extending below the main body portions of said receptacles and adapted to receive the lower end of a handle stick about which material in the main section of the mold is to be frozen.

2,003,613

WATERPROOFING CONCRETE

Edward W. Scripture, Jr., Cleveland Heights, Ohio, assignor to The Master Builders Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application May 9, 1932, Serial No. 610,389
14 Claims. (Cl. 106—27)



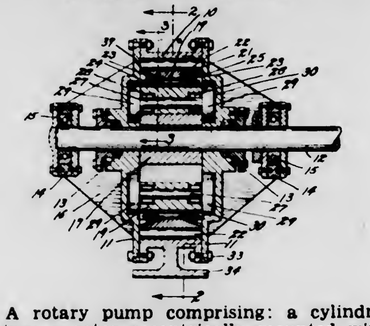
1. The process of producing waterproof concretes and mortars which comprises the steps of first producing a water-emulsion of a soap forming fatty acid, and then mixing and agitating said emulsion with hydraulic cement, aggregate and tempering water until thoroughly disseminated throughout the mixture.

2,003,614

AUTOMOBILE WINDOW OPERATING MEANS

Walter F. Shetzline, Los Angeles, Calif.

Application September 11, 1933, Serial No. 688,977
12 Claims. (Cl. 268—125)



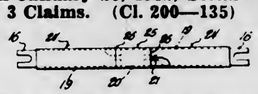
1. The combination with a frame provided with an opening and a panel arranged for sliding movement in said frame and adapted to close said opening, of a cylinder arranged within said frame below the opening therein, a piston arranged for operation within said cylinder, a substantially U-shaped member providing a connection between said piston and said panel, a guiding support for said U-shaped member, a brake for normally engaging said U-shaped member and holding same against movement, vacuum operated means for effecting a release of said brake, and means for simultaneously producing vacuum in the cylinder above said piston and within said vacuum operated brake releasing means.

2,003,615

ROTARY PUMP

Charles Smith, Albert E. Prohaska and Albert L. Wilson, Denver, Colo., assignors of one-fourth to O. B. Schmidt, Denver, Colo.

Application August 10, 1933, Serial No. 684,520
4 Claims. (Cl. 103—136)



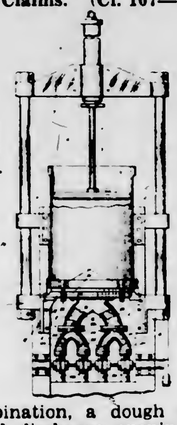
3. A rotary pump comprising: a cylindrical housing; a rotor eccentrically mounted within said housing; vanes slidably mounted in laterally extending radial guideways in said rotor; each of said vanes having a slot extending longitudinally along its outer end; a sealing block slidably mounted in each slot so as to extend beyond said vane, the bottom of each sealing block having an inclined surface; a wedge block positioned between the bottom of said slot and said inclined surfaces; means for moving said wedge block so as to force said sealing block outwardly or draw it inwardly so as to increase or decrease the length of said vanes as desired; said means including dove-tailed connections between said inclined surface and said wedge block and between the bottom of said slot and said wedge block so that the latter may exert a pulling as well as a pushing action.

2,003,616

OIL FUSE

Alwin G. Steinmayer, Milwaukee, and William O. Schultz, South Milwaukee, Wis., assignors to Line Material Company, South Milwaukee, Wis., a corporation of Delaware

Application January 25, 1932, Serial No. 588,606
3 Claims. (Cl. 200—135)



3. A fuse link comprising an elongated conducting member having end portions and an intermediate portion and having reduced portions joining said end and intermediate portions, said fuse link being covered by sheaths formed of insulating material of poor thermal conductivity, said sheaths consisting of a central sheath and two end sheaths, said central sheath having its edges abutting the adjacent edges of the end sheaths, and said abutting edges being located at said reduced portions.

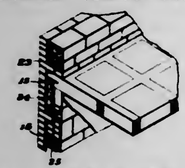
2,003,617

DOUGH DIVIDER FOR DOUGHNUT MACHINES AND THE LIKE

Peter J. Toews, Minneapolis, Minn., assignor to National Automatic Doughnut Machine Company, Minneapolis, Minn., a corporation of Minnesota

Application April 6, 1932, Serial No. 603,502
3 Claims. (Cl. 107—14)

1. In combination, a dough tank having a single central discharge opening at the lower end thereof, means for forcing dough downwardly in said tank and through said opening,



a divider having a pair of passageways communicating with said opening, said passageways being symmetrical with respect to said opening and terminating in outlets spaced from one another, and secondary dividers having passageways communicating with the outlets of said first named divider, the passageways of said second named dividers being symmetrical with respect to said outlets and terminating in secondary outlets, the spacing of said secondary outlets being one-half that of said first named outlets.

2,003,618

METHOD OF AND MEANS FOR WATERPROOFING BUILDINGS

Edwin H. White, Newark, N. J., assignor to American Reenforced Paper Company, Attleboro, Mass., a corporation of Massachusetts

Application June 15, 1932, Serial No. 617,373
2 Claims. (Cl. 72—127)

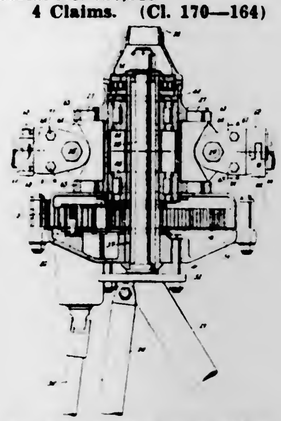
1. The method of waterproofing the floor of a building construction which consists in forming a lower floor area, applying thereto successive layers of waterproof, multiply sheet material, each consisting of two sheets of impervious paper saturated with a waterproofing substance and reenforced by filaments adhesively secured between the sheets, securing said layers together in overlapping relation by applying a bituminous binder over each sheet to form a flexible membrane having complete water impervious continuity throughout the floor area, and laying directly upon said membrane the upper floor area.

2,003,619

PIPE CUTTING DEVICE

Ralph J. Williamson, Milton, Mass., assignor to Trimont Manufacturing Co., Inc., Roxbury, Mass., a corporation of Massachusetts

Application May 10, 1933, Serial No. 670,268
1 Claim. (Cl. 29—67)



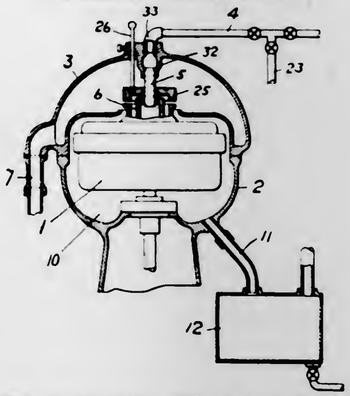
In a pipe cutting device, the combination of two relatively movable metal blocks each having a complemental cylindrical opening of a radius for closely engaging the exterior of a pipe for a substantial length thereof, a block supporting base having an upwardly extending block holding member provided with an overhanging lip which engages the top of and holds one of the blocks in operative position on the base, a pressure device acting in opposition to the upwardly extending lipped member, and each of the metal blocks having a saw kerf or slot extending in a plane at one side of the upwardly extending lipped member and the pressure device.

2,003,620

AIRCRAFT HAVING SUSTAINING ROTORS

Heraclio Alfaro, Cambridge, Mass., assignor to Autogiro Company of America, Philadelphia, Pa., a corporation of Delaware

Original application December 9, 1931, Serial No. 579,853. Divided and this application May 24, 1934, Serial No. 727,245
4 Claims. (Cl. 170—164)



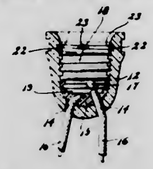
1. In an air driven rotor system, an axis mechanism, a rotor blade mounted on the axis mechanism, and means for adjusting the incidence of said blade, said means including a squared device fixed at the blade root, bracket means at opposite sides of the squared device and adjusting elements operatively associated with the said device and the bracket means to alter their relative angular positions.

2,003,621

CENTRIFUGAL SEPARATOR

Gustav Harry Andersson, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey

Application January 16, 1933, Serial No. 651,975
In Germany September 14, 1932
8 Claims. (Cl. 233—13)



8. The combination with a centrifugal separator bowl having an open neck, a centrally positioned supply tube extending into and spaced from the neck of the bowl, a distributor extending into the bowl neck and spaced from both the supply tube and the bowl neck and spaced from both the supply tube and distributor and between the distributor and the bowl neck, said bowl having drainage channels in its bottom part, of means movable into and out of position to close both said openings, said means comprising a disc enclosing the feed tube and movable thereon and an annular flange on the disc in alignment with the bowl neck.

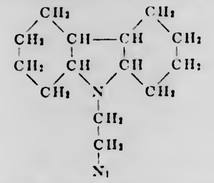
2,003,622

WEATHERPROOF SOCKET

Clinton Bateholts, Hoosick Falls, N. Y., assignor to Specialty Insulation Manufacturing Company, Inc., Hoosick Falls, N. Y., a corporation of New York

Application May 4, 1932, Serial No. 609,067
2 Claims. (Cl. 173—358)

2. A socket for electrical connection, comprising an insulating cup with a bi-terminal metallic shell insert, conductor wires from the insert through holes in the cup-bottom, and a sealing medium in the cup-bottom facing the insert, the whole providing in the cup two oppositely-facing obstruction-abutments, one of which abutments is the cup's bottom with said sealing medium facing the insert, on which a substantial area of the bottom part of the insert is engaged, there being means obstructing flow of sealing medium to the interior of the metallic shell; and the other of which abutments is in a wall of the cup, there being a lateral recess in the cup's wall, open to the interior of the cup, and that wall of this recess which is toward the mouth of the cup constituting the abutment last mentioned; there being a part of the shell-insert wall protruding laterally into engagement with said recess-wall, whereby mouthward movement of the insert is obstructed; and the axial distance between the two said abutments being equal to the axial distance between the two said parts of the insert, whereby the two said engagements of insert with cup are simultaneous.



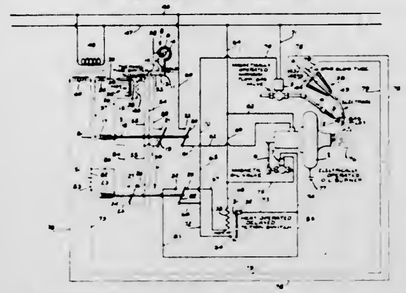
2,003,623

HETEROCYCLICALLY SUBSTITUTED PERHYDROCARBAZOLES

Max Bockmühl, Walter Krohs, and Gustav Ehrhart, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York

No Drawing. Application March 31, 1932, Serial No. 602,400. In Germany April 4, 1931
2 Claims. (Cl. 260—45)

2. The compounds of the following formula:



wherein N_1 is part of a five-membered heterocyclic unsaturated or saturated radical, said compounds being difficultly soluble or insoluble in water, forming hydrohalides soluble in water and being useful as therapeutics.

2,003,624

CONTROL SYSTEM FOR BURNERS PRODUCING HIGH TEMPERATURE FLAMES

George D. Bower, Columbia Heights, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application April 10, 1933, Serial No. 665,462
12 Claims. (Cl. 158—28)

1. A system of the class described, comprising, in combination, an electrically operated fluid fuel supply controlling device for producing a high temperature flame, a sensitive relay, an energizing circuit for the fuel supply controlling device controlled by said relay, means for producing a low temperature flame intersecting said high temperature flame, and a circuit for operatively energizing said relay, said circuit including the low temperature flame and high temperature flame in series as part of its conducting path.

2,003,625

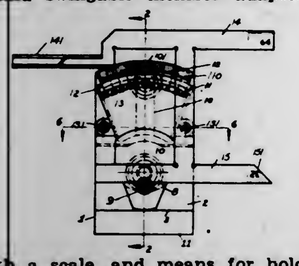
TERMINAL CONNECTION FOR ELECTRIC HEATING ELEMENTS

John A. Boyer, Niagara Falls, N. Y., assignor to Globar Corporation, Niagara Falls, N. Y., a corporation of New York

Application March 4, 1932, Serial No. 596,761
2 Claims. (Cl. 201—63)

1. A silicon carbide heating element having a metal terminal cap surrounding the end portion of the said element, the side walls of the cap being in intimate contact with the surface of the element, and a packing of metal powder within the cap, the said metal powder containing a substantial proportion of aluminum.

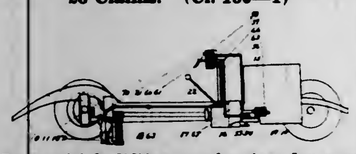
2,003,626



UNIVERSAL MEASURING INSTRUMENT

George Bozzer and Julius Habersin, Detroit, Mich.

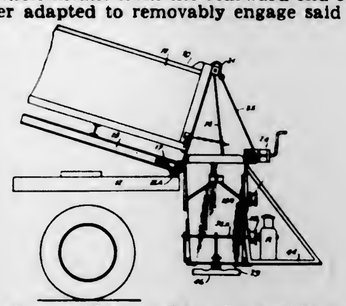
Application March 27, 1934, Serial No. 717,630
6 Claims. (Cl. 33—75)



1. An instrument of the character described comprising a body having an arcuate portion having graduations thereupon, a pivot concentric therewith, a member swingably mounted upon said pivot and having a pointer adapted to register with said graduations for adjustment to various angles relative to said body, a facing projecting from said body at right angles

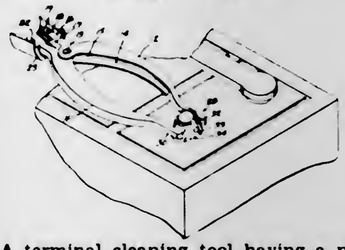
to the longitudinal axis of the same and adapted to co-act with a scale, means for holding said scale in contact with said facing, a facing upon said swingable member adapted to co-

act with a scale, and means for holding said last-mentioned scale in contact with said last-mentioned facing, whereby said last-mentioned scale may be adjusted to various angles relative to the longitudinal axis of said body.



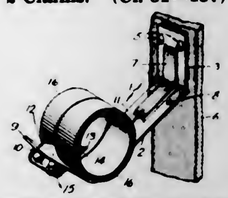
2,003,627
LIFTING AND PROPELLING MECHANISM FOR VEHICLES
Thomas E. Burkhardt, Dayton, Ohio
Application August 22, 1932, Serial No. 629,813
28 Claims. (Cl. 180—1)

1. In a vehicle lifting mechanism for a vehicle having a frame, a cylinder supported by the frame, an outer piston movable within the cylinder, an inner piston movable within the outer piston, a vehicle supporting member carried by the inner piston, means for supplying fluid under pressure between the inner and outer pistons, to force the inner piston downwardly, and a passage in the outer piston opening at one end within the interior thereof at a position to be uncovered by the inner piston when the inner piston approaches the end of its stroke, said passage opening at its other end on the exterior of the outer piston at a position to supply fluid under pressure between the outer piston and the cylinder to thereby force the outer piston together with the inner piston carried thereby downwardly to raise the vehicle.



2,003,628
DEVICE FOR SPREADING ROAD MATERIAL
John Eric Chadwick, Toronto, Ontario, Canada
Application September 11, 1933, Serial No. 688,933
4 Claims. (Cl. 275—8)

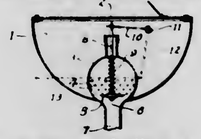
1. For use in combination with a dump truck having a tail gate swingable rearwardly from the bottom and supports extending rearwardly from the dump body of said truck, a removable material spreader unit comprising a hopper adapted to rest at the forward end upon said supports whereby the rearward end of said hopper is free to swing from the bottom, said hopper being formed to allow said gate to swing thereover to discharge material thereinto when said dump body is tilted and terminating in an opening for the discharge of the material, a rotor positioned to receive the material falling out of said hopper, a door under said opening operable to vary the rate of discharge of the material, means for actuating said rotor, and adjustable means from the rearward end of said hopper adapted to removably engage said truck



body above said supports and operable to move said rearward end relatively to said body whereby said rotor may rotate in a horizontal plane irrespective of the tilted position of said body.

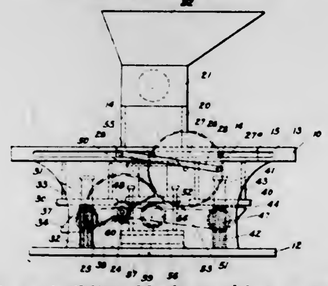
2,003,629
IN AND OUT TERMINAL CLEANING TOOL
Irven E. Coffey, Santa Ana, Calif.
Application February 13, 1931, Serial No. 515,548
11 Claims. (Cl. 82—4)

1. A terminal cleaning tool having a pair of hand levers pivotally connected together, a pivot rivet on the end of each lever and extending inwardly and each having a jaw swivelly mounted thereon to rotate on the axis of the rivet, each jaw being concave on its interior surface, and the jaws adapted to engage and smooth an exterior conical or cylindrical surface.



2,003,630
PIPE CUTTER
William F. Errig, Philadelphia, and George M. Pfundt, Churchville, Pa., assignors to Peco Manufacturing Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application June 4, 1934, Serial No. 728,976
2 Claims. (Cl. 81—187)

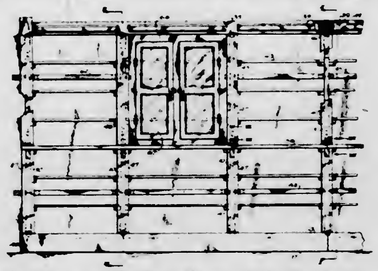
1. A pipe cutter comprising a main section and end sections, the end sections being disposed at angles greater than a right angle with respect to the main section, one of said end sections having a flange extending laterally thereof and



an opening therein, a cutting blade carried by the flange and extending through the opening with its cutting edge overhanging the main section, and means for securing the other end section to a support.

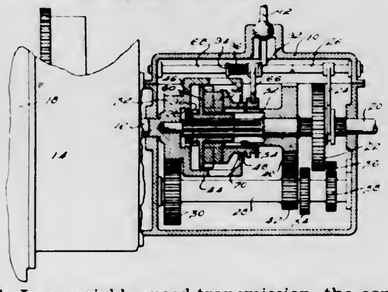
2,003,631
SAND BRAKING DEVICE, PARTICULARLY ADAPTED FOR USE ON AUTOMOBILES
Max Friedrich, Chicago, Ill.
Application March 30, 1933, Serial No. 663,585
1 Claim. (Cl. 291—36)

A sanding device including a supply reservoir; a bulbular sand trap within said reservoir, an outlet spout connected with said trap, a downwardly closing spring controlled valve arranged within said trap for normally closing said outlet; said trap having only its lower half formed with perforations to limit the amount of sand entering the outlet spout, but at the same time, permitting enough sand to enter the trap to assist in closing the valve and foot operated mechanism connected with said valve for opening said valve at predetermined intervals.



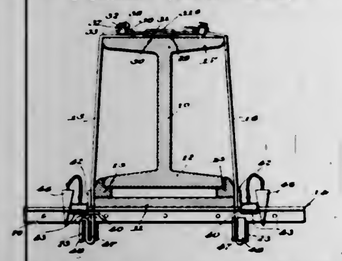
2,003,632
BUILDING BLOCK MACHINE
Louis Gelbman, Yonkers, N. Y.
Application December 13, 1928, Serial No. 325,673
17 Claims. (Cl. 25—41)

15. In a building block machine, a mold, a continuous vibrator movably mounted for engaging against said mold to pack material into the mold, means for holding said vibrator in a position contacting with said mold and in another position out of contact, and vibration insulation material insulating the vibrations from said vibrator reaching the mold in the latter mentioned position of the vibrator.



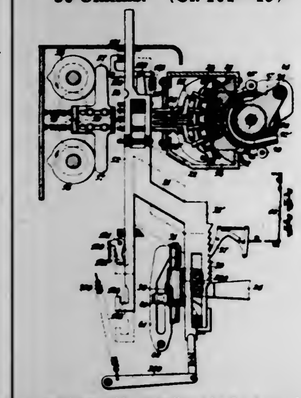
2,003,633
KNOCKDOWN WALL FIXTURE
Marriott T. Johnston, Chicago, Ill., assignor to Walgreen Co., Chicago, Ill., a corporation of Illinois
Application May 5, 1932, Serial No. 609,532
9 Claims. (Cl. 211—148)

1. In a sectional wall fixture, the combination with vertical support members, top and bottom members detachably applied to the extremities of said vertical members, sustaining means for shelf members on said vertical support members, horizontal shelf members removably supported by said sustaining means between said vertical members, the end vertical support members being attached to said top and bottom members so that the vertical median line of the former are



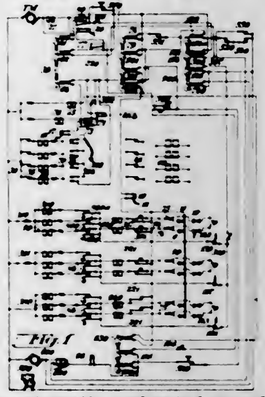
in alignment with the edges of the latter to enable the association of wall fixture sections without vertical member duplication, and inter-engaging means detachably connecting said vertical support members with said top and bottom members to retain the assembly thereof as a rigid unit.

2,003,634
AUTOMATIC TRANSMISSION
Rex E. Keller, Beverly Hills, Calif.
Application February 26, 1934, Serial No. 713,028
9 Claims. (Cl. 74—336)



1. In a variable speed transmission, the combination of two clutch elements driven from a common source and adapted to be rotated at different rates with a driven shaft adapted to be connected to either of said clutch elements, a clutch core member connected for rotation with said driven shaft, each of said clutch elements being provided with a slotted opening, a centrifugally operable bolt carried by said clutch core member and normally engageable with the slotted opening in the slower rotating of said clutch elements for connecting said driven shaft to the same to be driven thereby, said centrifugally operable bolt being movable subsequent to the attainment of a predetermined speed of rotation by said clutch core to extend into said slotted opening provided in the faster rotating of said clutch element and being provided with means for preventing the movement of said bolt into the slotted opening in the faster rotating of said clutch elements until the rotative speeds of said last mentioned clutch element and said clutch core are substantially synchronous, said centrifugally operable bolt being movable out of engagement with the said slotted opening in the slower rotating of said clutch elements upon moving in to the slotted opening in the faster rotating of said clutch elements.

2,003,635
BEAM HANGER
Charles M. Markham, Detroit, Mich.
Application June 23, 1932, Serial No. 618,976
1 Claim. (Cl. 25—131.5)



In a beam hanger for concrete forms, a form supporting cross member, strips for suspending said cross member from a beam, seat members carried by the lower ends of said strips and upon which said cross member is adapted to rest, said seat members each comprising a one piece laminated sheet metal member, said strips having the lower ends thereof looped under an intermediate lamination and confined by adjacent laminations of said members, said strips extending over said beam from opposite sides thereof, and means for connecting the ends of said strips together.

2,003,636
PRINTING AND PUNCHING RECORD CONTROLLED MACHINE
Michael Maul, Berlin-Johannisthal, Germany
Application June 11, 1931, Serial No. 543,599
In Germany June 14, 1930
30 Claims. (Cl. 101—19)

1. In an automatic perforated record card controlled punching and printing tabulating machine, analyzing means for said record cards, means for automatically feeding said record cards one by one past said analyzing means, means for automatically feeding a continuous record sheet step by step in accordance with the passage of the subsequent record cards past said analyzing means, punching means for perforating said record sheet, printing means for printing upon said record sheet, both said punching and printing means being under the common control of said analyzing means, means for causing said punching and printing means to subsequently perforate and simultaneously print upon said record sheet in accordance with the perforations on said record cards, an automatic group control mechanism responsive to changes in the perforations of record columns of subsequent cards controlling commonly said punching and printing means, and means under the control of said group control mechanism for rendering the punching means inactive after the passage of the first card of each group.

2,003,637
RECORD CONTROLLED PUNCHING MACHINE
Michael Maul, Berlin-Johannisthal, Germany
Original application June 11, 1931, Serial No. 543,599. Divided and this application December 27, 1932, Serial No. 649,000. In Germany June 14, 1930
24 Claims. (Cl. 164—115)

1. In an automatic perforated record card controlled machine, analyzing means for said record cards, means for automatically feeding said record cards one by one past said analyzing means, punching means under the control of said analyzing means, an automatic group control mechanism responsive to changes in the perforations of record columns controlling said punching means, and means under the control of said group control mechanism for modifying the operation of the machine upon a change in the perforations of the card columns controlling said punching means.

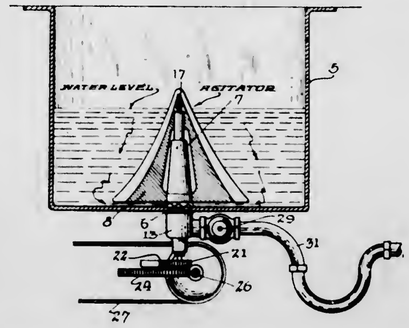
2,003,638
CARTRIDGE THERMOSTAT
Paul A. Nothstine, Dayton, Ohio
Application August 18, 1928, Serial No. 300,560
11 Claims. (Cl. 200—122)

1. In an automatic flasher switch, a unitary device for insertion into and removal from an electrical circuit without disturbance of the electrical connections thereof comprising a vessel, metallic terminal caps on the vessel for contact engagement with terminals of an electrical circuit, a thermostatic bar mounted within the vessel, said bar being permanently electrically connected with one of said terminal caps, a contact intermittently engaged by the bar and electrically connected with the other of said terminal caps, said bar being caused to intermittently make and break connection between said terminal caps by fluctuations of temperature.

2,003,639
PRINTING PRESS
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application February 9, 1931, Serial No. 514,376
Renewed April 19, 1934
4 Claims. (Cl. 270—5)

1. In a printing press, a plurality of perfecting press units each adapted to print a web, means for assembling the webs, a multiple impression unit adapted to make a plurality of impressions on a face of one of the webs, reversing means whereby the multiple impressions may be made on either face of the latter web as desired, and means for introducing the latter web at any desired position in the assembly.

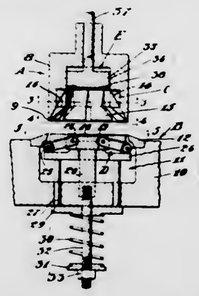
2,003,640
RECOVERY OF NAPHTHENIC ACIDS
Julius A. Wunsch, New York, N. Y.
No Drawing. Application February 25, 1932, Serial No. 595,237
3 Claims. (Cl. 260—108)



1. The method of recovering alkali metal naphthenates from mineral oil sludge which consists in dispersing the sludge in an aqueous medium, thinning the dispersed sludge, de-emulsifying the thinned sludge with a water soluble inorganic compound while maintaining the thinned sludge at a temperature substantially between 90° and 100° C. to effect substantially complete separation of the naphthenates and removing the mineral oil layer that is formed after de-emulsification.

2,003,641
PRINTING OF TEXTILE FABRICS WITH VAT DYESTUFFS
Hermann Berthold, Leverkusen-on-the-Rhine, Carl Krauss, Frankfort-on-the-Main-Fechenheim, and Alfred Hagenböcker, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application May 29, 1930, Serial No. 457,522. In Germany June 4, 1929
5 Claims. (Cl. 8—6)

1. Process of preparing a water-insoluble leuco compound of a vat dyestuff which leuco compound is stable to air, which comprises reducing a halogenated-1.2-naphthoxythiophene - halogenated-2.2'-indolindigo with a reducing agent customarily employed in vat dyeing and effective with weak alkali, in the presence of water, ammonia, and a water-soluble alcohol.

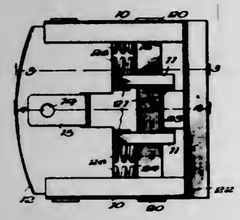


2,003,642
WASHING MACHINE
Carl F. Brunn, Brisbane, Calif.
Application August 21, 1933, Serial No. 686,162
1 Claim. (Cl. 259—101)

In a device of the character described, the combination with a tub having a fitting extending through the bottom thereof, said fitting having a frusto-conical upper end extending into the tub a sufficient distance to form a bearing, an agitator rotatably positioned on said fitting, a shaft extending through said fitting and connected to said agitator; a second fitting secured to said first mentioned fitting and contacting the bottom of said tub at a point below the tub and in axial

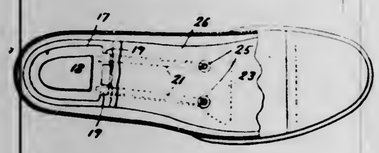
alignment with said first mentioned fitting, said second fitting having a tubular shaft enclosing portion extending into said first mentioned fitting, passages formed in said first mentioned fitting and said second mentioned fitting at a point outside the margin of said tubular member, whereby fluid may be drawn from the tub without engagement with said shaft.

2,003,643
BOTTLE CAP FORMER
George A. Buttress, Los Angeles, Calif., assignor to Lonroy Corporation, Los Angeles, Calif., a corporation of California
Application February 2, 1934, Serial No. 709,478
3 Claims. (Cl. 93—60)



1. In a punching mechanism for forming paper caps for bottles, a circular die, a punch cooperable with said die to punch a circular blank, a head arranged centrally of said die, a series of vertically swinging arms pivotally supported on said head and projecting radially therefrom, yieldable means for normally maintaining said arms in an uppermost position, crimping elements carried on the upper edges of said arms, and means on said punch member for bending the marginal portion of the blank over said crimping elements to form radially extending pleats on the marginal portion of said blank and also to form said marginal portion at an angle relative to the central portion of the blank.

2,003,644
BIOPHYSICAL PROCESS FOR PRESERVING AND CONSERVING FERMENTABLE LIQUIDS
Percy Charles Clifford and Joaquin Crespo y Garcia, Mexico, D. F., Mexico
No Drawing. Application October 29, 1932, Serial No. 640,325. In Mexico November 3, 1931
3 Claims. (Cl. 99—15)

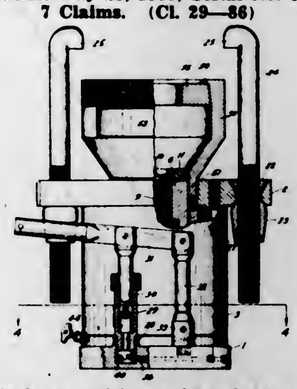


1. A bio-physical process for conserving or preserving fermentable liquids, which consists in subjecting the same to varying temperatures, raising and lowering alternatively high and low temperatures in ascending and descending scales, in one continuous operation and terminating such variations, with a fixed high or low temperature maintained for a determined period of time according to the kind of liquid being treated by the process.

2,003,645
MINE CAR BUMPER
William T. Dalton, Ansted, W. Va.
Application October 17, 1934, Serial No. 748,750
9 Claims. (Cl. 293—55)

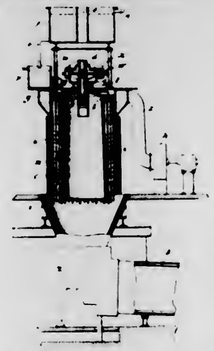
1. A combined bumper and draft rigging for mine cars and the like comprising fixed side sills, intermediate sills movable longitudinally of the side sills, a bumper carried by the intermediate sills, a pair of cross members each extending transversely of all said sills, said cross members being free to move longitudinally of the side sills and the intermediate sills being movable relatively to the cross members, and means for yieldingly urging said cross members away from each other.

2,003,646
FOOT AERATING DEVICE
Michele De Biasio, Wilkes-Barre, Pa.
Application August 23, 1934, Serial No. 741,155
1 Claim. (Cl. 36—3)



In a structure of the class described, a longitudinally arched plate, the longitudinal edges thereof being bent inwardly to define longitudinally extending tubular sheaves, a pair of air circulating tubes mounted in said sheaves, and a hollow block-like compressible rubber bulb having attaching nipples with which the adjacent ends of said tubes are connected.

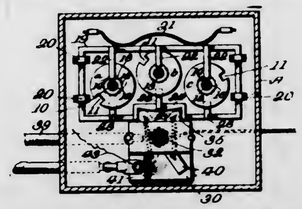
2,003,647
ELECTRIC MOTOR
Torbjörn Viktor Dillström and Per Anton Åstradsson, Stockholm, and Fredrik Dahlgren, Djursholm, near Stockholm, Sweden.
Application October 26, 1931, Serial No. 571,226
In Sweden June 4, 1930
17 Claims. (Cl. 172—126)



17. In an electric induction motor, a primary winding, means for exciting said winding uninterruptedly in operation by commercial alternating current, an induction armature movable to and fro and short-circuited in operation, and means for reversing the direction of motion of said armature automatically in the end positions of its to and fro motion.

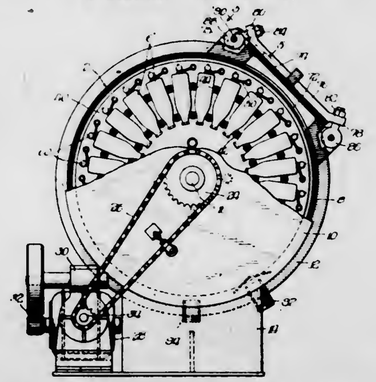
2,003,648
COMBINED JACK AND WHEEL AND GEAR PULLER
Fred L. Frye and John K. Frye, New Boston, Ill., assignors of one-half to Harry Englehart, Davenport, Iowa
Application May 25, 1933, Serial No. 672,780
7 Claims. (Cl. 29—86)

1. A jack comprising a base having an upstanding tubular member provided adjacent its upper end with a liquid seal ring, a piston surrounding said tubular member and having a liquid seal in its lower end, said piston being slidable longitudinally of said tubular member, a second tubular member surrounding said piston and cooperating therewith in substantially liquid-tight relation, said second mentioned tubular member being attached to the base in liquid-tight relation, a third tubular member surrounding the first and second tubular members and having liquid-tight connection with said base, there being liquid chambers between said tubular members, a head spaced from said base and connected to said second and third tubular members in liquid-tight relation, said head having an opening therethrough for the passage of said piston, a liquid seal in connection with said opening and surrounding said piston to prevent leakage of liquid around said piston, the second mentioned tubular member having an opening therethrough adjacent said head to connect the liquid chambers for flow of liquid between them, and means for forcing liquid from the outer liquid chamber to the inner liquid chamber below the piston to cause movement thereof, the opening in the tubular member being free from connection with both liquid chambers.



2,003,649
HEAT EXCHANGE APPARATUS
Alexander Hasselbach, Dessau, Germany
Application April 12, 1933, Serial No. 665,809
In Germany April 18, 1932
3 Claims. (Cl. 222—7)

1. In apparatus for drying sludge, the combination with a vertical annular chamber having a gas inlet in the lower portion thereof through which hot gases are introduced and a gas outlet in the upper portion thereof, of a plurality of relatively movable chains supported in the chamber and depending freely therein, means for depositing sludge on said chains, means for agitating said chains to dislodge the sludge therefrom when dried, and means for directing and confining the hot gases in an upward path in the direction of the chains through the whole cross-sectional area of the annular chamber.

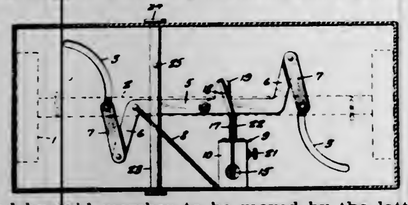


2,003,650
COMBINATION LOCK WITH ELECTRICAL SWITCH CONTROL
George T. Hosking, Somerville, Mass., assignor of one-fourth to Thomas G. Phillips, Somerville, Mass., and one-fourth to Gomer R. Lewis, Waterbury, Conn.
Application April 18, 1933, Serial No. 666,752
5 Claims. (Cl. 70—53)

1. A lock of the character described comprising a plurality of relatively spaced tumbler disks each having a peripheral opening therein, a plurality of axially and rotatably adjustable shafts, one for each tumbler disk, each shaft being extended loosely through its tumbler disk in such manner as to retain the disk in position, a control disk fixed to each shaft at a position to overhang the tumbler disk of said shaft, the control disk and the adjacent tumbler disk of each shaft having complemental interlocking means so constructed and arranged that the disks may be engaged and disengaged by axial movements imparted to the shaft, a slide bar having lugs complemental to the peripheral recesses of said tumbler disks, a spring yieldably holding said

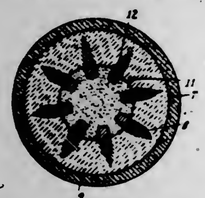
slide bar in such position that said lugs and said disks are normally disengaged, and means constructed and arranged to impart slidable movement to said slide bar against the tension of said spring, said slide bar also having means constructed and arranged to overlie said control disks in such manner as to prevent axial movement of the shafts while said lugs are disengaged from said recesses.

2,003,651
STERILIZING APPARATUS
Karl W. Karnopp, Winnetka, Ill.
Application October 31, 1932, Serial No. 640,407
2 Claims. (Cl. 99—18)



1. A receptacle holding device for a sterilizer, comprising rotatable supporting means, oppositely disposed frame members mounted thereon, an inner and outer row of spaced members extending between said frame members, the members of said rows being substantially in radial alignment, and receptacle retaining members releasably secured to a frame member for preventing radial displacement of said receptacles.

2,003,652
DOOR OPERATOR
Albert J. Kinsler and Joseph Kinsler, Pittsburgh, Pa.
Application August 16, 1933, Serial No. 685,462
1 Claim. (Cl. 268—70)



A double door operating device comprising a main lever pivotally mounted intermediate its ends and having the ends thereof angularly disposed and bifurcated and extending in opposite

directions to each other, links pivotally connected to the bifurcated ends of the levers and to swinging doors, spring means urging the lever in one direction for closing the doors, a rotatable member traversing the lever, and a pin car-

ried by said member to be moved by the latter to engage the lever at one of its angularly related ends to hold said lever against pivotal movement by the influence of said spring means for retaining the doors in an open position.

2,003,653
ELECTRIC FURNACE OPERATION
Paul Louis Joseph Miguet and Marcel Paul Perron, St. Julien de Maurienne, France
Continuation of application Serial No. 665,787, April 12, 1933. This application July 16, 1934, Serial No. 735,492. In France April 30, 1932
1 Claim. (Cl. 13—34)

The improvement in the operation of electric furnaces wherein the materials are charged in alternate vertical zones comprising in alternation a zone of a conductive mixture of all of the reducing material and only a part of the material to be reduced, and a zone comprising the remainder of the material to be reduced in the form of lenticular masses regularly spaced through the mass of the charge which comprises supplying current to the charge through electrodes of which the periphery is alternately composed of prebaked and unbaked segments, the unbaked segments being disposed opposite the portions of the charge free from lenticular masses and the prebaked segments being disposed opposite the lenticular masses.

2,003,654
SANITARY PAD AND BELT
Rebecca V. Poison, Kansas City, Mo.
Application March 3, 1933, Serial No. 659,511
1 Claim. (Cl. 128—289)

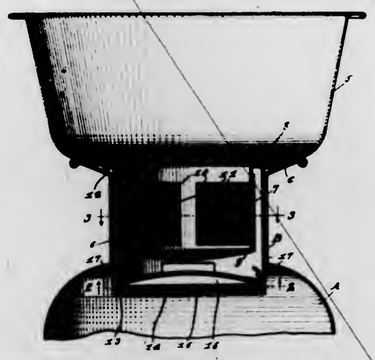
A sanitary pad and belt assembly comprising, in combination, a gauze belt to encircle the waist of the wearer; a flat tubular case of absorbent fabric having one end thereof stitched to said belt at a point substantially one-quarter the length of the said belt from one end thereof and in fully extended flat condition with the belt extending transversely across the tubular case; a loop formed at the other end of said flat tubular case by rebending a length thereof and stitching said end to the case along a line spaced inwardly from the end; a semi-rigid stiffening member between the turned back end and the case having the stitches passing therethrough, said stiffening member being greater in thickness than the said belt and extending the full width of said flat tubular case to preclude lateral gathering thereof at the said loop; and a pair of parallel spaced-apart

slits formed through that portion of the case forming the outer wall of the said loop and adapted to receive the belt when the assembly is worn whereby an inner smooth wall is against the wearer and accidental slipping longitudinally along the belt is precluded.

2,003,655
COMPOSITION OF MATTER
Ernest W. Reid, Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application September 23, 1931, Serial No. 564,708
3 Claims. (Cl. 134—79)

2. The method of producing a lacquer composition highly resistant to deterioration upon prolonged standing, which method comprises preparing a mixture consisting of ethylene dichloride and isopropyl alcohol, and dissolving cellulose acetate therein.

2,003,656
CEMENT PRODUCT AND METHOD OF MAKING THE SAME
Howard R. Starke, Riverside, Calif., assignor to Riverside Cement Company, Los Angeles, Calif., a corporation of Delaware
No Drawing. Application January 4, 1933, Serial No. 650,165
8 Claims. (Cl. 106—25)

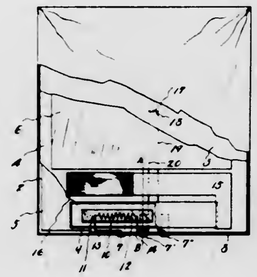


1. A cement product comprising a finely ground mixture containing Portland cement and also containing inert mineral material other than Portland cement and a very small proportion of oleaginous material, said inert mineral material and oleaginous material being interground with the Portland cement.

2,003,657
CAP FOR DRINKING GLASSES
Roy Irvin Stubblefield, Bloomington, Tex.
Application April 27, 1934, Serial No. 722,769
3 Claims. (Cl. 65—13)

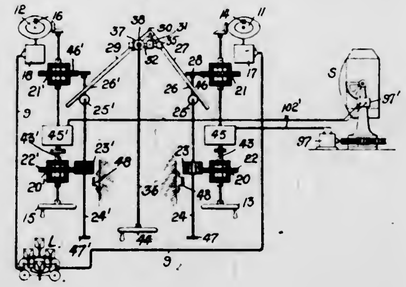
2. A resilient cap for a drinking vessel adapted to cover the entire top of the vessel and having an annular rim completely encircling the top of the vessel and having a slit adjacent but spaced inwardly from its edge, said slit being normally closed and defining a lip yieldable to pressure from a drinker's lip to permit escape of the contents of the vessel.

2,003,658
STRAINER
Lawrence J. Thomas, Mount Angel, Oreg.
Application August 7, 1933, Serial No. 684,053
1 Claim. (Cl. 210—159)



A strainer of the character described comprising a funnel-shaped body having a contracted neck provided with an open bottom, an inturned flange formed from said neck and concentric of its open bottom, filtering mediums resting upon said flange and superimposed one upon the other, a bowed member straddling the filtering mediums and having springy end portions frictionally engaging the internal surface of said neck, a removable cup-shaped strainer fitting said neck and of a diameter considerably less than the latter, the said body having an annular seat at the juncture of the neck therewith, and an outturned annular flange on said strainer and fitting said seat to have the upper end of the strainer flush with the inner surface of the said body, the strainer having spaced wire mesh screens fitted therewith.

2,003,659
HAT HOLDER
John C. Van Aken, Ridgway, Pa.
Application July 3, 1934, Serial No. 733,679
2 Claims. (Cl. 211—32)

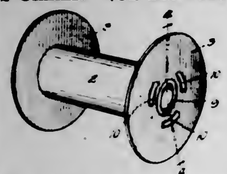


1. A holder of the character described comprising a forked frame having a hinge leaf extension provided with pintle sleeves, an attaching plate having pintle sleeves interfitted with the pintle sleeves on the extension, pintle members fitted within said pintle sleeves, a rod interfitting the pintle members, coiled springs having their outer ends attached to the pintle sleeves on the plate and their inner ends attached to one pintle sleeve on the extension, and cushioning buttons at the extremities of said forked frame.

2,003,660
SHEET FLASHER FOR TAKING PHOTOGRAPHS
Yohei Yamaguchi, Toshima-Ku, Tokyo, and Haruo Nakazawa, Kawanaka-Mura, Nishi-Kasugai-Gun, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan
Application April 25, 1933, Serial No. 667,892
In Japan March 17, 1932
4 Claims. (Cl. 102—21)

1. A sheet flasher for taking photographs, comprising a closed envelope, one of the two sides of which is a transparent yieldable member, the other side being a non-transparent sheet, means for producing oxygen gas contained in the envelope, a combustible metal member in the envelope and means for igniting the metal member in the presence of the oxygen gas produced in the envelope.

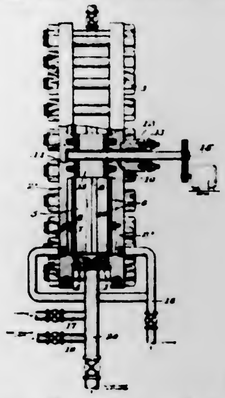
2,003,661
SEARCHLIGHT DIRECTOR
Preston R. Bassett, Rockville Centre, and Frank R. House, Baldwin Harbor, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application May 16, 1932, Serial No. 611,448
20 Claims. (Cl. 240—1.2)



1. In a preliminary positioning system for searchlights, means for approximately locating a target by non-optical means, remote control means for directing the searchlight therefrom, and means for introducing at will within said directing means an additional to and fro motion to cause said searchlight to scan a predetermined area around said location until the target is picked up.

2,003,662
LIQUID MEDIUM FOR HEAT AND PRESSURE TRANSFER
Henry L. Cox, South Charleston, W. Va., and Leo J. Clapsadle, Buffalo, N. Y., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application September 16, 1930, Serial No. 482,370
3 Claims. (Cl. 252—5)

1. A substantially anhydrous liquid medium consisting essentially of ethylene glycol and diethylene glycol in the proportions of from about 40% to about 70% of diethylene glycol.

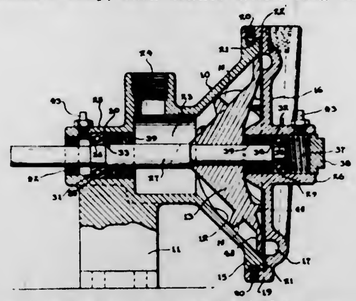


2,003,663
SPOOL
Elmer G. Ellstrom and William P. Hicks, Webster Groves, Mo., assignors to Sefton National Fibre Can Co., Maplewood, Mo., a corporation of Delaware
Application July 4, 1931, Serial No. 548,720
2 Claims. (Cl. 242—119)

1. A spool having only, in combination, an all paper stock spool hub having its ends provided with a plurality of cutaway portions to form three triangularly disposed arcuately shaped projections beyond the ends of the hub, an all paper stock tubular core longitudinally disposed within the hub and of a length equal in length to the hub and its projections, a pair of all paper stock spool flanges, said flanges each having three triangularly disposed arcuately shaped slotted openings to receive the hub projections which project beyond the outer faces of the spool flanges, said flanges each having a central opening to receive the ends of the tubular core and which ends project beyond the outer faces of the spool flanges the same distance as the hub projections, and said hub projections and the projecting ends of the tubular core adapted to be turned outwardly to form flanges engaging the outer faces of the spool flanges for locking the spool flanges on the hub projections and on the ends of the tubular core.

2,003,664
FILTRATION OF WAX FROM OIL
Francis X. Govers, Vincennes, Ind., assignor to Indian Refining Company, Lawrenceville, Ill., a corporation of Maine
Application January 11, 1932, Serial No. 585,844
2 Claims. (Cl. 196—19)

1. In the method of removing solid paraffin from hydrocarbon oil by filtration under pressure at low temperature, the steps comprising mixing the oil with acetone and benzol in proportions sufficient to exert a selective action as between oil and wax at temperatures of the order of 0° F., chilling the mixture to solidify the wax constituents, introducing the mixture of oil and solvent containing solid hydrocarbons to a closed zone of filtration, subjecting the mixture to moderate stirring within said zone sufficient to substantially prevent gravity settling of solids from the filtering solution, removing the mother liquor of liquid hydrocarbons and solvent as a filtrate and forming a filter cake of solid hydrocarbons, stopping the flow of cold mixture to the filtration zone when a cake of desired thickness is formed, introducing fresh acetone and benzol mixture as a washing liquid to the zone of filtration to displace the remaining mother liquor and to wash the cake, removing the wash solution, thereafter filling said zone of filtration with acetone and benzol mixture, subjecting the solvent to relatively more rapid and violent stirring to thereby dislodge the filter cake and form with the solvent a slurry, and withdrawing the slurry from said zone of filtration.

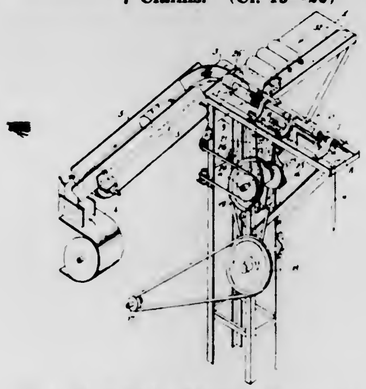


2,003,665
PRESSER-FOOT FOR SEWING MACHINES
John D. Karle, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application January 16, 1934, Serial No. 706,807
12 Claims. (Cl. 112—151)

1. The combination with stitch-forming mechanism including a reciprocatory needle, of a presser-foot comprising a shank provided with an aperture extending from front to back for guiding a cord from a point in rear of the needle to the needle, a sole-plate formed with a needle-opening carried by said shank, and a shirring foot carried by said sole-plate, whereby the work may be shirred and corded concomitantly.

2,003,666
PUMP
Charles H. Moneypenny, Detroit, Mich.
Application May 5, 1932, Serial No. 609,462
3 Claims. (Cl. 103—89)

1. A pump impeller comprising a conical body portion, substantially spiral blades formed with said body portion, each of said blades comprising an arcuate portion beginning adjacent the apex of said body and extending in an arcuate path around one-half the circumference of said body portion to the base thereof, said arcuate portion of each of said blades passing through a point one-half of the circumferential distance between the terminals thereof and one-half the height of the conical body, said blades when laid in flat

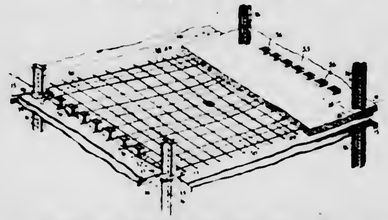


pattern forming an arc one-half the circumference of a true circle.

2,003,667
DEWAXING HYDROCARBON OIL
Ernest F. Pevere, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application November 3, 1933, Serial No. 696,535
7 Claims. (Cl. 196—19)

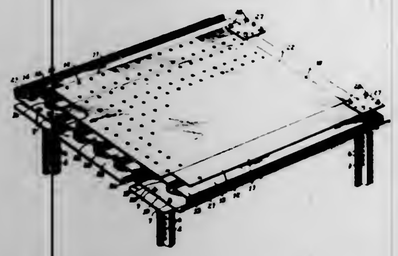
1. The method of dewaxing wax-bearing mineral oil comprising mixing the oil with a solvent liquid selected from the group consisting of the cyclic ketones containing from four to about seven carbon atoms, in such proportion that at temperatures of around 0° F., the liquid constituents of the oil are substantially completely soluble, and the solid constituents are substantially insoluble in the mixture, chilling the mixture to a temperature at which the wax is precipitated, removing the thus precipitated wax, and recovering the solvent from the resulting dewaxed oil.

2,003,668
APPARATUS FOR CLEANING BOTTLES
Paul S. Pittenger, Philadelphia, Pa., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland
Application March 16, 1931, Serial No. 522,927
7 Claims. (Cl. 15—20)



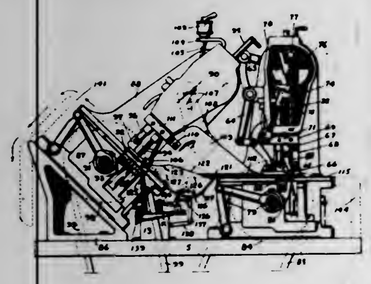
1. In a bottle-treating machine, an ejector-head adapted to receive the mouth of a bottle, an air tube, an operating lever connected with the air tube and adapted to move it in and out of the bottle, an operating lever connected with the ejector-head and adapted to move it in a horizontal position and to eject the bottle from the machine, a cam shaft, and cams on the shaft for actuating the operating levers.

2,003,669
DOOR CLOSER
Robert S. Potter, Greenwich, Conn., assignor to The Yale & Towne Mfg. Co., Stamford, Conn., a corporation of Connecticut
Application February 4, 1932, Serial No. 590,879
4 Claims. (Cl. 16—51)



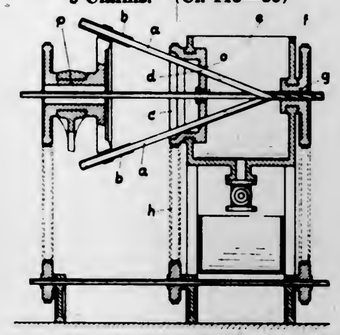
2. A door closer having upper and lower chambers separated by a plate, a shaft traversing said chambers and having a bearing in each of them, a pair of pinions on said shaft, one carried in each of said chambers, a pair of oppositely spring pressed racks cooperable with opposite sides of said upper chamber pinion, and a rack carrying a check mechanism cooperable with said lower chamber pinion.

2,003,670
BOOK STACK
Robert C. Walker, Scarsdale, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y.
Application April 5, 1933, Serial No. 664,575
15 Claims. (Cl. 72—1)



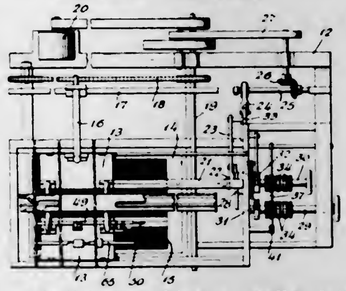
1. In a library stack construction, the combination of a plurality of foundation plates formed with positioning lugs, said plates being mounted in co-planar relation and spaced predetermined distances apart both longitudinally and transversely in rows to fix the spacing of stack columns, a plurality of stack columns of substantially uniform dimension, each having a top plate on one end and a bottom plate at the other end, each top plate being provided with a plurality of positioning lugs corresponding to the positioning lugs on a foundation plate, each base plate having openings to receive said lugs, said lugs cooperating to interlock each lower stack column with one of said foundation plates, and each stack column above the lower columns with the top plates of an adjacent stack column extending between adjacent floors, gauge bars connecting the top plates of adjacent stack columns in both directions in said longitudinally and transversely arranged rows of columns at each floor level and retaining said columns in predetermined spaced relation in the stack, independent reinforcing webs extending longitudinally and transversely between said columns in superposed relation to each other and supported on said gauge bars, and concrete floors embedding said webs and gauge bars reinforced thereby, and extending between columns in alignment with said top plates.

2,003,671
BOOK STACK CONSTRUCTION
Robert C. Walker, Scarsdale, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y.
Application April 5, 1933, Serial No. 664,576
11 Claims. (Cl. 72—1)



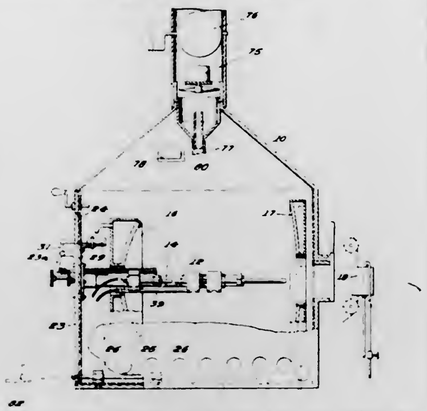
1. A library stack, comprising a plurality of vertically spaced floors, each floor having a plurality of metal floor sections formed on the marginal portions for interfitting interlocking cooperation with adjacent marginal portions of adjacent floor sections, a plurality of stack column members extending between and supporting said floors and arranged in rows longitudinally and transversely, said stack column members being in vertically aligned relation, load carrying means on the floors extending between the ends of aligned column members on opposite sides thereof, and foundation plates mounted in horizontal coplanar and predetermined spaced relation, said plates receiving and supporting the lower ends of the lowermost column members and providing a base for supporting the library stack and predetermining stack column position.

2,003,672
SEWING MACHINE FOR STITCHING MULTIPLE SEAMS
John P. Weis, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a corporation of Delaware
Application January 5, 1933, Serial No. 650,248
36 Claims. (Cl. 112—2)



1. In a machine for sewing multiple seams, the combination of means for feeding and stitching superposed plies of material with a line of stitches, means for then separating the plies and reversing one of them, means for then feeding the spread-apart plies at an angle to the first direction of feed, and means for stitching the same margins with parallel rows of stitches.

2,003,673
MACHINE FOR MANUFACTURING MOISTUREPROOF CABLE COVERINGS
Georg Zapf, Cologne, Germany, assignor to Felten & Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany
Original application March 25, 1931, Serial No. 525,297. Divided and this application January 16, 1933, Serial No. 652,088. In Germany April 15, 1930
5 Claims. (Cl. 113—35)



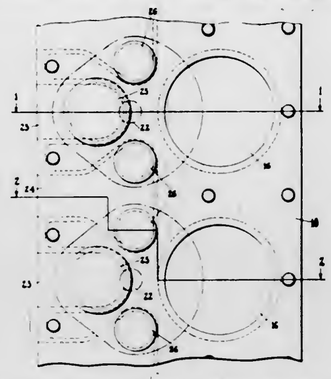
1. A machine for manufacturing a cable covering, which surrounds the core of an electric cable so as to protect it from moisture, comprising a revolving frame carrying several reels adapted to receive flat bands, means for folding the bands to an acute angle and a single container in which the twisting of the said folded bands around the core of the cable takes place.

2,003,674
KNITTING MACHINE
Michael Zimic, Forest Hills West, N. Y.
Application September 25, 1933, Serial No. 690,818
5 Claims. (Cl. 66—63)

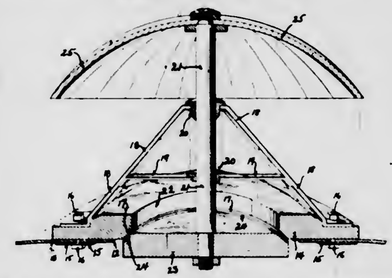
1. In a knitting machine, a needle plate for receiving needle jacks having long and short butts, a carriage movable along said needle plate, a lock mechanism on said carriage having means to direct said jacks along a certain course as said carriage is moved, a lock element adjustable to a plurality of positions relative to said course, an operating mechanism for said element including a bar slidably mounted on said carriage and operatively connected to said lock element, a trip device for said bar having a series of positions each corresponding to one of the positions of said lock element and in certain of which the same is directly contacted by said bar to slide the latter relative to said carriage, and coordinated abutments linked to said bar and contacting said trip device in one of its positions to produce a different sliding movement of said bar.

2,003,675
HIGH INTENSITY MULTIPLE AUTOMATIC ARC LAMP
Frederick A. Berg, Chicago, Ill.
Application February 3, 1930, Serial No. 425,440
17 Claims. (Cl. 176—51)

1. A multiple high intensity arc including an elliptical reflecting focusing mirror, the arcs being positioned at the focal points of the mirror and mounted on a support projecting through an opening in the center of the mirror, said support comprising a tube and carbon supporting and feed means mounted in conjunction with the tube, the negative carbon feed positioned outside the tube and the positive carbon feed drive extending inside the tube to the outer end thereof.



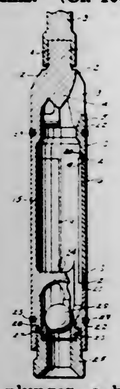
2,003,676
CABLE CONNECTER
William A. Bonnell, New York, N. Y.
Application January 27, 1931, Serial No. 511,515
3 Claims. (Cl. 247—25)



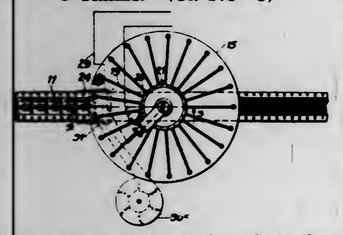
1. A cable connecter comprising a hollow body having opposite ends and a clamp member fulcrumed to said body, said clamp member having oppositely directed ends, one of said ends being angularly disposed to provide a jaw extending over an end of the hollow body, the other end of said clamp member being angularly directed for fulcrum engagement with the edge of an outlet box opening to secure the hollow body therein.

2,003,677
INTERNAL COMBUSTION ENGINE
Harold D. Church, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a corporation of Ohio
Application February 16, 1931, Serial No. 515,910
2 Claims. (Cl. 123—191)

1. In an internal combustion engine of the L-head type, the combination of a cylinder, a piston in said cylinder, an inlet conduit leading into said engine and communicating with the interior of said engine through an inlet port opening, a pair of exhaust conduits leading into said engine each communicating with the interior of said engine through an exhaust port opening, the aforesaid inlet port opening and exhaust port openings being closely aggrouped about said cylinder at one side thereof in the form of a triangle with two of said port openings disposed adjacent the cylinder, the other of said port openings being located so as to extend between the port openings adjacent the cylinder, a compact combustion chamber encompassing the aforesaid port openings in close relationship thereto and communicating with said cylinder, ignition means associated with said combustion chamber, poppet valves for controlling the aforesaid port openings, and means for operating said valves.



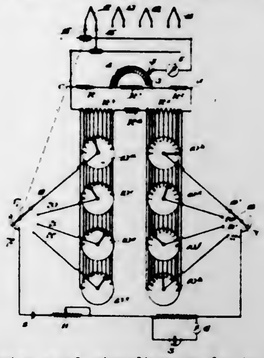
2,003,678
VACUUM RELIEF VALVE
Jared F. Cilley, Wadhams, N. Y.
Application October 30, 1931, Serial No. 572,051
1 Claim. (Cl. 137—69)



A vacuum relief valve adapted to relieve vacuum within a penstock having an orifice which is controlled by said valve, an external saddle member riding on said penstock over the orifice, a valve seat on the inner side of said saddle member, a valve member for engaging said valve seat, a valve stem for carrying said valve member, a plurality of strut members, bearings carried by said strut members for guiding said valve stem, a reinforcing ring and means for securing said ring and the saddle member to the penstock on opposite sides thereof and the strut members to the saddle member, and an umbrella-like member secured to the free end of said valve stem, said member having its concave surface facing the penstock.

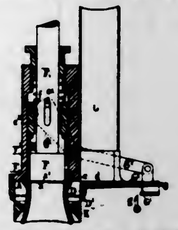
2,003,679
FLEXIBLE PUMP PLUNGER
Charles S. Crickmer, Dallas, Tex., and Harvey R. Standlee, Tulsa, Okla., assignors to The Guiberson Corporation, Dallas, Tex., a corporation of Delaware
Application November 30, 1931, Serial No. 577,944
9 Claims. (Cl. 103—225)

1. In a pump plunger, a hollow body having longitudinal openings and longitudinal expansible panels between said openings and co-extensive therewith, and co-acting expansible panels secured at each end in said openings, the panels having overlapping edges in contact forming liquid-tight joints.



2,003,680
TELEVISION RECEIVING AND PROJECTING MEANS AND METHOD
Lee de Forest, Hollywood, Calif., assignor to American Television Laboratories, Inc., a corporation of Delaware
Application September 22, 1931, Serial No. 564,331
6 Claims. (Cl. 178—5)

3. In an apparatus of the class described, means for etching a normally transparent film comprising a source of high frequency current having modulations corresponding to the etchings to be produced on said film, a rotatable capillary electrode carrier, said electrode terminating above the lower end of said capillary, means for applying said modulated currents to said coating and said electrode, and means for rotating said carrier and for moving said film in timed relation thereto.



2,003,681
MEASURING APPARATUS
Edgar D. Doyle, Philadelphia, Pa., assignor to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 28, 1930, Serial No. 423,923
17 Claims. (Cl. 73—32)

8. A pyrometer system comprising a self-balancing calibrated potentiometer, a plurality of thermo-couples, motive means for the self-balancing mechanism of said potentiometer, means actuated by said motive means selectively to include said thermo-couples in circuit with said

potentiometer and simultaneously to vary the calibration of said potentiometer proportionally to the ratio of the potentials of said thermo-couples for the same temperature.

2,003,682
CAPPING OF BOTTLES AND AN APPARATUS THEREFOR
Arthur Guy Enock, Wembley Park, England, assignor to Auto Dairy Pioneers Limited, London, England
Application October 14, 1931, Serial No. 568,837
In Great Britain November 4, 1930
4 Claims. (Cl. 226—80)

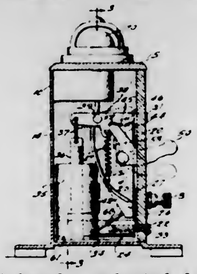
1. Apparatus for capping bottles comprising rollers to feed forward a strip of flexible capping material, dies to puncture or partially sever the material into cap pieces, apertured guide plates to grip the strip of material, a reciprocating die to hold the material upon the bottle lip and a plunger to force the cap piece in a well-like depression into the bottle mouth and means to raise the bottles into position to receive the caps.

2,003,683
CHILD'S GARMENT
David S. Foodem, New York, N. Y.
Application June 20, 1933, Serial No. 676,607
2 Claims. (Cl. 2—227)

1. A child's unitary garment consisting of a waist portion and leg portions, the waist portion being shaped to conform to the corresponding front and back portions of the body of the child, the back of the waist portion having a slit extending substantially centrally from the top edge of the waist portion to the crotch and along the same substantially to the front face of the waist portion to provide equal rear flaps when the slit is open, means for releasably closing said slit,

and the waist portion having elastic means extending along said top edge, whereby to pull the

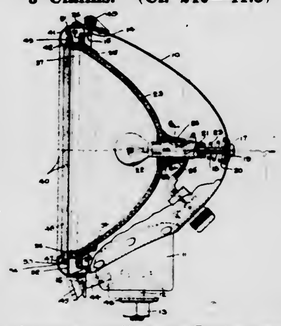
flaps frontward on opening said means, to afford full exposure of the adjacent part of the child's body.



2,003,684
INCENSE
Emile Frantz, San Francisco, Calif.
No Drawing. Application January 27, 1934, Serial No. 708,697
8 Claims. (Cl. 167—94)

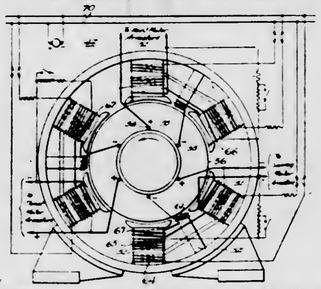
3. An incense consisting of a solid piece of slowly combustible material consisting of the ground pods and caps of eucalyptus trees molded to form.

2,003,685
ALUMINUM BRASS ALLOY
John R. Freeman, Jr., Cheshire, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application October 30, 1934, Serial No. 750,675
8 Claims. (Cl. 75—1)



1. A brass alloy containing from about 70% to 85% copper, 0.5% to 6.0% aluminum, 0.005% to 0.5% arsenic, and the remainder zinc.

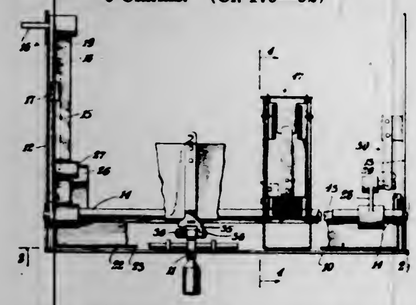
2,003,686
CIRCUIT BREAKER
Charles V. Glaimo, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a corporation of New York
Application March 26, 1931, Serial No. 525,363
4 Claims. (Cl. 200—106)



1. A circuit breaker adapted for low voltage circuits comprising an insulating plate, a conducting frame secured to one face of the plate, a contact secured adjacent the frame, a solenoid coil supported from the frame and connected at one end to the frame, an armature core movably carried in the coil, a switching member pivotally secured to the frame and having a free end engageable with the contact to complete a circuit from the contact through the switching member, frame and coil, a manually operable lever pivotally carried by the frame for actuating the switching member, a latching lever connected to the armature and cooperable with the switching members to hold it in closed position, and a spring between the switching member and the latching lever, the spring holding the latching lever in position to hold the switching member in closed position and pulling the switching member away from the contact.

2,003,687
HEADLIGHT
Herbert J. Graham, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 25, 1931, Serial No. 583,157
3 Claims. (Cl. 240—41.5)

1. In a lamp, a unitary reflector assembly including a glass reflector and a mounting therefor, said mounting comprising a pair of ring members having radially extending flanges secured together in flatwise relation, said members being provided with relatively divergent portions to provide an annular seat within which the peripheral edge of the reflector is received, one of said divergent portions being provided with a flange extending axially in advance of the reflector for supporting a cushioning gasket, and a frontal closure for the lamp having a lens-equipped frame adapted to embrace said mounting with the lens thereof in abutting relation with respect to said gasket.

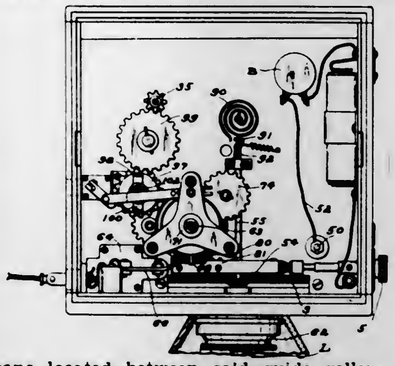


2,003,688
POWER-SUPPLY SYSTEM FOR ELECTRIC SHOVELS AND THE LIKE
Clarence B. Hathaway, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application June 16, 1930, Serial No. 461,333
20 Claims. (Cl. 172—239)

1. In a machine having a hoist motion and a swing motion, a direct-current electric motor for each of these motions, in combination with a prime-mover and a multi-circuit multi-polar direct-current generator mechanically connected

together and mounted upon the swinging part of said machine, said generator having a multiple-wound armature without cross-connections, and having a plurality of pairs of main field poles, and having a plurality of circuits taken off from said armature, means for independently varying the direction and the magnitude of the excitation of the poles corresponding to at least some of said circuits, and means for constantly connecting the armature of at least one of said motors across at least one of said circuits, characterized by the fact that the armature winding is chorded to a pitch which is at least one full slot different from full pitch.

2,003,689
AUTOMATIC SIGNAL LOCK AND RELEASE FOR SWITCHBOARDS
Henry Koch, Jamaica, N. Y., assignor to Dictograph Products Company Inc., New York, N. Y., a corporation of Delaware
Application August 11, 1932, Serial No. 628,291
6 Claims. (Cl. 179—92)



1. In a telephone device, the combination with an incoming circuit having a magnetic coil connected therein when the receiver is in position on the receiver support, and a magnetic coil armature, of a visual signal adapted to be moved to a display position by said armature when said magnetic coil is energized, a biased fastening device to maintain said signal in a display position operable only when the receiver is in position on the receiver support, and means to return said fastening device to and hold it in an inoperable position when the receiver is removed from its support.

2,003,690
TOBACCO PRODUCT
Lucy O. Lewton, Portchester, N. Y.
No Drawing. Application March 28, 1933, Serial No. 663,173
8 Claims. (Cl. 131—31)

2. A new article of manufacture comprising a smoking tobacco having uniformly incorporated therewith an oxidizing agent of the mixed ferrous-, ferric-oxide type sufficient to and capable of yielding substantially all of its oxygen to afford more complete combustion of aldehyde, acrolein and other products of incomplete combustion and of forming a metallic element capable of fixing alkaloid bases of the pyridine type formed during the smoking.

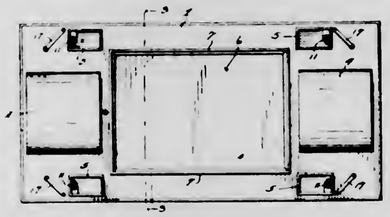
2,003,691
MEANS FOR PHOTOGRAPHIC COPYING
Carl E. Lundberg, Seattle, Wash.
Application November 17, 1930, Serial No. 496,196
5 Claims. (Cl. 95—34)

1. In a photographic copying device employing a movable sensitized film, the combination of a case having a pair of separated chambers, a film feeding reel in one chamber and a take up roll in the other chamber, means for operating the take up roll, spaced guide rollers for the film,

means located between said guide rollers for varying the length of film to be exposed, and a spring pressed roller co-acting with each guide roller for retaining the film on said rollers.

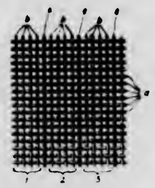
2,003,692
DENTAL APPLIANCE
James E. Meadows, San Francisco, Calif.
Application April 16, 1934, Serial No. 720,700
2 Claims. (Cl. 32—19)

1. A dental appliance comprising a pair of arms pivotally connected at one end, each of said arms being provided with a pivotal joint at a point intermediate its ends the pivotal joints being equi-distant from the pivot connecting the ends of the arms whereby each of said arms comprises an inner section pivotally connected at an end to an end of the inner section of the opposite arm and an outer section pivotally connected to the free end of each inner section respectively, a pair of mouth trays on the free outer ends of the outer sections of the arms, means whereby the arms are controlled for simultaneous pivotal movement comprising a pair of links pivotally connected at one end and each link pivotally connected at its opposite end to one of the outer sections of the arms respectively, and a member provided with elongated slots in longitudinal alignment, said slots arranged and adapted to slidably receive the pivot connecting the ends of the inner sections of the arms and also the pivot connecting the ends of the links for slidable movement of both pivots longitudinally of the slots.



2,003,693
TYPOGRAPHICAL SLUG
Walter W. Morey, Wilmette, Ill., assignor, by mesne assignments, to Teletypesetter Corporation, Chicago, Ill., a corporation of Delaware
Application June 20, 1931, Serial No. 545,774
4 Claims. (Cl. 101—374)

3. In the typographical slug-casting art, a slug adapted to be associated with a pre-set slug, said first named slug comprising a portion integral thereto, the conjunction of said portion and said first named slug being of reduced dimension whereby when said first named slug is assembled

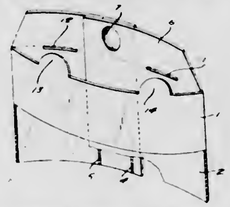


in printing relation with said pre-set slug said portion is severed by the cooperation of the adjacent edge of said pre-set slug with said portion.

2,003,694
SELF-DUMPING SCOW
John Kimball Munson, Olympia, Wash.
Application August 15, 1933, Serial No. 685,215
3 Claims. (Cl. 114—38)

1. A self-dumping scow having a top deck and a bottom, an inner deck within the scow extending from one end to the other and spaced from the bottom of the scow to position said lower deck slightly above the no-load water line of the scow, an upstanding enclosure carried by the top deck to provide a top cargo space, air tanks mounted upon the top deck fore and aft of the enclosure, panels depending from the top deck and spaced from the side walls of the scow to provide pockets to catch water as the scow rolls over to an inverted position, said panels terminating at a point substantially midway between the top deck and the inner deck, and flood lines mounted upon the inner deck at opposite sides of the scow and adjacent to the opposite ends thereof, said flood lines having their induction ends above the water line when the scow is substantially free of load, said flood lines having swinging sections within the scow adjustable from a substantially horizontal position to a substantially vertical position and means for swinging said sections, said air tanks being aligned lengthwise of the scow and positioned substantially at the transverse center thereof.

2,003,695
WOVEN WIRE FABRIC
Joseph O'Neill, Port Chester, N. Y.
Application August 6, 1932, Serial No. 627,785
7 Claims. (Cl. 139—425)

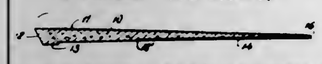


1. Paper-making and paper pulp treating woven wire fabric having warp wires of an alloy including copper, manganese and silicon.

2,003,696
UTILIZATION OF COTTON PLANT CELLULOSE
Gideon Howard Palmer, East Orange, N. J.
No Drawing. Original application May 27, 1933, Serial No. 673,309. Divided and this application March 26, 1934, Serial No. 717,433
7 Claims. (Cl. 260—100)

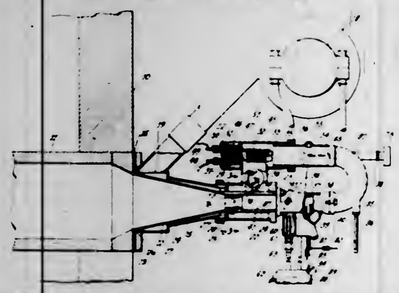
1. A process for the manufacture of viscose from alpha cellulose obtained from purified cotton plant (from which the cotton has been removed), comprising immersing the cellulose in an alkaline solution of about 18.4 per cent sodium hydroxide at about 17.5° for less than 1.5 hours, removing excess alkali solution until the alkali cellulose weighs about 2.85 times the weight of the original cellulose taken, shredding to a predetermined particle size, at about 17°, xanthating in a rotating container with carbon bisulfide, dissolving the xanthated cellulose in sodium hydroxide solution until said solution has a cellulosic content of about 6%–8% and alkalinity of about 6.5%, then ripening at about 19° until the desired degree has been obtained.

2,003,697
PAPER BAG CONSTRUCTION
George W. Poppe, Brooklyn, N. Y., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y., a corporation of New York
Application August 12, 1933, Serial No. 684,775
4 Claims. (Cl. 229—54)



1. A paper bag having a front wall, a tab formed as a prolongation thereof, a rear wall having overlapped plies forming a wide seam, paste lines near the edges of the seam and a slit in the rear wall through which said tab may be passed to close the mouth of the bag, said slit being between the paste lines.

2,003,698
METHOD OF AND APPARATUS FOR SEPARATING SHEETS FROM STACKS THEREOF
Joseph P. Remington, Philadelphia, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 20, 1932, Serial No. 594,194
24 Claims. (Cl. 271—25)

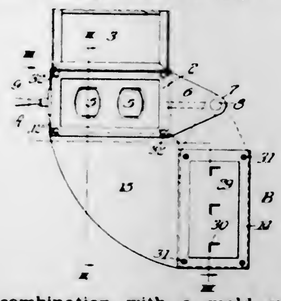


1. A method of separating one sheet at a time from a stack of limp sheets, which comprises reducing the adhesion between the top sheet and its neighboring sheet beginning adjacent an end of the top sheet and progressing in zones toward the other end of said top sheet, and adjacent said other end picking up and removing the top sheet from the stack, without substantial disturbance of said neighboring sheet.

2,003,699
ROOFING PRODUCT
Thomas Robinson, Goldenbridge, N. Y., assignor to Lancaster Asphalt, Inc., New York, N. Y., a corporation of Delaware
Application September 12, 1930, Serial No. 481,412
2 Claims. (Cl. 108—8)

1. A roofing element which comprises a plate-like body of hardened plastic material, said body having its sides and butt edge undercut, a stiffening rib formed in the body of said plastic material extending transversely of the body along the butt edge and on one surface of the body only and a reinforcing web of fibrous material on the said surface extending from side to side and from the front edge to slightly beyond the central portion of said surface, said web being permanently united to the said body.

2,003,700
OIL BURNER
Jerome J. Sloyan, Red Bank, N. J.
Application December 13, 1930, Serial No. 502,055
4 Claims. (Cl. 158—76)

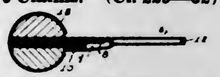


1. In a device for burning fuel, a mixing chamber for air and said fuel, a combustion chamber for burning a mixture of said air and fuel, an air passageway in heat exchange relationship with said combustion chamber, a Venturi metering and mixing device for said fuel and air arranged in direct communication with said passageway so that the air flowing through said passageway and subject to the heat of said combustion chamber is the only air available and the only air used for operating, and carrying the resulting air and fuel mixture from, the metering and mixing device, a second venturi adjacent said combustion chamber and provided with associated ignition means, said last named venturi being adapted to prevent the passage of a flame therethrough, said venturis being substantially spaced from each other and said mixing chamber being arranged therebetween.

2,003,701
OIL WELL DRILLING MUD
Thane K. Stinson, East St. Louis, Ill., assignor to Geo. S. Mepham Corporation, East St. Louis, Ill., a corporation of Delaware
No Drawing. Application February 19, 1935, Serial No. 7,176
6 Claims. (Cl. 255—1)

1. A compound for use in a drilling mud for oil and gas wells consisting of 90% to 98% of bentonite in combination with 2% to 10% of a flaky, cellular material, such as iron oxide.

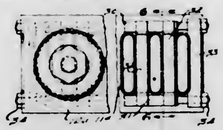
2,003,702
CONCRETE BLOCK MAKING APPARATUS
Francis J. Straub, New Kensington, Pa.
Application September 5, 1933, Serial No. 688,113
5 Claims. (Cl. 25—41)



2. In combination with a mold supporting trackway and a horizontally supported mold box movable thereover, a depressible platform providing a support for a pallet flush with the trackway, reciprocable ejecting mechanism provided with a pressing plate and thrust rods normally elevated to admit of mold box placement thereunder and upon the pallet, means for lowering the ejecting mechanism to bring the plate into contact with the mold contents and the thrust rods into contact with the pallet, and means opposing downward pressure on the platform adapted to raise it to normal position after ejection of the mold contents and removal of the mold.

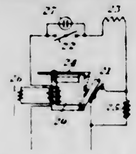
2,003,703
BENZYL PIPERIDINE-1-CARBOTHIONOLATE AND PROCESS OF PREPARING THE SAME
Douglas Frank Twiss, Sutton Coldfield, and Frederick Arthur Jones, Birmingham, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
No Drawing. Application February 17, 1931, Serial No. 516,510. In Great Britain February 22, 1930
2 Claims. (Cl. 260—43)

1. Benzyl piperidine-1-carbothionolate.



2,003,704
MOTHPROOF BAG
Joseph William Wensell, El Monte, Calif.
Application January 17, 1934, Serial No. 706,905
10 Claims. (Cl. 229—62)

1. As an article of manufacture a bag having an open edge, half-round wooden strips oppositely positioned externally of said bag adjacent to and co-extensive of the open edge; said bag formed with a flap pocket underlying said strips, a resilient flap to said bag co-extensive of the open edge and disposed to be folded over the open edge of said bag and inserted in said pocket, and slotted tubes fitting slidably over said strips to clamp opposed strips together.



2,003,705
HEAT EXCHANGER SECTION
James Whiteley, Detroit, Mich.
Application April 25, 1934, Serial No. 722,402
1 Claim. (Cl. 257—230)

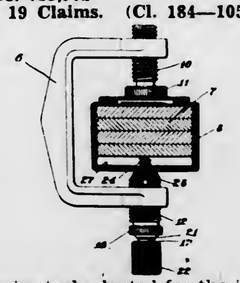
A heater section for use in boilers, fuel economizers and the like comprising a pair of headers, a series of tubes opening at opposite ends to the respective headers, a series of plates separating the tubes and lying in contact with the side walls thereof and in spaced relation longitudinally of the tubes between the headers, and

means for applying pressure to the series of plates and interposed tubes whereby the plates through contact with the side walls of the tube under pressure prevent deformation of the tubes through internal pressure.

2,003,706
ELECTRIC SIGNAL AND CONTROL DEVICE
Charles B. Bartley, Pittsburgh, Pa.
Application February 26, 1931, Serial No. 518,387
2 Claims. (Cl. 175—294)

1. A device for protecting a circuit from excessive overload comprising a magnetic core having a movable armature adapted to close the core, a primary exciter winding on said core adapted to be connected in series with the load on said circuit, said movable portion normally shunting a circuit adapted to be connected in series with the primary and load on movement of said portion, and a secondary winding on said core connected to a resistor of such value as to cause the primary winding to maintain sufficient excitation of said core to hold said movable portion attracted after it is once actuated by the building up of flux in the core due to increased current through said load.

2,003,707
HOSIERY FORM
William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York
Application February 28, 1933, Serial No. 658,960
4 Claims. (Cl. 223—18.3)



2. A flexible celluloid hosiery form closed at the foot, said form being made from a tube and having unitary leg and foot portions, a single seam, where the wall of the tube is joined, at the sole of the foot portion, and a thimble projecting from the upper end and of smaller diameter than the form proper, by means of which the form may be supported.

2,003,708
TOOL FOR RESERVICING SPRINGS EQUIPPED WITH SPRING-COVERS
Warren F. Eisenhauer, Cambridge, Mass., assignor to Anderson Manufacturing Company, Cambridge, Mass., a corporation of Massachusetts
Application June 20, 1934, Serial No. 731,556
11 Claims. (Cl. 184—105)

1. A service tool, for re-servicing springs equipped with a spring-cover having a liner, comprising a body, an injection head extending from one end of said body providing a helical formation adapted to enter a hole formed in the cover permitting engagement of the liner and functioning to thread itself through the liner upon rotating the tool, a socket at the other end of the body adapted to retain a grease gun fitting, and said tool having a continuous grease duct from said socket through said injection head.

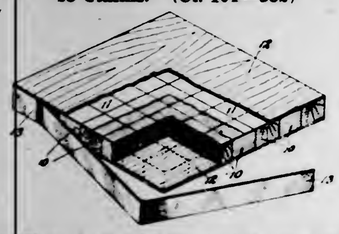
2,003,709
TOOL FOR RESERVICING SPRINGS EQUIPPED WITH SPRING-COVERS
Warren F. Eisenhauer, Cambridge, and Warren T. Ferguson, Waban, Mass., assignors to Anderson Manufacturing Company, Cambridge, Mass., a corporation of Massachusetts
Continuation of application Serial No. 685,566, August 17, 1933. This application July 6, 1934, Serial No. 733,972
19 Claims. (Cl. 184—105)

1. A service tool adapted for the injection of a spring action stabilizing compound upon the leaves of a multiple leaf spring equipped with a spring-cover having an inner liner, comprising a sleeve, a hollow plunger held rotatably within said sleeve forming a compound-serving duct, and a head on said plunger characterized by a liner-piercing device for entering through the spring-cover and making a hole in the liner.

2,003,710
METAL BODY RESISTANT TO FLUCTUATING STRESSES
Herbert W. Graham and Samuel L. Case, Pittsburgh, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 28, 1933, Serial No. 663,155
5 Claims. (Cl. 285—146)

1. As a new manufacture, a drill pipe made of substantially non-aging steel, the drill pipe being

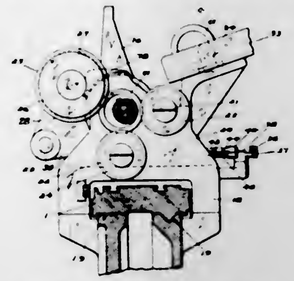
in the form of a hollow tube having a thickened end portion, which thickened end portion is



threaded, the threaded portion at least being cold worked.

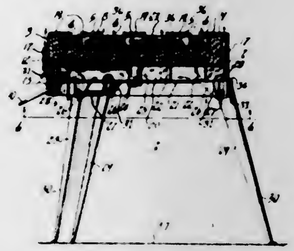
2,003,711
METHOD OF TREATING LEAD SULPHIDE MINERAL
Fred E. Gregory, Galena, Kans., and Raymond L. Hallows, Joplin, Mo., assignors to The Eagle-Picher Lead Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application May 6, 1933, Serial No. 669,798
6 Claims. (Cl. 23—134)

1. The herein described method of removing iron and iron compounds, other than iron sulphides, from the surface and interstices of lead sulphide mineral, which consists in treating lead sulphide mineral by means of an acid selected from the group consisting of sulphuric acid, hydrochloric acid or nitric acid.



2,003,712
PRINTING PLATE BASE
Horace W. Hacker, La Grange, Ill.
Application June 21, 1934, Serial No. 731,737
18 Claims. (Cl. 101—382)

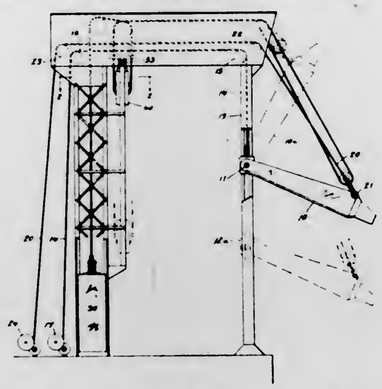
1. Lumber from which printing plate bases are to be cut, said lumber comprising a plurality of wood elements cemented together to form a slab, each of said elements having all its faces hermetically sealed.



2,003,713
GRINDING MACHINE
Carle J. Highberg, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts
Application March 31, 1928, Serial No. 266,287
26 Claims. (Cl. 51—48)

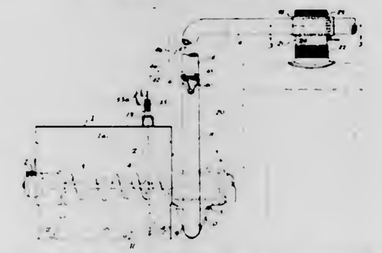
6. In a machine of the class described, work-holding and loading mechanism comprising a pair of rotatable rolls mounted on stationary axes, a third rotatable roll, a magazine adapted

to hold a plurality of workpieces, and means for moving said third roll to and from said magazine to guide a workpiece into operating position.



2,003,714
PORTABLE ELECTRIC HEATER
Gustave A. Johnson, Newark, N. J., assignor to Electrical Patent Holding Corporation, New York, N. Y., a corporation of New York
Application April 20, 1933, Serial No. 666,949
2 Claims. (Cl. 219—37)

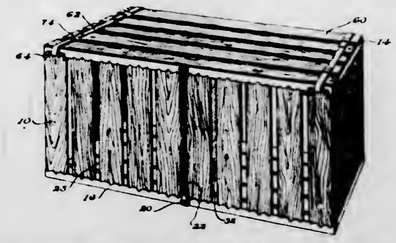
2. In a portable electric heater of the character described having a heater unit, a casing for said heater unit, said casing being open at its top and bottom and having its side walls spaced outwardly from said heater unit, a bottom plate member fixed upon said heater unit in spaced relation with respect to the bottom of said heater unit, said bottom plate member substantially closing the bottom of said casing and having depending ears thereon, folding legs having their upper ends connected for pivotal and limited sliding movement upon said ears, said legs being arranged to be turned either radially inwardly into folded position upon said bottom plate member or outwardly for supporting said casing, said legs having slots thereon for receiving portions of said casing when said legs are in their out-turned positions to thereby lock said legs in supporting relation to said casing.



2,003,715
SYSTEM AND APPARATUS FOR REEVING COUNTERWEIGHT CABLES
Robert W. Kaltenbach, Cleveland Heights, Ohio
Application February 8, 1934, Serial No. 710,275
5 Claims. (Cl. 193—24)

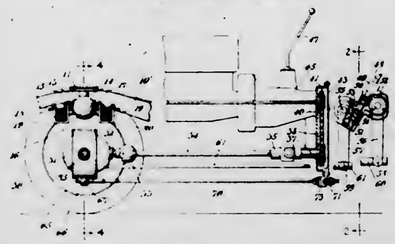
1. In combination, a frame, a chute swivelly mounted thereon, two counterweights for the chute, a single cable connecting the chute and counterweights across the frame, the cable having its ends fixed and reeved into three loops, one of the loops supporting the chute, and the

other loops supporting the respective counterweights.



2,003,716
APPARATUS FOR CONVEYING AND CONDITIONING PULVERULENT MATERIAL
Edward J. Lauterbur and Frank X. Lauterbur, Sidney, Ohio, assignors to The Peerless Bread Machine Company, Sidney, Ohio, a corporation of Ohio
Application April 6, 1931, Serial No. 527,893
3 Claims. (Cl. 302—17)

1. In apparatus of the character described, a receptacle, supply means for pulverulent material, supply means for warm air, supply means for cold air, a blower receiving air from either one of said air supply means, and a conduit leading from said blower past said material supply means to said receptacle, and having an inlet from said material supply means and means causing air current from the blower to aspirate material from said supply means into said conduit, a thermostatic device near the path of travel of said material from said material supply means to said receptacle, and means whereby said thermostatic device varies the proportions of warm air and cold air supplied to said blower.

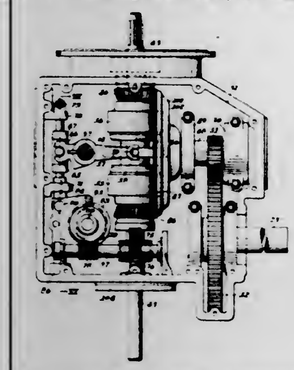


2,003,717
CRATE
George M. Leghorn, Winchester, Mass.
Application October 29, 1932, Serial No. 640,200
12 Claims. (Cl. 217—12)

1. A crate comprising side and end walls formed from a length of slatting which consists of parallel slats held in assembled relationship by one or more metal bands resting flatly upon the faces of the slats and locked thereto, and having flanged portions which stiffen and strengthen the bands when bent into predetermined form to prevent distortion of the walls of the crate, and having preformed portions

which cause bending of the bands to produce corners in predetermined regions at the juncture of the walls in a manner to provide a complete stiffened and reinforced wall when the length of slatting is bent into a four-walled closure.

2,003,718
FRONT WHEEL DRIVE
William McCarthy and George Wolff, Clifton, N. J.
Application May 2, 1934, Serial No. 723,500
3 Claims. (Cl. 180—42)

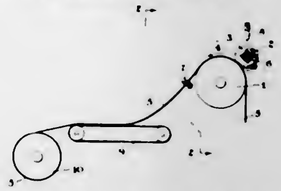


1. In a front drive for motor driven dirigible vehicles, an axle casing having road wheels secured at its ends, said casing enclosing wheel driving shafts, a differential casing integrally formed at the center of said casing and having drive elements therein, means for transmitting power from the vehicle motor to said differential mechanism, a pair of spaced cambered springs supported on blocks on said axle casing, a platform connecting said springs at their centers, said platform supporting a ball and socket, means carried by the ball and socket to support the forward end of the vehicle chassis, said support permitting universal movement between the chassis and the axle, and a stay rod having divergent arms slidably connected with the opposite sides of the vehicle chassis and connected at its other end to the axle by a universal joint.

2,003,719
AUTOMATIC REVERSING MECHANISM
Harold E. McCrery, Pittsburgh, Pa., assignor to Blaw-Knox Company, Blawnox, Pa., a corporation of New Jersey
Application March 23, 1931, Serial No. 524,506
2 Claims. (Cl. 74—324)

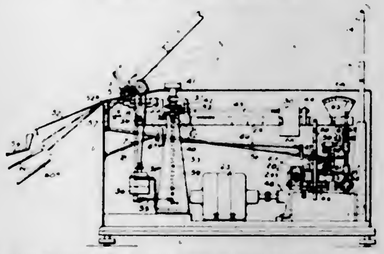
1. A reversing mechanism, comprising a driving shaft, a driven shaft, a ring gear secured to the driven shaft, two beveled gears rotatable on the driving shaft, said beveled gears meshing with the ring gear at opposite sides thereof, clutches for causing either one of said beveled gears to

rotate with the driving shaft, a pivoted clutch shift lever, a cam, gearing connected to the driving shaft for rotating the cam, a reciprocating



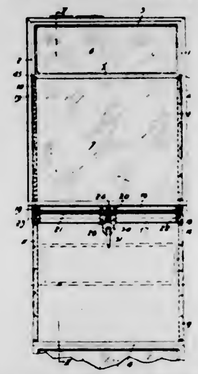
follower, a reciprocating yoke connected to one end of the shift lever, and a spring-pressed pin connecting said yoke and follower.

2,003,720
CLOSURE FOR VACUUM CLEANER BAGS
Jessie Walton Meek, Deer Park, Wash., assignor of one-half to Lena H. Walton, Deer Park, Wash.
Application February 27, 1933, Serial No. 658,873
1 Claim. (Cl. 150—3)



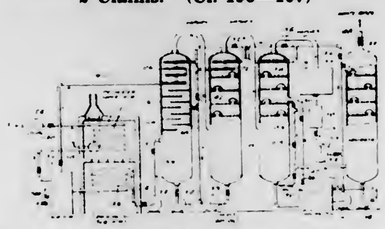
A vacuum cleaner bag having its lower end formed with a cleaner-engaging portion at one side of the bag, the upper end of the bag being open for the full width thereof and the bag being formed with a longitudinally extending slit extending from the open upper end of the bag through the entire length of the bag at the opposite side thereof from the cleaner-engaging portion, a removable clamp extending the entire width of the upper end of the bag for clamping the front and rear walls of the bag together and holding the upper end of the bag closed, closure means for the open side of the bag including actuating means movable downwardly away from the open upper end of the bag to open the bag at its side whereby the bag may be spread to a flattened condition for substantially its entire length and the inner surface of the bag thoroughly cleaned, and a sealing flap secured longitudinally of the bag against the inner face thereof and spanning the side slit when the side slit is closed.

2,003,721
MANUFACTURE OF THREADS OR STRIPS OF RUBBER OR THE LIKE
Ugo Pestalozza, Milan, Italy, assignor to Società Italiana Pirelli, Milan, Italy
Application August 4, 1932, Serial No. 627,532
In Great Britain August 4, 1931
12 Claims. (Cl. 18—54)



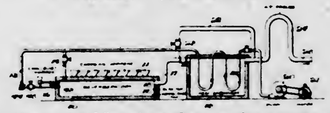
1. A process for the manufacture of elastic rubber threads or strips which comprises simultaneously cutting a plurality of threads or strips from a parent sheet of coherent pre-coagulated dispersion-rubber uniformly incorporating in its mass a large proportion of water, the freshly cut threads or strips being so supported in contact with one another side by side during their relative movement away from the cutting means as to be caused lightly by the adherence of their cut surfaces temporarily to re-unite into a unitary sheet for subsequent handling and treatment, and the freshly cut surfaces of the sheet being wetted with a liquid adapted to reduce the mutual adherence of the said surfaces.

2,003,722
MACHINE FOR AUTOMATICALLY SORTING PLATES OR OTHER ARTICLES ACCORDING TO WEIGHT
John Oliver Powell, Gorseinon, Swansea, South Wales
Application June 16, 1933, Serial No. 676,024
In Great Britain June 23, 1932
7 Claims. (Cl. 209—121)



1. In apparatus for automatically sorting articles by weight, weighing means and a sorting device operated from the weighing means, means for selectively varying the predetermined correct weight of the articles to be sorted to which the apparatus will respond to sort those articles of approximately correct weight from the others and means for adjusting the percentage weight limit, said means for selectively varying the predetermined correct weight of the article to be sorted comprising a pair of spaced abutments, an arm pivotally depending from a part of the weighing apparatus which is moved to an extent proportional to the weight of the article being sorted, a blade carried by said arm and located opposite the space between said abutments, a shaft automatically set into rotation when an article is delivered to the apparatus for weighing, means with said shaft to move said arm towards the said abutments, the said blade being adapted to engage and displace one of said abutments if the article being weighed is above predetermined correct weight, and the other abutment if the article is below correct weight, and a deflecting device adjusted to various positions by the movement of said abutments to effect sorting of the articles.

2,003,723
WINDOW
Herman Gustaf Victor Rydahl, Viggbyholm, Sweden
Application January 22, 1934, Serial No. 707,764
In Sweden December 5, 1933
1 Claim. (Cl. 189—64)

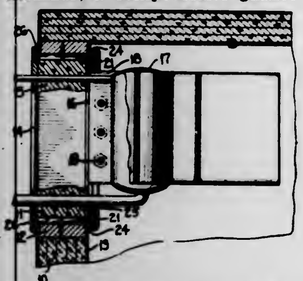


A window comprising a window frame built of channel iron, a pair of Z-bars secured with one set of end flanges to each vertical frame member with the middle flanges in alignment with each other and spaced from the channel iron and with the free end flanges spaced from each other in the median plane of the channel iron, a pair of racks guided in the spaces between the Z bars and the channel irons, a cross bar connecting the lower ends of the racks to form a sash frame, and a glass pane supported on said cross bar and guided in the spaces between the free end flanges of the Z bars.

2,003,724
APPARATUS FOR THE TREATMENT OF HYDROCARBON OILS
Willis F. Sims and Venus U. Cloer, Wichita Falls, Tex., assignors to Panhandle Refining Company, Wichita Falls, Tex., a corporation of Texas
Application March 4, 1931, Serial No. 520,074
2 Claims. (Cl. 196—107)

1. Apparatus for the treatment of hydrocarbon oils comprising in combination an initial heater adapted to retain pressure, a feed pump connected to the inlet of said heater and adapted to positively produce pressure therein sufficient to store up heat energy by substantially raising the boiling points of the oils, an expansion chamber or flashpot, a connecting pipe extending from the outlet of said initial heater to said flashpot and a valve in said pipe adapted to release the initially heated oils from said heater into said expansion chamber or flashpot, a still having an open connection to said flashpot adapted to receive the oil vapors therefrom, and means to heat the oils to cracking temperature in the vapor phase in said still, cooling and separating means connected through a suitable pipe line to the outlet of said cracking still to receive the cracked vapors therefrom, and a pump connected in said pipe line and adapted to positively create and maintain a constant vacuum or subatmospheric pressure on the oil vapors in said cracking still and through its open connection with the flashpot on the content of said flashpot.

2,003,725
PROTECTION OF METALLIC CONDUITS EXPOSED TO HIGH TEMPERATURES
Lewis B. Skinner, Denver, Colo.
Original application January 28, 1930, Serial No. 424,109, now Patent No. 1,959,086, dated May 15, 1934. Divided and this application February 27, 1934, Serial No. 713,224
6 Claims. (Cl. 23—262)



1. In the art of heat exchange by regeneration, the method which comprises preliminarily passing combustion gases carrying phosphorus pentoxide and flue dust from a phosphate treating furnace into contact with the outer surfaces of metal regenerator pipes, while controlling the heat in such manner as to prevent substantial destructive action on said metal pipes, until an adherent protective coating formed of phosphorus pentoxide and flue dust is deposited thereon, and then operating the furnace in such manner that the gases passing in contact with the coated pipes are at a temperature sufficiently higher to be destructive to unprotected metal pipes, and passing air for combustion through said coated pipes, the conditions of operation during and after the formation of said coating being such as to prevent said coating from building up to a thickness beyond that permissible for effective transfer of heat from the exterior to the interior of said pipes.

2. The combination, with a furnace, of a heat regenerator comprising a chamber into which gases are discharged from said furnace, and a metal conduit disposed in said chamber and arranged to conduct air for combustion through said chamber for supply to said furnace, said conduit having its outer surface protected by an adherent coating formed from phosphorus pentoxide and flue dust.

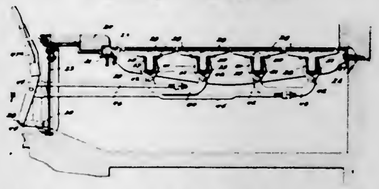
2,003,726
REFRIGERATOR SEALING STRIP
Robert S. Taylor, Evansville, Ind., assignor to Electrolux Servel Corporation, New York, N. Y., a corporation of Delaware
Application November 14, 1930, Serial No. 495,553
4 Claims. (Cl. 20—35)

1. In a refrigerator cabinet including a wall having an aperture therein and a removable clo-

sure member within said aperture, a seal for the clearance space between the wall and said closure member and comprising a strip resiliently mounted around the edge of said aperture and overlapping both the wall around said aperture and said closure member, a compressible gasket between

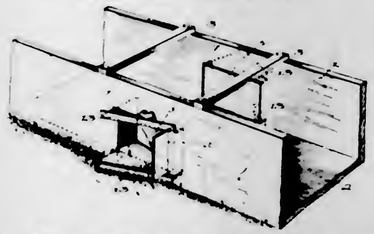
said strip and the portion of the wall around said aperture overlapped by said strip, and a second compressible gasket between said strip and the edge of said closure member overlapped by said strip, said second gasket being secured to said strip.

2,003,727
MOUNTING FRAME FOR DENTAL ARTICULATORS
Benjamin F. Toffiemire, Berkeley, Calif.
Application March 6, 1934, Serial No. 714,303
6 Claims. (Cl. 32—32)



1. The combination with a dental articulator having an incisal guide pin with a groove therein indicating the occlusal plane, of a mounting plate, an occlusal plane indicator supporting the plate, said indicator being slidably mounted on the guide pin, securing means carried by the indicator for entering the groove for holding the indicator in the desired position, and adjustable supporting means for holding the plate in the desired position.

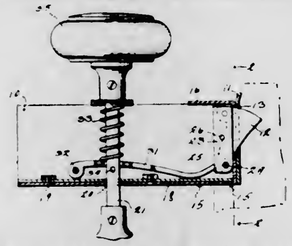
2,003,728
ROOFING MATERIAL
Hermann von Forster, Niederursel, near Frankfort-on-the-Main, Germany, and Samuel de Lange, Hilversum, Netherlands, assignors, by mesne assignments, to Gulf Research & Development Corporation, Pittsburgh, Pa., a corporation of Delaware
Application June 19, 1928, Serial No. 286,704
In Germany June 23, 1927
4 Claims. (Cl. 108—6)



1. An object the surface of which carries a covering of corrosion proof metal in the form of a sheet of foil thickness and of sufficient mechanical strength to be handled without a supporting backing and to withstand the mechanical stresses to which it is subjected in normal use but of less thickness and mechanical strength than is required of sheet metal roofing applied without adhesive attachment to the under-structure, said covering being secured directly to said surface by means of an adhesive material, the metal covering having such inherent flexibility and the adhesive having such inherent plasticity as to be capable of relative movement under differential thermal expansion and contraction without separation from the surface or from the metal covering.

2,003,729
DUMPING GRATE
Charles A. Warg, Scranton, Pa., assignor to McClave-Brooks Company, Scranton, Pa., a corporation of Pennsylvania
Application March 13, 1928, Serial No. 261,361
11 Claims. (Cl. 308—24)

1. In a dumping grate, a frame including side bars formed with a plurality of spaced upwardly opening recesses, a removable bearing seated in each of said recesses and adapted to receive a grate bar journal, said side bars being formed with a pair of oppositely inclined slots at the sides of each recess, and a pair of cap plugs mounted in said slots adapted to hold the grate bar journal and also engaging the bearing and locking it in position.



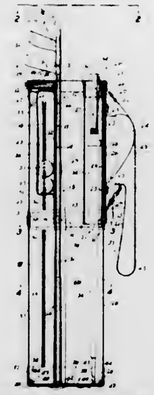
2,003,730
FLUME
Harry W. Baldwin, Hamakuapoko, Territory of Hawaii
Application November 13, 1934, Serial No. 752,878
10 Claims. (Cl. 61—14)

1. A flume having a side wall with an opening therein and a rotatable gate for closing said opening, said gate being rigidly provided adjacent one edge thereof with portions respectively overlapping opposite sides of said wall affording means pivotally associating the gate with the wall.

2,003,731
DOORLATCH
Rangvald C. Beito, Terrace, Minn.
Application November 24, 1934, Serial No. 754,677
3 Claims. (Cl. 292—221)

2. A door latch, comprising a housing, a bolt in the housing, a pair of links pivotally secured at one end to said bolt, a shaft extending transversely of the housing and pivotally engaging the other ends of the links, a laterally extending pin secured to one of said links and extending outwardly through a side of the housing, said housing being provided with an elongated opening in the side thereof through which the pin projects, a spring disposed about said shaft and having one end thereof engaged with the pin to urge

said bolt and links to locked position, a lever having one end thereof pivotally secured in the housing and the other or free end thereof engaging against the free end of the bolt and adapted to normally hold said free end of the bolt against inward swinging movement, and yieldable operating means slidable transversely of the housing and engaging the lever to rock the lever into released position.



2,003,732
COUPLING FOR CANVAS TUBING
Frank M. Bins, Butte, Mont.
Application January 30, 1935, Serial No. 4,180
3 Claims. (Cl. 285—71)

1. A coupling, comprising an annular member formed of sheet metal and provided with interior circumferential parallel grooves of substantial V-shape cross-section; expansive spring rings having overlapping ends and of normally larger diameter than the internal diameter of the annulus; each ring being adapted to be engaged with a cuff formed at the end of a flexible tube section; the spring rings in the cuffs of adjacent tube sections being respectively wedged in the grooves in the annulus, whereby rings of various diameters will automatically contact with both walls of the grooves.

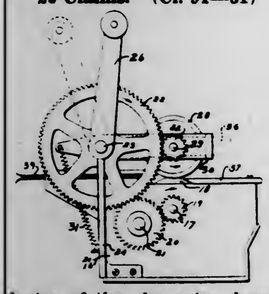
2,003,733
GOLF BAG
George E. Bishop, Cleveland Heights, Ohio
Application March 7, 1931, Serial No. 520,816
5 Claims. (Cl. 150—1.5)

1. A golf bag comprising a skeleton rigid frame for the upper part of the bag, said frame having an open-ended compartment of D cross-section, and a closed-end compartment of D cross-section, fabric material covering the sides of the frame and extending downwardly below the latter and having a closed bottom, and fabric partitions within the fabric material forming a plurality of compartments, a part of the skeleton frame consisting of a web member defining the two D-

sections, said web member being disposed adjacently beneath a part of one of said fabric partitions and forming a support for horizontally aligned clubs.

2,003,734
PROCESS OF TREATING CAUSTIC SODA SOLUTIONS
Harold Marland Broadhurst, Mossley Hill, Liverpool, England, assignor to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application February 8, 1933, Serial No. 655,859. In Great Britain February 10, 1932
3 Claims. (Cl. 23—184)

1. The process of treating concentrated aqueous caustic soda solutions for the removal of sulphate therefrom, which comprises passing the solution through a filter-bed comprising a salt of carbonic acid to cause a reaction between the sulphate of the solution and the carbonate, and the formation of an insoluble salt containing said radicals whereby a clear solution of caustic soda of reduced sulphate content is obtained.



2,003,735
DISPLAY WINDOW
Gerald Brown, Barnes, London, and Edward Pollard, London, England
Application March 29, 1934, Serial No. 718,013
In Great Britain December 11, 1933
4 Claims. (Cl. 88—74)

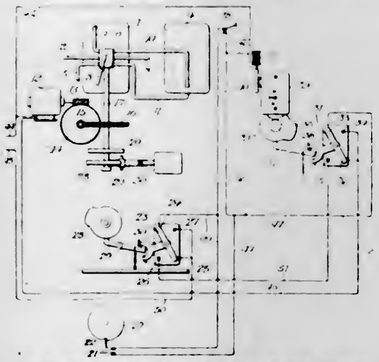
1. In a display window, the combination of a light-absorbing surface disposed out of the direct line of vision of an observer, a curved transparent pane bearing such angular relation to said light

absorbing surface as to take the field of reflected view away from ordinary outside objects to said light absorbing surface, and side panels of an image reflecting nature disposed at the sides of the pane and bearing such angular relation to said pane and said light absorbing surface that light reflected from said pane onto said panels will be reflected onto said light absorbing surface.

2,003,736
MOISTENER
Thomas I. Brown, Los Angeles, Calif., assignor to William J. Pearson, Los Angeles, Calif.
Application October 23, 1931, Serial No. 570,626
20 Claims. (Cl. 91—51)

17. A device of the character described, comprising a moistening roller, a pressure roller, means for supporting said pressure roller, and means for rocking said supporting means toward said moistening roller to bring said pressure roller and said moistening roller into contact, and thereafter operative to produce rotation of said pressure roller.

2,003,737
WEIGHING SCALE
Homer Butler, Bronaugh, Mo.
Application August 10, 1933, Serial No. 684,598
4 Claims. (Cl. 265—68)

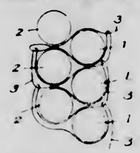


2. A device of the character described, comprising a housing having an aperture in a side wall thereof, a shaft extending through said housing and mounted for free rotation, a dial at one side of the housing, an indicator hand carried by said shaft at one end and overlying the dial, a drum having said shaft extending through the center thereof and secured to the shaft for rotation therewith, said drum having a flange concentric with the shaft in the edge of which ratchet teeth are formed, a ratchet formed upon the back of the drum concentric with the shaft, a pawl oscillatably mounted on the housing and engaging said last ratchet to permit rotation of the drum and shaft in one direction only, an elongated lever mounted at one end upon the shaft for oscillation independently of the same, said lever extending laterally through the wall aperture of the casing and terminating at its other end in a hook, means on the shaft for preventing the lever from moving longitudinally of the shaft, and resilient means engaging the lever and normally tending to swing the same upwardly, said lever when moved downwardly against said resilient means engaging a tooth of the drum flange to rotate the drum and shaft, said lever being of a flexible character to permit of its passage over the ratchet teeth of said drum when the same is swung upwardly by the said resilient means.

2,003,738
FABRICATED STRUCTURE AND ELEMENTS THEREOF
Frank Poole Cartwright, Chevy Chase, Md.
Application September 5, 1933, Serial No. 688,223
17 Claims. (Cl. 20—99)

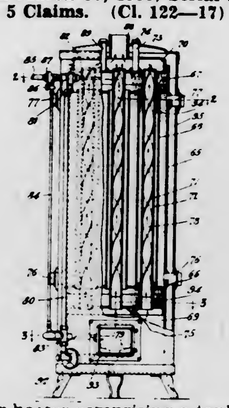
1. A tower of polygonal cross-section having face sections each comprising a pair of legs joined by web pieces, and spacer pieces between the adjacent legs of adjacent face portions to which said adjacent legs are secured.

2,003,739
WATER SOFTENING APPARATUS
Thomas B. Clark, Rockford, Ill., assignor, by mesne assignments, to The Permutit Company, (1934), Wilmington, Del., a corporation of Delaware
Application October 15, 1930, Serial No. 488,722
5 Claims. (Cl. 161—7)



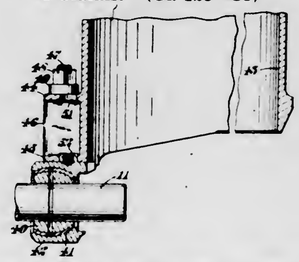
1. In a regenerative base exchange water softening apparatus including a softening chamber, a source of brine, the necessary connecting conduits for carrying out the several regenerative operations and return to softening with valve means controlling said conduits and a valve operating shaft adapted in being turned through a single complete revolution to shift said valve means to the several positions for said regenerative operations and return to softening, improved automatic means for timing said valve shifts which comprises an electric motor for turning said shaft, an electric circuit for said motor, a starting switch in said circuit adapted to start the motor to shift the valve means from softening to the first regenerative position, a time clock, two doubleway spring switches connected in series in said circuit, means actuated by the valve operating shaft whereby one of said switches is moved to break the motor circuit after two succeeding valve shifts, means actuated by the time clock whereby the other of said doubleway switches is moved to reestablish the motor circuit at predetermined times so as to start the motor shifting the valve means to a succeeding regenerative position and to the softening position, and circuit closing and breaking means actuated by the valve operating shaft at the beginning and end of each single complete revolution thereof.

2,003,740
NECKTIE HOLDER
Herman Cohn, Baltimore, Md.
Application July 14, 1934, Serial No. 735,255
5 Claims. (Cl. 24—49)



2. Necktie holder comprising a rigid looped member defining within its bounds a tie-receiving space, and having its front and back portions separated a distance greater than the thickness of the tie which it is designed to receive so that the tie when within said looped member is unrestricted thicknesswise by said looped member, leaving the latter free to tilt, means for attaching said looped member to a shirt, and connecting means between said attaching means and looped member comprising a flexible element secured at its ends to said looped member at spaced points, and slidably connected to said attaching means for holding said looped member unstably balanced.

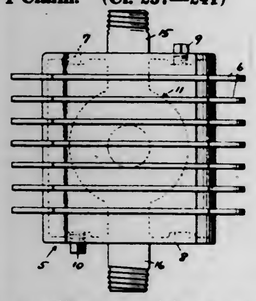
2,003,741
PRODUCTION OF LAUNDRY PADS
James Harold Daughdrill, Lagrange, Ga., assignor to Calloway Mills, Lagrange, Ga.
Application April 1, 1933, Serial No. 664,035
5 Claims. (Cl. 66—192)



1. The method of forming a composite laundry pad, which consists in first assembling separate layers of rovings in staggered relation so that the rovings of one layer are so positioned with respect to the rovings of the other layer that a line joining the centers of any two opposite rovings makes an angle of approximately thirty degrees with the horizontal, and in knitting the rovings and layers to each other resulting in the staggered layers as first made being held in close contact and maintained in this relation throughout the use of the pad whereby openings will not form between the rovings of one layer and the rovings of the other layer.

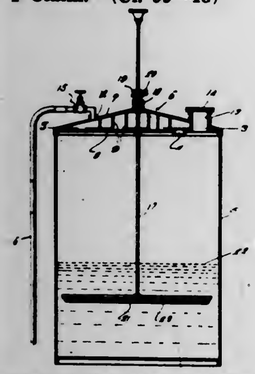
2,003,742
APPARATUS FOR UTILIZING HEAT TRANSFERRING MEDIUM
Phillip H. Elliott, Charleston, W. Va., assignor to Chemical Manufacturing Company, Point Pleasant, W. Va., a corporation of West Virginia
Application March 30, 1933, Serial No. 663,664
5 Claims. (Cl. 122—17)

1. A water heater comprising a tank, partitions therein providing chambers in heat transmitting relation to the water in said tank, means providing an intermediate chamber within said tank communicating with said first named chambers, heating means at the bottom of the tank, and a flue extending from said heating means through said tank and through said first named chambers, said chambers adapted to contain a liquid for transferring heat from said heating means and flue to the water.



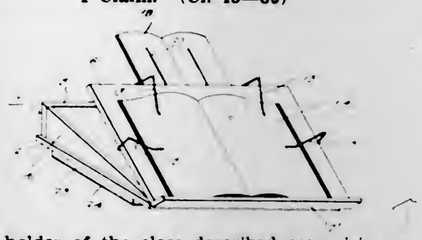
2,003,743
SLEEVE-VALVE MECHANISM FOR INTERNAL COMBUSTION ENGINES
Alfred Hubert Roy Fedden, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application February 21, 1934, Serial No. 712,418
In Great Britain March 18, 1933
4 Claims. (Cl. 123—81)

1. Sleeve driving mechanism comprising, in combination, an unsplit ring, studs screw threaded into the ring and passing through ribs or



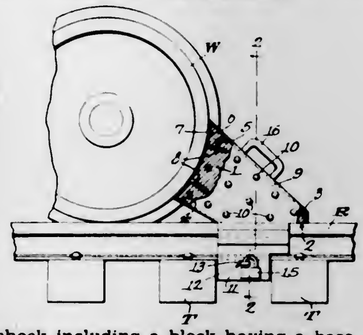
flanges on the sleeve to receive beyond the said ribs nuts which are accessible from the cylinder head end of the sleeve, and a spherical coupling member engaging a spherical bearing surface within the ring and having a central bearing to receive the eccentric driving element slidably and rotatably within it.

2,003,744
OIL COOLER
James Flockhart, Newark, N. J.
Application January 31, 1935, Serial No. 4,391
1 Claim. (Cl. 257—241)



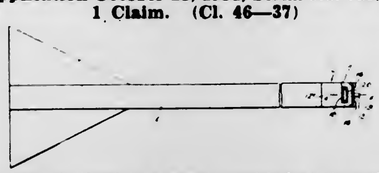
A one-piece casting comprising a substantially rectangular casing having external fins provided at one end with an oil inlet and at a diagonally opposite end with an oil outlet, said casing being further provided with priming means and drain means, an annular coil located centrally in the casing and having diametrically opposed connections with the end walls of the casing, said connections extending to the exterior to facilitate connection of a water supply pipe thereto.

2,003,745
GAS GENERATOR FOR FUMIGATION PURPOSE
Ted Forsberg, San Leandro, Calif.
Application August 21, 1933, Serial No. 686,142
Renewed March 20, 1935
1 Claim. (Cl. 99—18)



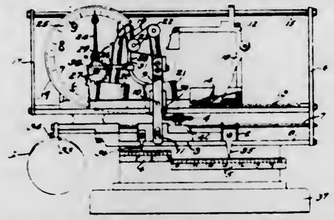
In a generator of the class described, a tank adapted to contain a liquid chemical, a cover for the tank having means for connecting a conduit hose thereto, a rod slidable axially through said cover, and a pan on the inner end of the rod adapted to contain a dry chemical, said cover provided with a gas chamber and a gas inlet for establishing communication between said chamber and the interior of said tank, and partitions arranged in said gas chamber between said gas inlet and the hose connection and providing a tortuous gas passage for the conducting of gas through said chamber.

2,003,746
BOOK, CHART, AND REFERENCE HOLDER
Florence E. Headington, Iowa City, Iowa
Application June 1, 1934, Serial No. 728,604
1 Claim. (Cl. 45—80)



A holder of the class described comprising a supporting structure, a platform hingedly mounted for swinging adjustment on the supporting structure, means for supporting the platform in adjusted position, and means for supporting a reference book in open position on the free end of the platform, the last-named means including guides mounted beneath the platform, and a holder mounted in the guides, said holder being formed from a single piece of resilient material including a substantially U-shaped supporting portion, the legs of said supporting portion being bent upon themselves in a manner to provide resilient retaining fingers, said fingers substantially paralleling the legs of said supporting portion and being slidably engaged in the guides.

2,003,747
CHOCK
Loring B. Hester, Tallahassee, Fla., assignor of one-third to William T. Dowden, Tallahassee, Fla.
Application August 15, 1934, Serial No. 740,017
1 Claim. (Cl. 104—258)



A chock including a block having a base, upwardly and forwardly inclined top and bottom faces and a concave end face, an arcuate wear plate secured to the concave face for contact with the tread of a wheel, a metal sheathing upon the side, top and bottom faces of the block, wings integral with the sheathing for straddling a rail and extending between supporting ties, and means detachably engaging the wings below the level of a rail for detachably securing the chock to a rail.

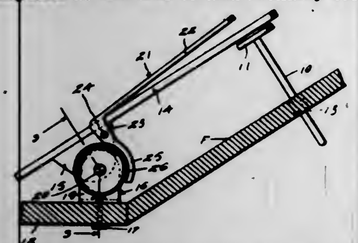
2,003,748
TOY
William Ellsworth Hopkins, Pittsburgh, Pa.
Application October 13, 1934, Serial No. 748,255
1 Claim. (Cl. 46—37)

A dart including a stem provided at its tail end with a vane and at its head end with an apertured hollow head forming a chamber, an anvil secured directly to said head end and extending into the chamber, a gravitating hammer operating within the chamber and having a stem operating through an opening in an end wall of the chamber to provide a striking point, said head being provided in one side thereof with a slot for the introduction of a percussion cap into the chamber between the anvil and the hammer head, and means on opposed walls laterally of the chamber for retaining a percussion cap in flat contact with the anvil.

2,003,749
FRUIT TESTING DEVICE
Ausker E. Hughes, Orlando, Fla., dedicated to the free use of the Public
Application December 28, 1932, Serial No. 649,186
5 Claims. (Cl. 265—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

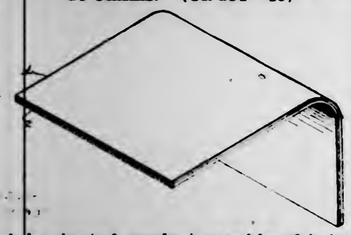
4. A testing machine for applying external pressure to a specimen of fruit, for accurately measuring the pressure applied and for accurately measuring the circumference of the fruit, which comprises a base, a rigid outer frame supported by said base, and having a lug at one end, a carrier-pulley secured to the lug, a flexible metal band having one end fastened to the outer frame near the lug, the band extending thence to form a contractible circular loop, a curved guard at the top of the loop to serve as a guide for the band and aid in distributing compressive force applied to the fruit, the band passing over the carrier-pulley and extending horizontally along the outer frame, a sliding adjustment block provided with a pointer mounted on said outer frame and to which is attached the other end of said flexible band, a sliding clamp block having a pointer and mounted on the outer frame between the loop and the sliding adjustment block, and through which said band passes, a movable inner-frame supported by the outer frame, a lever-arm pivoted on the inner-frame, a pin and slot pivot connecting the lever arm at its lower end to the sliding clamp block, two flexible metal bands attached to the upper end of said lever-arm, two weighted lever-arms hung pendulum-wise from the inner-frame and having drums at their upper ends, the flexible metal bands arranged to function as wrapping-connectors to the drums, pivot-shafts concentric with the drums supporting the weighted arms, the arrangement being such that tension on the band wrapping-connectors will tend to rotate the drums and cause the weighted arms to diverge arc-wise, a shaft connected crank and pinion-gear mounted on the inner-frame, and forming parts of a rack-and-pinion system for applying force tending to move the said inner-frame with respect to the fixed outer frame in a direction tending to exert tension on the band wrapping-connectors and on the contractible flexible band, a curved cam-lever affixed to one of the aforementioned weighted lever-arms, a second rack-and-pinion system in which the rack is movable and a cam follower attached to this movable rack associated with the said curved cam-lever, a graduated dial having an indicator hand, mounted on the inner frame and pinion means connecting the indicator hand and the movable rack, this said rack-and-pinion system actuating and controlling the rotation of the indicator-hand associated with the graduated dial, these several members being supported on the movable inner-frame and so arranged that any motion of divergence from the vertical, of the aforesaid weighted lever-arm, is translated into rotary motion of the indicator-hand, the movable rack-member being provided with notches for indicating by their position relative to a fixed index point on the inner frame the number of revolutions described by the indicator-hand, an idle pulley for guiding the band wrapping connectors and guides, guide rods and slideways associated with said sliding members, substantially as described.

2,003,750
CORD ELASTIC SUSPENDER END ASSEMBLAGE
Lyndon W. Joyce, Greensboro, N. C., assignor to Southern Webbing Mills, Inc., Greensboro, N. C., a corporation of North Carolina
Application March 27, 1934, Serial No. 717,661
5 Claims. (Cl. 241—25)



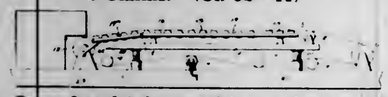
1. Suspender end assembly comprising a piece of fabric folded to form a stirrup, spaced perforations through the bottom of said stirrup, eyelets lining said perforations, and a button loop including a cord elastic portion, said portion passing through said eyelets in interlinked relation to said stirrup, and means for keeping said interlinked portion out of direct contact with the fabric of said stirrup.

2,003,751
FOOT ACCELERATOR PEDAL
William L. Kramer, Houston, Tex.
Application July 26, 1934, Serial No. 737,119
4 Claims. (Cl. 74—513)



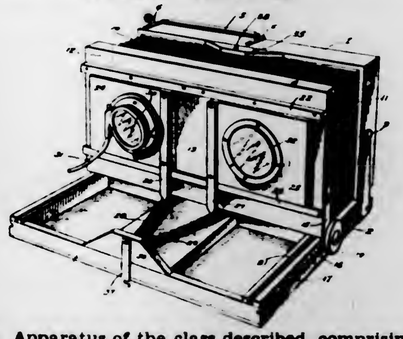
1. In combination, an accelerator pedal, means for rockably mounting said pedal on a vehicle

floor, a fixed braking member carried by said mounting means, and a releasable braking member disposed at one side of and rockably secured



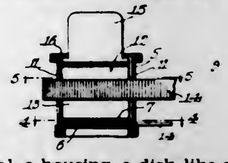
to said pedal for engagement with said fixed braking member to releasably hold the pedal in a selected depressed position.

2,003,752
BENDABLE LAMINATED PRODUCT
Gustave E. Landt, Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Application October 15, 1932, Serial No. 638,026
16 Claims. (Cl. 154—43)



1. A laminated product capable of being bent without delamination of the layers or cracking of the surface, comprising fibrous sheet material impregnated with a thermo-plastic resin securely united to a metal sheet of substantial thickness and rigidity.

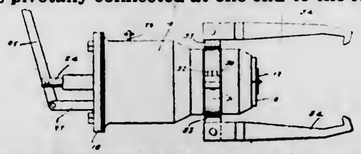
2,003,753
VERTICALLY ADJUSTABLE TABLES FOR FOURDRINIER MACHINES
Lawrence L. Lapeyrouse, Mobile, Ala.
Application June 10, 1932, Serial No. 616,528
2 Claims. (Cl. 92—44)



1. In a fourdrinier machine, a breast roll, a couch roll, a wire extending from the breast roll and couch roll, a sieve table, the sieve table being formed in two sections, the forward section adjacent the breast roll being shorter than the rear section and being pivoted to the rear section at a point between the suction boxes and the breast roll and having table rolls, means for vertically adjusting the forward end of the rear section to thus adjust the inclination of the forward section of the sieve table, and independent means for vertically adjusting the rear end of the rear section of the sieve table relative to the forward end thereof, the rear section carrying suction boxes at its rear portion, and wire supporting rollers from the suction boxes to the point of connection with the forward section.

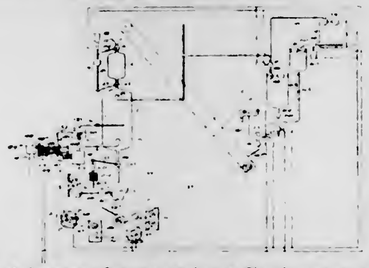
2,003,754
PHOTOGRAPHIC APPARATUS
Carl Miller, Philadelphia, Pa.
Application October 16, 1934, Serial No. 748,515
8 Claims. (Cl. 95—44)

1. Apparatus of the class described, comprising a base, front and rear members carried by said base, said front member being movable forwardly and backwardly and having a wall with spaced openings therein, bellows means connecting said members, transverse guide means carried by said wall, a pair of lens plates adjacent said openings slidably carried by said guide means free of attachment to each other or to other parts of the apparatus, whereby said plates are free to move transversely as independent elements, and means for simultaneously moving said front member as a unit and said plates individually.



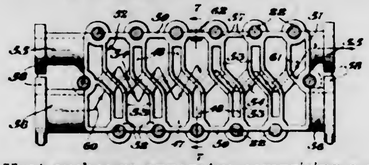
2,003,755
SEAL
Lou Quin Moore, Pueblo, Colo., assignor, by direct and mesne assignments, to The Moore Seal Co., Inc., Pueblo, Colo.
Application January 30, 1934, Serial No. 709,042
4 Claims. (Cl. 292—307)

4. In a seal, a housing, a disk-like clutch member fitted within the bottom of the housing, said housing having slots in opposite sides thereof, a shackle having one of its ends secured between the bottom of the housing and the disk-like clutch, a rotary shackle locking member mounted within the housing, one end of said shackle adapted to extend through the slots of the housing and through the rotary shackle locking member, said rotary shackle locking member adapted to be rotated bending the shackle within the housing, and securing the free end of the shackle.



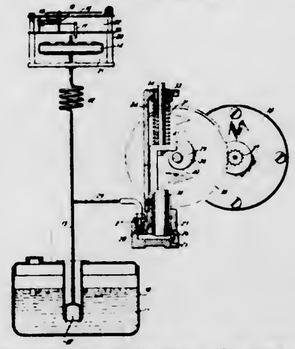
2,003,756
HYDRAULIC PULLER
Howard K. Nagel, Seymour, Wis.
Application May 28, 1934, Serial No. 728,018
3 Claims. (Cl. 29—36)

1. A puller for gears, pulleys and analogous wheels comprising a cylinder, a ram mounted for reciprocation within the cylinder, pump means provided in one end of the cylinder for forcing the fluid through the cylinder behind the ram to cause relative movement of the ram and cylinder; said cylinder being provided with an external groove, a ring engaging in the groove, arm members pivotally connected at one end to the ring at



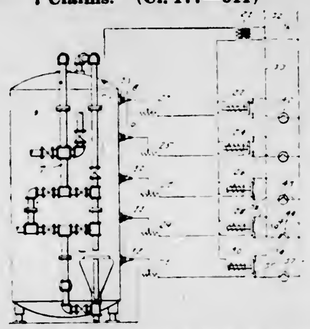
diametrically opposite sides thereof, a ring connecting the free ends of the arm members, and a pair of cooperating jaw members pivotally connected at one end with the last named ring.

2,003,757
CONTINUOUS AUTOMATIC WATER SOFTENING
Eric Pick, New York, N. Y., assignor to The Permutit Company, (1934), Wilmington, Del., a corporation of Delaware
Application January 3, 1931, Serial No. 506,473
15 Claims. (Cl. 210—24)



1. A base exchange water softening apparatus comprising means for transferring portions of the base exchange material from a water softening chamber for regeneration elsewhere, means measuring the quantity of said portions of base exchange material transferred, and means for initiating said portional transfers actuated by flow of the water passing through the water softening chamber.

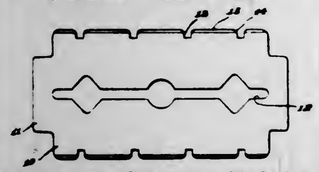
2,003,758
HEAT EXCHANGER
Eric Pick, New York, N. Y., assignor to The Permutit Company, (1934), Wilmington, Del., a corporation of Delaware
Application September 21, 1934, Serial No. 744,972
14 Claims. (Cl. 257—245)



1. Heat exchange apparatus comprising a plurality of open grooved channeled members assembled into a unit, the unitary assemblage having therein two separate, tortuous, immediately adjacent fluid passageways running from one end of the unit to the other, the open channels of each member forming parts of both passageways in the unitary assemblage, the unit having conduit connections for each passageway and means for holding the members together.

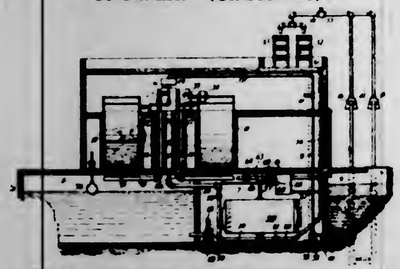
2,003,759
LIQUID LEVEL INDICATOR
Wladimir A. Reichel, Philadelphia, Pa., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 5, 1931, Serial No. 579,283
18 Claims. (Cl. 73—54)

1. In apparatus for indicating the quantity or level of a liquid, comprising a receptacle containing the liquid to be measured, an indicator including a pressure responsive actuator therefor; a closed pressure system including a hydrostatic cell immersed in the liquid to the maximum depth to be indicated and connected to the pressure responsive actuator, whereby fluid pressure entrapped in the system is effective for producing an indication of the level of the liquid; and means for replenishing the fluid pressure in said closed pressure system; the combination with said pressure replenishing means, of time-controlled means for operating the latter at predetermined timed intervals so that continuous accurate indications of the quantity of liquid in the receptacle are obtained.



2,003,760
INDICATOR FOR ZEOLITE SOFTENERS
Orland R. Sweeney, Ames, Iowa, and Thomas B. Clark, Rockford, Ill., assignors, by mesne assignments, to The Permutit Company, (1934), Wilmington, Del., a corporation of Delaware
Application March 3, 1930, Serial No. 432,632
7 Claims. (Cl. 177—311)

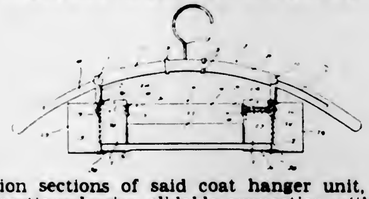
1. A water softener comprising a chamber, a hard water inlet, a soft water outlet, a bed of base exchange material within said chamber positioned intermediate said inlet and said outlet, and electrical means also intermediate said inlet and said outlet and responsive to a change in hardness of



water for detecting and indicating the progressive exhaustion of said bed of base exchange material.

2,003,761
SAFETY BLADE
Nicholas Testi, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application August 28, 1934, Serial No. 741,754
4 Claims. (Cl. 30—12)

1. An improved safety razor blade having an edge supporting portion which is divided by a series of uniform notches into sections each longer than the width of the notches and sharpened to a cutting edge, the cutting edge being terminated adjacent to each notch by an unsharpened curve of substantially the same radius as the length of the bevel.

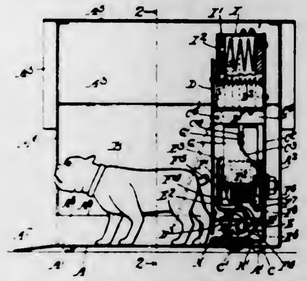


2,003,762
WATER TREATING APPARATUS
Edward T. Turner, Dayton, Ohio, assignor to The Permutit Company, (1934), Wilmington, Del., a corporation of Delaware
Application October 9, 1931, Serial No. 567,913
30 Claims. (Cl. 210—24)

1. In an apparatus of the character described, a container for water softening material having an outlet above the level of said material, a receptacle arranged alongside of said container, a partition dividing said receptacle into a delivery reservoir and a supply reservoir and having an opening to connect said reservoirs one with the other above the level of the outlet for said container, means for supplying water to said delivery reservoir, and means for so connecting said supply reservoir with said container that the water will be maintained normally at substantially the same level in said supply reservoir and said container.

2,003,763
GARMENT HANGER
Bartlett F. Vavruska, Prairie du Chien, Wis.
Application October 29, 1934, Serial No. 750,573
6 Claims. (Cl. 223—64)

1. In a structural assemblage of the class described, in combination, a longitudinally bowed coat hanger comprising a pair of sections disposed in slidable overlapping relationship, a clip pivotally connected with one of said strips, a suspension hook swivelly connected with said clip, a trousers supporting and clamping unit, rod connections between said unit and the com-

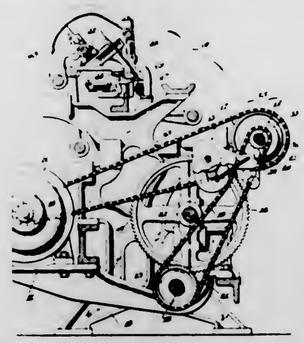


panion sections of said coat hanger unit, said connections having slidable connection with the hanger sections.

2,003,764
PISTON AND RING
Carl B. Welch, Attapulgus, Ga.
Application September 29, 1933, Serial No. 691,549
7 Claims. (Cl. 309—42)

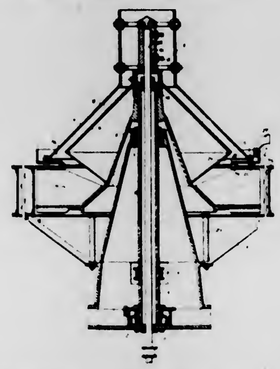
1. A piston having parallel grooves formed in the periphery thereof and a helical groove extending from the lowermost of said grooves downwardly, compression rings positioned in said parallel grooves, and a helical ring positioned in said helical groove under axial compression against the lowermost compression ring.

2,003,765
SOUND ACTUATED DEVICE
Henry R. Widen, Chicago, Ill., assignor of one-half to Charles E. Botenstein, Chicago, Ill.
Application August 31, 1932, Serial No. 631,114
7 Claims. (Cl. 46—40)



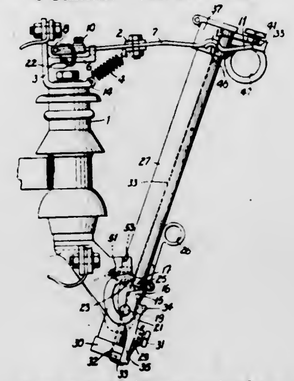
1. In combination, an impeller movably mounted and means adapted to move it, when free to do so, means for holding the impeller against movement and for releasing it, and a sound producing device operatively associated with the impeller and adapted to be mechanically actuated by the said impeller to produce a sound.

2,003,766
SAFETY DEVICE FOR STRAIGHT KNITTING MACHINES
Melchior Zwicky, Berkshire Heights, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application April 7, 1933, Serial No. 664,866
2 Claims. (Cl. 66—82)



2. A knitting machine comprising knitting mechanism, a motor, a sprocket wheel fixed to the motor shaft, a hand-wheel shaft, a sprocket

wheel on the hand-wheel shaft, a chain operatively connecting said sprocket wheels, a second sprocket wheel on the handwheel shaft fixed thereto, a drive shaft, a cam shaft, means providing a reduced-gear-ratio connection from the drive shaft to the cam shaft, a sprocket wheel fixed to the drive shaft, a chain operatively connecting the drive-shaft sprocket wheel to said fixed hand-wheel sprocket wheel, and a reverse-turning friction-slip connector between said first

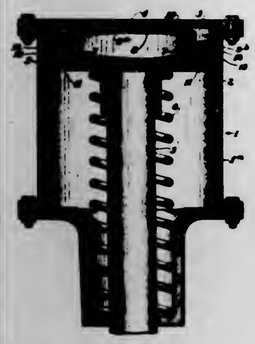


hand-wheel shaft sprocket wheel and the hand-wheel shaft normally providing a positive connection between the motor and the drive shaft but responsive to greater driving force by the motor than normally required by the mechanism to cause damped relative slip between elements of the connector in one direction and responsive to excessive opposition by the mechanism to retardation by a reduction of the driving force of the motor to cause damped relative slip between said elements in the opposite direction.

2,003,767
CENTRIFUGAL CONCENTRATOR
Curtis C. Baldwin and Verne S. Miller, Ottawa, Kans.
Application July 29, 1933, Serial No. 682,759½
6 Claims. (Cl. 233—7)

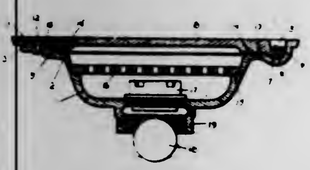
1. In a device of the class described, a pair of independently rotated cones in spaced relation forming a passageway, means for delivering material into the passageway, a concentrate chamber carried by one of the cones, a stationary refuse chamber below the concentrate chamber, a fan therein rotating with the other cone, the refuse chamber having communication with the passageway and a hollow offtake member having its inlet in the concentrate chamber.

2,003,768
FUSE SWITCH
Lester Pierce Boll, University City, and Theodore Birkenmaier, St. Louis, Mo., assignors to W. N. Matthews Corporation, St. Louis, Mo., a corporation of Missouri
Application March 3, 1934, Serial No. 713,860
6 Claims. (Cl. 200—116)



6. In a fuse switch, line terminals, a cartridge having terminal engaging elements, one of said terminal engaging elements comprising a member hinged to the cartridge, gudgeons on said last-named member, bearings on one of said line terminals adapted to receive said gudgeons, a fuse link associated with said hinged member and the cartridge adapted in unblown condition to hold said cartridge and said hinged member in a predetermined position but to release them for collapse when the link blows, said cartridge being rotatable at said gudgeons after collapse, camming means on the bearing, gudgeons on the cartridge adapted to frictionally engage said camming means, and stops adapted to positively limit the degree of rotation of the cartridge after said frictional engagement, said camming means being adapted to effect lifting of the cartridge so as to lift said gudgeons from their seats in the bearings, said bearings being so formed that said hinged element is, in the ultimate disconnected position of the cartridge forced to its initial position with respect to the cartridge, whereby said gudgeons and the cartridge may be readily removed from their operative positions, and said gudgeons on the hinged member and their respective bearings being oppositely located and of different sizes whereby proper cartridge application is determined.

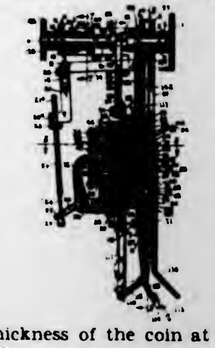
2,003,769
PACKING FOR PISTONS
George Christenson, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application May 4, 1932, Serial No. 609,156
6 Claims. (Cl. 60—62.6)



1. In the combination of a cylinder provided with a head, a piston movable therein, and piston-packing means, the improvement including piston-packing means comprising a cup-shaped, shape-retaining member, disposed between the piston and the head of the cylinder and provided

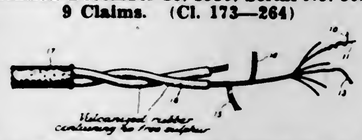
with an outwardly extending flange, and an independent annular packing element supported

by the said flange in packing contact with the wall of the cylinder.



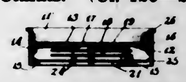
2,003,770
FLOOR DRAIN
Louis Goodhart, St. Louis, Mo.
Application March 24, 1934, Serial No. 717,193
1 Claim. (Cl. 182—31)

A floor drain, comprising a basin provided with an outlet and having an annular seat at its upper edge, a cover hingedly and removably connected at one side of said seat and adapted for support thereon, a catch pivoted at the opposite side of said seat having an inclined face engageable with an oppositely inclined edge of said cover, and a sealing element interposed between said cover and seat, and compressible by the wedge engagement of said catch and cover.



2,003,771
COIN TESTING DEVICE
Emil Graf, Jamaica, N. Y., assignor of one-half to Harry E. Rubens, New York, N. Y.
Application November 22, 1933, Serial No. 699,159
5 Claims. (Cl. 194—97)

1. In a coin testing device; means for receiving a coin to be tested comprising a pair of pins arranged to position said coin in a predetermined position; a third pin; means for moving said third pin towards said coin, said three pins locating three points defining the diameter of the class of coins to be tested; selecting mechanism operative in the event that the circumferential edge of said coin includes said three points for arranging to selectively accept said coin, said third pin having a notched end for defining the third position of the circumferential edge of the predetermined coin having a predetermined diameter and also de-

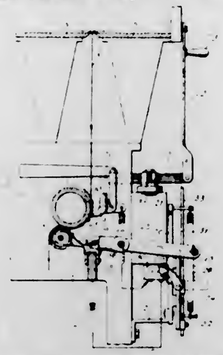


fining the thickness of the coin at the circumferential edge.

2,003,772
INSULATED CONDUCTOR
Alvin N. Gray, Baltimore, Md., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 16, 1930, Serial No. 502,667
9 Claims. (Cl. 173—264)

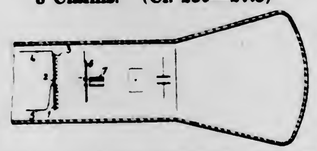
8. An electrical conductor comprising a conducting core and a layer of vulcanized insulation thereupon, free from uncombined sulphur, said insulation containing before vulcanization free sulphur, a sulphur containing accelerant and a non-sulphur containing accelerant.

2,003,773
BURNER GUARD FOR COOKING UTENSILS
Herman Gross, New York, N. Y.
Application July 19, 1933, Serial No. 681,074
6 Claims. (Cl. 126—215)



6. A burner guard for cooking utensils, comprising an annular wall portion for surrounding a bottom wall of a cooking utensil, lugs attached upon the inner side of said annular wall, a perforated disc with edge cutouts engageable over said lugs and turnable to maintain its position, and several perforated baffle discs adjustably mounted upon said bottom disc.

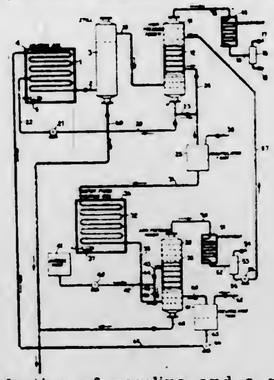
2,003,774
STOP MOTION FOR KNITTING MACHINES
Andrew Gruna, Union City, and Ferdinand Radhuber, North Bergen, N. J., assignors to Michael Zimic, Forest Hills West, N. Y.
Application December 13, 1934, Serial No. 757,252
4 Claims. (Cl. 66—166)



1. In a stop motion for a knitting machine, the combination with rollers between which a knitted fabric is drawn, means for stopping said machine, and a circuit for said means; of a control device including a pivoted circuit-closing element having direct contact with the surface of one of said rollers, said element being movable

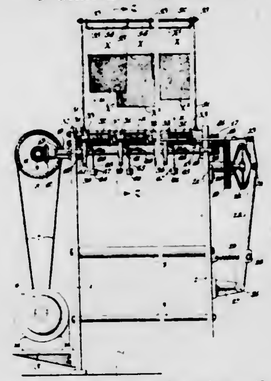
about its pivot, in one direction by a movement of one of said rollers away from the other and

in a different direction by engagement of said fabric therewith, to close said circuit.



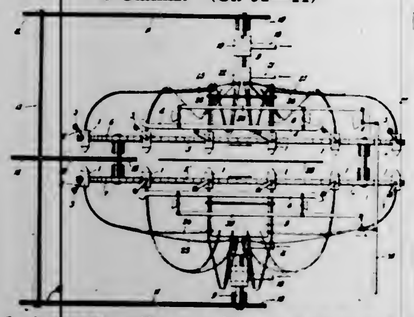
2,003,775
BRAUN TUBE
Kurt Schlesinger, Berlin, Germany
Application May 13, 1933, Serial No. 670,819
In Germany May 14, 1932
8 Claims. (Cl. 250—27.5)

1. A Braun tube for television purposes comprising a hot cathode, an anode, means to control, means to deflect the cathode ray and a fluorescent screen, means for concentrating the cathode ray, said means comprising an electrode consisting of semi-conductive material, being arranged between said cathode and said anode.



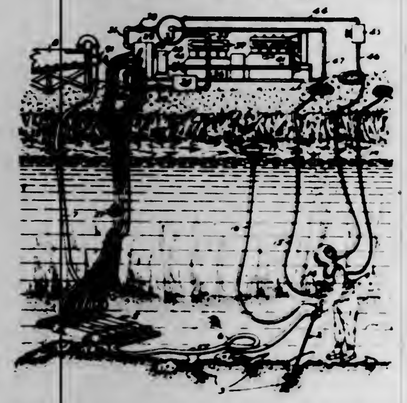
2,003,776
TREATMENT OF HYDROCARBON OILS
William M. Stratford, New York, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application February 12, 1931, Serial No. 515,189
12 Claims. (Cl. 196—60)

1. The process of treating hydrocarbon oils that comprises subjecting hydrocarbon oil in a first cracking zone to a substantially liquid phase cracking temperature to effect conversion of the high boiling hydrocarbon oils into lower boiling hydrocarbon oils, vaporizing the lower boiling hydrocarbons of the cracked products, withdrawing the unvaporized oil from the system, fractionating the evolved vapors in a first fractionating zone to form a gasoline-like vapor fraction, a lighter reflux condensate and a heavier reflux condensate, returning the heavier condensate to said liquid phase cracking operation, subjecting said lighter condensate to a vapor phase cracking temperature in a second cracking zone, contacting relatively heavy fresh charging stock with the resulting vapors from the vapor phase cracking operation to thereby vaporize a portion of the fresh charging stock, withdrawing the unvaporized portion of the charging stock from the system, dephlegmating the combined vapors from the vapor phase cracking operation and the vapors from the fresh charging stock in a second fractionating zone to produce a vapor fraction suitable for



the production of gasoline and a reflux condensate suitable as a clean cracking stock and charging said clean cracking stock to the liquid phase cracking operation.

2,003,777
MACHINE FOR RECLAIMING YARN FROM KNITTED FABRIC
Hans Westkott, West Reading, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a corporation of Pennsylvania
Application January 11, 1933, Serial No. 651,114
9 Claims. (Cl. 28—17)



8. A machine for reclaiming thread from knitted fabric comprising a spool, a flange on one end of said spool, a friction wheel on said spool adjacent said flange, a constantly rotating friction wheel, a trunnion on said spool adjacent the friction wheel thereon, a bearing for said trunnion normally supporting said end of said spool with said friction wheels in operative driving engagement to wind said thread on said spool, a support for said trunnion adjacent said bearing, a lever controlled by that portion of said thread under tension, a shoe on said lever arranged to have rolling contact with said flange to shift said trunnion from said bearing to said support to effect and maintain disengagement of said wheels when the thread becomes excessively taut, and an abutment for arresting the rolling action of the flange on the shoe and preventing reverse rotation of said spool.

2,003,778
SPRAY COATING MACHINE
Charles C. Willis, Bound Brook, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a corporation of New Jersey
Application November 10, 1932, Serial No. 641,973
6 Claims. (Cl. 91—44)

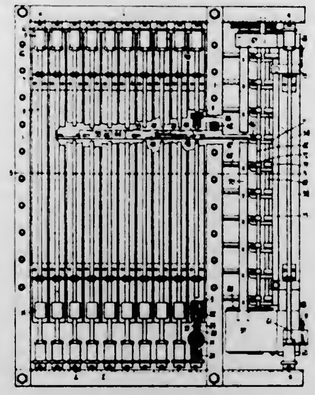
1. A spray coating machine, comprising a rotatable spray tank, a plurality of nozzles, connections from said tank to each of said nozzles, means for rotating said tank, means for motivating said nozzles in a predetermined closed path, said path being in straight lines over the material being coated and in curved lines beyond the material to form said closed path, said rotating means and motivating means synchronized to complete one revolution of the tank and one circuit of the closed path by a nozzle contemporaneously.

2,003,779
MINING SYSTEM AND APPARATUS
Guy A. Wedd, Oakland, Calif., assignor of one-half to John R. Pusey, Oakland, Calif.
Application March 7, 1933, Serial No. 659,934
8 Claims. (Cl. 262—2)

1. In apparatus for subaqueous dredging, a suction nozzle for underwater manipulation by a diver for application to submerged material to be removed, a sluice box, a combined suction and lift pump comprising a submerged and cylindric working chamber disposed in axially prone position and having inlet and discharge connections with said nozzle and sluice box respectively, one-way valves operative in said connections and for the chamber, a flexible hose providing an air duct connecting with said chamber, and means operative through said hose duct to alternately create suction intake and pressure discharge conditions in said hose and chamber, said chamber disposed substantially at the level of said nozzle whereby substantially the full intake suction for the chamber is operative at said nozzle.

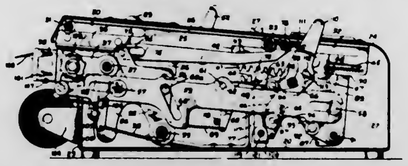
2,003,780
SEISMIC SURVEYING
William T. Born, Tulsa, Okla., assignor to Geophysical Research Corporation, New York, N. Y., a corporation of New Jersey
Application November 24, 1933, Serial No. 699,483
7 Claims. (Cl. 181—0.5)

2. The method of seismic surveying which comprises detonating a charge of explosive at a point near the earth's surface, receiving waves thus formed at a point near the shot point, impressing received waves on a recorder and rendering the recorder inoperative until after the direct waves have passed beyond the receiving point.



2,003,781
PENDANT FOR WATCHES AND THE LIKE
Louis L. Burghoff, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a corporation
Application January 30, 1934, Serial No. 708,937
5 Claims. (Cl. 58—95)

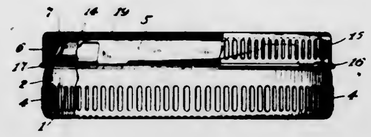
2. The combination with a case-member having a head-receiving passage of non-circular form opening therethrough; of a pendant-head substantially corresponding in cross-sectional form to the non-circular form of the said head-receiving passage in the said case-member and installed therein so as to project beyond the outer surface of the said case-member and having preformed laterally-offsetting abutment-means engageable with the inner surface of the said case-member to stop the outward movement of the pendant-head through the said head-receiving passage.



2,003,782
ELECTRIC SWITCHING MECHANISM
David Adam Christian, London, England, assignor to Siemens Brothers & Company Limited, London, England
Application March 31, 1933, Serial No. 663,692
In Great Britain March 31, 1932
11 Claims. (Cl. 179—18)

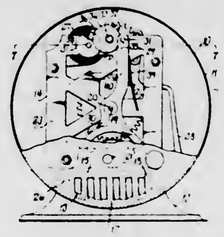
1. In a selective switch mechanism a plurality of inlets and a plurality of outlets, a plurality of sets of contact members for each inlet, a set of conductors for each outlet associated with contact members of a plurality of inlets, means for first selecting the conductors of an outlet, mechanical means common to said outlets, operating means individual to the conductors of each

inlet, said common means operated to control a set of members associated with a particular inlet to establish a connection between the members and the conductors of the previously selected outlet.



2,003,783
ACCOUNTING MACHINE
Frederick L. Fuller, West Orange, N. J., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 22, 1933, Serial No. 699,129
3 Claims. (Cl. 235—58)

1. In an accounting machine, in combination, an accumulator, a pivoted frame carrying said accumulator, a pivoted cam member, a latch lever having a shoulder which normally holds said cam member in position whereby the latter is normally effective to shift said frame, a total control device for shifting said frame and adapted to be latched in operated position by said latch lever, and means whereby said total control lever causes the latch lever to release the pivoted cam member for a movement which renders it ineffective to shift said frame.

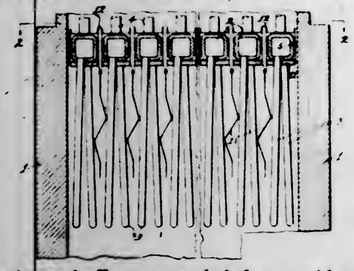


2,003,784
METAL CONTAINER
Charles Hammer, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application July 23, 1930, Serial No. 469,944
8 Claims. (Cl. 220—40)

1. As an article of manufacture, a one-piece container stamped from sheet metal comprising the combination of a bottom, an annular side wall extending upwardly therefrom, an annular zone of said side wall being offset inwardly to reduce the diameter thereof and to increase the flexibility of the sealing zone in a vertical direction, the portion of the side wall above said inwardly set zone being turned outwardly and downwardly to form a rounded seal-

ing zone and an outwardly flared depending flange lying within the boundary of the normal portion of the side wall, said flange having closure engaging means to engage and hold a closure on the container with the cover portion thereof against said sealing zone.

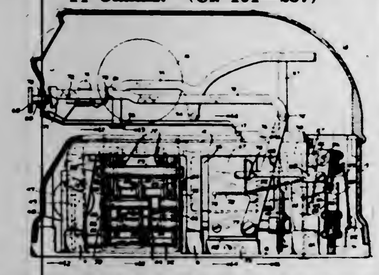
2,003,785
MODULATED ALARM CLOCK
Dudley S. Ingraham, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a corporation
Application April 18, 1934, Serial No. 721,145
12 Claims. (Cl. 58—16)



1. An alarm clock including: a casing; an alarm-sounding member in the casing; the casing having a sound-opening for transmitting sound from the alarm-sounding member; and movable means mounted to move in a plane substantially parallel to the plane of the sound-opening for a closing or opening said sound-opening.

3. An alarm clock including: a casing; an alarm-sounding member in the casing; the casing having a sound-opening for transmitting sound from the alarm-sounding member; movable means for closing or opening said sound-opening; and a sound-damping member actuated to engage said sounding-member when said movable means is moved to close said sound-opening.

2,003,786
MERCURY BOILER HEADERS WITH CASINGS
Howard J. Kerr, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application April 1, 1929, Serial No. 351,474
Renewed May 25, 1933
7 Claims. (Cl. 122—318)



1. In a boiler for high boiling point fluids, a plurality of headers arranged side by side and having tubes depending therefrom, casings

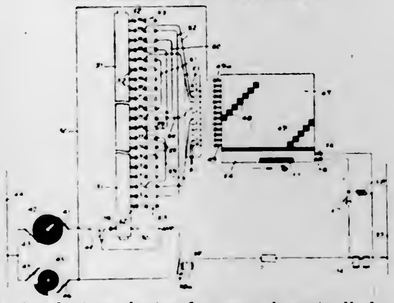
around each header, spacers between the casings,

and zigzag baffles suspended from said spacers between groups of said tubes.

2,003,787
TIME STAMP
Clair D. Lake, Binghamton, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 28, 1933, Serial No. 695,647
14 Claims. (Cl. 101—287)

8. In a time stamp, an impression element, a light spring, means adapted to be operated by the light spring for operating the impression taking element, releasable means for restraining the spring against operation including a partially bent toggle and a latch holding the toggle in partially bent position, a low power solenoid for operating said latch to release the toggle, a relatively higher power solenoid for restoring the impression element against the tension of said spring, and means connected to the toggle for preventing a second operation of the first named solenoid before the second named solenoid has fully restored the impression element.

2,003,788
ELECTRICAL CONNECTION
Walter McGinnis, Eagle Rock, and Zebulon Wirt, Los Angeles, Calif.
Application July 21, 1932, Serial No. 623,734
1 Claim. (Cl. 173—259)



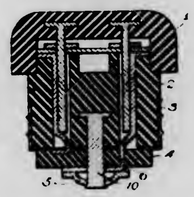
A battery connection, comprising a body portion having a cable connection, a battery terminal clamping member on said body portion, a hook-like keeper member on said body portion, a second and separate clamping member having a flange for engaging said keeper member, and a clamping rod having oppositely threaded ends engaging complementary female threads in the clamping member on said body portion and in said separate clamping member respectively, said rod being provided with intermediate means for permitting rotation of said lug, and said second clamping member being rotatable about said rod into position in engagement with said keeper.

2,003,789
COMPOSITION AND METHOD OF PREPARING SAME
Robert L. Falls, Charlotte, N. C., assignor of five per cent to J. F. Kelley, Rock Hill, S. C.
No Drawing. Application August 27, 1932, Serial No. 630,698
3 Claims. (Cl. 106—33)

1. That method of preparing a composition for use in the manufacture of containers and other articles which comprises taking a quantity of paraffin wax, heating the paraffin wax to its boiling point, adding caustic potash in solution to the boiling paraffin wax, allowing the mixture to cool and separating the wax from the dissolved caustic potash and heating the treated paraffin wax and bringing it to its boiling point again, adding thereto a quantity of pine rosin, then adding to the mixture a small quantity of grain alcohol.

2,003,790
SORTING MACHINE
Paul Rieger, Frankfort - on - the - Main - Hochst, Germany, assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application August 19, 1933, Serial No. 685,813
In Germany February 20, 1933
11 Claims. (Cl. 209—110)

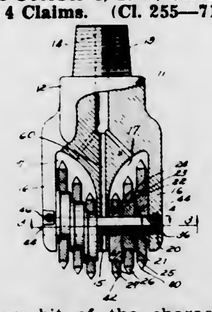
1. A selecting device for record controlled machines, comprising a plurality of record analyzing devices each adapted to sense data designations in a single column of the control records, a single rotary control device having a single series of differently timed control elements corresponding to the index-point positions of a single column of the control record, and means for connecting any number of said analyzing devices to one of said elements.



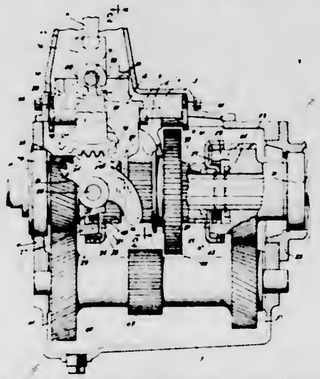
2,003,791
ROTARY DISK BIT
James W. Sperry, South Pasadena, Calif.
Application August 19, 1929, Serial No. 386,847
9 Claims. (Cl. 255—71)

1. A rotary disk bit of the character described, including: a body having a central, intermediate,

and outer legs projecting downwardly therefrom, said legs being of relatively thin, flat form and having the opposing faces thereof parallel so as to provide inner and outer cutter receiving spaces between the flat faces of said legs; right-hand and left-hand pairs of supporting pins, each of said pairs of supporting pins projecting through one of said outer legs, the adjacent intermediate leg, and making threaded engagement with said central leg; inner and outer bearing members supported respectively in said inner and outer spaces by said left-hand and right-hand pairs of pins, said outer bearing members being eccentric to said inner bearing members; and inner and outer cutter disks supported respectively on said inner and outer bearing members.



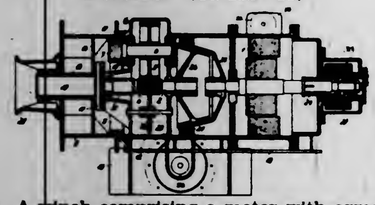
2,003,792
PLUG FUSE WITH A REPLACEABLE FUSE LINK
Joel Rosenbaum, West Orange, N. J.
Application March 13, 1934, Serial No. 715,261
3 Claims. (Cl. 200—130)



1. A plug fuse with a replaceable fuse link, comprising, in combination, a shell of insulating material and a fuse link, the body of said shell having parallel spaced wells, of a depth equal to that of said body, springs in said wells, said springs extending the full length of said wells, and bent over top of said body to provide a contact seat for said fuse link, a fusing depression in said body, said fusing depression allowing sufficient space for the link to fuse readily and completely, a top for said shell, said top fitted snugly over said body, parallel spaced prongs attached to said top, adapted to be inserted in said wells in said body, stays placed on said prongs so as to press said fuse link against the said contact seats provided by said springs, said fuse link having a pair of spaced slots therein, adapted to allow said prongs to slip thru said slots and hold said link against said spring contact seat.

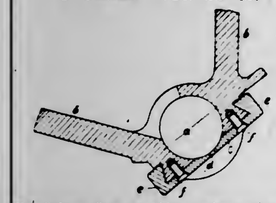
2,003,793
ROTARY ROCK DISK BIT
James W. Sperry, South Pasadena, Calif.
Application October 4, 1929, Serial No. 397,238
4 Claims. (Cl. 255—71)

1. A rotary bit of the character described, including: a bit body adapted for attachment to a string of drill pipe, said bit body having a downwardly extending center leg and diametrally opposing side legs; a bar extending laterally through said legs, said bar being non-rotatable in said legs; means for locking said bar in such laterally extending position; bearing members supported on said bar in the spaces between said center and said side legs, said bearing members being non-rotatable on said bar and having openings to receive said bar so placed that said bearing members will be progressively downwardly offset from the outer bearing members toward the inner bearing members; and cutter disks supported on said bearing members.



2,003,794
GEAR SHIFT MECHANISM
Thomas C. Van Degrift, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 20, 1932, Serial No. 587,643
9 Claims. (Cl. 74—339)

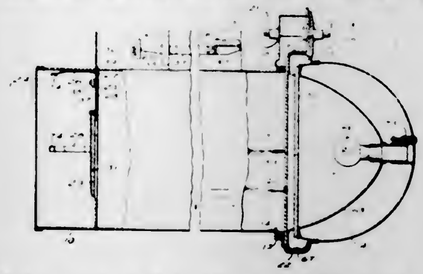
8. In a change speed transmission having as constituent parts thereof a shifting element and a member shiftable to effect a predetermined driving ratio, connecting mechanism whereby said element may move said member, said connecting mechanism including means having a cam operable upon said member whereby said element moves said member through the instrumentality of said connecting mechanism with a



relatively high mechanical advantage during a first part of its movement and with a lesser mechanical advantage during the remainder of its movement.

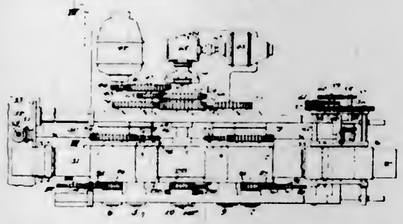
2,003,795
CLUTCH AND BRAKE MECHANISM FOR WINCHES
Paul Wilsing, Duisburg, Germany, assignor to Demag Aktiengesellschaft, Duisburg, Germany
Application July 14, 1930, Serial No. 467,814
In Germany July 19, 1929
5 Claims. (Cl. 192—18)

1. A winch comprising a motor with armature shaft that is axially movable and a transmission gear, a coupling between said motor and said gearing and a brake with which said coupling co-operates so that the brake is not released till the coupling transmits the full turning moment, and a stationary electromagnetic coil disposed axially with respect to the motor shaft and adapted to control in common the operation of the brake and coupling by axial movement of the armature shaft.



2,003,796
MELTING POT, PARTICULARLY FOR STEREOTYPE CASTING MACHINES
Robert Zahner, Bern, Switzerland
Application April 10, 1933, Serial No. 665,264
In Germany April 14, 1932
1 Claim. (Cl. 22—2)

In a machine for casting stereotype plates or the like, a melting pot having an outlet opening, a valve for controlling the flow of molten metal through said opening, a steel plate applied to the outside of said opening, exterior bearing surfaces provided on each side of said opening, corresponding bearing flanges provided on the longitudinal edges of said plate and arranged to embrace said exterior bearing surfaces, so that said plate may be readily shrunk to said melting pot to thereby avoid fracture of the edges of said opening.

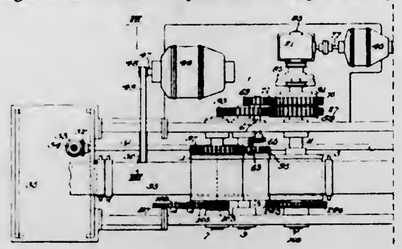


2,003,797
HEADLAMP TESTING DEVICE
Samuel F. Arbuckle, Highland Park, Mich., assignor, by mesne assignments, to Guide Lamp Corporation, Anderson, Ind., a corporation of Delaware
Application October 23, 1929, Serial No. 401,949
Renewed April 20, 1934
14 Claims. (Cl. 88—14)

1. A device for testing a headlamp having a reflector and a light source mounted therein including, in combination, a supporting member, a plate mounted in one end of said member, a screen in said member axially spaced from said plate, means for securing said plate and screen in predetermined relation with respect to said reflector, said plate having an aperture therein through which a pattern of light may be projected from said re-

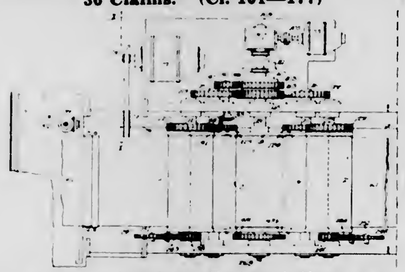
flector upon said screen, and calibrations on said screen for determining the relative location of said light source with respect to said reflector by the location of said light pattern on said screen, said screen being shiftable in the plane thereof whereby to enable the location of said light pattern to be corrected with respect to said calibrations.

2,003,798
OFFSET PRINTING PRESS
Howard M. Barber, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware
Application June 7, 1934, Serial No. 729,365
36 Claims. (Cl. 101—177)



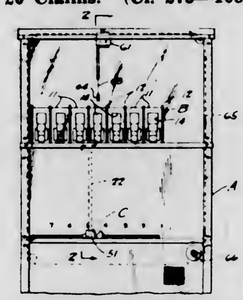
1. In a multi color offset printing press, a printing unit comprising a common impression cylinder and pairs of design and transfer cylinders interconnected therewith, their drive, means for separating and means for operatively disconnecting the transfer cylinders from the impression cylinder, and means for driving the design and transfer cylinders independently of the impression cylinder and independently of each other.

2,003,799
OFFSET PRINTING PRESS
Howard M. Barber, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware
Application June 20, 1934, Serial No. 731,439
36 Claims. (Cl. 101—220)



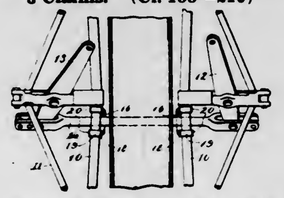
1. In an offset printing press, a plurality of printing units, each comprising an impression cylinder and a pair of design and transfer cylinders interconnected therewith, their drive, means for separating and means for operatively disconnecting the transfer cylinders from their

impression cylinders, and means for driving the design and transfer cylinders independently of



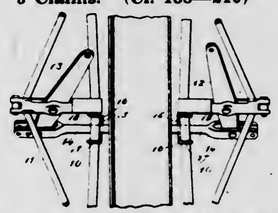
their impression cylinders and independently of each other.

2,003,800
OFFSET PRINTING PRESS
Howard M. Barber, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware
Application August 1, 1934, Serial No. 737,892
36 Claims. (Cl. 101—177)



1. In a multicolor offset printing press, a plurality of printing units, each comprising a common impression cylinder and pairs of design and transfer cylinders interconnected therewith, their drive, means for separating and means for operatively disconnecting the transfer cylinders from their impression cylinders, and means for driving the design and transfer cylinders independently of their impression cylinders and independently of each other.

2,003,801
GAME DEVICE
George C. Boyer, Los Angeles, Calif.
Application November 14, 1933, Serial No. 697,937
20 Claims. (Cl. 273—108)

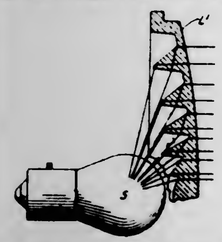


20. A game device comprising a traveling member provided with means to discharge articles carried thereby, means to constrain said traveling member to a definite path of travel, means for causing said traveling member to move along said path of travel, a trip member carried by the traveling member and moving therewith, a target adapted to be selectively positioned in the path of travel of the trip member, and whereby the trip member will be actuated to discharge articles from the traveling member when the trip member encounters the target.

2,003,802
SAFETY SUPPORT FOR BRAKE RODS
Seth A. Crone, East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a corporation of New York
Application August 1, 1934, Serial No. 737,880
3 Claims. (Cl. 188—210)

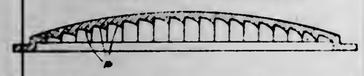
1. In a safety support for brake rods, the combination of a brake-beam channel member, and a stirrup formed of a metallic bar, having at its upper ends outwardly bent arms, each arm having an inwardly directed hook for engagement over and under the upper flange of the channel member.

2,003,803
SAFETY SUPPORT FOR BRAKE RODS
Seth A. Crone, East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a corporation of New York
Application August 1, 1934, Serial No. 737,881
3 Claims. (Cl. 188—210)



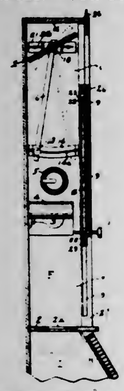
1. In a safety support for brake rods, the combination of a brake-beam channel member, and a bottom rod supporting member having a hook shaped member formed with two connected substantially parallel legs for engaging over the channel member, one leg being free, and the free leg extending downwardly past the two flanges of the channel and forcibly deflected between the flanges whereby to force it against the flanges and rigidly secure it to the channel member.

2,003,804
LENS
Robert N. Falge, Birmingham, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 21, 1932, Serial No. 623,693
6 Claims. (Cl. 240—8.3)



1. A signal lamp comprising a housing, a source of light in the housing, a lens over the housing

comprising a plurality of lenticular rings provided with back reflecting configurations lying in the space between adjacent rings and being shielded by the rings from direct rays from the

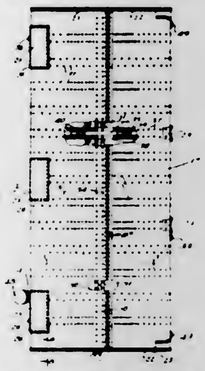


source, the lenticular rings distributing light from the source in the form of a signal beam, while the configurations return a signal beam when illuminated from an outside source.

2,003,805
HEADLAMP
Robert N. Falge, Anderson, Ind., and Charles E. Godley, Ypsilanti, Mich., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 26, 1933, Serial No. 667,958
3 Claims. (Cl. 240—41.4)

3. In a headlamp, light distributing means including a plurality of transversely extending superimposed zones extending from one side to the other thereof, one of said zones being provided with asymmetrical flutes for spreading light to one side of the road only, the light deflecting action at one margin of each of the flutes increasing as the center line of the lamp is approached.

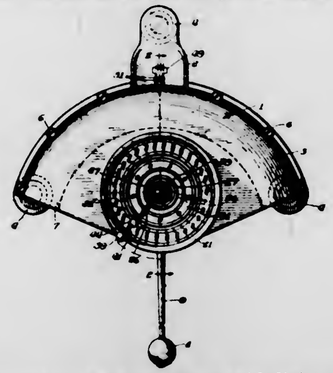
2,003,806
OPTICAL APPLIANCE
Orval W. Lee, Spokane, Wash.
Application June 19, 1933, Serial No. 676,454
17 Claims. (Cl. 88—20)



17. In an optical appliance, a cabinet having therein a fixed horizontal test-object holder and means for illuminating the test-object holder, a vertically spaced reflecting mirror above said holder, said mirror having a horizontal supporting axis and means for adjusting the mirror on its axis, said cabinet having a front opening, a vertically movable panel supported in the walls of a portion of the opening, an observation mirror supported on the panel, and a laterally spaced test-object holder having a horizontal supporting axis and means for adjustment on said axis.

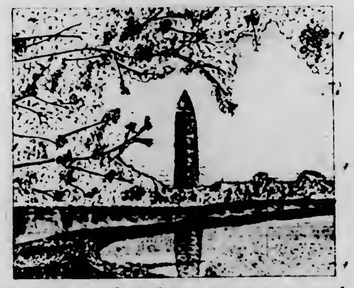
2,003,807
ILLUMINATION OF INSTRUMENT DIALS
John H. Little, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 29, 1934, Serial No. 708,750
3 Claims. (Cl. 240—8.16)

1. The combination of an instrument dial having oppositely inclined edges bearing indicia and a light source at one side of the dial substantially in line with one of said side portions and arranged so that corresponding portions on opposite sides of the dial receive substantially equal amounts of illumination.



2,003,808
LIQUID TANK
Joseph J. Mascuch, Newark, N. J.
Application June 5, 1933, Serial No. 674,284
7 Claims. (Cl. 220—71)

1. A liquid tank formed of thin gauge metal, tubular re-inforcing ribs secured to the inner face of the tank, floating connecting members disposed in the tubular ribs and stay rods having their ends connected to the floating means.

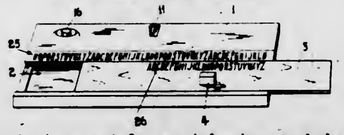


2,003,809
GOLF GAME
David Powell, Chicago, Ill.
Application March 25, 1933, Serial No. 662,649
17 Claims. (Cl. 273—35)

1. A simulated golf game comprising a base, an arm pivotally carried by said base, a ball supported by said arm in position to be struck by a golf club, an indicator actuated by said arm, said indicator being adjustable relatively to said arm, an adjustable dial associated with said indicator, said dial being graduated to indicate relative distances, an additional indicating device with reference to which said dial is adapted to be adjusted, and means arranged to give a signal when

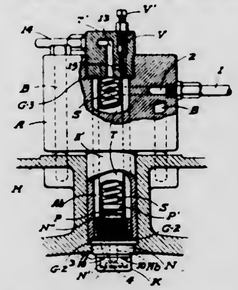
said indicator advances upon said dial to a position determined by said additional device.

2,003,810
PROCESS OF EMBROIDERING FABRICS
August Ruesch, New York, N. Y.
Application April 7, 1934, Serial No. 719,476
1 Claim. (Cl. 2—278)



The process of making an ornamental fabric which consists of uniting a canvas sheet to the back side of a velour sheet by cement and pressure to cause substantial coalescence, stitching the main features of the design with differently colored silk yarns in conformity with a predetermined design, extending the stitches to unequal distances outwardly beyond the velour and closely against the backing sheet whereby a raised perspective effect is obtained, and manually applying color pigments to selected portions of the velour facing.

2,003,811
HAIR WAVING DEVICE
Ernest L. Smith, San Francisco, Calif.
Application June 22, 1933, Serial No. 677,046
19 Claims. (Cl. 132—36)



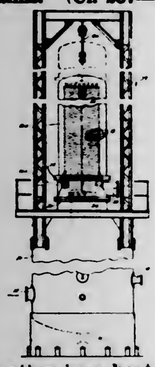
1. In a hair waving apparatus, a curling member upon which a strand of hair is wound in spiral form, another member extending along said curling member and rotatable about said curling member, and a flexible element interposed between said members and engaged by said other member to bear against hair wound on said curling member and pull said wound hair about said curling member to tighten said wound hair upon rotation of said other member.

2,003,812
INSTRUMENT FOR ENCIPHERING AND DECIPHERING
Norman Alexander Smith, Adelaide, Australia
Application January 5, 1934, Serial No. 705,374
In Australia January 28, 1933
6 Claims. (Cl. 35—3)

1. An instrument for enciphering and deciphering comprising, a base member having the letters of the alphabet displayed along its face, a slide member slidably supported in the base member and having the letters of the alphabet displayed along its face adjacent the letters upon the base member, a rotatable member carried upon a pin on the base member, and having the letters of the alphabet upon it, and gearing connecting the rotatable member to the slide member.

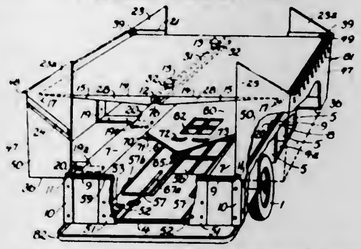
2,003,813
ATOMIZER
John Leonard Taylor, Kenosha, Wis.
Application March 24, 1930, Serial No. 438,391
13 Claims. (Cl. 299—107.6)

1. In an atomizer the combination of a body portion provided with a fluid supply passage, a cylinder bore in said body portion, a piston valve reciprocatively supported in said bore, a plurality of fluid discharge passages so located as to be covered by said piston valve in one position thereof, and uncovered by reciprocations of said valve to communicate with said fluid supply passage, a plurality of fluid discharge orifices in said body portion at least a part of said orifices being spaced axially of said piston valve from the points at which said passages communicate with said bore, and directed in paths transverse to said discharge passages with which said passages communicate, a valve seat in said body portion, and a portion on said piston valve formed to cooperate with said seat, a spring arranged to yieldingly maintain said portion seated on said seat, a duct leading from said supply passage to said bore at a point at one side of said seat beyond an end of said piston valve in position to subject said end to fluid pressure in opposition to said spring, said discharge passages opening out of said bore on the other side of said seat, said passages being spaced from



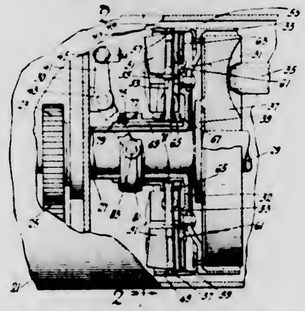
each other where they leave said bore in such a manner as to be uncovered successively upon movement of said piston valve under the influence of fluid pressure from said duct acting upon said end of said piston valve in opposition to said spring.

2,003,814
OIL ENGINE ATOMIZER
John Leonard Taylor, Milwaukee, Wis.
Application November 9, 1931, Serial No. 573,925
10 Claims. (Cl. 299—107.5)



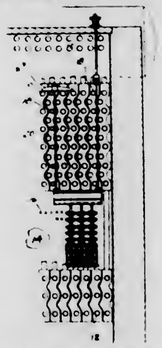
1. In an atomizer for an oil engine the combination of a body member having an extension terminating in a substantially cylindrical spraying head projecting into an engine combustion chamber, said body member having a bore therein extending into said extension and spraying head, a fluid supply passage leading into said bore, a piston valve slidable in said bore and having a passage therethrough freely communicating through said bore with said fluid supply passage, and a plurality of spraying orifices in the cylindrical walls of said spraying head intersecting said bore in position to be covered and uncovered by said valve, upon sliding movement thereof, said orifices being supplied with fluid, when uncovered, through said fluid supply passage, said bore, and said passage in said piston valve, whereby full fluid pressure is made available directly at said orifices immediately upon opening thereof and until the instant of closing thereof.

2,003,815
COMBINED SEPARATOR AND HEAT EXCHANGER
George A. Worn, Montclair, N. J., assignor to The Lummus Company, New York, N. Y.
Application April 27, 1933, Serial No. 668,144
2 Claims. (Cl. 257—223)



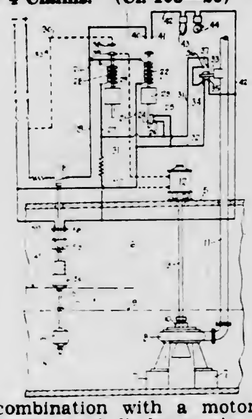
1. The combination in a heat exchanger of a base ring having a wide central opening and a side opening, a casing on said ring, a tube bundle supported from said ring and extending into said casing, connections whereby one fluid may pass through said bundle and baffling means whereby another fluid passing through the central aperture in said ring may pass over said bundle and out through said side opening.

2,003,816
CAMP TRAILER
Rufus S. Allen and Ben Oakes, Detroit, Mich.
Application July 17, 1934, Serial No. 735,570
7 Claims. (Cl. 296—23)



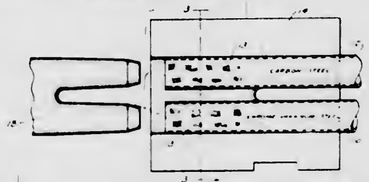
1. In a camp trailer of the character described, boxlike folding housings with air spaced walls for the circulation of air into an air conductor extending to each corner of said housings, said housings forming a portion of the upper side walls, ends, and gables, supported and swinging on a rabbeted friction water tight bearing extending from end to end of said trailer and said housings, pivot bolts to keep said friction joint in alignment, combination wall braces and stop arms to limit swinging movement, said housings adapted to swing to an open position or to a closed position, an upturned edge on top of one housing and an inverted trough or groove on the other housing, said inverted trough or groove adapted to close over said upturned edge, a set of slidable roof roller hangers attached to inside of each housing corner, a set of spring roof rollers, double canvas air spaced ventilating roof members, a hollow ridge pole with inlet venting openings and hooded venting outlet openings on its top, said ridge pole has an inverted groove extending full length along its bottom, flanges extending along the bottom of said ridge pole at each side of said inverted groove, said hollow ridge pole having closed ends, means for attaching top canvas to top of ridge pole and lower canvas to flanges on ridge pole and the canvas on the spring rollers, a combination platform and tail gate with a rabbeted shelf along its outer top edge, a door frame rigidly attached at right angles to said platform, an entrance door and window hinged within said frame, auxiliary end closures hinged to outer side of said door frame, said door frame extending up to form a portion of the gable, a frame with slidable guide pin attached to topmost portion of door frame, said sliding guide pin contacting the inverted groove on said hollow ridge pole, means for shifting the ridge pole above top of gables or below top of gables, a combination front end unit comprising a window frame, a window, and auxiliary front end door closure, a slidable guide pin attached to top of said window frame and adapted to contact the groove in the ridge pole and raise and lower the front end of roof unit, said window frame resting and swinging on a rabbeted shelf across the top of box of trailer, pivot alignment bolts at each end thereof, said window frames adapted to swing from a vertical position to a horizontal central position over the floor, said front end unit when in a horizontal position supporting the ridge pole in a position for the closing of boxlike roof housings, means for locking said front end unit in a horizontal position and means for locking ridge pole on said window frame substantially as described.

2,003,817
DISK SPRING GOVERNOR
John O. Almen, Royal Oak, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 21, 1934, Serial No. 712,308
11 Claims. (Cl. 264—15)



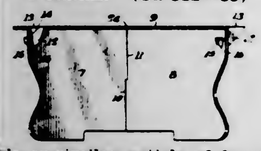
1. In a governor, a resilient annulus, flyweights operatively connected to the inner periphery of said annulus and mounted to move under the influence of centrifugal force and thereby to move said inner periphery, means to restrain the outer periphery of said annulus from movement to an extent commensurate with the movement imparted to the inner periphery by said flyweights.

2,003,818
SUPERHEATER BOILER
Wilbur H. Armacost, New York, N. Y., assignor to The Superheater Company, New York, N. Y.
Application March 7, 1932, Serial No. 597,177
6 Claims. (Cl. 122—478)



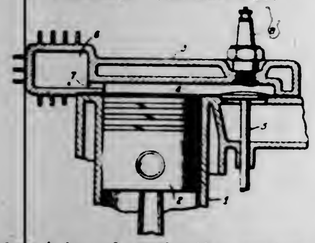
1. A boiler having a generating bank of tubes of the straight horizontally inclined type and in which the majority of the tubes are of uniform size and staggered in the vertical direction to such an extent as to eliminate, so far as the majority of the tubes are concerned, vertical lanes of sufficient width to accommodate supporting members, but having certain tubes of smaller size than the majority, said smaller tubes having an arrangement relatively to the remainder of the tubes of the bank such as to provide narrow vertical lanes through the bank adapted to receive supporting members.

2,003,819
SAFETY DEVICE FOR CENTRIFUGAL PUMPS
Ira Archer, Brooklyn, N. Y.
Application April 22, 1933, Serial No. 667,426
4 Claims. (Cl. 103—26)



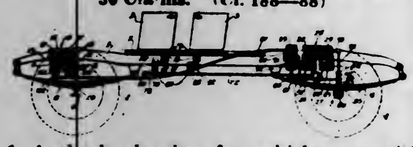
1. The combination with a motor operated centrifugal pump and discharge pipe for maintaining water in a chamber at a minimum level, of a circuit for said motor, a float and float rod in the chamber operable by a rise of water to close a self-opening float switch, a control circuit for said motor circuit including said self-opening float switch and a motor circuit maintaining member, a time relay for breaking the control circuit at a predetermined time, a switch operable by the water pressure in the discharge pipe for completing said control circuit before the same is broken by said relay, and an auxiliary float and float operated means for completing said control circuit upon an abnormal rise of water in the chamber.

2,003,820
METHOD OF MAKING WELDED ARTICLE
Thomas F. Birmingham, Hammond, Ind., assignor to The Superheater Company, New York, N. Y.
Application January 2, 1932, Serial No. 584,499
2 Claims. (Cl. 29—157.6)



1. The method of forming articles having portions of chrome-vanadium steel united directly to portions of carbon steel which comprises covering with a flux of the type which is non-fluid at ordinary atmospheric temperatures the sections of chrome-vanadium and carbon steels to be welded, cutting said sections while at welding temperature and quickly pressing together fresh surfaces of carbon steel and of chrome-vanadium steel so provided to weld them together.

2,003,821
TABLE OR SIMILAR ARTICLE OF FURNITURE
Valerie F. Blake, New York, N. Y.
Application December 8, 1933, Serial No. 701,429
4 Claims. (Cl. 311—35)

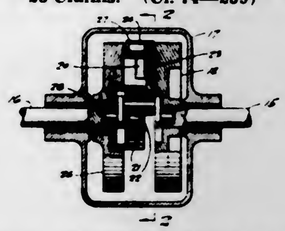


2. A table or similar article of furniture, comprising a top member and angularly related base members supporting the same, said top member having hinges over said base members providing lug portions at the edge of the top member foldable downwardly over the base members and said lug portions and base members having companion hook elements including undercut shoulders interlocking to secure the parts in the flexure of said lugs on the hinge lines aforesaid.

2,003,822
MEANS FOR AVOIDING THE DELETERIOUS EFFECT OF DETONATION IN INTERNAL COMBUSTION ENGINES
Oswald C. Brewster, Kansas City, Mo., assignor to Brewster Development Corporation, New York, N. Y., a corporation of Delaware
Application September 21, 1931, Serial No. 563,972
3 Claims. (Cl. 123—191)

1. In an internal combustion engine, a cylinder head adapted to form a compression space with the piston, ignition means located in said compression space, a chamber communicating with said compression space through an orifice of reduced diameter, adapted to receive a portion of the fuel, said chamber being positioned at a point substantially most remote from the ignition means whereby the fuel contained therein will be ignited subsequent to the burning of the fuel in said compression space, whereby detonation will be substantially segregated in said chamber, and the shock of detonation on said piston will be reduced by said orifice.

2,003,823
SHOCK ABSORBER
Herbert E. Bucklen, Elkhart, Ind., and Joseph N. Mahoney, Brooklyn, N. Y.
Application December 12, 1930, Serial No. 501,806
30 Claims. (Cl. 188—88)

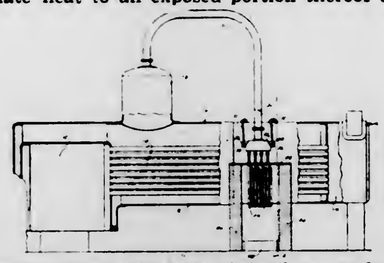


1. A shock absorber for vehicles comprising means having a part carried by said vehicle and establishing a variable resistance to relative motion between the vehicle body and the axle, and means disposed forward of the first mentioned means for controlling said resistance in accordance with the dynamic load, said last mentioned means including a movable member responsive to vertical vibration of a portion of the vehicle body in advance of said first mentioned means.

2,003,824
PLAQUE
John V. Cavalero, Bloomfield, N. J.
Application May 31, 1934, Serial No. 728,232
2 Claims. (Cl. 40—152.1)

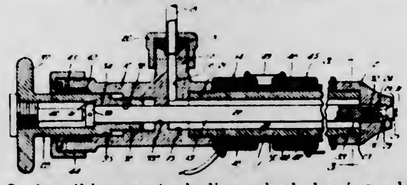
1. In a plaque, a backing on the face thereof having a display secured thereto, an easel frame, a rear pad and a metal body between said backing and said rear pad and a transparent cover having its edges and the edges of said backing turned over and around the turned over edges of said metal body and clamped thereunder and between said easel frame whereby said metal body is completely obscured and covered on both the front and rear face of said plaque.

2,003,825
TORQUE TRANSMISSION DEVICE
Robert V. Derrah, Beverly Hills, Calif.
Application May 13, 1933, Serial No. 670,830
23 Claims. (Cl. 74—259)



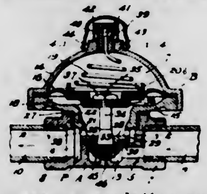
1. A torque transmission device comprising a driven rotor; a planet gear meshed with said driven rotor and constrained to revolve about the axis of said driven rotor; a revolving driving member coaxial with said driven rotor; a floating rotor coaxial with said driven rotor; a crank and connecting link securing said planet gear and said floating rotor, a link connecting said crank and driving member; said crank and link vibrating said floating rotor and shifting the position of the force reactions of said floating rotor on said planet gear in such manner as to react on said driven rotor with a tendency to unidirectional rotation of the latter.

2,003,826
OIL FIELD SUPERHEATER
Frederic I. Epley, North Pelham, N. Y., assignor to The Superheater Company, New York, N. Y.
Application September 11, 1933, Serial No. 688,903
3 Claims. (Cl. 122—485)



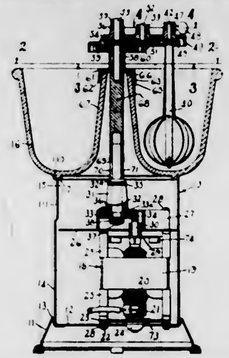
1. The combination with a boiler having an internal fire box and a cylindrical external shell

portion of a group of superheater units supported beneath said shell portion in positon to readily radiate heat to an exposed portion thereof and



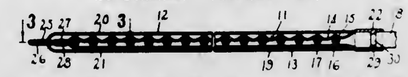
extending from side to side thereof, means forming with the under surface of said shell a furnace chamber enclosing said units, and firing means for said chamber.

2,003,827
OIL BURNER
William M. Esterling, Long Beach, Calif., assignor, by direct and mesne assignments, of fifteen per cent to Henry Walters, fifteen per cent to Mary P. Walters, five per cent to Charles Kling and/or Ida M. Kling, eighteen per cent to Bessie M. Cone, two per cent to Z. B. West and Franklin G. West, known as West & West, and twenty per cent to Ruben F. Wussow, Santa Ana, Calif.
Application August 7, 1931, Serial No. 555,672
3 Claims. (Cl. 299—131)



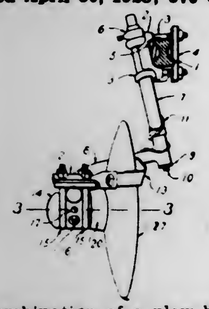
2. An oil burner including a body having a longitudinal passage, an oil inlet communicating with said passage, a stem shiftably guided in said passage, a valve head threadedly connected with the stem for cooperating with said passage, rotatable means for longitudinally shifting the stem and controlling the discharge from said passage, and a swivel connection between the stem and said means allowing relative rotation.

2,003,828
PRESSURE REGULATING AND FILTERING DEVICE FOR FLUIDS
Victor Ey, New York, N. Y.
Application October 17, 1934, Serial No. 748,602
4 Claims. (Cl. 50—23)



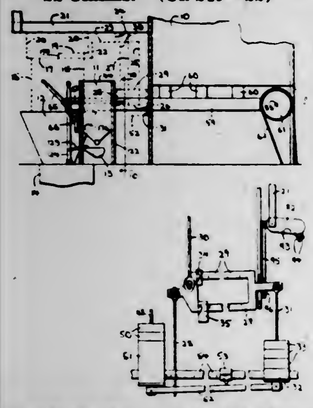
1. A fluid pressure regulating and filtering device including a base member adapted to join the sections of a fluid pipe line to form a continuation of said line, said base section having inlet and outlet ports and a recess opening through one side thereof and communicating with the outlet port, and a filter well communicating respectively with the recess and the inlet port; a pressure regulator unit detachably associated with the base member and including a casing adapted to close and seal the recess, said casing having a valve controlled apertured wall covering the filter well and a filter element adapted to be introduced into the well through the recess and adapted to surround the aperture of the wall and retained in place therein by said wall.

2,003,829
MIXING APPARATUS
Alfred C. Gilbert, North Haven, and Arthur A. Arnold, New Haven, Conn., assignors to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application November 28, 1931, Serial No. 577,754
12 Claims. (Cl. 259—102)



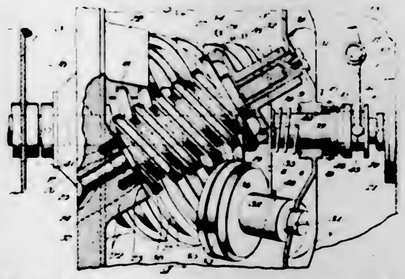
1. In a material treating machine, a vertically disposed electric motor structure, relatively flat horizontal plates mounted one on either end of said motor structure and supported thereby, a casing connected to and extending upwardly from one of said plates and beyond the other plate, said casing and plates substantially enclosing said motor structure, the upper plate being slightly spaced from the inner walls of the casing to permit the passage of air therebetween, a bowl on the upper end of said casing, a material treating element within said bowl, and means connected to said motor structure and extending upwardly through said bowl for driving said element.

2,003,830
HEATING PAD
Alfred C. Gilbert, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application November 28, 1931, Serial No. 577,755
29 Claims. (Cl. 219—46)



1. In a heating pad, a sealed envelope of plastic material, a flat relatively thin resistance heating element mounted loosely in the envelope, and means for attaching one of the edge portions of the heating element to the envelope comprising means attached to the heating element and embedded in the material forming the envelope and at one end thereof.

2,003,831
SELF-ALIGNING DISK JOINTER
Archie H. Glaves, Toledo, Ohio, assignor to Henry A. Wallace, Secretary of Agriculture of the United States of America
Application January 24, 1935, Serial No. 3,337
2 Claims. (Cl. 97—217)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



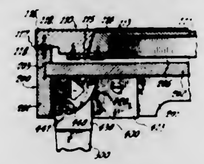
1. The combination of a plow beam, a jointer shank having an intermediate portion normally disposed horizontally and having vertical terminal portions, the rear terminal portion extending upwardly and the front terminal portion extending downwardly, means for adjustably, securely affixing the rear terminal portion to the side of the plow beam, a swivel arm normally disposed horizontally and fitted upon the front depending terminal of the jointer shank, a plate rigidly attached to the free end of the swivel arm, a hub detachably secured to said plate, an axle retained by said hub, and a concaved disk rigidly mounted on the axle, and so positioned that its cutting edge is angularly offset from the front terminal portion of said shank.

2,003,832
WEIGHING AND MIXING MECHANISM
Douglas C. Jeffrey and Henry J. Wolfe, Akron, N. Y., assignors to Universal Gypsum & Lime Co., Chicago, Ill., a corporation of Delaware
Application December 21, 1932, Serial No. 648,180
22 Claims. (Cl. 249—22)

1. In a mechanism of the type described, the combination of two containers, means for supporting said containers and connecting them together adapted to cause said containers to have vertical movement with respect to each other when the ratio of the weight of the materials in one container to the weight of the materials in the other container passes a predetermined critical value, feeding means for each of said containers adapted upon operation to deliver materials to said container, means actuated by a downward movement of one of said containers for automatically stopping the operation of the feeding means for said container when the weight of the materials in said container reaches a predetermined maximum, and means adapted upon a relative vertical movement of said containers for automatically stopping the operation of the feeding means for the other container when the ratio of the weights of the materials in the respective containers reaches said predetermined critical value.

2,003,833
FREE WHEELING CLUTCH
Delbert L. Lotts, Chicago, Ill., assignor, by direct and mesne assignments, to General Research Corporation, Chicago, Ill., a corporation
Application October 19, 1931, Serial No. 569,620
24 Claims. (Cl. 192—48)

24. In a free wheeling clutch, a driving shaft, a driven shaft, a worm associated with said driven shaft, a worm associated with the driving shaft and meshing with the first mentioned worm, and means to selectively cause said worms to lock relatively to each other or idly rotate, the inclination and hand of the teeth of said two worms being the same.

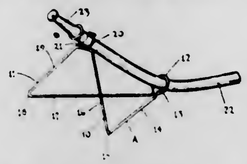


2,003,834
GAME TABLE
John Kearsley Mitchell, Villanova, Pa.
Application May 18, 1933, Serial No. 671,609
9 Claims. (Cl. 311—106)

1. A table top of the type described comprising a frame-work, a flat central member hinged to said framework, and an outer frame hinged directly to the frame-work and adapted when lowered to fit closely around the central member so as to stretch and hold in place a fabric cover spread over the central member.

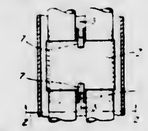
2,003,835
FOLDING LEG CONSTRUCTION
John Kearsley Mitchell, Bryn Mawr, Pa.
Application May 28, 1934, Serial No. 727,870
11 Claims. (Cl. 311—99)

3. A hinge construction for folding table legs comprising an angular corner member having a base plate and depending side wall plates forming a trihedral angle, a socket member comprising spaced cam plates disposed in said trihedral angle and secured to said corner member, a plu-



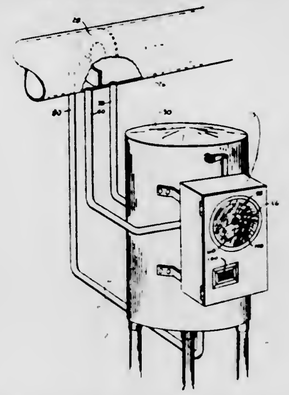
rality of external and internal cam surfacings formed on the cam plates adapted to receive and seat guide and locking pins of an associated table leg.

2,003,836
FOLDING LEG CONSTRUCTION AND LOCKING MEANS THEREFOR
John Kearsley Mitchell, Bryn Mawr, Pa.
Application May 28, 1934, Serial No. 727,871
6 Claims. (Cl. 311—82)



6. A locking mechanism for folding table legs, comprising separate spring-urged means for separately moving the legs into operative position, means on the legs for releasably engaging and holding each other in a mutually interlocked train, and separate spring locked means on at least one of the leg members for retaining the train of leg members in folded, inoperative position.

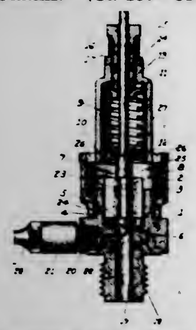
2,003,837
NOZZLE HOLDER
Joseph A. Skoglund, St. Paul, Minn.
Application September 24, 1932, Serial No. 634,681
2 Claims. (Cl. 248—83)



2. A nozzle holder comprising a stand constructed solely of a single length of wire bent intermediately thereof to form an upstanding eye for the reception thereinto of a portion of a hose, said wire being further bent to provide base portions diverging forwardly from said eye and legs converging upwardly from said base portions, said wire being still further bent to provide opposed jaws at the free extremities of the legs, the legs being adapted to be crossed at their upper ends to flex the wire throughout said legs, base portions and eye for receiving and yieldingly gripping said hose at another portion thereof, the flexing of said eye including the springing of opposite portions thereof out of the plane normally occupied thereby.

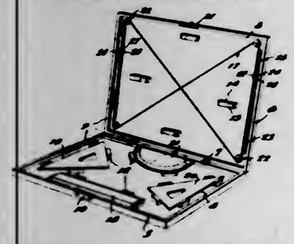
2,003,838
SUPERHEATER SUPPORT
Bert Smith, Teaneck, N. J., assignor to The Superheater Company, New York, N. Y.
Application March 1, 1933, Serial No. 659,026
2 Claims. (Cl. 248—68)

1. A support for two parallel superheater pipes arranged in a horizontal plane in a flue, comprising two sheet-metal parts which together encircle each of the two pipes contacting with each pipe along its entire circumference, one of the parts extending around the upper portion of the pipes and entering into the space between the two pipes substantially to said horizontal plane, the other of the two parts extending around the lower portion of the pipes and entering into the space between them to contact the first part, means to secure the contacting portions together comprising two tongues unitary with one of the parts and bent around edges of the other part, the two parts being further secured together at two other points adjacent respectively to the lower outer quarters of the pipes, the lower of said parts having its ends extended and bent to form rests to engage the flue.



2,003,839
APPARATUS FOR METERING THROUGH THE MEDIUM OF THE VERSED SINE
Ed S. Smith, Jr., Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a corporation of Rhode Island
Application August 6, 1930, Serial No. 473,391
19 Claims. (Cl. 73—167)

1. In a meter for continuously indicating the product of the square roots of several quantities, pivoted members, means to move each of said pivoted members through angles the versed sines of which are proportional respectively to said quantities whereby the angular position of said pivoted members may indicate substantially the square roots of said respective quantities, means coacting with said pivoted members to modify the movement of each of the respective pivoted members to cause them to follow the true substantially square root relation of said quantities, multiplying means actuated by said pivoted

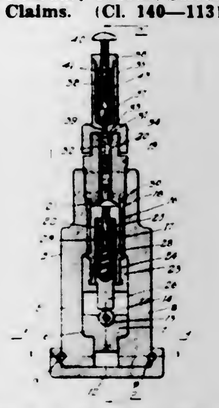


members to automatically multiply the square roots of said respective quantities and indicating means actuated by said multiplying means.

2,003,840
LUBRICANT SEALED SEAT
Alfred K. Sorensen, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application March 29, 1932, Serial No. 601,815
2 Claims. (Cl. 137—53)

1. In a valve comprising a casing, an inlet passage in said casing, a valve seat at the upper end of said passage, a substantially lateral port extending through the wall of the said casing and opening into the said passage in proximity to the said valve seat, a valve closure member to normally engage said seat, a seal in said passage at the juncture of the said closure member and the wall of the said passage, means positioned exteriorly of the said casing for conducting a sealing medium through said port and into the said passage, the said sealing medium being forced into contact with the said closure member and the wall of the said passage to form the said seal by the pressure of a fluid in said inlet passage.

2,003,841
DRAWING BOARD
Rasmus L. Sorensen, Cincinnati, Ohio
Application August 13, 1931, Serial No. 556,840
Renewed December 1, 1934
1 Claim. (Cl. 33—80)

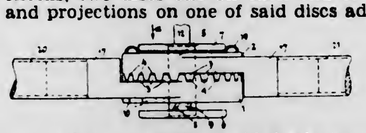


In a device of the class described, superimposed slabs hinged together, a straight edge element disposed across the outer face of one of said slabs, the inner face of said slab having a recess therein, an endless cable contained in said recess, pulleys in the recess mounting said cable, said cable disposed on said pulleys with portions of the length thereof movable in the same direction and respectively disposed adjacent and along the side edges of said slab on which the straight edge element is mounted, and attaching devices extending through slots adjacent the side edge of said slab securing the ends of said straight edge element respectively to said portions of the cable, said second slab forming with the first slab, a housing whereby the cable and pulleys are enclosed between the slabs, the straight edge element being maintained by said cable to move in parallelism to itself.

2,003,842
PROCESS FOR THE MANUFACTURE OF 2'-NITRO-2-CARBOXY-DIPHENYLAMINE
Louis Spiegler, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 23, 1933, Serial No. 699,406
6 Claims. (Cl. 260—109)

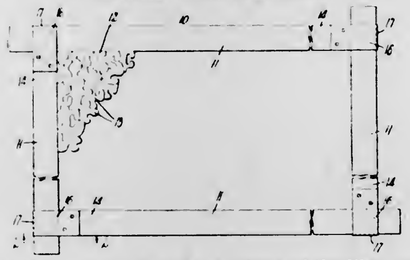
1. In the preparation of 2'-nitro-2-carboxy-diphenylamine wherein anthranilic acid is reacted with an alkali-metal carbonate in the presence of o-nitro-chlorobenzene and heated in the presence of a catalyst at temperatures of from 185–205° C., the step which comprises using a sufficient excess of o-nitro-chlorobenzene in the mass during the final stage of the reaction to maintain the mass in a fluid condition.

2,003,843
POWER PRESS
Robert Temple, Jr., Denver, Colo., assignor to Robert Temple, Inc., Denver, Colo., a corporation of Colorado
Application February 8, 1932, Serial No. 591,540
31 Claims. (Cl. 140—113)



1. In a press of the character described, a frame having a cylinder, an anvil on the frame, a hammer piston in the cylinder to act upon work on the anvil, and a pressure member on the piston, adapted to subject the said work to pressure during action of the hammer to prevent the displacement of the work by said action.

2,003,844
FOLDABLE STRETCHER
Fritz Tintner, Vienna, Austria
Application August 14, 1933, Serial No. 685,071
In Austria August 26, 1932
2 Claims. (Cl. 287—14)



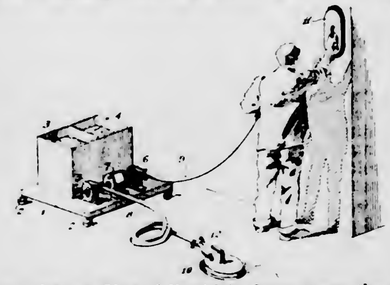
1. A hinge joint especially for foldable stretchers, comprising in combination two cheeks, radial teeth arranged in a circle on the adjacent sides of said cheeks, one of said cheeks provided with

recesses on its outer side, a bolt loosely connecting said cheeks, two discs one on each end of said bolt, and projections on one of said discs adapt-

ed to normally press together said cheeks to maintain said teeth in engagement and to enter the recesses in said cheeks to allow said cheeks to move apart and disengage said teeth.

2,003,845
ADJUSTABLE FRAME FOR JIG-SAW PUZZLES
William H. Whitcomb, Newtonville, Mass.
Application March 9, 1933, Serial No. 660,078
7 Claims. (Cl. 273—157)

1. A frame for jig-saw puzzles and the like comprising, in combination, a plurality of side members in one piece and of uniform thickness, and a pair of guide members mounted at an end of each side member and adapted to yieldingly grip the opposite faces of another side member and position said side members perpendicular one to another.



2,003,846
METHOD OF FORMING SPECTACLE FRAMES
Arthur J. Wolff, Hartford, Conn.
Application March 17, 1933, Serial No. 661,219
4 Claims. (Cl. 88—43)

3. The process for constructing spectacle frames that consists in obtaining a cast of the nose while in repose and undistorted, placing a band of disintegrating material of the same shape as the bridge of the spectacle frame on said cast, forming a mold over said cast and band, then removing the band, then filling the space occupied by the band with material to produce a bridge, and then securing said bridge thus produced to the spectacle frame.

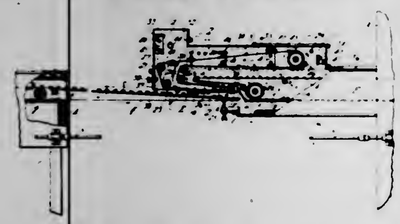
2,003,847
WASHING DEVICE AND METHOD
Charles S. Woods, Shaker Heights, Ohio
Application September 21, 1932, Serial No. 634,217
3 Claims. (Cl. 15—269)

1. The method of removing dirt from a surface which comprises first applying cleaning liquid to the surface at a uniform rate that permits only a film of liquid to form on said surface, simultaneously scrubbing the dirt and film, then permitting the cleaning liquid to partially evaporate, and thereafter applying a rinsing liquid to the surface at such a rate that it co-mingles with the remaining cleaning liquid and permits no

more than a film of liquid to form upon the surface, and simultaneously with the application of said rinsing liquid wiping from the surface some of the co-mingled cleaning liquid and the dirt.

2,003,848
FLEXIBLE COUPLING
John R. Grundy, Philadelphia, Pa., assignor to Charles Bond Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 8, 1928, Serial No. 260,052
6 Claims. (Cl. 64—96)

1. The combination in a coupling for connecting substantially aligned shafts, of a pair of coupling members each adapted to be secured to one of said shafts, each of said coupling members having projecting lugs intermeshing with the lugs on the other coupling member, the adjacent lugs on opposite coupling members being provided with flat surfaces lying parallel to a plane midway between them containing the axis of one of said shafts, and a resilient power transmitting member mounted between said coupling members and having radiating arms of resilient material contacting with adjacent flat faces of two of said lugs carried by opposite coupling members.

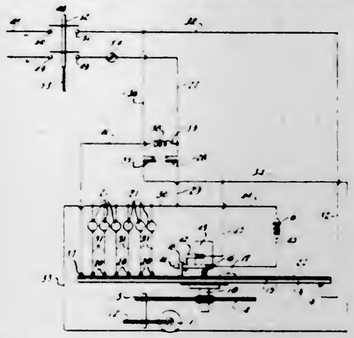


2,003,849
COLORED GRANULE
William H. Alton, New York, N. Y., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application September 14, 1932, Serial No. 633,078
6 Claims. (Cl. 91—70)

3. In a method of coating granules of inert material with a solution of a salt capable of reacting to form an insoluble silicate and thereafter treating the granules thus coated with a solution of a reagent capable of reacting with the salt of said first solution to precipitate an insoluble silicate coating on the granule, and which contains added coloring matter; the step of washing the granules after the precipitation thereon of the insoluble silicate coating to remove soluble salts to an extent such that the granules when exposed to the weather will not effloresce.

2,003,850
COLORED GRANULE AND METHOD OF MAKING SAME
William H. Alton, New York, N. Y., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application December 2, 1933, Serial No. 700,759
6 Claims. (Cl. 91—70)

1. The method of making colored granules which comprises coating granules with a solution of sodium silicate carrying coloring material, treating the coated granules with a precipitating salt solution to convert the soluble silicate into an insoluble silicate, washing the granules to remove water-soluble salts and calcining the resulting granules at a temperature sufficiently high to cause a reaction to take place between the silicate coating and the material of the granule so that a permanently colored coating is obtained.

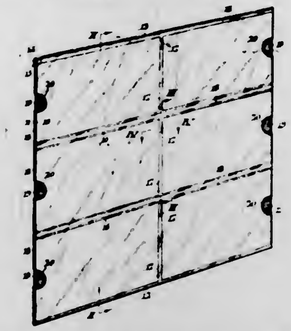


2,003,851
CONFECTION COATING MACHINE
Alonzo Linton Bausman, Springfield, Mass.
Application October 23, 1933, Serial No. 694,783
12 Claims. (Cl. 91—3)

1. In apparatus for the manufacture of coated confections, a pair of conveyers presenting upper stretches travelling in the same direction with the delivery end of one adjacent but above the receiving end of the other, an intermediate conveyer having a portion of its travel in the space between said ends and presenting in such portion of its travel upper and lower stretches which underlie and overlie respectively and move in the same respective directions as the lower stretch of the first conveyer and the upper stretch of the second conveyer, said conveyers carrying coated confections while their coatings are still workable and arranged for the transfer of confections from the lower stretch of the upper conveyer to the upper stretch of the underlying intermediate conveyer and from the lower stretch of the intermediate conveyer to the upper stretch of the lower conveyer, said intermediate conveyer having another portion of its travel wholly outside and remote from said space, and means for cleaning said intermediate conveyer in the last named portion of its travel.

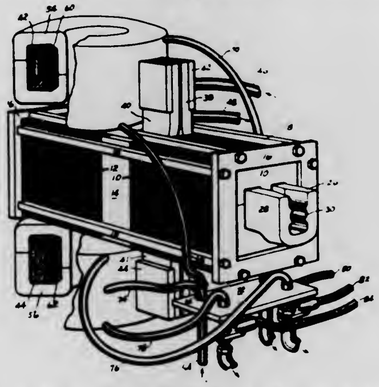
2,003,852
SAFETY DEVICE FOR AUTOMATIC CONTROLS
William P. Beattie, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application December 29, 1931, Serial No. 583,698
5 Claims. (Cl. 200—46)

1. Automatic control apparatus of the class described and having a contactor-carrying base with a set of contactors yieldably mounted thereon, contactor means, means associating said contactor means and base to provide relative opening and closing movement therebetween, said contactors being arranged to yieldably contact said contactor means when the latter and said base are in closed relation, a program member having insulating parts and perforate parts, means for removably mounting said program member in overlying relation with said contactor means, means for driving said program member



by way of said mounting means to cause its said parts movement in paths to control contact between said contactors and their said contact means, and means for controlling energization of said driving means dependent upon the said mounting of said program member between said base and said contactor means when the latter are in closed relation.

2,003,853
SPARE WHEEL CARRIER
Fred C. Burnett and Guy S. Adams, Jackson, Mich., assignors to Ryerson & Haynes, Inc., Jackson, Mich., a corporation of Michigan
Application September 18, 1933, Serial No. 689,800
10 Claims. (Cl. 224—29)

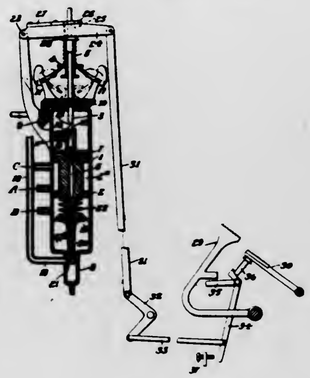


1. In a spare wheel carrier, the combination of a bracket, a ledge of hook-shaped cross section supported by said bracket on which the hub flange of the wheel is arranged to suspend the wheel therefrom, a fulcrum mounted on said bracket below said ledge and engageable with the rear face of said hub, and securing means located below said fulcrum and in substantially vertical alignment with said ledge, engageable with said hub and acting to rock the wheel upon said fulcrum to urge said hub into rigid engagement with said ledge.

2,003,854
DATA SHEET HOLDER
George D. Cox, Philadelphia, Pa., assignor to Williams and Marcus Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 19, 1933, Serial No. 666,804
5 Claims. (Cl. 129—16.7)

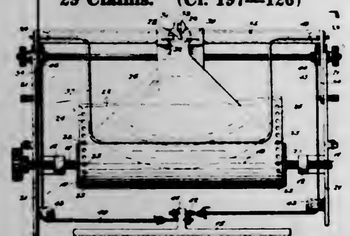
3. A data sheet or letter holder for filing cabinets, having the form of a flat rectangular envelope comprising a quadrangular sheet of stiff, transparent, tear-resistant material like cellulose acetate folded upon itself with the side edges of the folds coincident and the end edges joined to each other; and coincident internesting spot indentations formed from the opposite faces of the holder and connecting said faces at intervals to set apart pockets individually accessible for insertion or removal of the letters or data sheets through the open side edges of said holder.

2,003,855
ELECTRIC HEATER
Gustav Fredrickson, Bristol, Conn., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 11, 1931, Serial No. 550,137
16 Claims. (Cl. 219—13)



1. In an induction heater, a pair of straight side walls spaced apart to embrace and guide a piece of work therebetween and forming a portion of an induction loop, a core surrounding the side walls and the work-piece, and means for supplying alternating current to the induction loop to heat the piece and cause it to advance between the side walls; substantially as described.

2,003,856
BOX COVER ATTACHING CLIP
Conrad Gimbel, North Bend, Wash.
Application February 1, 1932, Serial No. 590,141
1 Claim. (Cl. 292—288)



A cover attaching clip for an egg case, or the like, having a cleat attached to a wall of the case along an edge and a cover applied to the case with an end portion overlapping the cleat; said clip comprising a flat strip of resilient metal having a body portion with inwardly turned upper and lower end portions adapted, when the clip is functionally applied across the cleat, to overlie the end of the cover and to underlie the cleat, respectively, the lower end portion having a length equal to the thickness of the cleat and formed with an end hook to be embedded in the cleat, the upper end portions being formed at an acute angle with the body portion and said body portion being of a length equal to the width of the cleat plus the thickness of the cover so that application of the clip to the case will cause the upper end portion to be brought substantially to a right angle thereto, thus placing the clip under tension whereby the said end portions are caused to tightly grip against the cleat and cover.

2,003,857
CENTRIFUGALLY CONTROLLED VALVE
Jesse W. Hale, Newton Center, Mass.
Original application August 7, 1933, Serial No. 683,918. Divided and this application December 9, 1933, Serial No. 701,720
8 Claims. (Cl. 137—140)

8. A valve comprising a casing, a fluid inlet and fluid outlets above and below said inlet, a piston in said casing adapted to connect said inlet with one of said outlets, means responsive to engine speed in control of said piston, a member adapted to depress said means, detents to prevent premature movement of said piston, means in connection with one of said outlets to counteract the pressure of said compressible member, and a lock to prevent upward movement of said rod regardless of engine speed.

2,003,858
TYPEWRITING MACHINE
Arthur A. Johnson, Bridgeport, Conn., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Application April 16, 1931, Serial No. 530,517
Renewed August 15, 1934
29 Claims. (Cl. 197—126)

23. A carbon holder for typewriting machines comprising a segment having at its periphery and extending therebeyond an arcuate strip of transfer material approximately equal in length to the line of writing of a platen and worksheets with which it is to be used.

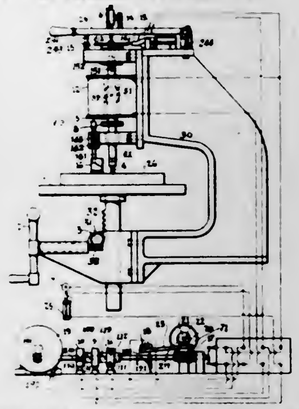
2,003,859
PREPARATION OF QUINIZARINE
Henry E. Lee, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 25, 1934, Serial No. 708,251
5 Claims. (Cl. 260—58)

3. In the preparation of quinizarine wherein phthalic anhydride and para-chloro-phenol are condensed in concentrated sulfuric acid in the presence of boric acid, the step which comprises diluting the condensation mass with sufficient water to bring the sulfuric acid concentration to 55 to 70%, based on the initial charge of sulfuric acid used.

2,003,860
BITUMINOUS EMULSION
Kenneth E. McConnaughay, Indianapolis, Ind., assignor to Pre Cote Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application March 9, 1931, Serial No. 521,390
1 Claim. (Cl. 134—1)

The process of making a bituminous emulsion containing bitumen of two different degrees of hardness, which comprises suspending the harder bitumen in powdered form in a water solution of an alkali, melting the softer bitumen, adding saponifiable material to the softer bitumen, and then thoroughly mixing the melted softer bitumen and the saponifiable material with the alkaline solution in which the harder bitumen has been suspended.

2,003,861
PAVING MATERIAL AND PROCESS OF PREPARING IT
Kenneth E. McConnaughay, Indianapolis, Ind., assignor to Pre Cote Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application January 5, 1933, Serial No. 650,266
7 Claims. (Cl. 106—31)



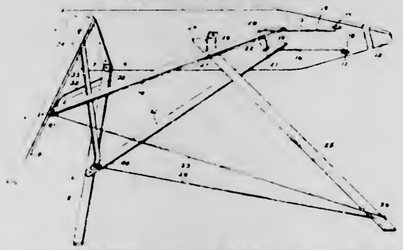
1. The process of producing a paving composition consisting of a mixture of aggregate and a bituminous binder, which comprises impregnating the surface of the aggregate particles with a liquid mixture of an oil miscible with said binder, a tar distillate, an emulsifying agent, and an inert thinner, and subsequently mixing the aggregate so treated with a bituminous binder, the amount of said liquid mixture applied to the aggregate being insufficient in quantity to leave on the surface of the aggregate any excess of said oil, said tar distillate, or said emulsifying agent.

2,003,862
MEAT PACKAGE
Harry H. McKee, Chicago, Ill., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application June 21, 1933, Serial No. 676,837
1 Claim. (Cl. 206—46)

A sliced bacon package comprising a flat, central stiffening member, a plurality of overlapped slices of bacon folded about said stiffening member and a sheet of wrapping material holding the bacon in position on said stiffening member.

2,003,863
APPARATUS FOR DETERMINING TOUGHNESS OR RESISTANCE TO BREAKAGE OF ABRASIVE BODIES BY IMPACT
Romie Lee Melton and John Fitzpatrick, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application October 9, 1929, Serial No. 398,468
10 Claims. (Cl. 265—13)

4. Apparatus for determining the characteristics of abrasive or similar bodies, comprising in combination a table for supporting a body under test, a penetrating tool adapted to produce successive impacts on said abrasive article by falling from a predetermined height above said body, electromagnetic means for raising said tool to its original position after each fall and there releasing it, additional electromagnetic means for rotating the tool to a different angular position between each fall, means for controlling said electromagnetic means, comprising a rotary switch in circuit with each of said electromagnetic means, a shaft supporting said rotary switches, an electric motor for driving said shaft, a worm on said shaft, a worm gear in engagement with said worm, a cam driven by said worm gear, a switch in circuit with said electric motor and operated by said cam to stop said motor after a predetermined number of impacts of said tool and means for measuring the penetration of said tool into said abrasive article.



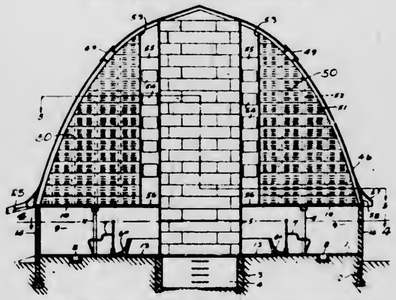
2,003,864
METHOD OF PERMANENT MOLD MANUFACTURE
Leo F. Nock, Elyria, Ohio
No Drawing. Application April 17, 1930, Serial No. 445,087
6 Claims. (Cl. 22—190)

1. The process of producing permanent molds comprising sucessively forming, in suitable material, complementary mold patterns, forming plastic mold elements from each pattern, pouring molten metal of low melting point and negligible coefficient of thermo-expansion into the mold elements, and applying to the resultant articles of low melting point metal, a plastic material comprising a high percentage of a heat resistant fibrous material, such as asbestos, to form molds, and then casting complementary non-ferrous metallic permanent mold elements, by pouring molten non-ferrous metal into molds so produced.

2,003,865
COMPOSITION FOR USE IN SOLDERING CHAIN LINKS
John E. Pilling, Providence, R. I.
No Drawing. Application July 29, 1932, Serial No. 626,222
2 Claims. (Cl. 148—24)

1. A composition of matter for use in the preparation of chains for soldering consisting of one part of powdered tin, two parts of powdered copper and three parts of borax.

2,003,866
IRONING BOARD
Jesse W. Richardson, Cincinnati, Ohio, assignor to The Rich Pump & Ladder Company, Cincinnati, Ohio, a corporation of Ohio
Application August 26, 1932, Serial No. 630,561
7 Claims. (Cl. 68—10)



1. In a folding ironing table, a board, a pair of legs mounted on said board for swinging together and apart and toward and from the board, a pair of braces pivotally mounted at one of their ends intermediate the ends of said legs, a pair of links pivotally mounted intermediate the ends of said braces and on the bottom of said board so that the legs are limited to substantially the vertical position, or to a position flat against the bottom of said board, and a pair of cross braces pivotally mounted at one of their ends upon said legs and at their other ends upon said first braces at points intermediate the pivot points of the first braces with the legs and with said links.

2,003,867
METHOD OF MAKING CRYSTALLINE ALUMINA AND A COMPOSITION OF MATTER CONTAINING THE SAME
Raymond R. Ridgway, Niagara Falls, N. Y., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
No Drawing. Application September 22, 1933, Serial No. 690,589
25 Claims. (Cl. 23—142)

6. The process of removing traces of partially or difficultly reducible metal oxide impurities from a melt of alumina formed by the reduction of bauxite with carbonaceous reducing agents comprising the steps of incorporating in the furnace charge an easily reducible metal sulfide and an alkaline metal oxide and adjusting the sulfur content of the mixture so that after fusion and cooling the metal oxide impurities will be separated into a water-soluble or hydrolyzable matrix, the sulfide sulfur content of which is not over 2% by weight of the total melt.

25. As an article of manufacture, a solidified ingot containing upwards of 85% of pure crystalline alumina as discrete crystals in commercial grain sizes loosely cemented with a disintegratable matrix containing the sulfide of an alkaline metal associated with compounds of titanium and zirconium and in which the matrix contains from 25 to 40% by weight of aluminum sulfide, 25 to 70% of alkaline metal sulfide and zero to 35% of stable sulfides, and the total sulfide sulfur content is not over 3% by weight of the whole ingot.

2,003,868
BARN
John G. Shodron, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a corporation of Wisconsin
Application March 16, 1933, Serial No. 661,031
4 Claims. (Cl. 119—16)

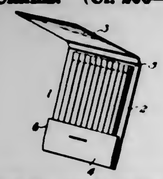
1. A hay enclosure having continuous inner and outer walls, means for dividing the enclosure into a plurality of vertical compartments, some of which are relatively wide for containing hay, and others are relatively narrow for forming air passageways, the latter being formed of vertically positioned foraminous walls for permitting the passage of air from one compartment of the hay enclosure to another.

2,003,869

APPARATUS FOR THE STERILIZATION AND STERILE FILLING OF VESSELS AND THE LIKE IN ONE CONTINUOUS WORKING PROCESS

Friedrich Stegemann, Bad Kreuznach, Germany, assignor to Seitz-Werke G. m. b. H., Kreuznach, Germany, a firm

Application July 3, 1933, Serial No. 678,944
In Germany July 14, 1932
17 Claims. (Cl. 226—110)



1. In an apparatus for the sterilization and the sterile filling of vessels and the like in one continuous procedure, in combination, a reciprocable filling member comprising a valve body and a hollow valve stem, said valve stem being also adapted to lead a sterilization agent and subsequently a scavenging agent into the vessels to be filled, and a device adapted to be set by the filling member during its downward stroke and to release the valve at a predetermined moment.

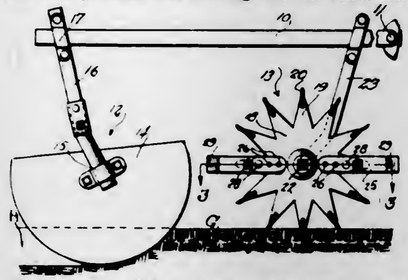
2,003,870

MATCH BOOK

Joseph F. St. John, Chicago, Ill.

Application January 26, 1934, Serial No. 708,467
2 Claims. (Cl. 206—29)

1. A safety match folder comprising a card of matches and a cover encompassing said card, said cover being folded to provide a back and overlapping front flaps, the lower front flap and said back embracing the lower edge of said card in fixed relation, the fold line portion between said back and said lower front flap being slit inwardly from the side edges thereof, the inner opposite portions bounding the said slit being surfaced with match-igniting material.



2,003,871

EARTH WORKING IMPLEMENT

Joseph Svatos, Yankton, S. Dak., assignor of one-fourth to Joseph Svatos, Jr., Yankton, S. Dak.

Application February 7, 1935, Serial No. 5,490
2 Claims. (Cl. 97—55)

1. In an earth working implement, the combination with a pivotally mounted beam, of a trenching shovel carried by the rear end of the beam, and a ground engaging member on the beam forwardly of the shovel and constructed and arranged to effect intermittent pivotal movement of the beam and elevation of the shovel above the ground line during the forward travel

of the implement for digging trenches in spaced relation, the ground engaging member comprising a star wheel and shoes carried by at least two points of the star wheel and projecting outwardly of the periphery thereof for effecting the pivotal movement of the beam.

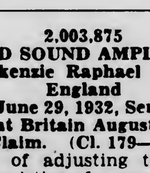
2,003,872

SAFETY RAZOR

Arthur W. Thistlethwaite, Atchison, Kans.

Application February 9, 1933, Serial No. 655,968
3 Claims. (Cl. 30—12)

1. A safety razor including a guard, a coacting face plate for clamping a razor blade against the guard and provided with a depending threaded stud, the lower end of which is convex, a tubular handle threaded on said stud, a finger piece having a threaded socket opening through one end thereof, a longitudinally adjustable locking rod disposed within the handle and having its upper end provided with a concave seat for engagement with the convex seat of the stud and its lower end threaded in the socket in the finger piece and normally spaced from the end of said socket, said finger piece being adjustable longitudinally of the rod for varying the effective length of said rod when the parts are assembled and being formed with a shoulder for engaging the end of the handle and limiting movement of the finger piece and rod into the handle, and a nut threaded on the rod within the handle and engaging the adjacent end of the finger piece for holding the rod in different positions of longitudinal adjustment.



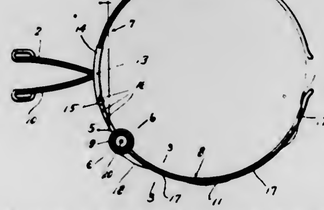
2,003,873

BOTTLE CLOSURE

Rudolph Weisbach, Los Angeles, Calif.

Application February 28, 1934, Serial No. 713,362
2 Claims. (Cl. 215—21)

1. A bottle closure comprising a tubular body open at its bottom and closed at its top, discharge openings being formed through walls of the body adjacent the closed top of the body, walls of the body being internally thickened below the discharge openings and at the upper end of the thickened portion being formed with an internal downwardly tapered conical portion constituting a valve seat, an inverted frusto conical valve in said body normally resting upon said valve seat and having a boss projecting upwardly at its center to engage the closed top of the



body and limit upward movement of the valve, said valve having depending guide wings disposed in intersecting relation to each other radially of the valve and slidably extending through the bore of the thickened portion to guide movement of the valve onto and off said seat and permit flow of liquid through the body about the valve to the discharge openings when the valve is off the valve seat.

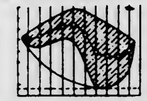
2,003,874

CORN SHOCK HOLDING AND BINDING DEVICE

Ernest L. Bailey, Boscawen, N. H.

Refiled for abandoned application Serial No. 530,396, April 15, 1931. This application October 3, 1934, Serial No. 746,732
1 Claim. (Cl. 100—31)

In a hand grain shock binding and stalk retaining implement comprising a clamp including a pair of companion jaws, said jaws being of general semi-circular configuration and pivotally connected at one end, actuating handles formed integral with the pivoted ends of said jaw, a latch pivotally carried by one of the jaws adjacent the pivotal connection of the jaws and latch engaging means carried by the other jaw adjacent the pivotal connection.



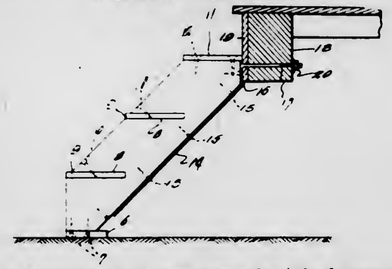
2,003,875

ADJUSTED SOUND AMPLIFICATION

Charles Mackenzie Raphael Balbi, London, England

Application June 29, 1932, Serial No. 620,019
In Great Britain August 18, 1931
1 Claim. (Cl. 179—107)

The method of adjusting the intensity-frequency characteristics of a sound delivered to a sound observing organ which comprises determining the maximum and minimum values respectively of sound intensity which said organ is capable of usefully observing for different values of sound frequency, determining for each of said frequencies the mean useful value of sound intensity as the mean of the maximum and minimum useful values for said frequency, and amplifying said sound intensity non-uniformly with



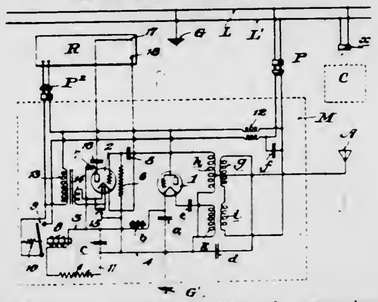
frequency in such a manner that sound of a given frequency is amplified by an amplification factor proportional to said mean useful value of sound intensity as determined for said organ for said frequency.

2,003,876

STAIRWAY

John Birtcher, Memphis, Tenn.

Application November 21, 1934, Serial No. 754,142
2 Claims. (Cl. 20—10)

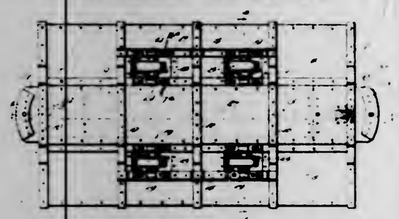


1. A stairway of the class described comprising a pair of stringers having slots, treads having end portions in the slots, an upper tread on the upper edges of the stringers, struts having bodies secured under the rear or bottom edges of the stringers and at their upper ends merging into upwardly disposed extensions which in turn merge into rearwardly directed bolts adapted to extend through openings in a beam or the like.

2,003,877

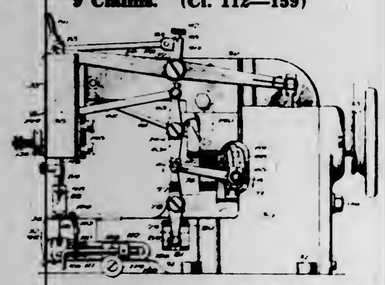
REMOTE CONTROL SYSTEM FOR RADIO BROADCAST RECEIVERS

Albert S. Blatterman, Asbury Park, N. J.



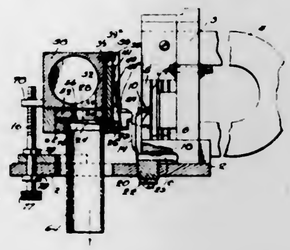
Application August 15, 1930, Serial No. 475,524
Renewed November 16, 1934
13 Claims. (Cl. 250—20)

1. The method of controlling the energization and operation of a radio receiver over power lines with which said receiver is connected which consists in generating at a point on the power lines remote from said receiver high frequency oscillating currents, of a predetermined fixed frequency and also other relatively different varia-



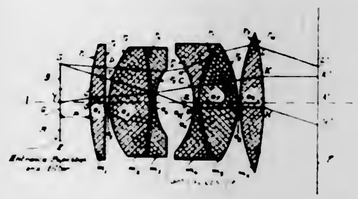
ble frequencies, and then transmitting the said fixed and variable frequencies over the power lines to the said receiver for the purpose of turning the said receiver off or on and tuning and regulating the signals received on the said receiver.

2,003,878
MINE CAR
Clarence P. Daniel, Bristol, Va.
Application August 27, 1931, Serial No. 559,785
10 Claims. (Cl. 105—364)



1. In a mine car, a body having a bottom provided with a longitudinally extending trough and side sections at opposite sides thereof, a draw bar extending longitudinally in said trough, a bumper at each end of said body extending into the body above the bottom thereof and overlapped by an end of said draw bar, a coupler engaging element carried by the bumper and overlapping end of the draw bar at the front end of said car, a draw head at the rear of said car resting upon the bumper and secured to the rear end of said draw bar, the last mentioned end of said draw bar being bent upwardly within the draw head to form an abutment, a shock absorber slidably mounted in said draw head and yieldably held against outward sliding movement in normal contacting engagement with said abutment, and coupler engaging means carried by the shock absorber.

2,003,879
SEWING MACHINE
Thomas H. De Spain, Paducah, Ky., assignor, by mesne assignments, to David & Lewis, New York, N. Y., a partnership composed of Herman David and Samuel Lewis
Application September 11, 1933, Serial No. 689,033
9 Claims. (Cl. 112—159)

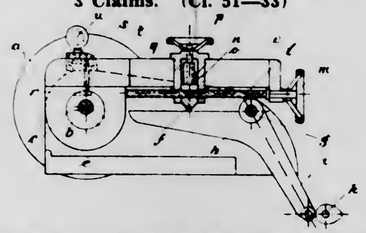


1. In a sewing machine, the combination of a support on which work is fed, a sewing needle, a presser foot having a slot thereon, means for projecting and retracting said needle through said slot and work, means for advancing the work each time the needle is retracted, said slot extending diagonally of the line of movement of work fed along said support, and means for reciprocating said needle longitudinally of said slot.

2,003,880
PNEUMATIC SOUND REPRODUCER AND PROJECTOR
William C. Eaves and Charles F. Dilks, Long Island City, N. Y., assignors to Hoovenaire Corporation, New York, N. Y., a corporation of New York
Application October 23, 1930, Serial No. 490,748
34 Claims. (Cl. 179—113)

1. In a pneumatic loud speaker, in combination, a pivoted valve, an actuating armature, and a connecting link operatively connecting said valve and armature, said link serving to transmit tension to pull the valve open, but flexing slightly under compression.

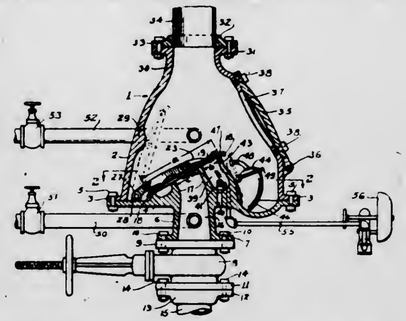
2,003,881
AUTO-COLLIMATED OBJECTIVE FOR COLOR PHOTOGRAPHY
Georges Grosset, Montreuil Sous Bois, Victor Hudeley, Clichy, and Jean Lagrave, Paris, France
Application August 14, 1933, Serial No. 685,132
In Luxemburg August 16, 1932
1 Claim. (Cl. 88—57)



An objective lens system comprising six lens elements, m_1, m_2, m_3, m_4, m_5, m_6, arranged in order, the element m_1 being the entrance element, said lens elements having respective thicknesses in given units of substantially the values for m_1, 8; m_2, 21; m_3, 2.5; m_4, 2.5; m_5, 20; m_6, 12; said lens elements having respective refractive indices of substantially the values for m_1, m_2, m_5, m_6, of 1.60754; for m_3 of 1.60357; for m_4 of 1.58103; said lens element m_2 being spaced from said lens element m_1 by an axial space of substantially 2 of said given units, said lens element m_4 being spaced from said lens element m_3 by an axial space of sustantially 20 of said given units, said lens element m_6 being spaced from said lens element m_5 by an axial space of 1 of said given units; the entrance and exit radii of curvature of each of said lens elements having substantially the respective values in said given units, for m_1, +115 and + infinity; m_2, +45 and −150; m_3, −150 and +30; m_4, −39 and +53.2; m_5, +53.2 and +55; m_6, +90 and −150.

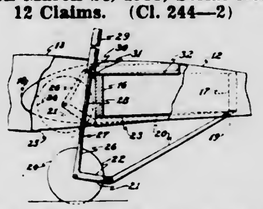
2,003,882
LOOPER MECHANISM FOR SEWING MACHINES
Horace F. Gruman, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a corporation of Maine
Original application January 31, 1931, Serial No. 512,661. Divided and this application September 19, 1931, Serial No. 563,841
5 Claims. (Cl. 112—200)

1. In a sewing machine, the combination with an oscillatory shaft; of a 4-motion looper; and means for operating said looper comprising a looper carrier supported for oscillation about an axis disposed at right angles to the longitudinal axis of the shaft, a looper holder mounted in the carrier for bodily movements therewith and for radial reciprocatory movements relative thereto, driving connections between the shaft and the carrier for imparting loop-taking and loop-shedding movements to the looper, and means separate from the shaft for imparting needle-avoiding movements to the looper.



2,003,883
DEVICE FOR SPHERICAL GRINDING ON CIRCULAR GRINDING MACHINES
Julius Grundstein, Frankfort-on-the-Main, Germany, assignor to Gesellschaft des ächten Naxos-Schmirgels Naxos-Union Schmirgel-Dampfwerk Frankfurt a. m. Julius Pfungst, Frankfort-on-the-Main, Germany, a corporation of Germany
Application January 20, 1934, Serial No. 707,562
In Germany January 20, 1933
3 Claims. (Cl. 51—33)

1. In a device for spherical grinding on circular grinding machines, a drive lever, a reciprocatory lever, a grinding disk eccentrically journalled in said reciprocatory lever, the reciprocatory lever carrying an edge resting on the drive lever, and means for adjusting said edge longitudinally and transversely relative to the reciprocatory lever.

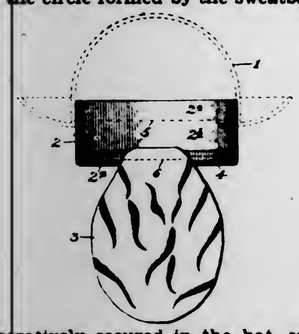


2,003,884
CONTROL VALVE FOR AUTOMATIC SPRINKLER SYSTEMS
Marion Eugene Halford, Greensboro, N. C.
Application February 2, 1933, Serial No. 654,956
2 Claims. (Cl. 169—17)

1. A combined wet-dry pipe sprinkler system control valve comprising a casing having supply and distributor conduits extending therefrom, the supply conduit extending within the casing as an annular flange, a second annular flange surrounding and spaced from the first and forming therewith an annular chamber, said flanges having coplanar upper edges, a flapper valve pivoted in such a manner as to gravitate to seat on both of said flanges, conduits affording communication between said annular chamber and the interior of the casing and between said chamber and the exterior of the casing and valves controlling said conduits, said valves arranged to interact so that when the one controlling the former conduit is closed it will hold the one controlling the latter conduit open and conversely the valve in the conduit to the exterior will be

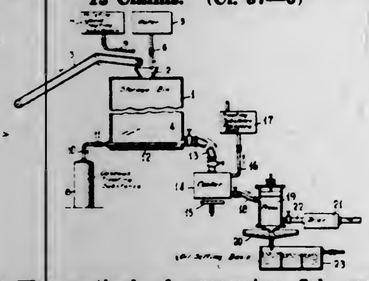
closed when the valve to the conduit to the interior is open, whereby said annular chamber communicates selectively with the interior or exterior of the casing and the pressure therein is atmospheric or that of the interior of the casing as said valves are set, means for engaging the flapper valve with the first mentioned of said conduit valves to hold same seated as long as the flapper valve is seated and means for opening said conduit valve when the flapper valve is open.

2,003,885
RETRACTABLE LANDING GEAR
Harold D. Hoekstra, Kenmore, N. Y.
Application March 24, 1933, Serial No. 662,418
12 Claims. (Cl. 244—2)



1. In aircraft including a wing having front and rear transverse spars, a member hinged to said rear spar, adapted when retracted to extend forwardly adjacent the lower wing surface, and having a forward portion curved upwardly around the front spar so that its forward end terminates substantially within the confines of the leading edge portion of said wing, a wheel pivoted to the forward end of said hinged member, and means for swinging said hinged member and said wheel from a retracted position adjacent to and within said wing to an extended position therebeneath, said means comprising a strut hinged to said member and pivotally connected with said forward spar for movement with respect thereto.

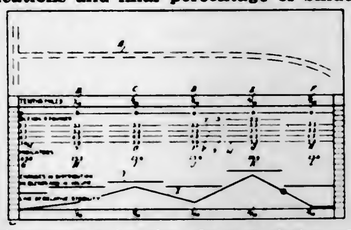
2,003,886
COMBINED SWEATBAND AND REMOVABLE LINING
Louis Hoffeld, New York, N. Y.
Application July 9, 1934, Serial No. 734,389
6 Claims. (Cl. 2—190)



1. A device of the character described, comprising a sweatband arranged to be secured in a

hat; and a circular lining shaped to conform to the interior of the hat, and having a circumference of a length approximating the circumference of the circle formed by the sweatband when

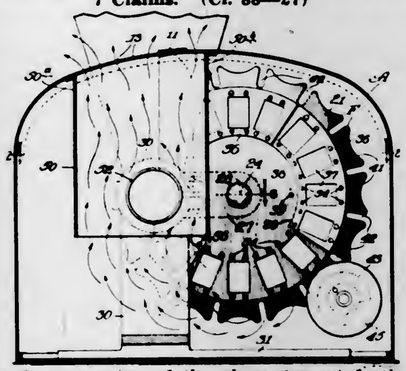
it is operatively secured in the hat, said lining having a segment only of its circumference attached to the side of the sweatband, whereby to adapt said lining to swing on said segment, hinge fashion, into and out of the hat crown.



2,003,887
PRODUCTION OF FERTILIZER
Lawrence T. Hopkinson, Washington, D. C.
Application November 30, 1934, Serial No. 755,486
13 Claims. (Cl. 87—6)

3. The method of processing fish material which comprises accumulating the material in a storage vessel, treating the material in said vessel with formaldehyde, transferring the treated material to a second vessel, driving off the formaldehyde by heating the material in the second vessel, and while the material is still warm applying more heat to digest the residue, and thereafter processing the residue to separate its solid and liquid constituents.

2,003,888
METHOD OF CONSTRUCTING ASPHALT PAVEMENT WITH NATURAL AGGREGATES
Charles C. Jamieson, Jacksonville, Fla.
Application October 28, 1930, Serial No. 491,801
4 Claims. (Cl. 94—23)

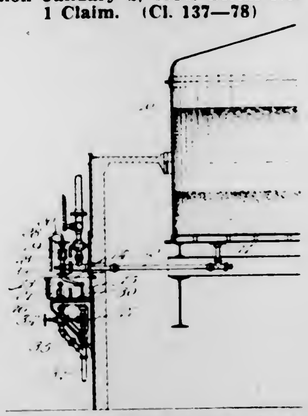


1. A method of constructing a pavement comprising finely breaking up the natural aggregates composing a roadbed intimately mixing therewith by mechanical agitation blends of a binder and a flux oil in a plurality of applications, each successive application having an increasingly higher percentage of binder, making a sufficient number of applications to incorporate a total amount of binder with the aggregate to stabilize the aggregate without flooding, the proportion of binder in the blends, quantity of blends, number of applications and final percentage of binder, being determined by the characteristics of each aggregate.

2,003,889
METHOD OF MAKING DEOXIDIZED COPPER AND COPPER ALLOYS
Herbert C. Jennison, Bridgeport, and Richard B. Montgomery, Seymour, Conn., assignors to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application October 20, 1933, Serial No. 694,522
50 Claims. (Cl. 75—62)

1. A method of making copper alloys comprising melting copper under reducing conditions, exposing the melted copper to air to permit escape of gases and to partially oxidize the copper but to an oxygen content less than 0.090 percent, adding non-carbonaceous deoxidizer which does not form a reaction product which is gaseous at room temperature upon combining with the oxygen of the copper and sufficient in amount to deoxidize the copper, and then adding one or more alloying elements.

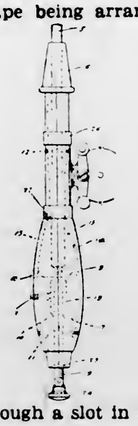
2,003,890
PROJECTION UNIT
Frank N. Jones, Chicago, Ill.
Application September 16, 1932, Serial No. 633,530
7 Claims. (Cl. 88—27)



1. In apparatus of the character set forth, a casing hinged together on one side, a projection lamp therein, complementary housing members carried by the hinged casing members and forming, when brought together, a housing extending about said lamp, perforations in the top of said casing communicating with said housing, means for concentrating the rays of light from said projection lamp, means for intermittently bringing picture films into alignment with said rays, an image screen, means for directing the rays from said films upon said screen, an intake opening, and fan means for circulating air from said intake through the housing about said lamp.

2,003,891
DENTAL PLATE
Eugen Kaczmarek, Berlin-Hermsdorf, Germany
Application January 9, 1933, Serial No. 650,903
In Germany January 9, 1932
4 Claims. (Cl. 32—3)

1. A suction valve for dentures comprising a valve base having openings therein, a valve plate arranged below said valve base and having openings therein adapted to register with the openings in said base, spring means arranged to urge said plate against said base and a resilient body interposed between said plate and base and adapted to be first gripped between the same and subsequently the registering portions of said body being extruded into the openings in said base by the pressure below said plate.

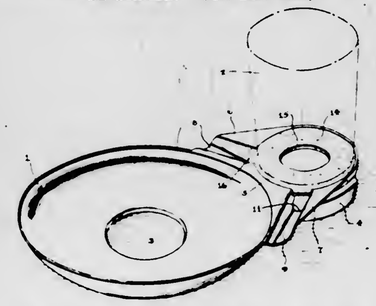


2,003,892
EXAMINATION AND CONTROL DEVICE FOR WORT HANDLING EQUIPMENT
Andreas R. Keller, Lombard, Ill.
Application January 2, 1934, Serial No. 705,023
1 Claim. (Cl. 137—78)

In brewing apparatus of the character described; a tub; a grant having two compartments, one of said compartments having a return to said tub, and the other of said compartments being adapted to discharge into a brew kettle; a wort pipe leading from said tub and adapted to discharge into said grant; an observation glass in said wort pipe whereby the liquid in said pipe may be visually examined to determine whether it should be discharged into said brew kettle; a swivel coupling near the end of said wort pipe; and handle means whereby the outlet of said pipe may be manually directed to discharge into either of said compartments.

2,003,893
FISHING ROD
Lester K. La Pan, Glens Falls, N. Y.
Application September 27, 1934, Serial No. 745,783
5 Claims. (Cl. 43—23)

1. A hand grip for fishing rods comprising an elongated hollow bulbous-shaped member provided on its interior with opposed projections fashioned to provide supporting and retaining means, a measuring reel casing supported in said retaining means and including a measuring tape, said measuring tape being arranged for access

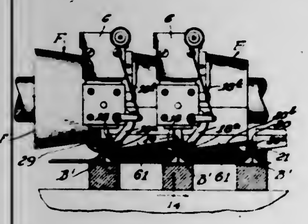


and operation through a slot in one end of said member.

2,003,894
KEYBOARD
Hans Luedtke, Berlin-Tempelhof, Germany
Application June 8, 1933, Serial No. 674,957
In Germany June 8, 1932
11 Claims. (Cl. 84—423)

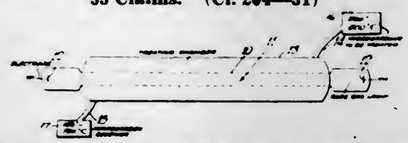
1. A keyboard comprising keys with substantially uniformly shaped hexagonal key heads in honeycomb-like formation arranged in a single general plane adjacent each other and in close relation, thereby forming a continuous field, adapted to be extended after desire in all directions and to be subdivided in any desired manner, the surface of each key head being inclined towards its edges so as to secure a smooth passage from each key head to the surrounding ones.

2,003,895
SERVING UTENSIL
William S. Martin, Rochester, N. Y.
Application July 16, 1934, Serial No. 735,498
21 Claims. (Cl. 131—51)



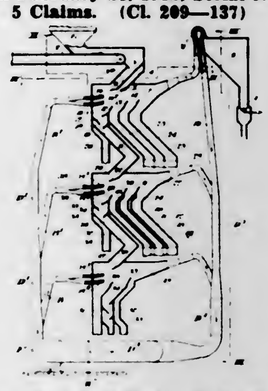
1. A device of the character described comprising a food, liquid or beverage vessel supporting portion and an ash receiver connected thereto, and a member extending across the upper portion of the ash receiver and removably mounted on the upper portion of the ash receiver for the support of the liquid or beverage vessel.

2,003,896
HORN MOUNT
Edward W. Menger, San Antonio, Tex.
Application June 12, 1934, Serial No. 730,367
3 Claims. (Cl. 35—20)



1. A horn mount comprising a body portion having sides and a centrally disposed embossed portion, said embossed portion having recesses with outwardly flaring edges for receiving the horns, and means for securing the skull portion connecting the horns to said embossed portion.

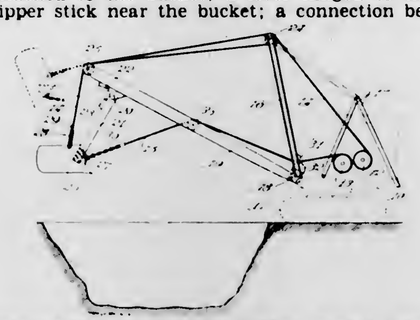
2,003,897
UPHOLSTERY MACHINE
Allister S. Mitchell, Detroit, Mich., assignor to National Automotive Fibres, Inc., Oakland, Calif., a corporation of Delaware
Application February 19, 1930, Serial No. 429,708
15 Claims. (Cl. 112—2)



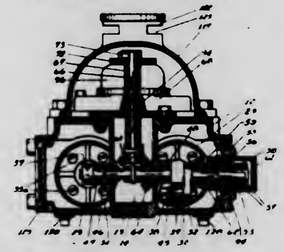
8. In a machine of the character set forth: means for advancing fabrics and forming seam-portions and intervening pleat-fullnesses, means for advancing batts intermediate the fabrics, sewing mechanism for uniting the fabrics, each sewing mechanism comprising a sewing-needle working through the fabrics; looper-bars having looper-needles disposed between the fabrics and coacting with said sewing-needles; a shaft extending transversely to the paths through which the fabrics are advanced; a second shaft parallel to the first-mentioned shaft; an eccentric on said second shaft for oscillating the first mentioned shaft, means actuated by the first-mentioned shaft for reciprocating said looper-bars; means actuated by the second shaft for swinging said looper-bars to raise and lower said looper-needles, and means for rotating said second shaft.

2,003,898
TREATMENT OF HYDROCARBONS
Waldemar O. Mitscherling, Bridgeport, Conn., assignor to Neon Research of Connecticut, Inc., Bridgeport, Conn., a corporation of Connecticut
Application April 28, 1931, Serial No. 533,406
35 Claims. (Cl. 204—31)

1. A process of degrading a hydrocarbon which comprises exposing said hydrocarbon to the action of radiations from a rare gas lamp until it is degraded.



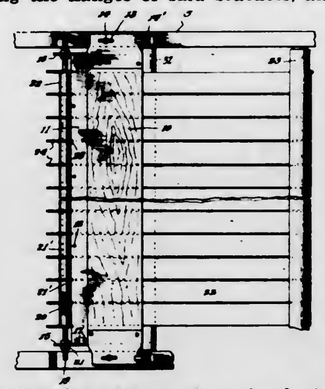
2,003,899
CLEANING AND SIZING OF COAL
Arthur F. Nesbit, Wilkinsburg, Pa.
Application February 23, 1932, Serial No. 594,641
5 Claims. (Cl. 209—137)



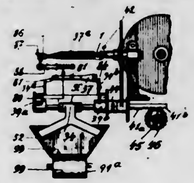
1. In a cleaning and sizing apparatus for lump and granular material, an enclosed inclined conveying chute for conveying the material to be sized and cleaned, upper and lower material conveying walls in said chute, said upper wall being composed, at least in part, of a screen through which the fine material and dust passes onto said lower material conveying wall, angularly adjustable deflector plates at the discharge ends of said conveying walls in the path of travel of the material under treatment and adapted to arrest the flow of the material and to cause said material to discharge from said chute into space with substantially no initial downward velocity, and means for producing a plurality of relatively high velocity air jets directed upwardly and forwardly into the material as it is discharged from said chute and below the deflector plates, said air jets being adapted to separate the fines and dust from the heavier material delivered by said chute.

2,003,900
EXCAVATING APPARATUS
John W. Page, Chicago, Ill.
Application April 7, 1934, Serial No. 719,549
3 Claims. (Cl. 214—138)

1. Excavating apparatus of the character described, including: a boom; a dipper stick with one end hinged to the boom at a point removed from the end of the boom; a bucket hinged to the free end of the dipper stick; a loading line attached to the bucket; a lever hinged to the dipper stick near the bucket; a connection between said lever and the bucket; and a boom line extending over the end of the boom with its outer end attached to said lever.



2,003,901
PISTON METER
Walter H. Parker and Nelson J. Seibert, Pittsburgh, Pa., assignors to Pittsburgh Equitable Meter Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 19, 1931, Serial No. 538,545
4 Claims. (Cl. 73—30)

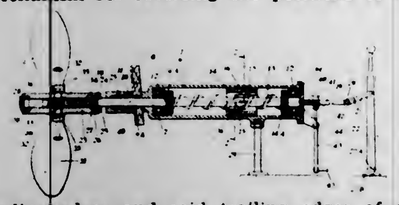


4. A fluid meter comprising a casing having a plurality of cylinders therein, one face of said casing being plane and having openings therethrough communicating with opposite ends of said cylinders; a piston in each cylinder; a crank shaft; a piston rod and crank arm connecting each piston to said crank shaft; a valve seat member having ports therein; a hollow bearing member threadedly engaging said casing and having a shoulder thereon engaging said valve seat member, said valve seat member having a bearing therein and a rotatable valve drive shaft journaled in said bearing and driven from said crank shaft; a valve member rotatably journaled on said hollow bearing member, and means for driving said valve member from said valve drive shaft.

2,003,902
FEED BOARD ATTACHMENT FOR FLAT WORK IRONING MACHINES
Albert J. Randlett, Richmond, Va.
Application June 4, 1934, Serial No. 729,004
5 Claims. (Cl. 68—9)

1. In a feeding apparatus for an ironing machine, a feed board, an elongated supporting means disposed substantially parallel to the front edge of the feed board in spaced relation thereto, ribbons trained about the board and supporting means, brackets securing opposite ends of the supporting means to the feed board and having attaching flanges overlapping the feed board and secured against the upper face thereof, a sheathing strip engaged about the forward edge portion of said feed board and overlying the flanges of said brackets, and ribbon guiding fingers secured to the feed board and projecting forwardly therefrom between the ribbons and engaging the supporting means to brace the same.

2,003,903
COP WINDING MACHINE
Wilhelm Reiners and Gustav Kahlisch, Munich-Gladbach, Germany, assignors to W. Schlafhorst & Co., Munich-Gladbach, Germany, a corporation of Germany
Original application June 21, 1932, Serial No. 618,554. Divided and this application February 10, 1934, Serial No. 710,735. In Germany June 29, 1931
5 Claims. (Cl. 242—35.5)



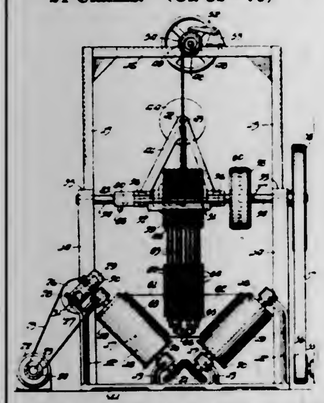
1. In a cop winding machine, a plurality of juxtaposed stub winding spindles and opposed yielding pegs in alignment with said spindles for supporting cop tubes between said spindles and pegs; a cop handling unit adjacent said spindles and pegs having thereon longitudinal bars and support-means between said bars for a plurality of juxtaposed empty cop tubes, said cop handling unit being normally disposed in a plane displaced from the plane of said spindles and pegs; means for actuating said unit transversely of the spindle axes to bring said unit into position preparatory to releasing the pegs from the cops and stripping the cops from the spindles, and means for actuating said unit in a direction parallel to the peg and spindle axes to effect said stripping and releasing operations.

2,003,904
PROPULSION OF BOATS
William Riseam, Hull, England, assignor of one-half to John Herbert Haiste, Hull, England
Application November 19, 1934, Serial No. 753,754
In Great Britain February 9, 1934
3 Claims. (Cl. 115—24)

1. Means for the propulsion of a boat, comprising a propeller shaft, a propeller including blades mounted pivotally in relation to said pro-

peller shaft, each of said blades having a leading edge and also a trailing edge, means to rotate said propeller shaft through an angle of at least 360° in opposite directions alternately, and mechanism for reversing the positions of said

leading edges and said trailing edges of said blades for the purpose of propelling said boat astern, the thrust on said blades being constantly effective during both directions of angular movement of said propeller shaft and both when said boat is being propelled ahead and astern.



2,003,905

GLASS GRINDING MACHINE

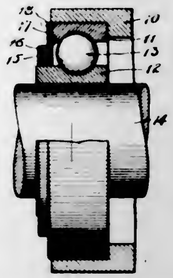
Michael R. Schottland and Robert A. Fontaine, Martinsville, Va.

Application September 13, 1932, Serial No. 632,974

24 Claims. (Cl. 51—76)

17. A glass grinding machine comprising conveyor means, a carrier resting thereon, a movably mounted frame above the conveyor means, a series of rotary grinding disks mounted in said frame, means on said carrier for supporting a plurality of glass panes in upright position to have their edges engageable by said grinding disks, said conveyor means cooperating with the sides of the carrier for gravitationally centering the latter with respect to the grinding disks.

2,003,906



BEARING AND METHOD OF FORMING SAME

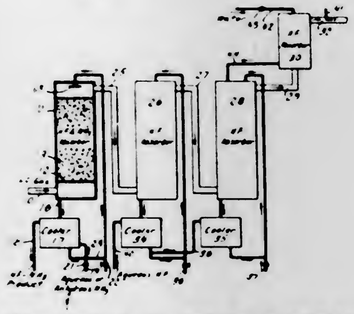
Raymond R. Searles, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a corporation of Connecticut

Application December 4, 1930, Serial No. 499,927

6 Claims. (Cl. 29—148.4)

5. The method of applying a bearing seal to a bearing ring, which comprises first forming a bearing ring with a relatively thin portion at one end, then hardening said ring and thin portion, then softening said thin portion to render it bendable while leaving said ring hard, then positioning a seal member adjacent to said thin portion, and finally bending said thin portion over

said seal member to hold it against the end of said ring.



2,003,907

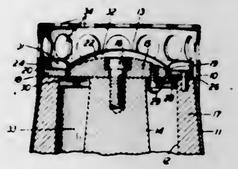
MANUFACTURE OF ACID COMPOSITIONS

John V. Shinn, Flushing, and Tom Cummings, Brooklyn, N. Y., assignors to General Chemical Company, New York, N. Y., a corporation of New York

Application September 20, 1933, Serial No. 690,226

15 Claims. (Cl. 23—5)

15. The method of making a substantially anhydrous hydrofluoric acid-ammonia composition which comprises contacting substantially anhydrous hydrofluoric acid with a substantially anhydrous liquid containing hydrofluoric acid-ammonia composition liquid at normal temperatures.



2,003,908

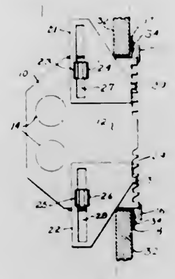
ACOUSTIC DEVICE

Lee T. Smith, Madison, N. J., and Albert L. Thuras, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application April 25, 1934, Serial No. 722,266

7 Claims. (Cl. 181—32)

1. An acoustic device comprising a diaphragm of polymerized styrol.



2,003,909

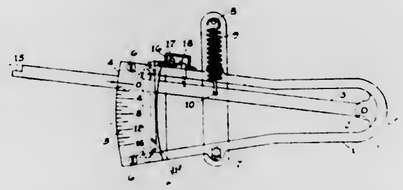
ELECTRICAL OUTLET RECEPTACLE

John Frank Stark, Rushville, Ind., assignor of one-fourth to Dwight G. Van Osdol, one-fourth to George J. Griesser, and one-fourth to Michael Katsaros

Application June 14, 1933, Serial No. 675,715

9 Claims. (Cl. 247—21)

1. An outlet box having side walls and ends, means on the box ends for bearing against the outer side of a wall, slides carried on the box sides having wall contacting portions oblique to each other and to the adjacent side of the wall, and means for interengaging and retaining the slides with and on the box sides whereby the slides may be passed through and held behind the wall to cause the wall to be compressively engaged between the oblique portions of the slides and said bearing means, said interengaging means comprising bendable members carried by one of the members to be joined and bent over holding formations of the other of the members to be joined and said box sides having a series of serrations each having a sloping side to contact a bendable member when the member is bent against a serration.



2,003,910

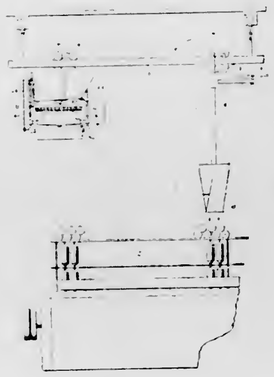
TENSION TESTING DEVICE FOR SPRING CONTACTS

James E. Stephenson, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application December 8, 1930, Serial No. 500,803

7 Claims. (Cl. 265—18)

7. In a gauge for testing contact pressures, in combination, a handle, an arm pivoted to the handle, a graduated scale over which the arm can move, means biasing the arm toward one end of the scale, slidably adjustable stop screws projecting into the path of movement of the arm for restricting movement of the arm to any predetermined portion of the scale, an indicating lamp, and an energizing circuit for the lamp which is closed upon the arm contacting with either one of the two adjustable stops.



2,003,911

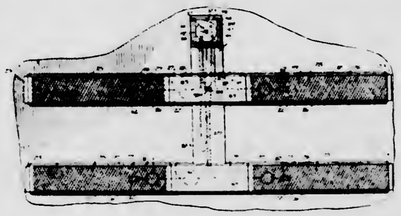
METHOD OF AND APPARATUS FOR OPERATING IN A SPINNING OR OTHER ROOM

William B. Walker, Roxboro, N. C.

Application February 23, 1933, Serial No. 657,971

7 Claims. (Cl. 261—1)

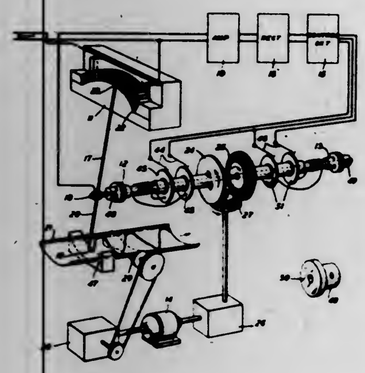
1. The method of conditioning air in a spinning or other work room which comprises creating a downwardly directed current of air, traversing the current of air about the room, and traversing a humidifying device in substantially the same path about the room at the rear of said current of air.



2,003,912

WHEEL TESTING APPARATUS

Ira A. Weaver, Albert R. Squyer, and Earl K. Hall, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill., a corporation of Illinois

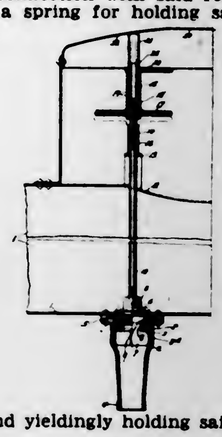


Application September 12, 1929, Serial No. 392,102

18 Claims. (Cl. 73—51)

3. In a vehicle-wheel brake-tester, the combination of a plurality of movable members adapted to be contacted simultaneously each by the corresponding wheel of a vehicle and to be moved thereby in either of opposite directions due to the application of the brakes to the wheels, means to resist such movements of said members in both directions, a gauge-glass for each of said movable members positioned relatively to one another in the same relation as said movable members to one another, and means actuated by the movements of said members to force liquid into said gauge-glasses proportional to the movements of the corresponding members.

2,003,913
POSITION CONTROLLING DEVICE
Edward C. Wente, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 1, 1933, Serial No. 700,548
7 Claims. (Cl. 179—175.3)



7. In a volume level recorder comprising a pair of oppositely rotating electromagnets, a control circuit for the electromagnets adapted to prevent overshooting of the recorder, said circuit comprising a variable impedance, a resistance in shunt to the impedance, a plurality of variable electromotive forces in series with the impedance and two shunt branches connected to different electromotive forces, each shunt branch comprising a field coil for one of the electromagnets and a unidirectional current passing element, said unidirectional current passing elements being opposed to one another, the difference between the electromotive forces constituting a zone within which the impedance may vary without affecting the recorder.

2,003,914
PROPELLANT EXPLOSIVE
Edward Whitworth, Saltcoats, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application May 15, 1933, Serial No. 671,279. In Great Britain May 18, 1932
8 Claims. (Cl. 52—22)

1. The process of manufacturing gelatinized propellant explosives containing nitrocellulose and a liquid nitric ester of a polyhydric aliphatic alcohol, which comprises gelatinizing the nitrocellulose with the nitric ester and a mixture of diethyl diphenyl urea and dimethyl diphenyl urea.

2,003,915
ADAPTER VALVE FOR TANK OUTLETS
Victor Willoughby, Ridgewood, N. J., and William L. Lapworth, Wantagh, N. Y., assignors to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application July 22, 1931, Serial No. 552,377
13 Claims. (Cl. 137—21)

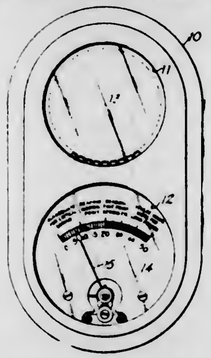
1. A car tank discharged valve mechanism comprising a valve seat and valve, a reciprocable valve operating rod, means for rotating said rod including a handle having a slidable but non-rotatable connection with said rod, and means including a spring for holding said handle in

position and yieldingly holding said valve to its seat.

2,003,916
RAILWAY CAR
Victor Willoughby, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application October 15, 1932, Serial No. 637,862
16 Claims. (Cl. 62—91.5)

1. In a railway car, a body, a roof, a plurality of longitudinally spaced refrigerating units secured to the roof each including closed containers adapted to hold a refrigerant and an air chilling chamber extending from said to side of the car, and air entrance ducts connecting successive air chilling chambers.

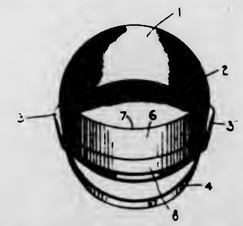
2,003,917
HANDLE GRIP
James G. Bowden, Millbury, Mass., assignor to The Felters Company, Boston, Mass., a corporation of Massachusetts
Application January 24, 1933, Serial No. 653,286
3 Claims. (Cl. 273—75)



1. A handle grip comprising a flexible strip of wool felt, the fibers of which are elastically bonded permanently together with a rubbery material, the proportion of said material being so limited that a substantial portion of the felty feel and fibrous characteristics of the felt are retained.

2,003,918
HOSE COUPLING
Wallace E. Brown, Fairfield, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application October 13, 1933, Serial No. 693,467
3 Claims. (Cl. 285—71)

1. A detachable coupling comprising a resilient discontinuous ring, a strengthening bead on one edge thereof, a projection in one end being slidingly engaged in an elongated aperture in the other, and a strengthening and guide wire slidingly connecting the strengthening bead at the ends thereof.

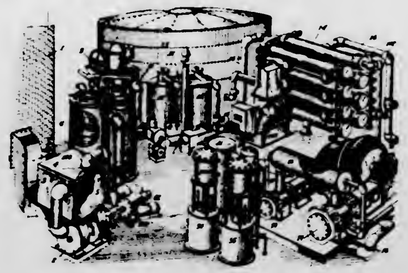


2,003,919
METER
Earl L. Canfield, Hillside, N. J.
Application September 16, 1933, Serial No. 689,705
1 Claim. (Cl. 88—23)

A portable light meter having an opaque casing provided with two apertures in its front face, a scale visible through one aperture, the scale reading in foot candles and having alongside the foot candle indications the character of the task which the human eye should be called upon to perform when the light intensity equals the reading in foot candles adjacent the particular indication, a pointer movable over the scale, and a light cell behind the other aperture for actuating the pointer, the scale and light cell being in substantially the plane of the front face of the light meter whereby the intensity of light in a plane of reference may be determined.

2,003,920
BATHING CAP
Winnie Carter, Wallington, England, assignor of one-half to George Spencer Moulton & Company, Limited, London, England
Application July 19, 1934, Serial No. 735,952
In Great Britain September 25, 1933
2 Claims. (Cl. 2—68)

1. The combination with an india-rubber bathing cap having ear cavities, of an annular band of thin sheet india-rubber having apertures for the wearer's ears coincident with said cavities, the band being positioned in the bathing cap near the lower marginal edge thereof



and having its upper edge secured to the interior surface of the cap while its lower edge is free to fit the head of the wearer during use, thereby preventing access of water to the hair.

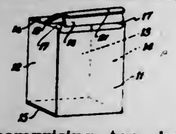
2,003,921
PROCESS FOR WATERPROOFING OR FILLING CAVITIES IN THE GROUND OR IN STRUCTURES
Louis Chevrillon, Paris, France, assignor to The Francois Cementation Company Limited, London, England
No Drawing. Application January 6, 1934, Serial No. 705,640. In France June 2, 1933
3 Claims. (Cl. 61—36)

1. A process for waterproofing and filling cavities in ground and in structures, which comprises simultaneously and separately injecting into the cavity to be filled a dispersion of binding material and a fine aqueous suspension of bitumen bearing material of such poor stability as to be broken up upon contact with said binding material, whereby the solid phase of the suspension is embedded by the binding substance at the outlet of the injecting means and immediately provides a coherent solid mass.

2,003,922
PRODUCTION OF CARBON-DIOXIDE FROM FLUE GASES
Roger J. Claret, New York, N. Y., assignor to Natural By-Products Corporation, New York, N. Y., a corporation of New York
Application January 26, 1933, Serial No. 653,722
17 Claims. (Cl. 62—121)

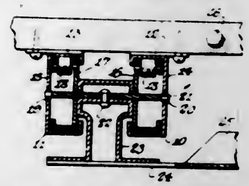
1. Process for production of solid carbon dioxide that consists in subjecting carbon dioxide gas to high compression without liquefaction of the gas, then passing the gas into a receiving tank, then causing the gas from the receiving tank to be released in an expansion chamber in small quantities in rapid succession for alternate periods of time to form snow in the chamber.

2,003,923
SCREEN PLATE SUPPORT
George Claussen, Longview, Wash.
Application November 1, 1934, Serial No. 750,975
6 Claims. (Cl. 92—30)



1. A screen plate support comprising a bar, a saddle adapted to hold the edges of the screens extending lengthwise of the bar and engaging the upper edge thereof, spaced yokes engaging the lower edge of the bar and means for securing the yokes to the saddle.

2,003,924
DRILL STEEL RETAINER
John C. Curtis, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a corporation of Ohio
Application July 13, 1932, Serial No. 622,222
7 Claims. (Cl. 121—32)



1. A tool retainer comprising a housing formed with a bore adapted to slidably receive the shank of a cutting tool, a collar formed integral on said shank, a counterbore within said housing within which said collar is free to slide, a single opening leading from one side of said housing into said counterbore, a shaft within said housing diametrically opposed to said opening, a yoke retainer pivotally mounted upon said shaft formed with a closed end portion movable through said opening into or out of engageable position with said collar, and a handle integral with said retainer by which said closed end portion may be moved into or out of engagement with said collar, said handle and retainer falling short of the outer ends of said housing irrespective of the position of said portion with respect to said collar.

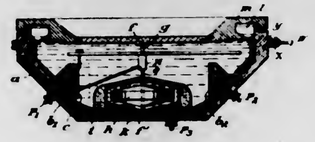
2,003,925
CONTAINER
Adrian O. Daller, Dennis Port, Mass., assignor to Daller Carton Co., Inc., New York, N. Y., a corporation of New York
Application December 5, 1933, Serial No. 700,954
7 Claims. (Cl. 229—51)

1. A carton comprising top, bottom, front, back and end walls, a portion of one of said walls having unsecured overlying layers, at least one of said layers being severable from the remainder of said wall along a weakened line, and a second wall comprising intersecured extensions from said layers, said second wall being movable with said portion of said first wall when said weakened line is broken, whereby that portion of said unsecured overlying layers which is set off by said weakened line is adapted to form a lifting tab.

2,003,926
TABLE WITH FOLDABLE LEAVES
William A. Duncan, Statesville, N. C.
Application March 24, 1933, Serial No. 662,590
5 Claims. (Cl. 311—73)

1. In an extension table, the combination of telescopic members consisting of a pair of outer hollow bars rectangular in cross section and having a longitudinal slot along the inner side thereof, a pair of inner hollow bars rectangular in cross section and having a longitudinal slot along the outer side thereof, said inner bars being telescopically mounted in the outer bars, the outer bars having a series of spaced apertures in their vertical webs, and a gear meshing in the apertures of said webs whereby movement of one of said telescopic members will cause a corresponding reverse movement of the other telescopic member.

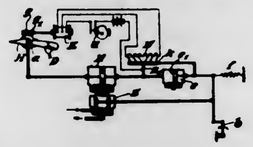
2,003,927
HATCH COVER OPERATING MEANS
Francis A. Ecoff, St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application February 25, 1931, Serial No. 518,126
15 Claims. (Cl. 268—9)



1. The combination with a hingedly mounted closure element of a lever pivotally mounted adjacent one end thereof and adjacent a free edge of said element for swinging movement about an axis parallel to said free edge, said lever having a bottom wall provided with a slot at the pivot end of said lever, said bottom wall at the said pivot end being formed into a camming surface which merges into a shoulder, the camming surface being adapted to engage a closure part when the lever is swung in one direction whereby to force the closure element to fully closed position and the said shoulder being adapted to limit the movement of said lever in said direction, the before mentioned slot defining a cross-bar at the pivot end of said lever adapted to engage the before mentioned closure part to lift said closure when the lever is swung in the opposite direction.

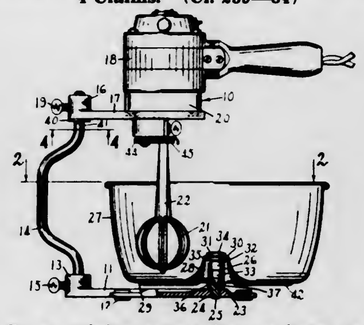
2,003,928
STRIPPING AND DISCHARGING DYED TEXTILES
John Gwynant Evans and Leslie Gordon Lawrie, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, Westminster, England
No Drawing. Application March 16, 1933, Serial No. 661,180. In Great Britain March 19, 1932
16 Claims. (Cl. 8—2)

1. A process for stripping textile materials dyed with azoic colours which comprises treating them with a chemically reducing liquor con-



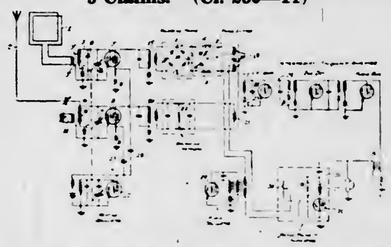
taining a substance selected from the group consisting of amines and amine salts having an aliphatic radical which contains not less than ten carbon atoms.

2,003,929
FLUID COMPASS
Eduard Fischel, Berlin-Charlottenburg, and Gerhard Rieper, Berlin-Mariendorf, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application September 7, 1933, Serial No. 688,537
In Germany September 24, 1932
5 Claims. (Cl. 33—204)



1. In a fluid compass for use in air or water craft the combination of at least one counter-electrode at the inner surface of the compass casing, a vertical axle pivoted at both ends in bearings and adapted to carry for co-action with said counter-electrode at least one electrode and the magnet system, a metallic float member secured to the lower end of said axle and being electrically connected to said electrode, a casing substantially enclosing said member, said casing being made of insulating material and provided with an opening for the axle, a metallic layer on the inside of said casing, an additional electrode placed inside of the casing adjacent to said floating member and being electrically connected to said layer, and circuit connections between said additional electrode and said counter-electrode for operating an indicating or a steering device.

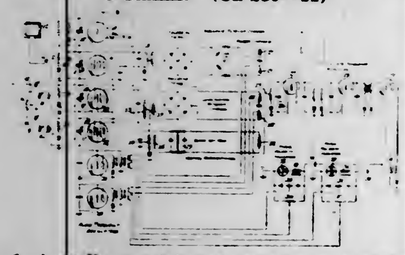
2,003,930
AUTOMATIC RUDDER CONTROL DEVICE
Eduard Fischel, Berlin-Charlottenburg, Germany, assignor to Siemens-Apparate und Maschinen G. m. b. H., Berlin, Germany, a corporation of Germany
Application May 3, 1934, Serial No. 723,659
In Germany May 11, 1933
10 Claims. (Cl. 244—29)



1. In an automatic rudder control device for dirigible craft in combination, a main control plane, a servo-motor for adjusting the same, control apparatus, means operable by said apparatus for controlling said servo-motor, an auxiliary control plane, a second servo-motor for adjusting said auxiliary control plane and means operatively connected to said means regulating said main control plane for controlling said second servo-motor in dependence upon the adjusting movement of the main control plane.

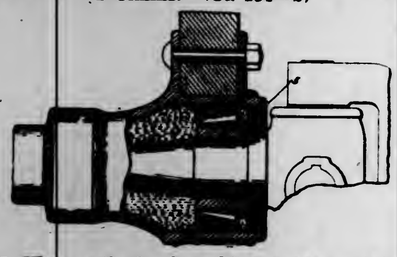
2,003,931
MIXING APPARATUS
Alfred C. Gilbert, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application October 9, 1933, Serial No. 692,745
4 Claims. (Cl. 259—84)

1. In a mixing apparatus, a base, a bowl mounted on said base for free rotation thereon, a stirring device comprising a pair of oppositely rotatable elements, means to support said stirring device, and means to adjust said supporting means in a horizontal plane to dispose said stirring device with one of the elements thereof closer to the wall of said bowl than the other element to cause rotation of said bowl in one direction during the beating operation, and to adjust said supporting means to dispose the other element in like position in respect to the bowl wall to cause rotation of the bowl in the other direction.



2,003,932
RADIO DIRECTION FINDER
John W. Greig, Detroit, Mich.
Application December 27, 1932, Serial No. 648,912
5 Claims. (Cl. 250—11)

2. A radio receiving apparatus for indicating the vertical plane in which radio frequency signals arrive with respect to an antenna system; consisting of a loop, a vertical antenna, a loop tuning means, a vertical antenna tuning means, a first modulator having an input circuit connected to said loop tuning means, a second modulator having an input circuit connected to said antenna tuning means, a radio frequency oscillator electrically coupled to both of said modulators to deliver a frequency which beats with the incoming signal frequency to form an intermediate frequency, two separate intermediate frequency channels connected to the output circuits of the said two modulators, a reversing means in one of said channels, a phase shifting means in the other of said channels, an audio frequency oscillator connected to operate said reversing means, an intermediate frequency amplifier having an input circuit con-

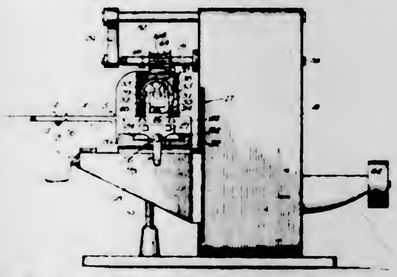


nected to the outputs of both of said intermediate frequency channels, a detector, and means connected to said detector and to said audio oscillator for indicating the relative phase polarity of the audio output of the detector as compared with the phase of said audio oscillator.

2,003,933
THREE DIMENSION RADIO DIRECTION FINDER
John W. Greig, Detroit, Mich.
Application December 27, 1932, Serial No. 648,913
8 Claims. (Cl. 250—11)

1. A radio receiving apparatus comprising a plurality of input channels, a reversing means in all but one of said channels with each reversing means effectively interchanging the poling of input and output leads of said reversing means at an audio frequency rate which is different for each of the said reversing means, and means for combining the outputs of the reversing means with the output of the channel which has no reversing means, means for correcting the phase of the currents in said channels to produce effective modulation at the fundamental audio frequencies employed in operating the reversing means, a common amplifier and detector supplied by the said combined channel outputs, a plurality of phase polarity indicators connected in the output of the radio receiver, and means for supplying each of said phase polarity indicators with a separate audio frequency, each separate audio frequency being synchronous with one of the audio frequency rates at which the said reversing means are operated.

2,003,934
GREASE RETAINING WASHER FOR BEARINGS
Lawrence H. Hansel, Brookline, Mass., assignor to The Felters Company, Boston, Mass., a corporation of Massachusetts
Application January 30, 1933, Serial No. 654,179
2 Claims. (Cl. 154—2)

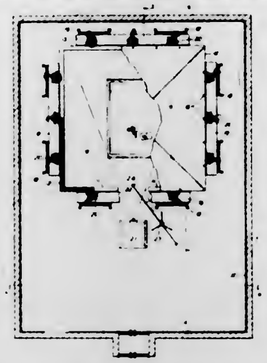


2. The method of making grease retaining washers which comprises combining and bonding two layers of felt by heavily base coating a surface of at least one of the layers with a cement made of chloroprene, placing the two sheets together in face to face contact with the chloroprene coat therebetween, pressing the layers together, heating the laminated sheet thus formed for a sufficient period of time and at a suitable temperature to polymerize the chloroprene and render the same relatively impervious to oil.

2,003,935
MANUFACTURE OF UPHOLSTERY PADDING
Joseph Arthur Howard, Streatham Hill, London, England
Application July 10, 1934, Serial No. 734,519
In Great Britain December 6, 1933
3 Claims. (Cl. 91—68)

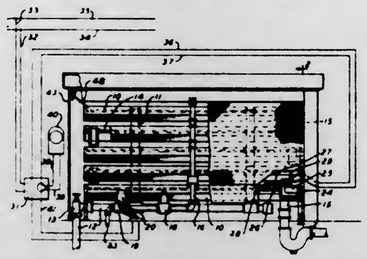
1. A method of producing a web of upholstery fibres held together in a loosely associated condition by rubber deposited from rubber latex, consisting in introducing said fibres into the top of a downwardly extending confined space, wetting with latex the web of said fibres on issue from the bottom of said confined space, drying said latex-wetted web, immersing said dried web in latex, squeezing said web after said immersion, and drying said latex-wetted web after said squeezing.

2,003,936
MILLING MACHINE
Wasyl Hucal, Chicago, Ill.
Application January 2, 1934, Serial No. 704,987
11 Claims. (Cl. 90—20)



1. In a machine of the character set forth, the combination of means for rotatably supporting a blank, means for cutting the blank, said first-named means being movable lengthwise relative to said second-named means, and means for moving said first-named means lengthwise and simultaneously rotating the blank comprising a fixed pivot mounted on a stationary part of the machine and a lever operatively engaging said first-named means making a sliding connection with said pivot.

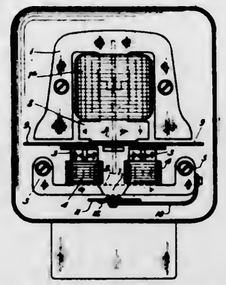
2,003,937
SOUND PICTURE SET
Franklin L. Hunt, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 15, 1933, Serial No. 702,448
5 Claims. (Cl. 181—30)



1. The combination of a studio having highly damped walls and a substantially enclosed sound

picture set disposed therein, the walls of said

set having a substantially lower sound absorption coefficient than the walls of the studio.



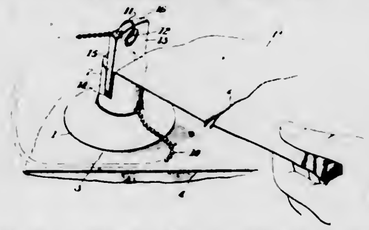
2,003,938
HUMIDIFYING APPARATUS
Harry L. Husson, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application February 27, 1934, Serial No. 713,115
4 Claims. (Cl. 257—182)

2. An air heating and humidifying apparatus comprising a plurality of relatively vertically arranged elements each having internal chambers to receive a heating fluid and having an open external trough to receive water, means to admit a heating medium to the internal chambers, means to supply water to one of the troughs including a valve, means to lead the water in cascade through the troughs, a float in one of the troughs, a mercury switch connected to the float to be operated thereby, a solenoid in circuit with the switch to operate the water supply valve, and a circuit making and breaking humidostat connected in series with the switch and the solenoid.

2,003,939
ELECTRICITY METER
Joseph Indergand, Baar, Switzerland, assignor to Landis & Gyr, A-G., a corporation of Switzerland
Application March 16, 1934, Serial No. 715,799
In Switzerland March 18, 1933
5 Claims. (Cl. 171—264)

1. A Ferraris meter including in combination voltage and current magnets and a metering disc to be rotated thereby, the current magnets being provided with an air gap, and temperature controlled means for varying the magnetic reluctance of the air gap comprising a plate of magnetic material positioned adjacent to said

gap and temperature control means for moving said plate.



2,003,940
HIGH SPEED BOTTLE MAKING PROCESS
Henry W. Ingle, Windsor, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
No Drawing. Application January 22, 1932, Serial No. 588,237
7 Claims. (Cl. 49—80)

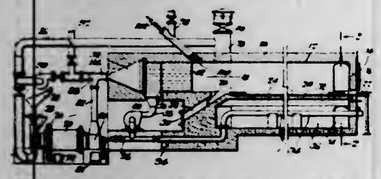
1. The process of making glass ware in molds which comprises subjecting molten glass to contact with mold surfaces for periods of time of less length than a period of contact which would result in ware which would deform when finally removed from the mold contact, and during the contact period provided extracting sufficient heat from the glass so that the articles when removed from contact with said mold surfaces are self-sustaining.

2,003,941
PROCESS FOR THE PRODUCTION OF PHENOL
Leopold Kahl, Charlottenburg-Berlin, Germany, assignor to Rütgerswerke-Aktiengesellschaft, Berlin, Germany
No Drawing. Application May 3, 1934, Serial No. 723,694. In Germany May 10, 1933
12 Claims. (Cl. 260—154)

1. A process for the production of phenol (C_6H_5OH) from homologous phenols and hydrogen characterized by the feature that the reaction mixture is suddenly raised by hot gaseous contact to the temperature favorable for the formation of phenol and is rapidly cooled down after a short reaction period.

2,003,942
FABRIC-GRIPPER
John D. Karle, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 28, 1933, Serial No. 682,624
14 Claims. (Cl. 223—54)

14. A fabric-gripper comprising a resilient suction cup, a post rising from said cup, and



means on said post for releasably gripping a fabric and supporting such fabric at an elevation above the base of said post greater than the lateral distance from the axis of said post to the point at which the fabric is gripped, whereby the post is freely tiltable resiliently by a pull on the gripped fabric.

2,003,943

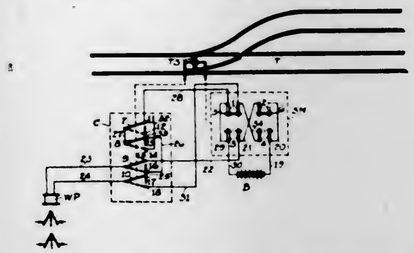
HEATING PROCESS AND APPARATUS

Albert L. Klees, New York, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y., a corporation of Maine

Application April 8, 1933, Serial No. 665,053
20 Claims. (Cl. 263—15)

1. The method of operating furnaces, which comprises pulverizing a solid fuel while so passing a hot and substantially inert gas therethrough as to suspend in said gas fuel particles of a desired fineness, continuously advancing the resultant suspension at an elevated temperature toward a highly heated combustion zone of said furnace, and continuously and concurrently conducting the said hot fuel suspension and a heated combustion-supporting gas into said highly heated combustion zone in parallel superposed streams at regulated approximately equal velocities adapted to maintain in substantial degree a parallel flow of the said contacting streams within the combustion zone.

17. An open-hearth furnace comprising in combination a hearth, regenerative chambers respectively adjacent each of two opposite ends thereof, burner means including a casing having therein a plurality of spaced parallel fuel ducts respectively mounted in each of the said ends of the furnace at opposite sides of the hearth, the said burner means being of approximately the same width as the hearth, means connected with each regenerator adapted to flow air at a regulated rate to the corresponding casing and to distribute it between the spaced fuel ducts therein, gas outlets within the furnace adjacent the hearth and connecting the latter with corresponding regenerators, the respective burners being in regulated communication with a corresponding regenerator, at least one gas-swept solid fuel pulverizer connected with the respective burners and having an inlet and outlet end, means for feeding solid fuel at a regulated rate to the pulverizer, a flue gas conduit connecting the respective regenerators with the pulverizer, means for inducing a regulated flow of flue gases selectively from either regenerator through the pulverizer and to the corresponding burner, and means for the regulated flow of flue gases from a regenerator directly to one of the burners and bypassing the said pulverizer.



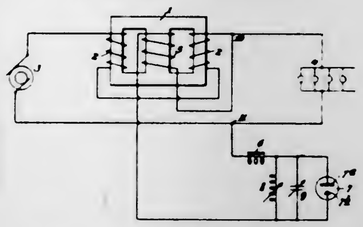
2,003,944

INDICATING MEANS FOR SWITCH MACHINES

Andrew Langdon, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application October 30, 1930, Serial No. 492,282
3 Claims. (Cl. 246—253)

1. In combination, a track switch, a switch machine arranged to power operate said track switch, pole changer contacts included in said switch machine and operated in accordance with the locked position thereof, a switch circuit controller directly operated in accordance with the position of said track switch, a local source of energy at said track switch, a three position polarized relay, a control circuit including said switch machine pole changer contacts and said



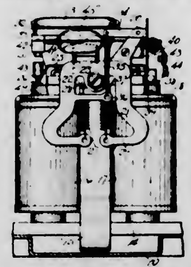
switch circuit controller for distinctively operating said relay in accordance with the extreme position of said switch and the locked position of said switch machine, and means for shunting said relay when said switch circuit controller is not in either extreme position and also when said extreme position does not correspond to the position of said switch machine pole changer contacts.

2,003,945

ELECTRIC CONTROLLING APPARATUS

Frank G. Logan, Mount Vernon, N. Y., assignor to Ward Leonard Electric Company, a corporation of New York

Application September 5, 1931, Serial No. 561,396
12 Claims. (Cl. 171—119)



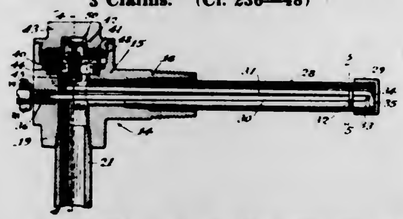
11. The combination of an alternating current supply circuit, an alternating current consumption circuit, a reactor for adjusting over a wide range the voltage supplied to said consumption circuit, said reactor having a winding connected in series between the supply circuit and said consumption circuit and having a second winding for varying the reactance, an auxiliary controlling device connected to said alternating current consumption circuit and subjected to change of voltage thereof and receiving energy therefrom for supplying direct current to said second winding, and means for adjusting over a wide range the direct current output from said controlling device to said second winding independently of change of voltage of said consumption circuit for changing the voltage of said consumption circuit over a wide range, the connections of said controlling device to said consumption circuit and to said second winding being related to cause said reactor to further amplify any change of voltage of said consumption circuit.

2,003,946

TELEPHONE TOLL APPARATUS

George A. Long and William W. Long, Hartford, Conn., assignors to The Gray Telephone Pay Station Company, Hartford, Conn., a corporation of Connecticut

Application June 1, 1934, Serial No. 728,532
15 Claims. (Cl. 194—16)



1. Toll collecting mechanism for a set of telephone instruments, said set including a polarized relay, an electric circuit for energizing said relay, a liquid switch for controlling said circuit, mechanism for operating said switch to circuit closing position and for releasing it for movement from said position, and electrical means for retaining said switch in its circuit closing position after said operating mechanism is returned to its normal position of rest.

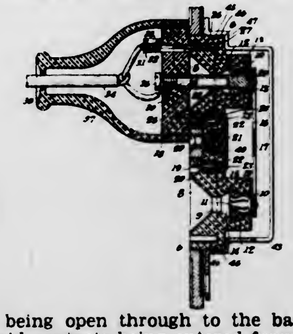
2,003,947

SNAP ACTION THERMOSTAT

Edwin W. McKinley, Los Angeles, Calif.

Application June 7, 1933, Serial No. 674,679
3 Claims. (Cl. 236—48)

1. A thermostat of the class described comprising a hollow gas body having a valve seat therein, a valve arranged to engage the seat, a stem secured to said valve, a member slidably mounted in said stem and normally seated therein with a portion of it projecting therebelow, a spring under compression disposed in said stem and urging said member seated, a tubular heat responsive element closed at its outer end secured to and communicating with the interior of the body at a point below the valve, valve actuating means including a bell crank lever disposed within said heat responsive element with the short arm engaging the closed end of the same and its long arm projecting into the body and extending underneath said valve stem, and means associated with said valve for regulating the movement of the member in its stem after it has been engaged by the long arm of said lever for the purpose set forth.



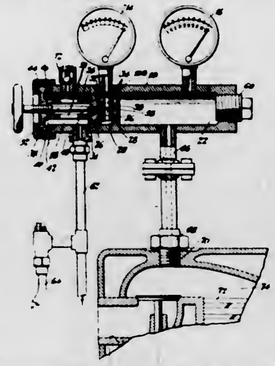
2,003,948

ATTACHMENT PLUG AND RECEPTACLE

Wilbur K. Mess, Newark, N. J.

Application March 12, 1934, Serial No. 715,046
3 Claims. (Cl. 173—330)

1. An electric receptacle base having a flush face with a generally conical prong guiding recess therein, a guide passage extending back from said recess, a larger chamber at the back of said guide passage and an annular groove in the flush face portion surrounding the conical recess, and contacts located respectively in said chamber and annular groove, said chamber and annular



groove being open through to the back of the base, said contacts being entered from the back of the base into said chamber and groove respectively, said chamber and groove having shoulders and said contacts having resilient locking portions engaging over said shoulders.

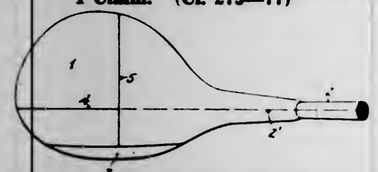
2,003,949

GAS ENGINE LEAKAGE TESTER

John D. Morgan, South Orange, N. J., and Percy B. Levitt, Jackson Heights, N. Y., assignors to Doherty Research Company, New York, N. Y., a corporation of Delaware

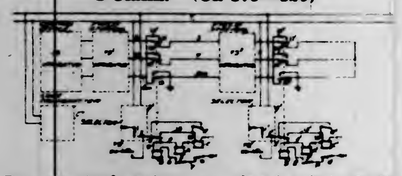
Application December 16, 1932, Serial No. 647,550
2 Claims. (Cl. 137—75)

1. Flow restricting apparatus adapted for leakage testing, comprising a manifold, an apertured lateral partition dividing said manifold into inlet and outlet chambers, the aperture in said partition having its edges beveled to form a frustoconical seat, a centrally apertured plug adapted for insertion in one end of said manifold and having its periphery contoured and dimensioned to seat in and close said partition aperture, the aperture in said plug forming a connecting passage between said inlet and outlet chambers, an annular groove formed in the said end of the manifold, a gasket adapted for mounting in said groove, a centrally apertured cap for said plug having a knife edge rim adapted to form a closure seal between the plug and the gasket, a screw cap for the said manifold end adapted for forcing said plug into tight sealing relation with the



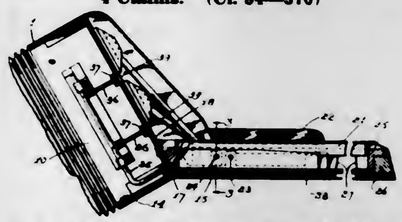
seat formed by the said partition aperture and with the gasket, a needle valve closure for the plug aperture having a stem threadably journalled in the aperture of the plug cap, and a flow restriction orifice mounted in the passage formed by the central aperture of the plug.

2,003,950
FINGER RING, BRACELET, AND THE LIKE
Josef Pejchar, Cicero, N. Y.
Application May 18, 1934, Serial No. 726,270
8 Claims. (Cl. 63—27)



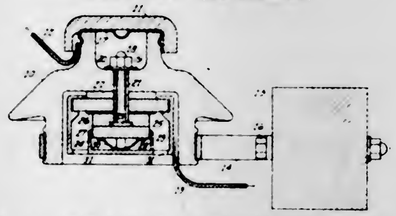
1. An article of the character described, comprising a setting member having a plurality of holding prongs extending on the same side of said member, an ornamental object set between said prongs and held by them, and a body member having spaced ends connected with two opposite holding prongs of said setting member.

2,003,951
GOLF CLUB
Thomas Pepin, New York, N. Y.
Application April 24, 1934, Serial No. 722,089
1 Claim. (Cl. 273—77)



A golf club comprising a shaft and a head, having its sole convexly curved to provide a transversely extending sole line, a line formed on said head, which line lies in a plane which contains the shaft axis and which is perpendicular to the transverse sole line of the club head, said second mentioned line being located to the rear of the striking face and spaced substantially therefrom.

2,003,952
CENTRALIZED TRAFFIC CONTROLLING SYSTEM
Robert M. Phinney, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application March 31, 1932, Serial No. 602,231
1 Claim. (Cl. 175—320)

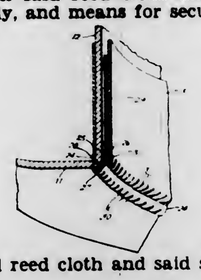


In a control system; a relay bank including a first relay, a second relay and a third relay; a control contact; a pick-up circuit for said first relay including said control contact and a back contact of said second relay; a stick circuit for said first relay including the winding of said second relay, a front contact of said first relay and a back contact of said third relay; means including the pick-up circuit for said first relay for shunting the winding of said second relay; a pick-up circuit for said third relay including said control contact and a front contact of said second relay; and a stick circuit for said third relay including said control contact and a front contact of said third relay, said stick circuit for said first relay energizing said second relay only when said first relay is energized and said third relay is de-energized.

2,003,953
PIANO ACCORDION
Finau Platanesi, Chicago, Ill.
Application December 20, 1933, Serial No. 703,187
4 Claims. (Cl. 84—376)

1. A piano accordion comprising a reed chest and a key manual support, the back wall of said support being joined integrally to the back wall of the reed chest at an obtuse angle, and the outer ported wall of the reed chest intersecting its back wall substantially at the line of such junction.

2,003,954
OVER VOLTAGE PROTECTIVE DEVICE
Ralph R. Pittman, Pine Bluff, Ark.
Application September 15, 1933, Serial No. 689,632
11 Claims. (Cl. 175—30)



1. An over-voltage protective device comprising, in combination, a housing of insulating material, a metallic chamber supported within said housing, a pair of coaxial disks of insulating material resiliently supported within said metallic chamber, spaced electrodes forming a radial spark path between the adjacent faces of said disks, and means resiliently biasing said disks one toward the other.

2,003,955
HAT CONSTRUCTION
Ralph K. Reynolds, Danbury, Conn., assignor to The Mallory Hat Company, Danbury, Conn., a corporation of Connecticut
Application August 13, 1931, Serial No. 556,726
8 Claims. (Cl. 2—184)

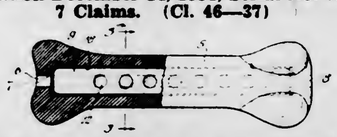
1. In hat construction, in combination, means forming a hat body, a folded strip of reed cloth extending about the interior of said hat body and substantially near the base thereof, a piece of waterproof silk partially enfolded by said reed cloth and extending about said hat body, stitches

securing both said reed cloth and said silk to said hat body, and means for securing a sweat-

band to said reed cloth and said silk above said stitches.

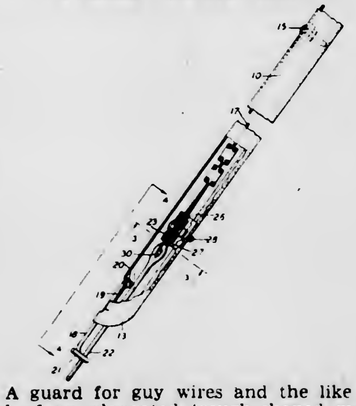
2,003,956
TEMPERATURE CONTROLLING DEVICE
Victor L. Ronci, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 31, 1933, Serial No. 663,766
12 Claims. (Cl. 49—81)

1. A temperature controlling device comprising a vitreous vessel having a capillary bore and a reservoir at one end thereof, a terminal extending into said reservoir, a body of expansible conducting material in said reservoir, and a metallic contact having a perforated portion eccentric with respect to said bore sealed through the wall of said vessel, the perforated edge of said contact extending into said capillary bore to the extent of at least a 90 degree arc.



6. The method of sealing a metallic contact in a capillary vitreous vessel which comprises, separating said vessel transversely in the vicinity of said capillary, piercing a contact to provide an aperture substantially corresponding to the diameter of said capillary, assembling the separated portions of the vessel with the apertured contact therebetween on a guide member, sealing said contact in said separated portions, and removing said guide member.

2,003,957
JINGLE BALL
Moses B. Salisbury, Chicago, Ill.
Application November 9, 1934, Serial No. 752,236
3 Claims. (Cl. 46—46)



1. A sound producing ball comprising a hollow body portion of semihard rubber, the interior surface of which is irregularly formed, a sound producing device within the ball actuated by movement of the device over the irregular surface, said ball having a sound emitting opening through the wall thereof, the wall of the ball being sufficiently thick to prevent pressure on the ball at any particular spot from inverting the curvature of the wall.

2,003,958
IMITATION BONE AND THE LIKE
Moses B. Salisbury, Chicago, Ill.
Application December 14, 1934, Serial No. 757,481
7 Claims. (Cl. 46—37)

1. A sound producing toy of the character described comprising an elongated rubber body having an opening therein from end to end, an elongated spring strip within said body having indentations formed therein adapted to be snapped back and forth by flexing the wall of said body to produce sound, said body having a pair of opposed grooves in the interior thereof in which the edges of said strip are seated.

2,003,959
GUY SHIELD
Everett St. John, Westport, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 25, 1931, Serial No. 565,063
6 Claims. (Cl. 189—31.5)

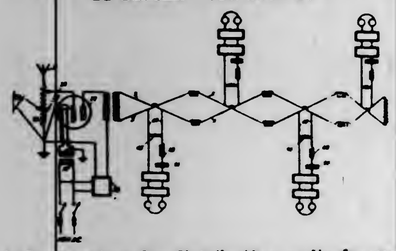
2. A guard for guy wires and the like composed of an elongated trough-shaped member having its edges turned inwardly to form interior grooves, and means mounted in said grooves for securing said guard against rotation.

2,003,960
PRINTING
Ronald Tonkin and James Stevenson Wilson, Earl's Road, Grangemouth, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application June 8, 1932, Serial No. 616,098. In Great Britain June 16, 1931
20 Claims. (Cl. 8—6)

1. Vat dye pastes comprising a water-insoluble vat dye and a quaternary base compound of the general formula

$$X-\underset{R_4}{\overset{R_1}{N}}-\underset{R_3}{\overset{R_2}{}}$$

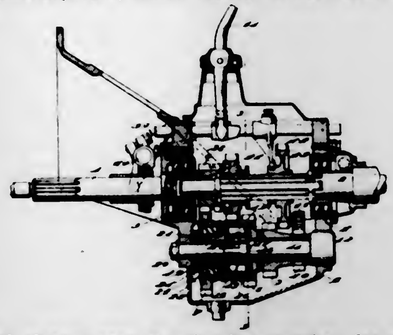
where R_1, R_2, R_3 and R_4 are the same or different



alkyl or aralkyl groups, one at least of which is an alkyl group containing a hydroxy group, and where X represents —OH or an acid residue.

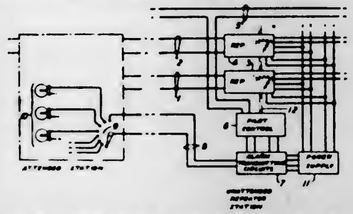
2,003,961
INNER SOLE AND LIKE PRODUCT
Morgan J. Vittengl, Fairfield, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 5, 1932, Serial No. 620,966
2 Claims. (Cl. 36—43)

1. A shoe sole having closely spaced lines impressed therein and running transversely of the sole and impressed lines running in the heel to toe direction of the sole, said last mentioned lines being further spaced than said first mentioned lines.



2,003,962
RADIO FREQUENCY DISTRIBUTION SYSTEM
Julius Weinberger, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 29, 1929, Serial No. 350,869
14 Claims. (Cl. 250—9)

1. In a system for distributing radio frequency energy, an antenna for collecting radio frequency energy, means at the antenna for amplifying the energy so collected, means comprising a two wire loaded transmission line for transferring aperiodically the amplified energy to isolated points, and means at each one of said isolated points for feeding the transferred energy into a translating device.



2,003,963
TRANSMISSION
Oscar E. Banker, Philadelphia, Pa., assignor to Continental Illinois Bank and Trust Company, Chicago, Ill., a corporation, as trustee
Application March 21, 1930, Serial No. 437,717
3 Claims. (Cl. 192—4)

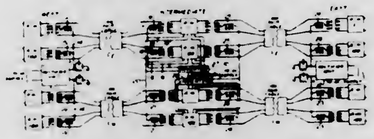
1. In a vehicle transmission for operatively connecting a driving and a driven member, a driving and driven gears, a stationary countershaft, a cluster gear on said shaft, driven by said driving member and selectively cooperating with said driven gears to provide a determined gear ratio, a stationary cam, clutch rollers between said cam

and cluster gear, a releasing member for said clutch rollers, a shaft having an arm provided with a ball and socket connection with said releasing member and a clutch throw-off mechanism operatively connected with said last-named shaft to actuate it.

2,003,964
REPEATERED LINE SYSTEM
Harold S. Black, Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 31, 1932, Serial No. 631,159
4 Claims. (Cl. 179—170)

3. In a repeatered line system, an attended repeater station and an unattended repeater station on the same line, a repeater requiring power located at the unattended station, a local source of power supply for said repeater, a local stand-by source of power also at said repeater, a signal at said attended repeater station, means operating in response to failure in said local source of power for substituting said stand-by source of power to energize said repeater and means controlled by said last mentioned means for actuating said signal at said attended repeater station.

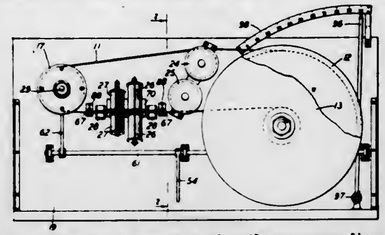
2,003,965
METHOD FOR PRODUCTION OF PURE WHITE SUGAR
Ignaz Bloch, Dessau, Germany
No Drawing. Application May 14, 1931, Serial No. 537,493. In Germany January 22, 1931
9 Claims. (Cl. 127—64)



1. In a process of producing sugar from a mass containing sugar crystals and syrup, the step of adding glycol to the mass, agitating the mass and separating the sugar formed by the admixture of glycol from the syrup containing the glycol.

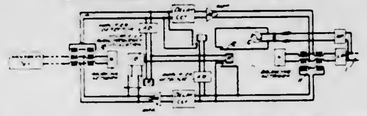
2,003,966
ELECTRICAL CONNECTER AND FIXTURE SUPPORT
Henry D'Olier, Jr., Bridgeport, Conn.
Application May 5, 1927, Serial No. 189,058
6 Claims. (Cl. 173—344)

1. A connecter-socket comprising in a unitary structure a connecter-member with means which can be connected permanently to electrical conductors; and a socket member provided with means for plugging into said connecter member, said connecter-socket being further characterized by a cap and shell surrounding the connecter members with means for directly and mechanically supporting said unitary connecter-socket structure.



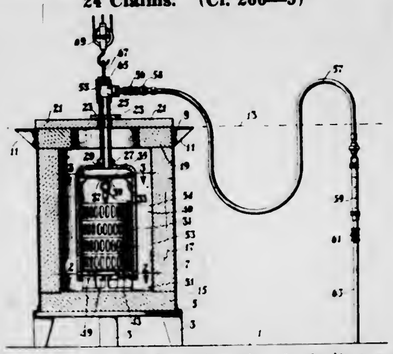
2,003,967
SIGNALING AND POWER SUPPLY SYSTEM
Charles W. Green, Millburn, and Harold S. Black, Westfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 29, 1932, Serial No. 625,610
8 Claims. (Cl. 179—170)

3. In a telephone system, an east group of lines and a west group of lines extending between stations, space discharge repeaters at the east station for certain of said lines, each having a cathode adapted to be heated, a source of current at the west station, a circuit supplying current from said source to the space paths of said repeaters comprising said east lines in multiple as one side of the circuit and said west lines in multiple as the opposite side of the circuit and means at said west station controlled over said circuit and actuated in response to a change in load condition at said east station for supplying over said same circuit from said source of current at the west station current for heating the cathodes of said repeaters.



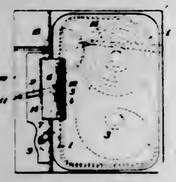
2,003,968
MAGNETIC TELEGRAPHONE SYSTEM
Clarence N. Hickman, Jackson Heights, and Edward C. Wente, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 15, 1931, Serial No. 530,168
13 Claims. (Cl. 179—100.2)

1. In a telegraphone, the combination with a translating device and a transversely magnetized tape of the order of one mil in thickness, of a magnet having poles terminating in directly opposed pole faces not more than two mils thick disposed on opposite sides of and in contact with



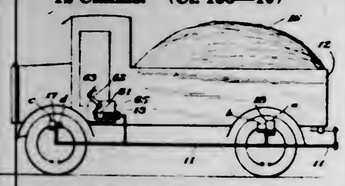
the member, and associated coils surrounding the magnets and connected to the translating device.

2,003,969
TELEPHONE TRANSMISSION SYSTEM
Oliver B. Jacobs, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 25, 1930, Serial No. 438,720
5 Claims. (Cl. 179—170)



3. A two-way message transmission system comprising signaling means for informing the sender how long to wait before a reply can be expected to be received, said signaling means including instrumentalities for transmitting an audible tone toward the sender, said instrumentalities including a source of oscillations of audio frequency, and control means for causing the operation of said instrumentalities during the entire time the system is in the condition that a reply can not be received.

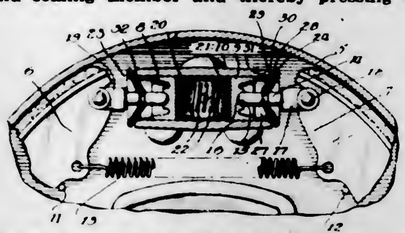
2,003,970
BELL RETORT FURNACE
Adolph W. Machlet, Elizabeth, N. J.
Application December 3, 1930, Serial No. 499,634
Renewed December 9, 1932
24 Claims. (Cl. 266—5)



1. A furnace for heat treating including a hot chamber having heat insulating walls, a separate bell retort confined and supported therein for removal from the top thereof, and designed to contain work, said retort being provided at the bottom with an opening through which the work may be inserted or removed, while the retort is out of the furnace, a means at the opening, separable from the retort, designed to hold the work, and a vent for spent gases at the means.

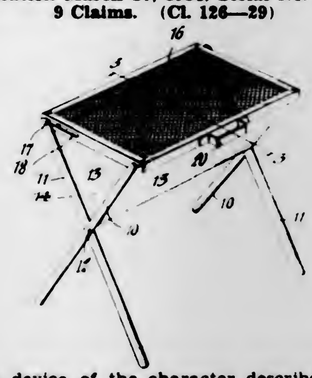
2,003,971
MOTION-PICTURE CAMERA
Kurt Moersbach, Berlin-Lichterfelde, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application May 31, 1930, Serial No. 458,643
In Germany June 10, 1929
8 Claims. (Cl. 88—18.4)

3. In a motion picture camera including a spring motor, a single film feeding mechanism including an element driven by said motor and having a path of movement during part of which it is in feeding engagement with said film and moves the same, a member movable with said element, a device having a cam surface adjustable to and from an operative position, said cam surface when the device is in its operatitve position being disposed so as to be engaged by said member to move said member whereby said element is shifted out of feeding engagement with said film and said spring motor may run down fully, and means accessible exteriorly of the camera for shifting said device to and from its operative position at will.



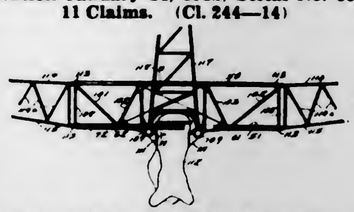
2,003,972
BRAKING SYSTEM
Wallace F. Oliver, Detroit, Mich., assignor to Hydraulic Brake Company, Los Angeles, Calif., a corporation of California
Application February 14, 1930, Serial No. 428,348
12 Claims. (Cl. 188—10)

1. In a braking system for a vehicle having front and rear wheels, a brake mechanism operable on a front wheel and a brake mechanism operable on a rear wheel, and means for expending energy to operate both of said mechanisms, said mechanisms including means for utilizing a greater proportion of the energy expended in the leading wheel of the vehicle in either direction of its motion.



2,003,973
HYDRAULIC BRAKE
Wallace F. Oliver, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application March 17, 1932, Serial No. 599,478
5 Claims. (Cl. 60—54.6)

1. In brake mechanism of the class described, the combination of a cylinder, a piston therein, a piston rod for actuating a brake shoe, said cylinder presenting an edge, a sealing member carried by said rod, said sealing member comprising a stiff resilient disk, and means provided by said rod for engaging the central portion of said sealing member and thereby pressing the



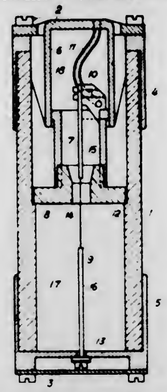
periphery thereof against said edge for all positions of said piston rod.

2,003,974
CAMP STOVE AND THE LIKE
Charles L. Pearson, Buffalo, N. Y., assignor to Master Metal Products, Inc., Buffalo, N. Y., a corporation of New York
Application March 17, 1934, Serial No. 716,154
9 Claims. (Cl. 126—29)

1. A device of the character described, comprising a frame including, at each end thereof, a pair of legs pivoted intermediate their ends and opposing side walls connecting the upper portions of the legs, said side walls forming a trough-like fire-box in the unfolded position of the legs, and being in spaced parallel relation in the folded position of such legs, and a grill plate having a combined hinge and laterally shiftable connection at one side to the upper ends of the corresponding legs and engageable at its opposite side with the side wall connecting the companion legs in the unfolded position of the latter, said plate being movable to a position between and in adjoining parallel relation to said side walls in the folded position of the frame.

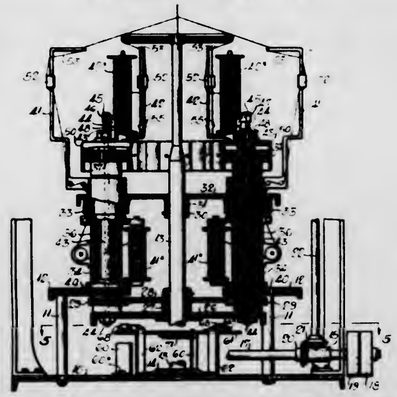
2,003,975
AMPHIBIAN AEROPLANE
Rufus R. Rand, Jr., Wayzata, Minn.
Application January 14, 1932, Serial No. 586,597
11 Claims. (Cl. 244—14)

4. An aeroplane structure having in combination, a central wing section, a main central



frame of truss construction and of substantially rectangular form within said section, separate side wing sections extending at each side of said frame having wing frames therein secured to said main frame, a hull independent of said main frame except that it is suspended therefrom, a motor suspended from said main frame independently of said hull and disposed principally within said hull, a propeller supported above said central wing section and means for driving said propeller from said motor.

2,003,976
FISHING BAIT DEVICE
Lambert L. Raymond, Minneapolis, Minn.
Application June 29, 1933, Serial No. 678,167
7 Claims. (Cl. 43—45)



1. The combination with a fish bait in the form of a spoon of concavo-convex form having sides tapering toward one end, the same having an aperture at said end adapted to receive attaching means and having an aperture at its other end for receiving a hook attaching means, of a thin plate-like member of concavo-convex form adapted to fit on the convex side of said spoon and having its sides substantially coincident with the sides of said spoon, said member having elongated means at opposite sides adapted to wedge against the edges of said spoon and prevent sidewise movement of said member on said spoon, said member having its end portions cut away to clear said attaching means at both ends of said spoon.

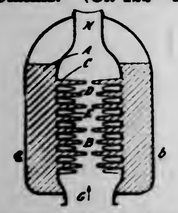
2,003,977
FUSIBLE CUT-OUT
Daniel Rönnberg, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application June 21, 1933, Serial No. 676,793
In Sweden June 22, 1932
5 Claims. (Cl. 200—120)

1. A fusible cut-out comprising a double cylinder, differential surfaces within said cylinder, a differential piston engaging both said surfaces and dividing the space inside said cylinder into two compartments, a channel in said piston connecting said compartments, a fuse metal strip extending through said channel, an arc extinguishing medium in said cylinder a stream of which is forced through said channel by the motion of the piston.

2,003,978
STOP MOTION FOR BRAIDING MACHINES
John F. Schenck, Sr., Lawndale, and Paul S. Monty, Charlotte, N. C.; said Monty assignor to said Schenck
Application December 8, 1933, Serial No. 701,500
23 Claims. (Cl. 96—19)

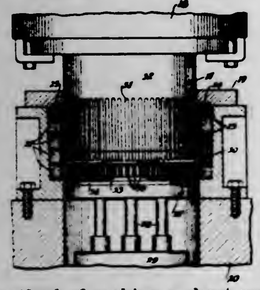
1. In a braiding machine having a base and a rotating framework mounted thereon, a plurality of revolving fliers disposed around the periphery of the framework, at least some of the said fliers having a drop member associated therewith, means integral with said drop member and supported by said framework for normally holding said drop members in elevated position, a stop motion device located beneath said drop members, means carried by said fliers and held in elevated position by a strand and engaging said drop members upon the exhaustion of, or parting of a strand, to remove the drop member from its support and allow it to fall to engage and operate said stop motion device, said stop motion device comprising a plurality of fixed supports mounted on said base, a ring member slidably mounted on said fixed supports, an arm secured to said ring member, a plurality of brackets adjustably mounted on said ring member, a trip mechanism normally contacting said arm and secured to said base member, a second set of brackets fixedly secured to said base member and having pivoted means mounted therein normally engaging said adjustably mounted brackets, said pivoted means being engageable by said drop member when a strand parts to impart rotation to said arm and ring to operate said trip mechanism.

2,003,979
DRUM GAME
Danilo Škorić, New York, N. Y., assignor of one-half to Nikola Nirandyitch, New York, N. Y.
Application October 27, 1934, Serial No. 750,235
5 Claims. (Cl. 273—144)



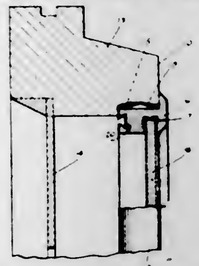
1. A drum game for mixing numbers, comprising a horizontal cylindrical container for holding numbered balls, a stand for stationarily support-

ing said container, a manually controlled discharge for the balls in said container, an axial shaft for said container manually rotative and longitudinally adjustable, a frame within said container and fixed on said shaft, and a stirring



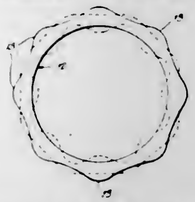
member for said balls fixed on said frame and coactable with the mouth of the ball discharge, said container being open at the top, and a rack for the discharged balls removably mounted over said opening.

2,003,980
STEAM BOILER AND WATER-HEATER
Edward Frank Spanner, Blackheath, London, England
Application June 11, 1934, Serial No. 729,939
In Great Britain June 20, 1933
10 Claims. (Cl. 122—173)



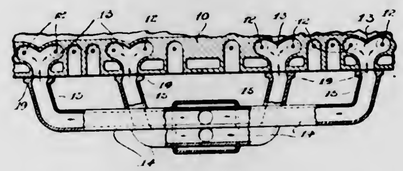
1. In a steam boiler having a tube plate forming a passage for hot gases; a shell enclosing said tube plate to form a water space; and a plurality of horizontal rows of slightly conical thimble tubes in said tube plate each of said thimble tubes communicating with said water space and extending radially into said passage: the arrangement of the thimble tubes so that slightly conical thimble tubes of different lengths and different sizes are interspaced in each horizontal row.

2,003,981
METHOD OF CORRUGATING SHEET METAL RECEPTACLES
Jacques Stanitz and George D. Boyer, Warren, Ohio, assignors to The Youngstown Pressed Steel Company, Warren, Ohio, a corporation of Ohio
Application July 24, 1933, Serial No. 681,833
5 Claims. (Cl. 153—70)



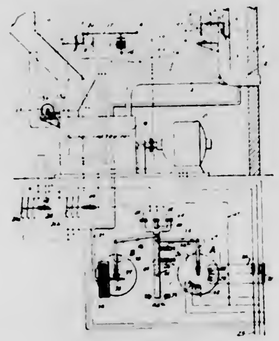
1. The method of making a sheet metal receptacle having grooved side walls, a bottom wall and a curved corner wall therebetween, which includes forming a receptacle blank with integral side and bottom walls and with a curved corner wall therebetween, and then forming spaced grooves in said side walls extending upwards from a portion of said curved corner wall by telescoping said formed receptacle blank upon a grooved male die having outer bounding surfaces conforming to the inner surfaces of said receptacle blank, and by then relatively telescoping said male die with said receptacle blank thereon in a female die having rolling die means corresponding in contour substantially to the contour of said male die grooves for forcing said receptacle blank into said female die to form grooves in said blank side walls progressively upwards from a portion of the curved corner wall thereof.

2,003,982
WINDOW CONSTRUCTION
Earl C. Swanson, Bayport, Minn., assignor to Andersen Frame Corporation, Bayport, Minn., a corporation of Wisconsin
Application October 17, 1932, Serial No. 638,094
12 Claims. (Cl. 20—56.5)



1. A window construction comprising a main glazed sash frame having inwardly facing edges spaced from the plane of the glass, an auxiliary glazed frame adapted to seat in said main sash frame, and means on said auxiliary frame for holding it securely in said main sash frame and for sealing the space between the main glass and the auxiliary glass.

2,003,983
WRENCH
Arthur F. Thener, St. Louis, Mo., assignor to Cupples Company, Manufacturers, St. Louis, Mo., a corporation of Missouri
Application September 28, 1932, Serial No. 635,134
4 Claims. (Cl. 81—3.1)



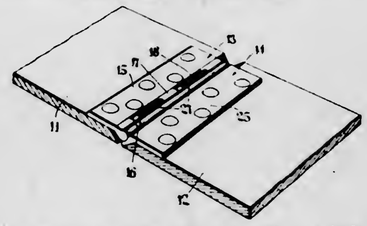
1. An adjustable wrench in the form of a ring made of elastic material having an inner face to engage the article to be turned and an outer face provided with abutments, said ring being reversible to transpose the locations of said inner and outer faces and at the same time reduce the internal diameter of the wrench, and said wrench being freely contractible when reversed, so as to force said abutments into gripping engagement with the article to be turned.

2,003,984
ENGINE
Harold H. Timian, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application April 16, 1931, Serial No. 530,507
21 Claims. (Cl. 123—52)

1. An intake manifold structure for an internal combustion engine and including a primary conducting portion, a manifold branch having an obtuse bend, and non-restricting means beyond the bend for correcting stratification of the fuel adjacent the manifold branch outlet.

2,003,985
FUEL CONTROL SYSTEM
Frank O. Wallene, Lakewood, Ohio
Application February 19, 1931, Serial No. 516,937
4 Claims. (Cl. 110—103)

1. In combination, a boiler furnace, fuel crushing and feeding means communicating therewith, fuel supply means for said fuel crushing and feeding means, air supply means for the furnace, means responsive to variations in a factor of boiler operation desirably maintained uniform for controlling said fuel supply means, and means responsive to the operating load of the fuel crushing means for controlling the air supply means.



2,003,986
ADJUSTABLE PLANT STAND
Frank Witthuhn, Cleveland, Ohio
Application April 7, 1934, Serial No. 719,471
4 Claims. (Cl. 47—39)

1. A plant stand, comprising a standard having spaced legs mounted on the floor, vertically adjustable communicating tubes having the bottom tube releasably mounted on the standard, a flower pot holder releasably mounted on the top tube and communicating with the tubes, and a catch basin adapted to be slid between legs of the standard for receiving water draining from the flower pot holder through the tubes, the catch basin being of such size and contour that it may

be fitted within the flower pot holder when the standard is taken apart.

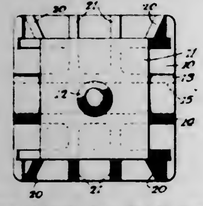
2,003,987
BELT FASTENER
Samuel Amantea, Niagara Falls, N. Y.
Application October 30, 1933, Serial No. 695,929
2 Claims. (Cl. 24—33)

1. In a belt and fastener therefor, a belt having the ends thereof beveled to define a recess of substantially V-shape on the outer surface of the belt when the ends are brought into adjacency, a part secured to one end of the belt and having a body portion with a substantially flat lower surface seated upon the outer surface of the belt, and a hook portion integral with the body portion, said hook portion being disposed in the recess between the belt ends and having the mouth thereof opening upwardly, another part secured to the other end of the belt and having a body portion with a substantially flat lower surface seated upon the outer surface of the belt, and said other part having an integral cylindrical portion engaged by said hook portion with the longitudinal axis substantially coincident with the axis of curvature of the inner surface of the hook, and arm portions connecting the cylindrical portion to the body portion of said other part, said arm portions extending from the body portion in downwardly inclining relationship and the axis of the cylindrical portions being at least as low as the plane of the outer surface of the belt.

2,003,988
SHEET MATERIAL FOR CURING AND PROTECTING CONCRETE AND METHOD OF MAKING
Edward H. Angier, Framingham, Mass.
Application January 12, 1932, Serial No. 586,193
3 Claims. (Cl. 25—1)

2. The improved process of curing concrete which consists in laying the concrete, then apply-

ing to its upper surface a water-proof repellent material to normally protect the concrete from rapid escape of moisture, while permitting escape of excessive heat through relatively small holes



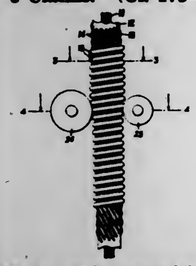
at predetermined spaced intervals in the cover, and the adding of additional water, if desired, through said holes without removing the cover to complete the curing of the concrete.

2,003,989

FOLLOWER BLOCK FOR DRAFT GEARS

Herbert E. Bartsch, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., Chicago, Ill., a corporation of Illinois

Application August 26, 1932, Serial No. 630,555
2 Claims. (Cl. 213—1)



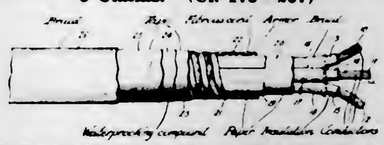
1. A follower block for draft gears comprising two end walls, a pair of straight transverse webs uniting the end walls and spaced to define a key-way, a pair of imperforate relatively spaced vertical webs extending from the first-named webs adjacent the center line of the block and uniting the end walls as solid columns, and an imperforate horizontal web extending laterally outward from the end of each vertical web and uniting the end walls, said webs forming sets on opposite sides of the key-way, the webs of each set being connected to form laterally open channels.

2,003,990

ELECTRIC CABLE

George Carlson, Bridgeport, and Homer G. Knoderer, Fairfield, Conn., assignors to General Electric Company, a corporation of New York

Application August 27, 1932, Serial No. 630,712
3 Claims. (Cl. 173—267)



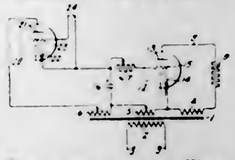
3. An electric cable comprising a conductor, a cover of insulating material for said conductor, a second conductor consisting of a plurality of separate strands wound spirally with a long pitch spiral about said first named conductor and spaced around the circumference of said covering; and a metal armor wound directly over and in contact with said strands, said armor being wound with a short pitch spiral with spaced convolutions.

2,003,991

WEATHERPROOF ARMORED CABLE

George Carlson, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application April 1, 1933, Serial No. 663,971
3 Claims. (Cl. 173—267)



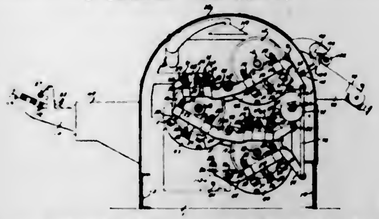
3. In an electric cable, a plurality of electric conductors, a covering of insulating material for each conductor, a spiral armor surrounding the conductors, a rubber filled tape on the armor, a layer of asphaltic compound covering the rubber filled tape, a second rubber filled tape located over said compound, and an overall braid impregnated with a flameproof saturant.

2,003,992

TIME DELAY CIRCUIT CONTROLLING APPARATUS

William D. Cockrell, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application June 8, 1934, Serial No. 729,634
5 Claims. (Cl. 250—27)



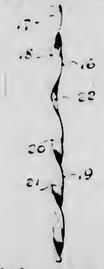
1. Time delay circuit controlling apparatus comprising an electric valve having an anode and cathode connected with said circuit and a control grid, a capacitor connected between the grid and the cathode, means for supplying a negative bias to said grid, means for giving the capacitor a charge opposing said negative bias, and means for retarding the discharge of the capacitor, said capacitor and retarding means being such that the negative grid bias is effectively opposed for the time of said delay.

2,003,993

DOUBLE SIDE IRONER

Forrest J. Couch, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio

Application April 7, 1930, Serial No. 442,125
8 Claims. (Cl. 68—9)



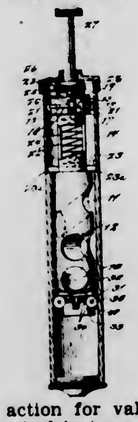
1. An ironing machine comprising, a frame, a pair of vertically spaced rotatable padded rolls, a rotatable padded roll spaced laterally and substantially equidistantly from said first named rolls and having a diameter greater than the spaces between said rolls, an ironing chest having an ironing face extending from one side and substantially the level of the horizontal axis of the upper roll, underneath the same and to a point adjacent the top side of the roll spaced laterally therefrom, an ironing chest having an ironing face engaging the top side of the laterally spaced roll, and a single supporting means for said two ironing members including a member pivotally mounted intermediate said ironing members with the ironing members so disposed thereon relative to the pivot thereof that the weight of one chest tends to counter-balance the weight of the other.

2,003,994

MARBLE-SAWING WIRE

Pierre de Vitry d'Avocourt, Basses-Pyrenees, France

Application June 26, 1934, Serial No. 732,482
In France May 15, 1933
5 Claims. (Cl. 125—12)



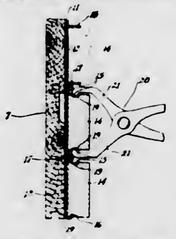
1. A saw wire of the character described comprising a uniform strip of hard steel having sections twisted to form opposed helical grooves for the accommodation of abrasive material, the helical grooves in adjacent sections being pitched in opposite directions.

2,003,995

GUIDING ACTION FOR VARIOUS VALVES AND SLIDES FOR MUSICAL, BRASS, AND OTHER INSTRUMENTS

Nathan Einhorn, Philadelphia, Pa.

Application October 9, 1934, Serial No. 747,634
8 Claims. (Cl. 84—392)



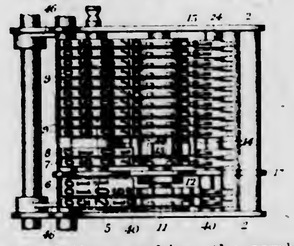
1. A guiding action for valves and slides of various brass musical instruments, comprising a movable element and a stationary element one within the other, and roller bearings and mounting means therefor, so constructed and arranged at opposite ends of one of the elements and cooperating between them to have surface engagement with one element only so as to hold the adjacent surfaces of said elements out of contact with less than standard clearance and entirely eliminating frictional engagement between said adjacent surfaces of the elements.

2,003,996

VENEER WALL CONSTRUCTION

Charles S. Finzer and Edward G. Finzer, Sugarcreek, Ohio, assignors to The Finzer Brothers Clay Company, Sugarcreek, Ohio, a corporation of Ohio

Application October 12, 1934, Serial No. 748,052
13 Claims. (Cl. 72—19)



1. In veneer wall construction, a wall, spaced strips on the wall, means attaching the strips to the wall, each strip having longitudinally spaced pliable projections for securing adjacent veneering units, and a plurality of veneering units each having grooved opposite surfaces, the projections being rigidly engaged with the grooves for interlocking the veneering units in position on the wall.

2,003,997

CROSSFOOTER REGISTER

Harry A. Foothorap, Harrisburg, Pa., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware

Application April 25, 1931, Serial No. 532,813
3 Claims. (Cl. 235—59)

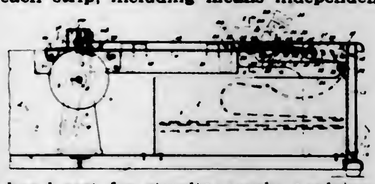
3. In a calculating machine, the combination with a master actuator; of a totalizer for accumulating decimal and non-decimal items, the denominational wheels of which are arranged in sets, the wheels of one set being of different diameter from the wheels of another set, the master actuator and the totalizer being relatively shiftable laterally to effect the engagement of the master actuator and successive wheels of the totalizer; axial supports for the respective sets of totalizer wheels in end to end eccentric relation, and so arranged that the peripheries of the totalizer wheels of less diameter lie flush with the

peripheries of the totalizer wheels of larger diameter along a horizontal line defined by the points of engagement of the master actuator and all the totalizer wheels; a set of visible, denominational indicating wheels all of like diameter; a rectilinear axis on which all the indicating wheels are journaled; pinions fast with the respective indicating wheels, the pinions on the indicating wheels corresponding with the actuator-driven wheels of one set, varying in diameter from the pinions on the indicating wheels associated with the actuator-driven wheels of another set; similarly variant sets of transmission wheels intermediate and connecting the denominational pinions and their corresponding denominational totalizer wheels; and one of the sets of intermediate transmission wheels being eccentrically mounted relatively to another, corresponding with the eccentric mounting of the sets of totalizer wheels with which they respectively engage, the denominational indicating wheel pinions and their transmission gears being of diameters corresponding with the diameters of the denominational totalizer wheels with which they are respectively in train; carrying mechanisms for the respective totalizer wheels except that of lowest denominations, the carrying mechanisms being arranged in sets corresponding with the sets of denominational totalizer wheels; and separate axes for the respective sets of carrying mechanisms, the axes being arranged eccentrically relatively to each other.

2,003,998

LACE YOKE AND METHOD OF MAKING THE SAME

Solomon Goodman, Brooklyn, N. Y.
Application November 23, 1934, Serial No. 754,517
2 Claims. (Cl. 28—1)



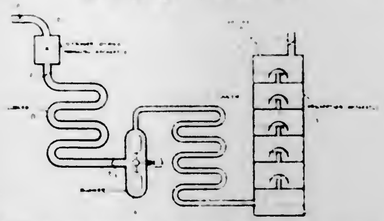
1. An article of manufacture comprising a strip of lace material having parallel side edges and provided with a series of repeat designs of predetermined configuration woven therein and defining garment trimming units, each of said units being severable from the strip and having a definite line of demarkation extending inwardly from one edge to define a cutting guide along which to sever a segment from the unit to produce a neck yoke, said segment and said neck yoke each embodying a complete design and constituting individual garment trimming elements.

2,003,999

AUTOGRAPHIC REGISTER

Louis F. Hagemann, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a corporation of Ontario, Canada
Application October 17, 1925, Serial No. 62,974
Renewed May 29, 1931
13 Claims. (Cl. 271—2.1)

1. An autographic register, comprising, in combination, means for feeding a plurality of superposed record strips into inscription-receiving position with reference to a tablet, a hand rest and tensioning means for applying a separate tension on each strip, including means independent of

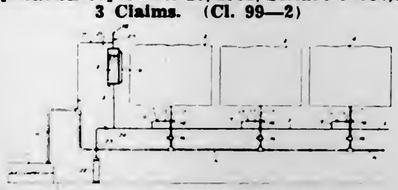


the hand rest for simultaneously applying and releasing the tension.

2,004,000

PROCESS AND APPARATUS FOR MANUFACTURE OF NITRIC ACID

Ingenuin Hechenbleikner, Charlotte, N. C., assignor, by mesne assignments, to Chemical Construction Corporation, a corporation of Delaware
Application May 8, 1928, Serial No. 276,031
18 Claims. (Cl. 23—162)



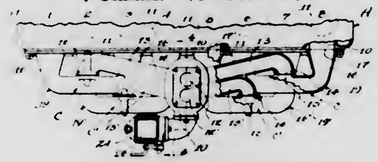
8. The process of manufacturing nitric acid which comprises producing oxides of nitrogen by oxidizing ammonia at a pressure not substantially above atmospheric, then absorbing said oxides in an absorbing liquid at a pressure substantially greater than atmospheric.

17. A nitric acid plant comprising an apparatus for producing oxides of nitrogen, an apparatus for absorbing said oxides of nitrogen, and a compressor apparatus interposed between said nitrogen oxide producing apparatus and said absorption apparatus and operating for withdrawing the nitrogen oxides from the first apparatus, for compressing the oxides of nitrogen, and for delivering said nitrogen oxides to said second apparatus under pressure.

2,004,001

APPARATUS FOR CONDITIONING GRAIN

Louis R. Henkle, Lawrenceburg, Ind., assignor to Pneumatic Process Corporation, St. Louis, Mo., a corporation of Indiana
Application September 10, 1931, Serial No. 562,055
3 Claims. (Cl. 99—2)

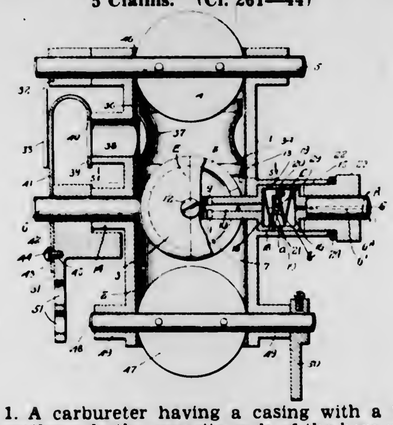


3. A grain bin provided with an air conductor at the bottom of the bin, means for forcing air under pressure through said conductor and upwardly through said grain bin, an atomizing injector in said air conductor, and another conductor through which a conditioning agent is transmitted to said atomizing injector, said air conductor being substantially vertical at said atomizing injector and provided with an indicating device below said injector to show the atomization of the conditioning agent in said air conductor.

2,004,002

ENGINE

Lewis P. Kalb, Grosse Pointe Village, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application April 13, 1932, Serial No. 605,017
7 Claims. (Cl. 123—52)



1. An intake manifold structure for an engine and including a lateral runner terminating in an outlet port opening laterally outwardly of said engine, and a port runner connecting said lateral runner outlet port with the engine.

2,004,003

CARBURETOR

Guy L. Kennedy, New York, N. Y., assignor to Ken-Crip Corporation, a corporation of New York
Application January 5, 1925, Serial No. 687
Renewed October 14, 1931
5 Claims. (Cl. 261—44)

1. A carbureter having a casing with a bore therethrough, the opposite ends of the bore serving as the main inlet and outlet of the casing, a hollow member open at both ends in the bore, said member presenting one end to said inlet and being secured around its periphery at said end to the inside of said bore, and being separated from the inside of said bore by a restricted space at its opposite end, which is the smaller, said member being contracted and imperforate between its ends, the casing having a port to admit air to said space adjacent the contracted part of said member, means for admitting hydrocarbon to said bore, a combined rotary valve and spray nozzle in said bore adjacent the end of said member secured to the inside thereof, and means connected to the rotary valve and nozzle to control said port.

2,004,004

WEATHERPROOF ARMORED CABLE

Homer G. Knoderer, Fairfield, Conn., assignor to General Electric Company, a corporation of New York
Application April 1, 1933, Serial No. 663,974
Renewed February 8, 1935
4 Claims. (Cl. 173—266)

1. In an electric cable, an electric conductor, insulating material surrounding said conductor, a second conductor consisting of strands spirally wound about said conductor and insulation, a metallic armor wound around and in contact with said second conductor, a tape of fibrous material covering said armor, a weatherproofing compound covering said tape, and an overall braid of fibrous material impregnated with a flameproof material.

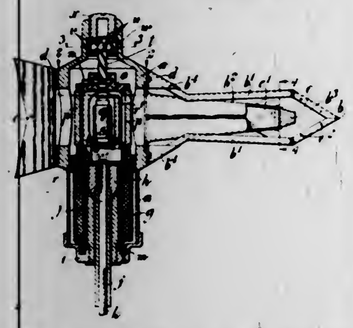
2,004,005

MOUNTING FOR RIMLESS SPECTACLES AND EYEGLASSES

Michael R. McDanal, Denver, Colo.
Application March 6, 1934, Serial No. 714,237
4 Claims. (Cl. 88—47)

1. A mounting for rimless spectacles and the like comprising, in combination, a lens, a front piece and a back piece adapted to engage respectively the front and rear faces of the lens, an aperture in the lens, an indentation in the rear face of the lens entirely within its periphery and entirely without said aperture, an indentation on the inner face of the back piece and a member positioned between the back piece and the lens and adapted to engage the indentations in the lens and back piece to prevent interrelative rotation of the back piece and the lens and means, operable through said aperture for drawing the front and back pieces toward each other whereby to interlock the elements of the combination.

2,004,006



FASTENING DEVICE

Harry J. McKeon, Galesburg, Ill.
Application June 20, 1934, Serial No. 731,509
1 Claim. (Cl. 151—33)

A fastener of the class described, comprising a bolt and nut, said nut being provided in its marginal portions with a pair of opposed keeper notches for reception of an adapter, as well as in the adjacent rim portions with grooves intersecting said notches for receiving a second adapter, each adapter embodying fingers for reception in the notches and grooves.

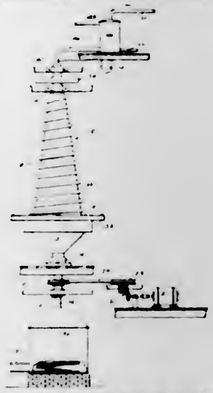
2,004,007
DIRECTION INDICATOR
Robert Shaw Miller, Ashton-under-Lyne, England
Application August 3, 1934, Serial No. 738,331
In Great Britain July 8, 1933
8 Claims. (Cl. 177—329)

2. A direction indicator of the type described comprising a rotatable casing, a support for said casing, an indicator on said casing, electro-magnetic means adapted to move said casing axially and mechanical means removed and separate from said electro-magnetic means adapted to be operated by said casing during its axial movement to impart a rotary movement to said casing.

2,004,008
SAFETY RAZOR BLADE
Vincent Minnelli, Pittston, Pa.
Application July 31, 1934, Serial No. 737,845
4 Claims. (Cl. 30—12)

1. A blade of the class described having a notch in its upper edge engageable by feeding and retaining means of a razor construction, lugs extending from the blade at opposite ends thereof, the blade at its cutting edge having notches of less depth than the length of said lugs for the purpose specified.

2,004,009
METHOD OF AND APPARATUS FOR CONDITIONING CHOCOLATE OR THE LIKE
William A. Moir, New York, N. Y.
Application June 4, 1934, Serial No. 728,991
16 Claims. (Cl. 99—11)



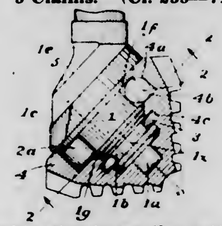
1. The method of treating a chocolate mass for providing a fine fat grain throughout substantially the entire mass, comprising rapidly rotating the mass and causing parts of the same to momentarily contact with a cooling medium.

2,004,010
PROCESS OF PRODUCING PENTAERYTHRITE
Erich Naujoks, Constance, Germany, assignor to Deutsche Gold & Silber-Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a company of Germany
No Drawing. Application August 29, 1932, Serial No. 630,944. In Great Britain June 21, 1932
16 Claims. (Cl. 260—156.5)

1. A process for the production of pentaerythrite, comprising condensing formaldehyde with acetaldehyde in aqueous solution in the presence of an alkaline condensing agent, and interrupting the condensation not later than at a point ranging from several hours to several days after the start of the process, at which there is a minimum amount of reducing substances, and before the amount of reducing substances begins increasing anew due to the reaction, this minimum being determined by titration with Fehling's solution.

2,004,011
CENTRIFUGAL COUNTER CURRENT CONTACT APPARATUS
Walter J. Podbielniak, Tulsa, Okla.
Application August 18, 1930, Serial No. 476,190
30 Claims. (Cl. 202—158)

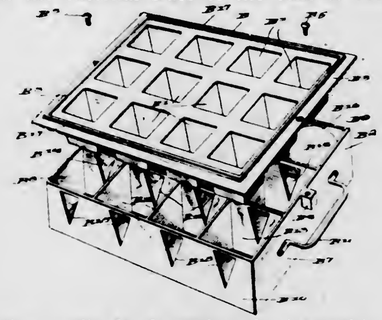
1. Apparatus of the character described comprising, a rotatable fractionating tube, means for passing vapors through said tube, means for passing reflux liquid through said tube countercurrently to the vapors, and means for rotating said tube so as to exert centrifugal force on the fluid thereby and cause the liquid and vapors to flow in separate paths.



2,004,012
ROLLER CUTTER AND SPINDLE ASSEMBLY FOR EARTH BORING DRILLS
Clarence E. Reed, Wichita, Kans.
Application July 2, 1934, Serial No. 734,752
25 Claims. (Cl. 255—71)

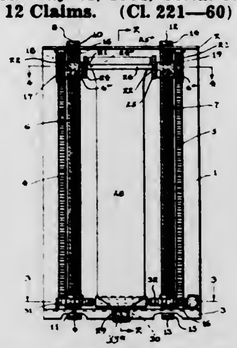
1. A roller cutter assembly for earth boring drills comprising a frusto-conical cutter, having a comparatively large diameter bore open at its base, with adjoining bores of progressively smaller diameter, the smallest bore being within the apex portion of the cutter, a spindle having a raceway complementary to a raceway in the bore of the cutter of intermediate diameter, anti-friction bearings in said raceway for rotatively locking the cutter on the spindle, anti-friction bearings in the form of comparatively large diameter balls positioned in the largest bore at the base of the cutter to take end thrusts outwardly from the vertical axis of rotation of the drill, and a spindle support having a portion at and extending across the open end of the large bore of the cutter, said balls rolling upon raceway surfaces

in the cutter bore, on the spindle and on the said portion of the spindle support at the open end of the bore, the free end of the spindle having a reduced cylindrical extension fitting in the smallest bore of the cutter, substantially as described.



2,004,013
ANTIFRICTION BEARING ASSEMBLY FOR DRILLS
Clarence E. Reed, Wichita, Kans.
Application July 11, 1934, Serial No. 734,662
5 Claims. (Cl. 255—71)

1. In combination in a roller cutter and spindle assembly for earth boring drills a spindle formed of two sections, the main section of which has a raceway and the terminal section of which spindle has a raceway between itself and the main section, a roller cutter mounted on the spindle having a raceway engaged by anti-friction locking means which also engage the raceway between the sections, means for holding the sections of the spindle together, said roller cutter having a bore open at one side thereof, anti-friction balls and anti-friction rollers arranged in alternation in the said bore of the roller cutter, and a base plate confining the balls and rollers in said bore and adapted to take end thrusts from the balls, substantially as described.

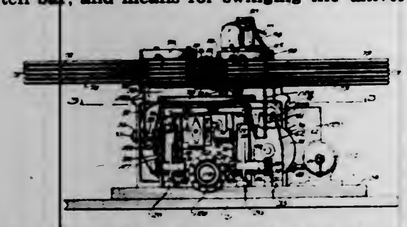


2,004,014
REFRIGERATING APPARATUS
Alfred F. Sanford, Knoxville, Tenn.
Application August 5, 1931, Serial No. 555,277
31 Claims. (Cl. 62—108.5)

1. An ice making receptacle for domestic refrigerators comprising a plurality of ice-containing cells arranged in rows extending longitudinally and transversely of the receptacle with a plurality of cells to each row and having walls spaced from the external sides of the cells to receive

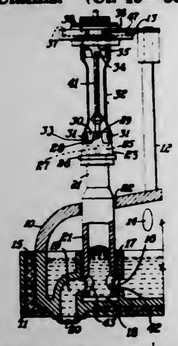
heating media for loosening the ice within the cells, and means confining the action of the heating media to less than all of the cells.

2,004,015
DISPENSING DEVICE
William H. Scott, Rochester, N. Y.
Application May 21, 1934, Serial No. 726,852
12 Claims. (Cl. 221—60)



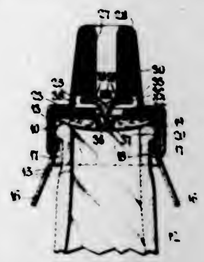
1. A dispensing device for collapsible containers comprising a support including a body portion having laterally directed horizontally disposed upper and lower end members and spaced longitudinally arranged series of corrugations forming a pair of longitudinal racks, spaced, longitudinally disposed feed screws journaled in said end members and arranged within said racks, transversely aligned bearing blocks having screw-threaded connection with said feed screws, transversely aligned shafts journaled in said bearing blocks and carried by the same, means connected with the inner ends of the shafts for engaging a collapsible container, gears carried by the outer ends of the shafts and meshing with the racks of the support for rotating the shafts to collapse the container, and means for rotating said feed screws to move said bearing blocks along the feed screws and simultaneously rotate said gears to rotate said shafts and collapse the container.

2,004,016
SELECTIVE PHONOGRAPHIC PLAYING MACHINE
Paul H. Smyth, Jr., Evanston, Ill.
Application October 8, 1931, Serial No. 568,610
Renewed November 24, 1933
44 Claims. (Cl. 274—10)



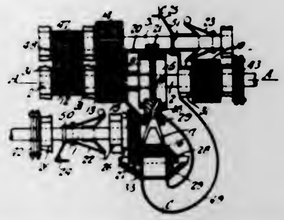
12. In phonographic mechanism of the class described, the combination of a set of ring shaped

record carriers normally standing in column relation, each provided with an extension, vertically extending pivoting means for the several extensions, a universal latch bar associated with the set of carriers and mounted to swing inwardly, a latching finger on each of the carrier extensions adapted when tripped to be engaged by the universal latch bar, selector means for tripping the latching finger of the selected carrier to position to be engaged by the universal latch bar, and means for swinging the universal



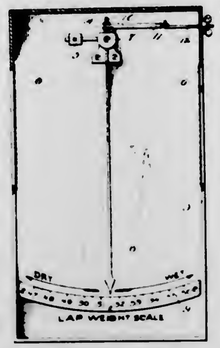
latch bar to carry with it the engaged record carrier, a restoring bar associated with the universal latch bar and mounted to swing therewith and adapted to engage a previously swung record and restore it to column position, a turntable and means for rotating the same, and means for raising and lowering the turntable through the planes occupied by the respective carrier rings when swung inwardly to engage and elevate a selected record and subsequently restore the same to its carrier ring, and means for playing the selected record when elevated.

2,004,017
GLASS FEEDING APPARATUS
David Stenhouse, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application August 5, 1932, Serial No. 627,559
16 Claims. (Cl. 49—55)



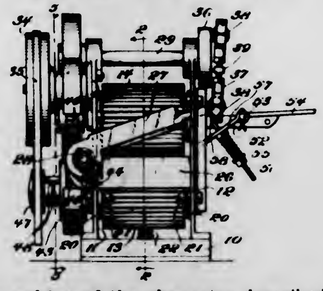
1. A glass feeding mechanism comprising in combination a glass container, an air-bell extending into the molten glass in said container, a member in said container surrounding the lower end of said air-bell and having a port and passageway opposite said port and leading to the bottom of said container, said bell having ports therein simultaneously registering with the port and passageway in said encircling member, means for rotatably adjusting said bell to change the position of the ports therein relative to the ports in said member, and means for creating alternate suction and pressure within said bell to draw glass through the intake port and expel it through said passageway.

2,004,018
BEVERAGE BOTTLE CAP
Luke J. Strauss, Buffalo, N. Y.
Application October 24, 1934, Serial No. 749,843
6 Claims. (Cl. 225—22)



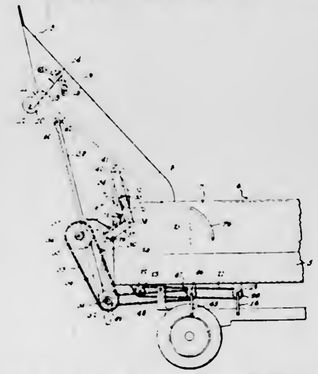
1. In a device for dispensing fluid contents from a sealed container having a cap sealed thereon, a chambered member having means for detachably securing it to the container cap, a tiltable member having a conduit for directing the flow of fluid from the container, said chambered member having an opening slidably and tiltably receiving the tiltable member, a valve portion provided on the tiltable member for normally closing said opening in the non-tilted position of the latter member, cap puncturing means supported by the tiltable member to pierce the container cap in response to pressure applied to the last mentioned member, and resilient means engaging said members and yieldably maintaining the tiltable member against tilting movement and against sliding movement in the opening of the chambered member.

2,004,019
POWER TRANSMISSION
Charles Condon Swetenham, Sherborne, England, assignor to himself, Clement Alfred Swetenham, and Leslie Mary Swetenham, all of Sherborne, Dorsetshire, England
Application July 5, 1932, Serial No. 620,911
In Great Britain July 14, 1931
6 Claims. (Cl. 60—54)



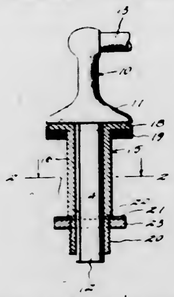
1. A variable speed power transmission gear, in which the energy transmitted is converted into hydraulic energy and then reconverted to mechanical energy, comprising a driving shaft, a pump with its impeller mounted thereon, a driven shaft, a plurality of impulse turbines, gearing between the impulse turbines and driven shaft differing in ratio as between one turbine and another, a driving shaft governor, a driven shaft governor, means for operatively connecting the pump discharge relatively to one or other turbine, and a controlling connection between said selection means and both governors.

2,004,020
COTTON-LAP WEIGHT INDICATOR
William Hosah Trogdon Worthville, N. C.
Application April 10, 1933, Serial No. 665,412
3 Claims. (Cl. 73—24)



1. In a lap weight indicator, a lap weight scale, a pivoted pointer member adapted to work over said scale and having a threaded extension beyond its pivot, means tending to swing said pointer toward the wet end of the scale, a hygroscopic member and means whereby one end thereof is secured to the aforesaid extended end of the pointer member in a manner to be adjusted therealong to thus vary the movement of the pointer member for any given increase or decrease in length of the hygroscopic member, and means attached to the other end of said hygroscopic member for manually bodily adjusting it for the purpose set forth.

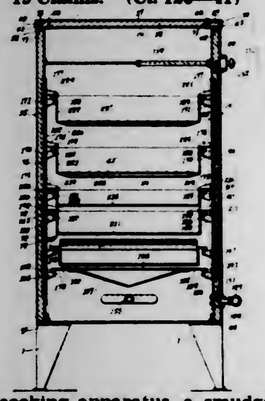
2,004,021
FEEDING MECHANISM FOR CUTTING MACHINES
Raymond M. Tucker, Sherman, Tex.
Application October 25, 1933, Serial No. 695,189
3 Claims. (Cl. 271—2.4)



1. A machine of the character described comprising a frame, upper and lower feed rollers therein, fixed bearings for one of the rollers, displaceable bearings for the other roller, a tensioning yoke mounted on the frame and having connection with the displaceable bearings and adapted for swinging movement, means for tensioning the said yoke to urge one roller toward the other and maintain it under tension, means for limiting the swing of the yoke, a guide platform for strip material arranged to one side of the rollers and in a plane to have the strip material pass therebetween, a presser bar overhanging the platform, a tensioning arm swingingly supported and pivoted to said presser bar, means regulating the tension of the presser bar, a gear on an axle of one of the rollers, a gear on an axle of the other roller, one gear being loose and the other fixed, a pointer on the fixed gear, a two-part clutch for clamping and unclamping the loose gear, a measuring dial on the outermost part of said clutch and cooperating with the pointer, and a hand knob cooperating with the clutch for rendering the same ineffective for clamping and unclamping action.

2,004,022
TRUCK
John Twik, South Ozone Park, N. Y.
Application June 5, 1933, Serial No. 674,439
1 Claim. (Cl. 214—78)

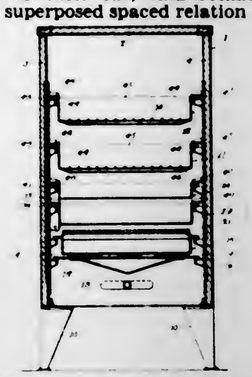
In a truck, a body, a shovel adjacent one end of said body and having a scooping end and a delivery end, means pivotally connected to the shovel adjacent the delivery end of the latter for elevating and lowering that end and means pivotally connected to the shovel adjacent the scooping end for raising and lowering the latter end and for varying the shoveling angle and the delivery angle of the shovel.



2,004,023
TOILET SEAT HINGE
John Uffen, Santa Paula, Calif.
Application March 17, 1934, Serial No. 716,185
3 Claims. (Cl. 4—240)

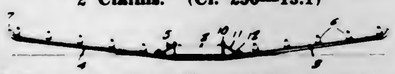
1. In a toilet seat hinge including a pintle for the hinge, a post for holding the pintle in upwardly spaced relation to the toilet bowl, a flange integral with the post, a stud integral with the post, said stud being substantially round in transverse section and having a flat face extending longitudinally thereof and means for removably mounting said stud in the toilet bowl, said mounting means comprising a substantially cylindrical socket member having a flat surface longitudinally thereof to slidably receive said stud and

holding said stud against turning, a flange integral with the upper end of said cylindrical socket member, a gasket interposed between said socket flange and the top of the bowl, a reduced threaded lower end portion formed on said socket member, a washer engaging against the shoulder formed between the reduced threaded portion of the socket member and the remaining portion of the socket member, and a nut threadedly engaging said threaded portion of the socket member for permanently securing said socket member in the bowl.



2,004,024
COOKING APPARATUS
George Van Veorst, Jr., Kansas City, Mo., assignor to Rutherford System Incorporated, Kansas City, Mo., a corporation of Missouri
Application June 15, 1933, Serial No. 676,004
19 Claims. (Cl. 126—41)

1. In a cooking apparatus, a smudge box element including an open top container and an insulated cover for the latter, said cover being formed with a section for extending into the container and a section arranged exteriorly of the container, said sections positioned relative to each other to provide an outlet at each end of the top of the container, and means secured to and encompassing the container for suspending it.

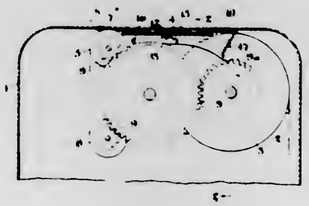


2,004,025
COMBINED TRACK-FORMING, SPACING, AND RETAINING STRUCTURE
George Van Veorst, Jr., Kansas City, Mo., assignor to Rutherford System, Incorporated, Kansas City, Mo., a corporation of Missouri
Original application June 15, 1933, Serial No. 676,004. Divided and this application December 9, 1933, Serial No. 701,693
4 Claims. (Cl. 312—150)

1. In a combined track forming, spacing and retaining structure for slidable objects, two opposed spaced parallel pairs of spaced vertical parallel bars, a suspension lug anchored at one end to and extending at right angles from one face of each of said bars, each lug being formed with a socket opening at its other end, the lugs of each pair of bars arranged in parallel relation, the lugs of one pair of bars being arranged in parallel relation with respect to the lugs of the other pair of bars, a track member positioned against the said other ends of the lugs of each pair of bars, and means extending through said members and into the sockets of said lugs for anchoring said members to the lugs in suspended position, said members being disposed in parallel spaced relation to provide a track for suspendingly supporting the object, a retainer lug anchored at one end to and extending at right angles from said face of each bar, said retainer lugs arranged in superposed spaced relation with respect

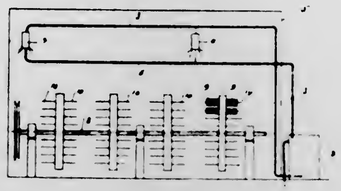
to said suspension lugs, and said retainer lugs being of greater length than suspension lugs and extending over and spaced from said members, each of said members including a pair of end portions disposed at right angles to the said oblong portion and arranged in parallel spaced relation, one of said end portions being of less width than the other.

2,004,026
GUARD
George Riley Wooten, Fredonia, Kans.
Application August 14, 1933, Serial No. 685,112
2 Claims. (Cl. 256—13.1)



2. In combination with an abutment, upper and lower guard rails extending from the ends of the abutment and curving laterally away from the side of a road, posts for supporting the rails, and clamps detachably connecting the rails to the abutment.

2,004,027
CLOSURE FOR CONTAINERS
Donald E. Baxter, Los Angeles, Calif.
Application October 27, 1933, Serial No. 695,482
5 Claims. (Cl. 215—74)

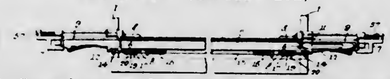


1. Closure means for the opening of a container including, a closure body closing the opening and having a discharge opening communicating with the interior of the container, a removable sealing member arranged on the outer end of the body and sealing the outer end of the discharge opening through the action of atmospheric pressure, a removable disc covering the sealing member, and means for clamping the disc against the sealing member.

2,004,028
MANIFOLD WRITING DEVICE
Horace Drummond Black, Uxbridge, and Christopher Frederick Webb, Eastcote, England, assignors to Bell Punch Company Limited, London, England
Application October 2, 1934, Serial No. 746,553
In Great Britain October 11, 1933
10 Claims. (Cl. 282—16)

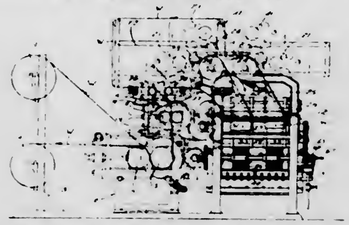
1. In a manifold writing device comprising a casing and feed mechanism for feeding a plurality of forms and ejecting at least one form therefrom and an opening in said casing presenting an exposed portion of at least one of said forms, the provision of means responsive to pressure imparted through the forms and operable upon such response to render the feed mechanism for ejecting the forms inoperable.

2,004,029
IMPREGNATION OF TEXTILE MATERIALS BY LATEX
Jean Etienne Charles Bongrand, Paris, and Léon Sylvain Max Lejeune, Wasquehal, France
Application October 28, 1932, Serial No. 640,128
In France July 19, 1932
9 Claims. (Cl. 91—68)



1. A process for facilitating the complete impregnation of textile material with rubber which comprises treating the said textile material wound in the form of bobbins with rubber latex and subsequently maintaining the textile material while still wet with the rubber latex in a humid atmosphere containing vapors of an anti-coagulating agent, the excess of latex being retained in contact with the said textile material by the slow rotation of said bobbins.

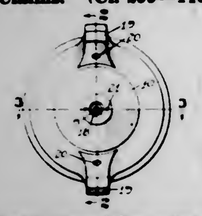
2,004,030
COLLOIDAL INORGANIC BONDING COMPOSITION
Willis A. Boughton, Cambridge, Mass., assignor to New England Mica Co., Waltham, Mass., a corporation of Massachusetts
No Drawing. Original application June 22, 1931, Serial No. 546,153. Divided and this application April 5, 1934, Serial No. 719,233
15 Claims. (Cl. 134—23.1)



2. A bonding composition for discrete portions of solids, comprising a highly viscous colloidal inorganic substantially non-crystalline liquid adhesive mass, the bonding agent therein consisting of at least one compound selected from the group consisting of metaphosphoric acid radicle compounds, alkali metal monoborates, and beryllium sulphate, said composition containing from about thirty-five percent to about sixty percent of the said bonding agent, and controlled effective amounts of a blendable crystallization restraining agent, the balance of said composition being principally water colloidally associated with said bonding agent.

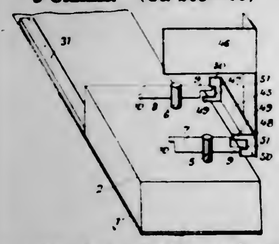
2,004,031
LOOM
Ellerslie Wallace Bullard, Anniston, Ala., assignor to Acme Weaving Mills, Inc., Anniston, Ala., a corporation of Alabama
Application June 26, 1933, Serial No. 677,712
5 Claims. (Cl. 139—171)

1. In a loom, a frame, a first shaft journaled in the side of the frame, a countershaft disposed parallel to the first shaft and journaled in the frame, cooperating interrupted gear wheels on the first shaft and on the countershaft, a vertically movable shuttle-box and means for mounting it on the frame, a raising and lowering rod for the shuttle-box, and mechanism for operating the rod, said mechanism comprising a lever fulcrumed on the frame, an eccentric on the first shaft and journaled in the lever, and a pitman connection between the lever and the rod.



2,004,032
PAPER NAPKIN EMBOSSING, PRINTING, AND FOLDING MACHINE
John S. Burt, Highland Park, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a corporation of New Jersey
Application November 12, 1930, Serial No. 495,259
21 Claims. (Cl. 270—78)

1. In a folder, a rotating roll having pairs of circumferentially-spaced, longitudinally-extending gripping jaws normally in gripping relation to one another, a tucking blade associated with the roll and operating in timed relation thereto for tucking a web between the jaws to be held



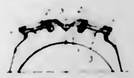
thereby during rotation of the roll, a longitudinally-extending cutting blade arranged between adjacent pairs of jaws and a stationary cutter blade associated with the roll for co-action with said cutter blade to sever the trailing portion of the web from that gripped in the jaws.

2,004,033
SPRAY HEAD
Gale H. Buzzard and Robert W. Tracy, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio
Application January 16, 1932, Serial No. 586,984
11 Claims. (Cl. 299—140.1)

9. A spray head comprising means to discharge an air supported stream of coating liquid, means for discharging separate supplemental air jets acting on said stream to form the same, and means for discharging other supplemental air jets against opposite sides of the stream in a plane at right angles to the plane of said first jets to flatten the stream, said last mentioned supplemental air jets striking said stream after said first jets have acted upon the stream.

2,004,034
POISE DEVICE
Charles Cadiet, Paris, France, assignor to the firm Société Anonyme des Etablissements Charles Testut, Paris, France
Application June 8, 1934, Serial No. 729,709
In France June 2, 1933
5 Claims. (Cl. 265—70)

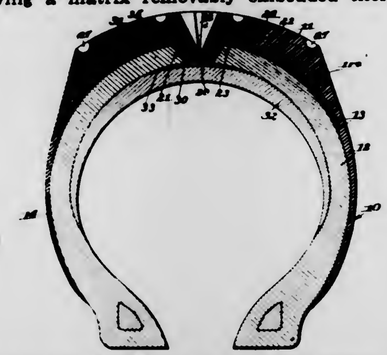
1. In a poise device having a beam and operated by electric circuits to bring the beam into its balanced position, means for opening and for closing said circuits comprising a release member operated by the unbalancing of the beam, cams for controlling said opening and closing means and means controlled by said release member for positioning said cams.



3. In a poise device having a beam and operated by electric circuits to bring the beam into its balanced position, two sets of contacts inserted in said circuits, means controlling said contacts comprising a shaft for each set of contacts, means for putting said shaft under rotative tension, a spindle, gearing connecting said shaft to said spindle for one way movement, cams fixedly mounted on each of said spindles, a vane mounted on each of said spindles to rotate therewith, and a cross-piece extending into the path of rotation of said vanes and movable with the beam to lock or to release said vanes.

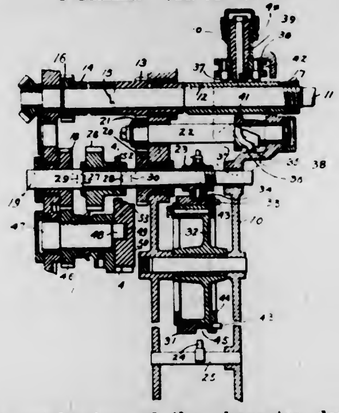
2,004,035
CONVERTIBLE AND PORTABLE WARDROBE AND CLOTHES DRIER
Dorothy Beale Cleveland, Los Angeles, Calif.
Application July 24, 1933, Serial No. 681,949
2 Claims. (Cl. 312—5)

1. A collapsible, traveling wardrobe consisting of a clothes drier and a curtain, said clothes drier comprising two hinged frames and means for detachably holding the frames at right angles to each other whereby one frame may rest against and be supported on a wall and the other frame be held in horizontal position, said curtain comprising a single sheet having a centrally positioned flap at its top edge, and means for closing the two side edges to form a tube surrounding the horizontal frame of the clothes drier, said flap resting upon said horizontal frame and separable fasteners for securing together the sides of the flap and the sides of the curtains.



2,004,036
ANTISKIDDING TIRE
Ernst Coenning, Halensee, near Berlin, Germany
Application June 8, 1933, Serial No. 674,951
In Germany June 10, 1932
6 Claims. (Cl. 152—14)

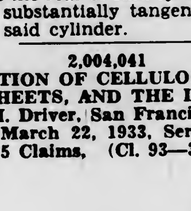
1. Cover for wheel tires comprising spacedly disposed circumferential ribs on the tread surface thereof, and being provided with a plurality of outwardly flaring, projecting suction cups, said cups having a cavity in the form of a shallow, obtuse-angled cone, entering into the body of said ribs.



2,004,037
METHOD OF REPAIRING TIRE CASINGS
Walter H. Criswell, Seattle, Wash.
Application May 14, 1934, Serial No. 725,628
6 Claims. (Cl. 18—59)

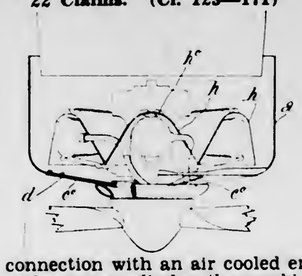
5. The method of repairing tire casings which comprises removing a section of the casing embracing an injured portion to form a pocket having inclined walls and an intermediate horizontal wall, lining with a cushion gum the inner portion of the pocket to points outwardly of the pocket when the breaker strip is exposed in the pocket, applying a filler to the pocket, said filler having a matrix removably embedded therein,

vulcanizing the filler and removing the matrix to provide a cavity in said vulcanized filler.



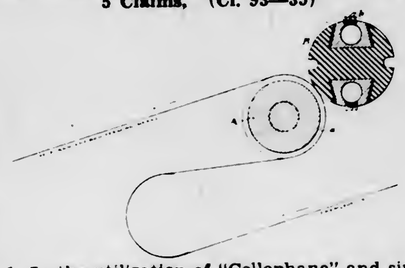
2,004,038
TIMING MECHANISM
Myron S. Curtis, Pawtucket, R. I., assignor to William Wallace Potter, Pawtucket, R. I.
Application August 26, 1930, Serial No. 477,881
3 Claims. (Cl. 74—323)

3. A mechanism of the character described comprising driving and driven members, a clutch having interlocking elements interposed between said members for clutching and declutching the same and means for aligning said members in clutching position when said members are declutched, the said means comprising jaw-engaging surfaces on one of said members, a block provided with jaws for engaging said surfaces, and means for reciprocating said block to cause said jaws to periodically engage said surfaces.



2,004,039
PILOT LIGHT
Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York
Application February 20, 1933, Serial No. 657,706
12 Claims. (Cl. 177—311)

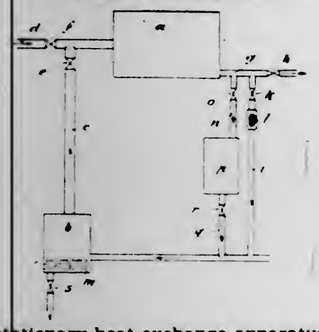
1. Electric wiring apparatus including in combination, a face plate having an opening therein, a mounting strap behind said plate and supporting it, means supporting said strap across the front of an outlet box, an opening in said strap in register with the plate opening, a pilot lamp receptacle including an insulating body and a threaded metal thimble, said thimble fitting through both said openings and having a flange



in back of the strap and engaging on the body, means securing the strap and body together to support the body, lamp contacts in said body, a lamp engaging said contacts and projecting beyond the front of said plate, and a lamp hood screwed over said thimble.

2,004,040
AIR COOLING SYSTEM FOR MOTORS
Jean Georges Dintilhac, Paris, France, assignor to Society "Yacco S. A. F.", Paris, France
Application January 5, 1933, Serial No. 650,357
In Belgium January 27, 1932
22 Claims. (Cl. 123—171)

5. In connection with an air cooled engine including at least one cylinder, the combination of a screen positioned in front of said cylinder to prevent cold air from impinging on at least the lower portion of the surface of the front part of the cylinder normally to said surface, said screen including means to deflect air flowing toward said cylinder into the spaces on either side of said cylinder, and deflecting walls extending on either side of and at the rear of said cylinder for directing said air substantially tangentially onto the rear part of said cylinder.



2,004,041
UTILIZATION OF CELLULOSIC FILMS, SHEETS, AND THE LIKE
John M. Driver, San Francisco, Calif.
Application March 22, 1933, Serial No. 662,178
5 Claims. (Cl. 93—35)

1. In the utilization of "Cellophane" and similar transparent cellulosic bodies in the manu-

facture of bags and similar containers, forming such material into tubing, and severing such tubing into bag blanks of predetermined length through the instrumentality of heat.

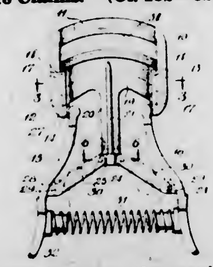
2,004,042
PROCESS OF CLEANING HEATING SURFACES
Otto Eberhardt, Karlsbad, Czechoslovakia, assignor to A. Riebeck'sche Montanwerke Aktiengesellschaft, Halle/Saale, Germany
Application October 6, 1931, Serial No. 567,324
In Germany November 11, 1929
1 Claim. (Cl. 87—5)

In stationary heat exchange apparatus the interior surfaces of which are normally subjected to a flow of heating steam containing oils passing therethrough, the process of removing the crust or scale formed by said heating steam on said surfaces comprising the steps of discontinuing the flow of oily steam through the apparatus, continuously heating a body of liquid organic dissolving medium for hydrocarbon crusts to drive off vapors therefrom, continuously circulating said vapors through the normal passage of flow of said heating steam in contact with the interior surfaces of said heat exchange apparatus, thereby condensing said vapors on said surfaces, continuously withdrawing from the apparatus the condensed dissolving medium together with the crust particles contained therein, continuously returning said contaminated dissolving medium to said liquid body of heated dissolving medium, revaporising said dissolving medium, continuing the flow of said dissolving medium through said apparatus until the condensed dissolving medium withdrawn from said apparatus contains no noticeable contamination, then withdrawing said clean condensed dissolving medium from said apparatus and collecting the same in a body distinct from said heated body until substantially all of the vaporized dissolving medium has been condensed in said apparatus and accumulated in said collecting body.

2,004,043
PRODUCING PATTERNS ON DARK COLORED SKINS OR LEATHERS
Hans Engels, Offenbach-on-the-Main, Germany, assignor to firm Oswald Eigner, Offenbach-on-the-Main, Germany
No Drawing. Application July 16, 1931, Serial No. 551,287. In Germany July 19, 1930
3 Claims. (Cl. 8—5)

1. The process for the production of markings on naturally dark and inexpensive colored skins and leathers consisting in applying to the skin steeped, limed, soaked and pickled in the usual manner a bleaching agent in the condition of a pulp, to localized areas, in an amount determined by the thickness and other conditions of the pigment, allowing said bleaching agent to act on the skins and leathers at the said localized areas, removing the bleaching agent from the said areas by rinsing, so as to produce the marking and superficial appearance of relatively expensive skins and leathers.

2,004,044
BRUSH AND COMB COMBINATION FOR PACKETS
Stella Meyers Fiegel, Marshall, Tex.
Application November 1, 1934, Serial No. 751,037
2 Claims. (Cl. 132—86)



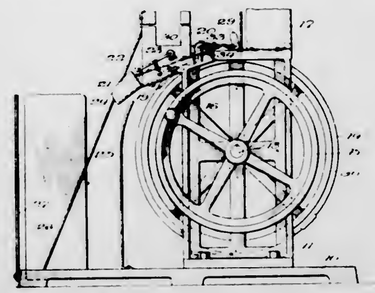
1. A brush arranged in pivoted relationship to a comb in such a manner that it may be easily removed from a packet cover, the brush comprising a bar member provided with bristles, the bar member being bent into the form of a U, thereby providing a slot for receiving the comb in folded relationship therein.

2,004,045
SLIVER ROLL FORMING MACHINE
Gordon Fraser, Norman Fraser, and John Fraser, Arbroath, Angus, Scotland
Application December 21, 1933, Serial No. 703,474
In Great Britain December 28, 1932
8 Claims. (Cl. 19—158)

1. A sliver roll-forming machine comprising a pair of spaced relatively fixed cheek plates mounted for joint pivotal movement on a horizontal axis, shoes carried by one of said cheek plates, pads of friction material attached to said shoes, a yoke interconnecting said shoes, a frictional pressure roller positioned between said cheek plates, a coaxial pair of arbor sections carried one by each cheek plate and retractable endwise to permit ejection of a completed roll from between said cheek plates, a fixed segment concentric with said axis, said segment member presenting opposed arcuate faces, and a lever pivotally connected to said yoke and manually operable to force said pads into frictional engagement with said segment.

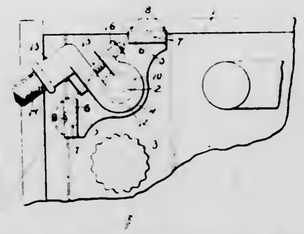
2,004,046
EYELASH CURLER
Jacob L. Glaser and Samuel Segal, Brooklyn, N. Y.; said Segal assignor of one-fourth to C. M. Palmer, New York, N. Y.
Application February 4, 1933, Serial No. 655,264
18 Claims. (Cl. 132—32)

1. In an eyelash curler, the combination of, a frame having depending slotted sides, a clamping plate carrying a resilient striated element, said plate being interposed between said sides and having integral marginal portions thereof guided in the slots of said sides, a member extending from said plate and below said sides, arms pivoted to the latter, links pivoted to the member and arms, and means operative to hold said element away from a complementary clamping portion of said frame.



2,004,047
HARVESTING OF PEAT OR PEAT FORMING MATERIALS MORE ESPECIALLY IN CONNECTION WITH THE PRODUCTION OF PEAT POWDER
Thomas Gram, London, England, assignor to Techno-Chemical Laboratories, Limited, London, England
Application November 13, 1933, Serial No. 697,876
In Great Britain November 19, 1932
14 Claims. (Cl. 44—27)

1. In the large scale production of partly air-dried peat, loosening material from the surface of an extensive peat deposit and disintegrating it for air drying by operation upon predetermined elongated bays thereof, served by transport lines running between groups of such bays, concentrating the loosened and air dried material of each bay along the interior thereof, moving the concentrated material in turn out of one bay into another in the direction of one of such lines by substantially only lateral displacement and depositing the material in a similar concentrated form along such other bay.



2,004,048
ENVELOPE-FILLING MACHINE
France E. Guedry, deceased, late of Fort Worth, Tex., by Edith Alderman Guedry, administratrix, Fort Worth, Tex., assignor to Edith Alderman Guedry, Fort Worth, Tex.
Application November 7, 1933, Serial No. 697,044
10 Claims. (Cl. 93—6)

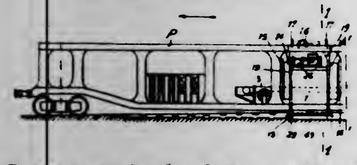
1. An envelope-filling machine comprising a drum adapted to rotate about its axis, means for imparting a rotary motion to said drum, a magazine for pieces of printed matter to be inserted in envelopes, a magazine for envelopes, said magazine for envelopes having its muzzle so arranged with respect to said drum as to dispose the foremost envelope in a plane substantially tangent to the peripheral surface of said drum and open

toward said drum surface with one edge of said envelope engaging against said surface, and means upon the periphery of said drum for cyclically engaging a piece of printed matter, carrying said piece of printed matter tangentially with respect to said drum surface and inserting said piece of printed matter in said envelope.

2,004,049
MEANS FOR CONNECTING CABLES TO BATTERIES
Charles E. Hoover, Lancaster, Pa.
Application June 8, 1933, Serial No. 674,955
4 Claims. (Cl. 173—259)

1. A battery terminal connector comprising a base having an opening to fit over a battery-post and be secured thereto, a pair of lugs carried by and upstanding from the base and located at right angles to one another, said lugs having bolt holes, said lugs being spaced from said opening a distance sufficient to permit the placing of a clamp cable terminal over the base for register with the opening without contacting the lugs.

2,004,050
HYPODERMIC NEEDLE PACKAGE
Paul Clifford Kerk, Exton, Pa., assignor to J. Bishop & Company Platinum Works, Malvern, Pa., a corporation of Pennsylvania
Application July 26, 1934, Serial No. 736,973
4 Claims. (Cl. 206—43)



1. A hypodermic needle package comprising a pair of tubes each having its outer end closed, and a stopper engaging both of said tubes and

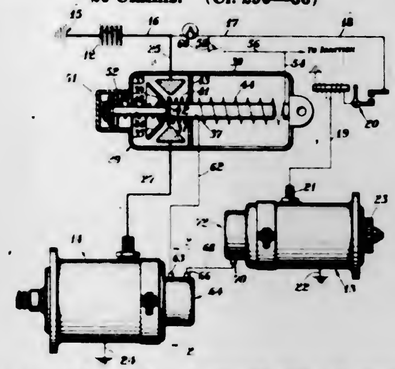
connecting adjacent ends thereof, said stopper having a relatively thin membrane confronting

the bore of each tube, which membrane is readily pierceable by an end of the needle.

2,004,051
APPARATUS FOR CONTINUOUSLY CLEANING RAILWAY BALLAST
Maurice Henri Lemaire, Paris, France
Application August 5, 1933, Serial No. 683,845
In France August 11, 1932
5 Claims. (Cl. 37—104)

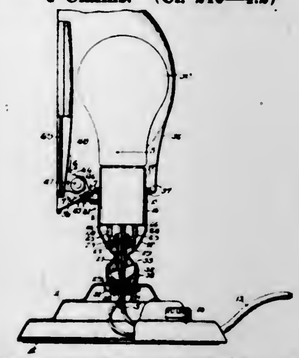
1. In an apparatus for cleaning railway ballast consisting of a beam moving along the track, track elevators carried by the said beam, endless excavators including chains and buckets surrounding the beam and the rails, improvements for increasing the output comprising track supports proper for guiding the excavator chains, implements integral with excavator buckets laterally thereof, a shield at the outlet of the excavation, the buckets each having an inclined bottom for deflecting during its discharge the ballast contained in the next bucket.

2,004,052
SHEET METAL ROOFING AND SIMILAR CONSTRUCTION
Howard J. Little, Fort Thomas, Ky., assignor to The Globe Iron Roofing & Corrugating Company, a corporation of Delaware
Application May 12, 1934, Serial No. 725,361
32 Claims. (Cl. 108—18)



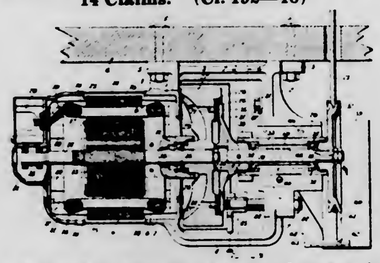
1. In a construction a pair of members one overlapping the other, each of said members provided with a plurality of parallel corrugations, the extreme sides of the corrugations on one member arranged so as to register with the extreme sides of the corrugations of the other member when the corrugations are overlapped, the adjacent sides of the valley between corrugations on the two members being non registering and the valley between corrugations of the overlapping member contacting with the bottom of the valley of the under member, all so arranged as to provide a plurality of enclosed passageways between the two members.

29. In a roofing sheet a body portion, a corrugated portion, a beading arranged transversely to the corrugated portion, extending entirely across the body portion and into the leg of the corrugation to provide an air space across the sheet and into the leg of the corrugation between the sheet



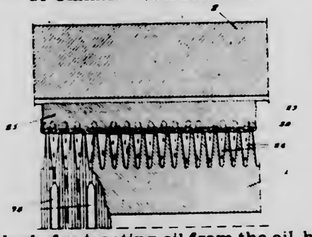
and the portion of the construction which it overlaps, thereby forming means for interrupting the forces of capillary attraction.

2,004,053
AUTOMATIC STARTING MECHANISM
Leslie K. Loehr and Wayne E. Burdick, Los Angeles, Calif., assignors to The Startomatic Corporation, Los Angeles, Calif., a corporation of Nevada
Application January 23, 1931, Serial No. 510,632
20 Claims. (Cl. 290—36)



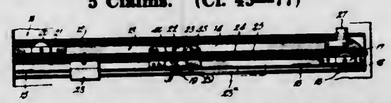
1. Automatic starting mechanism for internal combustion engines including a starting motor, a switch for controlling said motor, operating means for said switch, and manual means and mechanical means for jointly controlling said operating means, said mechanical means being responsive to the rotational speed of the starting motor.

2,004,054
ILLUMINATED MIRROR
Edwin W. North, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a corporation of Delaware
Application July 9, 1934, Serial No. 734,275
6 Claims. (Cl. 240—4.2)



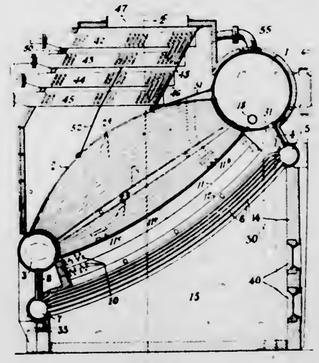
1. A lamp structure comprising a base, a bifurcated supporting member attached to and projecting upwardly from said base, a pivot member having a flat sided circular portion adapted to be disposed between the bifurcations of said supporting member and having an upwardly projecting threaded extension, a sleeve threaded on said supporting member for retaining the pivot member in position, yieldable means for retaining the pivot member in adjusted position, a housing carried by the pivot member, a lamp socket within the housing, and means connected to said socket and constructed to cooperate with said threaded extension for securing the housing to said pivot member.

2,004,055
UNITARY ELECTRIC MOTOR AND POWER TRANSMITTER
Wilbur J. Peets and Irving F. Webb, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application December 14, 1933, Serial No. 702,288
14 Claims. (Cl. 192—18)



1. A unitary electric motor and power transmitter having a pair of cup-shaped motor end-bonnets, a motor shaft and a manually controlled stub-shaft, pulley, and bearing sleeve assembly in end-to-end coaxial relation and having friction clutch elements mounted on their adjacent ends, characterized by this, that one of the cup-shaped motor end-bonnets in which the motor shaft is journaled is constituted by one side member of a vertically rectangular main supporting frame casting having means at its upper end for attachment to the under side of a sewing machine table, the other side member of which frame casting carries the stub-shaft, pulley, and bearing sleeve assembly.

2,004,056
METHOD AND MACHINE FOR EXTRACTING OIL FROM THE PEELS OF CITRUS FRUIT
Wilbur A. Pipkin, Safety Harbor, Fla.
Application March 6, 1933, Serial No. 659,713
10 Claims. (Cl. 100—47)



1. Method of extracting oil from the oil-bearing cells in citrus fruit peel, which comprises supporting the oil-bearing surface of the peel at a plurality of spaced areas so positioned as to support the surface sufficiently to permit substantially all the cells to be broken when pressure is applied to the peel while leaving the oil-bearing cells substantially unobstructed, applying pressure to the other surface of the peel while maintaining at least that portion of the peel to which pressure is being applied in a substantially unbroken state, thereby expressing oil from the peel, immediately removing the oil out of contact with the peel, and maintaining it out of such contact during the remainder of the expressing operation.

2,004,057
FILING DRAWER
Fred A. Schmits, Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Norwood, Ohio, a corporation of Ohio
Application March 24, 1934, Serial No. 717,205
5 Claims. (Cl. 45—77)

3. In combination with a drawer and its casing including channel guide rails, a carriage having wheels mounting it on and between said guide rails, intermediate rollers in said carriage, said drawer mounted for rolling movement on said intermediate rollers and certain of the wheels of said carriage, said rollers having axially arranged retainers mounted in the carriage and anti-friction elements between said rollers and retainers for maintaining said rollers in definite relation to the carriage without interfering with free rotative movement thereof.

2,004,058
BOILER
Thomas B. Stillman, South Orange, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application August 19, 1932, Serial No. 629,463
7 Claims. (Cl. 122—265)

1. A water tube boiler comprising a combustion chamber, a horizontal steam and water drum of large diameter, a horizontal water drum spaced therefrom, an inclined bank of curved steam generating tubes connecting said drums, said tubes being curved in two directions, a second inclined bank of curved steam generating tubes in front of and spaced from said first bank, horizontal water drums connected to opposite ends of said second bank, a superheater posi-

tioned in the space between said tube banks, nipples connecting the drums at corresponding ends of said banks, and an economizer including return bend tubes extending transversely of and above said first bank, the tubes of said superheater being of less diameter and more closely spaced than the tubes of said second bank, and the tubes of said first bank being of less diameter and more closely spaced than the tubes of said superheater.

2,004,059

METHOD AND MATERIAL FOR REPAIRING SHOES

Roland R. Bollman, Mount Washington, and Conrad L. Ornes, Cincinnati, Ohio, assignors to The Perfect Manufacturing Company, Cincinnati, Ohio, a corporation of Ohio

No Drawing. Original application September 29, 1931, Serial No. 565,922. Divided and this application January 10, 1933, Serial No. 651,062

1 Claim. (Cl. 134—17)

A liquid adhesive adapted to vulcanize and firmly and durably secure a plastic rubber composition containing sulfur to a leather-like surface, said adhesive, comprising, 6 pounds crepe rubber, 2.5 pounds rosin, and 1.5 pounds zinc dimethyl dithio carbamate, said components fluidified in 15 gallons of benzol.

2,004,060

RESIDENCE ELEVATOR

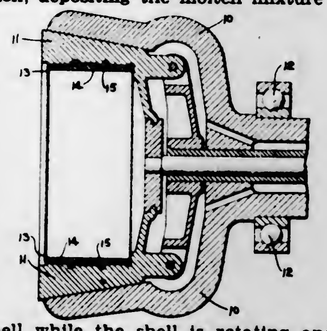
Alfred T. Brown, Cincinnati, Ohio, assignor to The Warner Elevator Mfg. Company, Cincinnati, Ohio, a corporation of Ohio

Application May 24, 1934, Serial No. 727,319

5 Claims. (Cl. 187—24)

1. In an elevator, a cab, an elevating screw for propelling the cab connected to the lower side of the platform of the cab, a revolving self-aligning ball bearing journalled nut for raising and lowering said screw and cab, and transmission means for revolving said nut in reverse directions.

2,004,061



COMPOSITE BRAKE DRUM

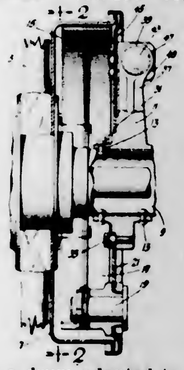
Donald J. Campbell, Spring Lake Township, Ottawa County, Mich., assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon, Mich., a corporation of Michigan

Application November 13, 1933, Serial No. 697,817

4 Claims. (Cl. 22—203)

1. The method of producing a brake drum which consists in providing a shell, melting a quantity of cast iron in a cupola, transferring it to an electric furnace and then introducing between 3% and 10% of copper thereto, rotating the shell, depositing the molten mixture within

the shell while the shell is rotating and then cooling the mixture.



2,004,062

BRAKE

Theron P. Chase, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application December 23, 1933, Serial No. 703,759

3 Claims. (Cl. 188—78)

1. In a brake, a drum adapted to rotate, a coaxial cover plate for said drum, brake means carried by said cover plate and movable relatively thereto to frictionally engage and check rotation of said drum, a fixed bracket to receive the torque resulting from brake application, means to mount said cover plate for limited rotary movement relative to said bracket, and cushioning means to transmit torque from said cover plate to said bracket, together with a wheel carrying said drum, an axle member carrying said bracket, said bracket having a radial arm with a head, plates carried by said cover plate on each side of said head, and said cushioning means comprising a cushioning member between each plate and the adjacent side of said head.

2,004,063

OSCILLATABLE PIVOTALLY MOUNTED AXLE

Joseph Ganz, Frankfort-on-the-Main, Germany

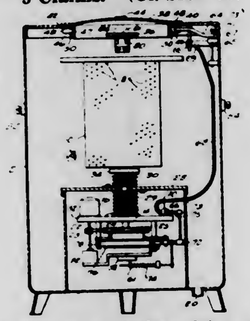
Application May 2, 1933, Serial No. 668,965

In Germany May 7, 1932

5 Claims. (Cl. 180—73)

1. An oscillatable pivotally mounted axle for motor vehicles, comprising in combination an axle casing, two half axles extending one from each side of said casing, wheels one on the outer end of each of said axles, transverse elements attached intermediate their length to the top and bottom of said casing, carrying members interconnecting the outer ends of said transverse elements forming with said transverse elements re-

silient link parallelograms, and supporting bearings on said half axles one adjacent each of said wheels, and pivot pins one connecting each of said supporting bearings to an intermediate point of one of said carrying members and extending parallel to the longitudinal axis of the vehicle, said bearings being thus resiliently guided by said link parallelograms.



2,004,064

CLOTHES SPINNER

Richard H. Jordan and Paul E. Hochstetter, Springfield, Mass., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

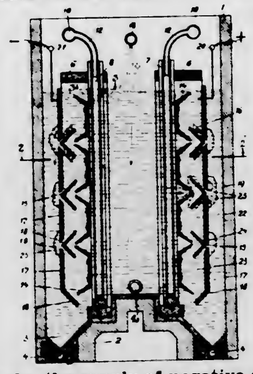
Application February 21, 1934, Serial No. 712,350

5 Claims. (Cl. 210—72)

1. In a spin-type clothes drier comprising a container, driving means for rotating said container, and an outer casing having a circular opening through which access to the container may be gained, the combination of a removable circular cover for said opening, means whereby a turning of the cover, when in place over the opening, in one direction will effect a latching thereof and a turning in the reverse direction will effect a release thereof, and means actuated by said cover turning movements for making effective said driving means only when the cover is turned to the latched position.

2,004,065

ELECTROLYTIC TREATMENT OF LIQUIDS



Karl Kaisser, Munich, Germany

Application March 22, 1933, Serial No. 662,122

In Germany March 27, 1931

14 Claims. (Cl. 204—25)

1. An electrolytic cell for the treatment of liquids, having electrodes for the supply of positive and negative electric current for decomposing the liquid and creating a flow of ions, and partitions within said cell adapted to separate the electrodes for the positive current from the

electrodes for the supply of negative current, said partitions being built of material which is impenetrable for the ions and having openings permitting a travel of said ions therethrough, said openings being adjustable as to size.

2,004,066

TERTIARY BUTYL ACETIC ACID

Frank C. Whitmore, State College, Pa., August H. Homeyer, St. Louis, Mo., and Walter R. Trent, State College, Pa., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri

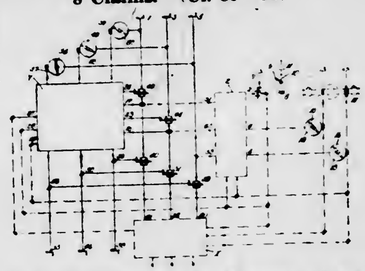
No Drawing. Application April 17, 1933, Serial No. 666,511

2 Claims. (Cl. 260—112)

1. Tertiary butyl acetic acid having approximately the following properties:

Boiling point	183° C. at 739 mm.
Freezing point	6.3 to 7.0° C.
Index of refraction, n_D^{20}	1.4096
Density—	
d_{20}^{20}	0.9140
d_4^{20}	0.9124

2,004,067

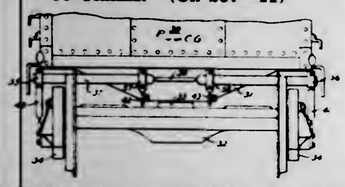


ANTIAIRCRAFT GUNFIRE CONTROL APPARATUS

John Percival Watson, Westminister, London, England, assignor to Vickers-Armstrongs Limited, London, England, a British company

Application February 14, 1934, Serial No. 711,172

In Great Britain January 3, 1933



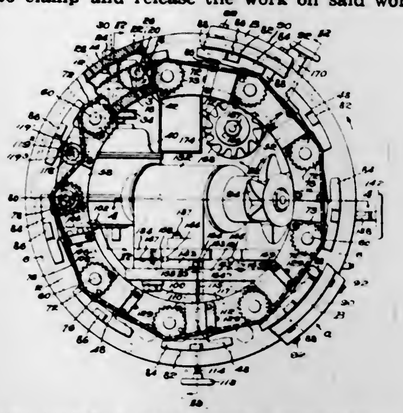
8 Claims. (Cl. 89—41)

1. In an anti-aircraft gun fire control apparatus for predicting a future position of a target

wherein means movable for an assumed course are utilized to represent vectors in accordance with (1) the linear rate of approach or recession of the target in the direction of the plane of the line of sight, this vector being termed V_1, (2) the linear rate of movement of the target at right angles to the aforesaid direction, this vector being termed V_2, and (3) a linear height rate, this vector being termed V_3, comprising means for deriving range, training and elevation from the means representing said assumed course vectors, means for indicating observed range, training and elevation, means for deriving therefrom values of rates of change of target velocities in the directions of vectors V_1, V_2 and V_3, and adjustable means for adjusting said assumed course vector means until the range, training and elevation derived therefrom correspond to the observed range, training and elevation.

2,004,068
STABILIZER FOR VEHICLES
George V. Woodling, Cleveland, Ohio
Application January 7, 1933, Serial No. 650,628
50 Claims. (Cl. 267—11)

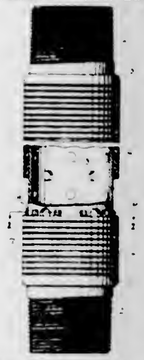
1. A stabilizer for a vehicle having a sprung and an unsprung mass comprising, in combination, resilient connective means carried by both the sprung and the unsprung masses, and a stabilizing member interconnecting the said connective means for resisting the relative "rolling" movements of the sprung and the unsprung masses of the vehicle.



2,004,069
PROCESS FOR PREPARING ALKYLATED AROMATIC KETONES AND PRODUCT
Herman A. Bruson, Germantown, and Otto Stein, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application May 14, 1931, Serial No. 537,496
23 Claims. (Cl. 260—131)

1. The process for preparing mixed amylacetophenones which consists in condensing reacting proportions of dry benzene, mixed amyl monochlorides from the chlorination of natural gas pentanes, and acetic anhydride, with anhydrous aluminum chloride; and thereafter hydrolyzing the reaction product.

2,004,070
HEEL BREASTING MACHINE
Nicholas L. Gulliford, deceased, late of Peabody, Mass., by Archibald T. Gulliford, administrator, Lynn, Mass., assignor to Gulliford Wood Heel Company, a firm composed of Archibald T. Gulliford and Pearce H. Gulliford, both of Lynn, Mass.
Application May 25, 1931, Serial No. 539,884
21 Claims. (Cl. 12—47.1)



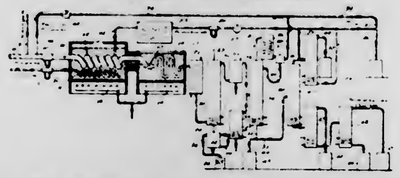
1. A machine for shaping heel breasts comprising a heel blank holder, a rotating cutter head, and means to rock said cutter head about a selected point in the heel breast to vary the inclination of the heel breast.

11. A machine of the class described comprising a revolving work carrier, cutter means, means relatively to move said work carrier and cutter means to shape the work, and means automatically to clamp and release the work on said work

carrier including a star wheel mechanism operated during the rotation of said work carrier.

2,004,071
STRAINER
Otto Hannesschlager, Houston, Tex.
Application November 18, 1933, Serial No. 698,679
6 Claims. (Cl. 166—5)

1. A well screen comprising a section of perforated pipe, continuous rings of metal of equal length and of larger internal diameter than the outer diameter of said pipe arranged adjacent each other upon the pipe and separate spacers between said rings and said pipe to space said rings uniformly from the pipe and also acting to space said rings uniformly from each other along the pipe.

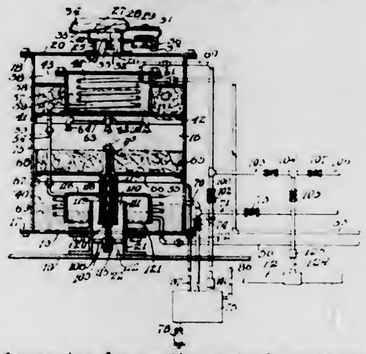


2,004,072
CHLORINATION PROCESS AND PRODUCT THEREOF
Henry B. Hass and Earl T. McBee, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application February 1, 1932, Serial No. 590,046
35 Claims. (Cl. 260—162)

1. The process of chlorinating compounds of the class consisting of hydrocarbons of the paraffin, naphthene, and aromatic series and their partially chlorinated derivatives, which consists in separately preheating chlorine and the material to be chlorinated to a predetermined reaction temperature materially above the boiling point of the hydrocarbon, and then mixing the heated material to be chlorinated with the heated chlorine, at a velocity in excess of that of flame propagation under the conditions existing, to effect the chlorination.

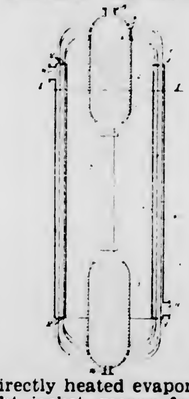
15. A new composition of matter, consisting essentially of 1,3 - dichloro - 2 - methylpropane which at atmospheric pressure boils at about 136.4° C. and at 10 mm. pressure boils at about 21 to 25° C.

34. A new composition of matter, consisting of a mixture of 1,3-dichloro-2-methylpropane which at atmospheric pressure boils at about 136.4° C. and at 10 mm. pressure boils at about 21 to 25° C.; and other chlorides of isobutane.



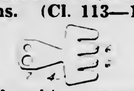
2,004,073
PROCESS OF CHLORINATING PROPANE AND ITS PARTIALLY CHLORINATED DERIVATIVES
Henry B. Hass and Earl T. McBee, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
Application May 1, 1934, Serial No. 723,366
22 Claims. (Cl. 260—166)

1. The process of producing trimethylene chloride, which consists in subjecting a gas of the class consisting of propane and 1-chloropropane to a chlorination reaction with gaseous chlorine to yield trimethylene chloride and other chlorides of propane, and separating the trimethylene chloride from other chlorides.



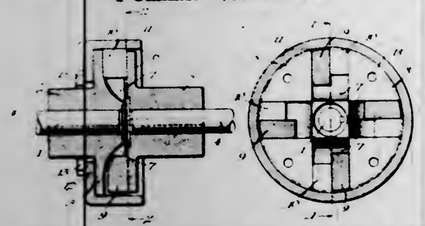
11. The process of chlorinating propane, which consists in separately preheating propane and chlorine to a temperature above 250° C., and mixing them in that heated condition to cause them to react, and then promptly cooling the products of the reaction.

2,004,074
APPARATUS FOR AND METHOD OF RECOVERING VAPORS VENTED FROM STORAGE TANKS
Le Roy D. Kiley, Larchmont, N. Y.
Application August 21, 1933, Serial No. 686,179
19 Claims. (Cl. 220—85)



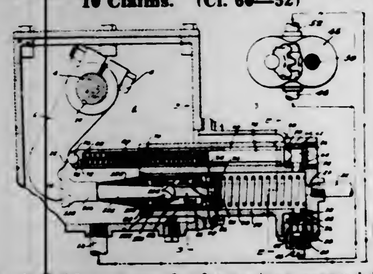
1. Apparatus for venting a tank containing a volatile liquid, comprising a receptacle for connection to said tank for vapor flow communication therewith, means disposed within said receptacle and in the vapor flow passage therethrough for exposing a refrigerated liquid to said vapor flow, and means providing a vent for non-condensable gases to the atmosphere from said receptacle.

2,004,075
EVAPORATOR, ESPECIALLY FOR HIGH PRESSURE STEAM
Ernst Koenemann and Karl Gensch, Berlin, Germany, assignors to Gesellschaft für Drucktransformatoren (Koenemann-Transformatoren) G. m. b. H., Berlin, Germany, a corporation of Germany
Application January 4, 1932, Serial No. 584,736
In Germany January 6, 1931
9 Claims. (Cl. 122—32)



1. An indirectly heated evaporator comprising a liquid tight jacket, means for supplying and withdrawing heating fluid from said jacket, a multiplicity of water tubes arranged in a plurality of continuous rows extending within said jacket and through a wall thereof, a collector spaced from said jacket and into which said water tubes lead, said water-tubes having their multiplicity of points of passage through said jacket wall disposed so as to render all said points of passage through said jacket wall readily accessible from practically all directions.

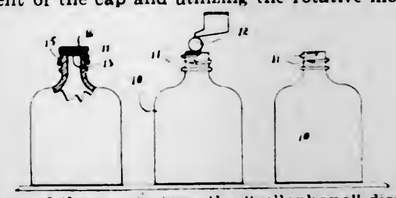
2,004,076
METHOD OF MAKING CONTACT DEVICES FOR RADIO SOCKETS AND THE LIKE
Carl L. Knutson, Maywood, Ill., assignor to Cinch Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Original application December 21, 1932, Serial No. 648,265. Divided and this application May 25, 1933, Serial No. 672,832
3 Claims. (Cl. 113—119)



1. The method of making a contact for a radio socket and the like which comprises forming a flat blank with a portion having a series of petals, at one end, bending said petal-presenting portion to form a tubular yieldable contact-receiving portion and then flaring outwardly a portion of the tubular portion to form a base flange at one end of said portion, the base flange extending at right angles to the axis of the yieldable contact-receiving portion.

2,004,077
COUPLING
William J. McCartney and Spencer T. Bachus, Birmingham, Ala.
Application July 16, 1934, Serial No. 735,529
4 Claims. (Cl. 64—96)

1. In a coupling of the class described, a driving element and a driven element, one of said elements comprising a relatively thick disc having a plurality of radially disposed slots therein, the slots having bottom surfaces which extend inwardly from the outer periphery of the disc and incline upwardly toward and reinforce the central portion of the disc; the other of said elements comprising a disc of approximately the same diameter as the first mentioned disc and having lugs on the face thereof corresponding in number to and engaging the slots in the first mentioned disc, the lugs being of less width than the slots and being of less depth at their inner than at their outer ends so as to conform to the shape of the slots; and resilient means positioned in each slot between a side of the lug and the opposing wall of the slot.

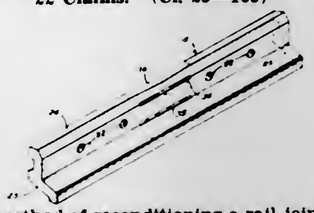


2,004,078
HYDRAULIC BRAKE MECHANISM
George F. McDougall, Portland, Oreg., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application July 1, 1933, Serial No. 678,627
10 Claims. (Cl. 60—52)

1. A fluid pressure brake system comprising a compression cylinder having a port, a continuously loaded valve controlling the port, means for supplying fluid under pressure to said cylinder, a piston reciprocable in the cylinder, and a member operatable to simultaneously advance the piston and to increase the load on the valve.

2,004,079
METHOD OF FORMING SEALED CONTAINERS
Charles E. McManus, New York, N. Y., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a corporation of New York
Application May 14, 1930, Serial No. 452,159
1 Claim. (Cl. 226—80)

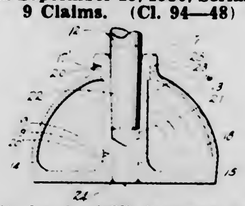
The improved method of forming a sealed container for oil-like materials which consists in applying to the top of the container around the mouth thereof an adhesive adapted to set without the application of heat and immune to deterioration from the action of oil, positioning a disc of thin material of "cellophane" type arranged within a cap adapted to be applied by rotative movement on the adhesively coated top of the container, the cap having therein above the disc a cushion liner engaging the said disc but freely separable from the disc, compressing the cushion liner on the said disc by rotating movement of the cap and utilizing the rotative movement of the cap to turn the "cellophane" disc to distribute the adhesive uniformly over the top of the container and the expansive action of the cushion liner to retain the disc in position, and permitting the adhesive to set and maintaining the separability of the disc and liner during the compression of the disc whereby to provide a disc sealed container which is substantially permanently sealed after removal of the cap until rupture of the disc.



2,004,080
TEXTILE HEMSTITCHING MACHINE
Edward B. Roby, New York, N. Y., assignor to The S and R Folding Machine Co., Inc., New York, N. Y., a corporation of New York
Application June 20, 1932, Serial No. 618,292
7 Claims. (Cl. 112—2)

1. A machine as characterized embodying a stitching mechanism, elongated guiding means for delivery of fabric to said stitching mechanism which will triple fold said fabric upon itself adjacent the edge thereof, and conveying means for supporting said fabric through said guiding means to relieve said fabric from any pulling strains, said means embodying a relatively narrow tape turned upon itself to enfold the fabric within and during the passage through said guiding means to relieve said fabric of any pulling strains.

2,004,081
METHOD OF AND MEANS FOR REPAIRING RAIL JOINTS
Leo C. Ryan, Chicago, Ill., assignor to The Oxweld Railroad Service Company, a corporation of Delaware
Application September 15, 1932, Serial No. 633,241
22 Claims. (Cl. 29—169)

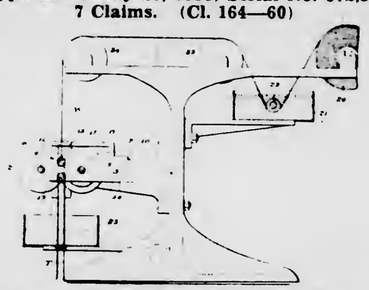


1. A method of reconditioning a rail joint comprising opposed rail ends and a joint bar connecting the same and having at least one longitudinal slot intermediate its ends, such method including spreading the slot of said bar by the action of wedging surfaces, at least one of the said surfaces having portions laterally tapered, so as to expand a portion thereof laterally to conform at least one fishing surface of the bar to the cooperating fishing surfaces of the rail ends.

2,004,082
HOSE COUPLING
Rudolph Scherf, Detroit, Mich.
Application March 16, 1934, Serial No. 715,856
4 Claims. (Cl. 284—17)

1. For coupling a hose end to a valve nipple having a valve therein provided with an exposed stem, a hose coupling including a gasket fixedly seated on and partially closing said end and provided with a central aperture, an insert fixed within said hose end and having a valve stem depressor portion projecting upwardly through said gasket aperture, and provided with a solid head and side openings above the base of the gasket which communicate the interior of the hose with the space above the gasket, a member encircling the hose and having integrally formed, upwardly extending, elongated resilient arms formed at their free ends with clamping jaws adapted to embrace the valve nipple between them when urged towards each other, and formed to have a tendency to separate to an extent sufficient to permit the jaws readily to receive a valve nipple, between them, and a non-circular clamping ring disposed outside of the jaws and journalled on the arms and manually rotatable to urge the jaws towards each other to clamp a valve nipple between them or to permit the jaws to separate.

2,004,083
TOOL ATTACHMENT
Arthur Scott, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application September 15, 1930, Serial No. 481,875
9 Claims. (Cl. 94—48)



1. A butt for backfill tampers comprising a body portion formed with a striking face, a frustospheroidal hood extending upwardly from said striking face, and a stem extending from the upper portion of said hood to said striking face formed with a piston rod receiving-tapered socket.

2,004,084
PROCESS OF MAKING OLEFINE DERIVATIVES
Walton B. Scott, Lloyd S. Bovier, and Ernest D. Matthews, Niagara Falls, N. Y., assignors to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
No Drawing. Application April 18, 1932, Serial No. 606,070
15 Claims. (Cl. 260—156)

1. The process of producing an alcohol comprising bringing the corresponding olefine in contact with an acid reactive therewith, and absorbing said olefine in said acid in excess of 50% of the amount required to completely replace all of the replaceable hydrogen of the acid employed, and then hydrolyzing said acid by progressively entering it into a predetermined quantity of water, accumulating said acid in said water with progressively increasing concentration and distilling off the resulting alcohol immediately upon its formation so as to avoid an accumulation of alcohol in the hydrolyzing liquid.
